BEGINNER'S BOOK

SCHOOL FOR THE PIANO
Vol. 1
By Theodore Presser

The familiar "red book" that has started thousands of youngsters between 6 and 9 years of age on their pianistic careers. Begins with the very rudiments of music and brings the pupil, through a series of practical exercises and pleasing pieces, to the point where he is ready to begin work on the scales.

Price, $1.00

STUDENT'S BOOK

SCHOOL FOR THE PIANO—Vol. 2
By Theodore Presser

Follows the *Beginner's Book* and, interspersed in a collection of delightful piano pieces, it presents a thorough fundamental course in scale playing.

Price, $1.00

PLAYER'S BOOK

SCHOOL FOR THE PIANO—Vol. 3
By Theodore Presser

The final book of this series carries the student through the third grade with exercises and pieces selected from the best composers.

Price, $1.00

ADVENTURES IN MUSIC LAND

By Ella Ketterer

Ella Ketterer

The author is a practical teacher and in this work she presents a comprehensive, up-to-date first book for young piano beginners. Melody playing is featured and the student is taken through all the major keys, up to first efforts in scale playing.

Price, $1.00

ADVENTURES IN PIANO TECHNIC

By Ella Ketterer

26 short exercises, in all major and minor keys, up to 4 sharps and 4 flats, each presenting a specific technical problem for the young piano student to master. Each study is attractively titled.

Price, 75 cents

MUSIC PLAY FOR EVERY DAY

The Gateway to Piano Playing

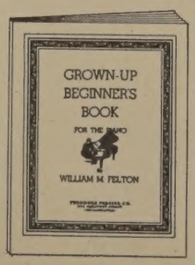
This irresistible first piano book, for children from 5 to 8 years of age, starts out with a striking picture in colors, *The Fairyland of Music*. In an appealing manner the book then continues, delighting the juvenile imagination with illustrations, game-like procedures and charming little melodies. There also are "cut-out" pictures for the pupil to paste in the book. This clever combination of work and play is almost sure to maintain interest and induce practice.

Price, Complete, $1.25

Also Published in 4 Books for Convenience in Class Use—Price, 40c each

HAPPY DAYS IN MUSIC PLAY

Sequel to "Music Play for Every Day"



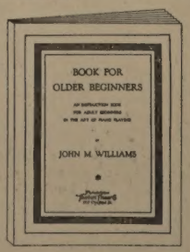
So rapid is the advancement of pupils in *Music Play for Every Day* that frequently youngsters of only 6 years are almost ready for second grade study. This book takes up the piano instruction of juveniles where its predecessor left off, and, with the same fascinating method of presentation, it carries the pupil well into the second grade.

Price, Complete, $1.25

Also Published in 4 Books for Convenience in Class Use—Price, 40c each

Instructors for Adult Students

GROWN-UP BEGINNER'S BOOK



FOR THE PIANO
By William M. Felton

Everywhere, adults and young folk well along in their teens, are taking up the study of the piano. Here is a book that really leads such students towards a definite goal—not the digital dexterity of the virtuoso—but the ability to play the many fine compositions of intermediate grade with which everybody is familiar. Everything in the book is designed for the adult student—the music will appeal to the adult intelligence and the pieces are arranged for playing by fully matured hands. Keyboard illustrations assist in correlating the notes of the printed page with the keys of the piano.

Price, $1.00

BOOK FOR OLDER BEGINNERS

By John M. Williams

This book was created to serve older boys, and beginners around 14 years of age and beyond, when something different is required in piano instruction material than that found in juvenile instruction books. Many teachers use it for the first lessons of adult beginners. Probably one feature above all others that accounts for the success of *Book for Older Beginners* is the frequent introduction of pleasing, easy arrangements of old folk songs and favorite melodies.

Price, $1.00

John M. Williams

FIRST YEAR AT THE PIANO

By John M. Williams

Ideal for the piano beginner between the ages of 9 and 12 years. Both clefs are used from the start, Mr. Williams stressing particularly the "Middle C" approach. By the time the student has finished this book, the first scale work has been attempted, phrasing is understood and an excellent foundation for future progress has been laid.

Price, Complete, $1.00

Also Published in 4 Parts for Convenience in Class Teaching—Price, 35c each

SECOND YEAR AT THE PIANO

By John M. Williams

After completing the "first year" book of Mr. Williams few students need any urging to take up this instructor with its fine collection of tuneful pieces.

Price, $1.00

THIRD YEAR AT THE PIANO

By John M. Williams

Only published a short time, this work has become established with many teachers as the logical "follow-up" book to the two previously issued books in this series.

Price, $1.00

STANDARD GRADED COURSE OF STUDIES

FOR THE PIANO
Compiled by W. S. B. Mathews
10 Volumes
10 Grades

The original and, in spite of many imitators, still the most widely used course of piano instruction material. An able editorial staff constantly keeps this work up-to-date. A pupil can take up this course of study in any grade and faithful application to the work it prescribes will insure rapid but thorough advancement. The Latest Revised Edition of Volume One uses the "Middle C" approach.

Price, $1.00 each volume

ALL IN ONE

Melody—Rhythm—Harmony
By Robert Nolan Kerr

A splendid instructor for children 9 or 10 years of age beginning piano study. It is used successfully both in class and private instruction. Throughout the book it will be noted that the author makes frequent use of a talent for writing pleasing and tuneful piano pieces.

Price, $1.00

TECHNIC FOR BEGINNERS

By Anna Priscilla Risher

Teachers, with an eye trained to the future of talented pupils, early introduce this work as a preparation for the studies of Hanon, Philipp, etc.

Price, 75 cents

● Often teachers having a large enrollment in their classes strive to include as many pupils as possible in presenting a recital program. Permitting each student to play a solo number lengthens the program unnecessarily. The use of ensemble groupings, such as listed on this page, not only lends a touch of variety to the recital program, but it gives opportunities for the inclusion of more pupil-performers than under the solo-for-each plan.

A Grouping Enjoyed by Participants and Audience

PIECES for 4 PLAYERS at 1 PIANO

SCHEHERAZADE

(Symphonic Suite)

By

N. Rimsky-Korsakov

One of the most frequently programmed numbers in the repertoire of leading symphony orchestras this distinctively individualistic suite with its Oriental atmosphere makes a fascinating study. Arranged in the form of a piano solo, it gives fairly proficient players a fine recreation number and provides a convenient reference for the advanced student in theoretical subjects.

Price, $1.50

No. 38

SYMPHONY, No. 9 in D-minor

(Choral)

By **Ludwig van Beethoven**

The final symphonic manifestation of Beethoven's genius, performances of this monumental work are limited only by the facilities available for production, as a well-trained chorus is required, in addition to a proficient symphony orchestra. Here is a piano arrangement, made primarily for study purposes, but also quite intriguing to the competent pianist.

Price, $1.50

FRENCH ART SONGS

Medium High Voice — Medium Low Voice

Edited by

Mabelle Glenn and Bernard U. Taylor

There are twenty songs in this volume and the composers include Reynaldo Hahn, Benjamin Godard, Cecile Chaminade, Claude Debussy, Jules Massenet, Cesar Franck, Charles Widor, Camille Saint-Saëns, Hermann Bemberg and others. The notes on each song carry brief paragraph bits on the composers, along with advice for an effective rendition. The matter of French pronunciation is well covered in the prefatory pages. The names of the two well-equipped and experienced editors are a guarantee of the collection's usefulness.

Price, $1.00 each volume

New and Augmented Edition of

CHORD CRAFTERS

(Technic Tales, Book 3)

By

Louise Robyn

Introduces the Twelve Fundamental Chord-Attacks—Marcato, Legato, Staccato, Hammer, Arpeggiated, Sforzando, Sforzando-Pizzicato, Accompaniment, Single Finger Melodic, Melodic High and Low Voice, Passage Chords and Alternate Chords—with full explanatory material and technical examples for both teacher and student.

Price, 75 cents

THE SNOW QUEEN

A Story Cycle of Piano Pieces for Young Players

Story from Hans Christian Andersen

Music by P. I. Tchaikovsky

Adaptation by Louise Robyn

This very clever adaptation of the *Album for the Young* to Andersen's familiar fairy tale furnishes a fascinating supplementary book to *Chord Crafters* (Technic Tales Book 3) by the same author. The book, itself, is most attractively gotten up. Seldom, if ever, has such colorful material been made available for youthful students at this stage of advancement.

Price, 75 cents

PUPIL'S MUSIC NOTE-BOOK

GRAND OPERA IN CANTATA FORM

Choral Fantasias for Mixed Voices

These gems from grand opera require no costumes or scenery and may be presented in about fifteen minutes. Of course, all parts are well within the range of school chorus voices. The difficult passages have been slightly modified without detracting from the effectiveness of the music.
Full orchestra parts for each choral fantasia available on a rental basis of $5.00 a month, or fraction thereof.

CARMEN (Bizet)	.50	PINAFORE (Sullivan)	.50
FAUST (Gounod)	.50	LOHENGRIN (Wagner)	.60
TROVATORE (Verdi)	.50	TANNHAUSER (Wagner)	.60

CHORUS PARTS OF ORATORIOS

The Messiah
(Handel)

Exact reproduction of the choruses in open score with accompaniments.
Price, 60 cents

Elijah
(Mendelssohn)

Exact reproduction of the choruses in open score with accompaniments.
Price, 60 cents

SECULAR CANTATAS

The Father of Waters
By Charles Wakefield Cadman

Solo Voices: S.T.B. Time, 1 hour
Contains brilliantly effective yet easy music, in which the historic, human, majestic and relentless aspects of the great river are set forth in poetic and dramatic vividness.....Price, $1.00

In Music's Praise
By Henry Hadley

Solo Voices: S.T.B. Time, 40 minutes
It is refreshing to find vigorous, inventive and musical thought expressed with clearness and directness as in this cantata. This is an excellent program number.....Price, $1.25

The New Earth
A Prophetic Vision
By Henry Hadley

Solo Voices: S.A.T.B. Time, 40 minutes
The brevity of the work gives the strength of concentration. For both soloists and chorus the music is inspirational to a satisfying and rewarding performance.....Price, $1.00

The Highwayman
By Deems Taylor

Solo Voice: Bar. Time, about 30 minutes
Mixed Voices Treble Voices
Issued in two editions—with chorus for mixed voices and with chorus for treble voices (three-part). The baritone solo, accompaniment and orchestration are the same in both editions. Be sure to mention edition desired in ordering.....Price, $1.00

DRAMATIC SACRED CANTATA

Esther, the Beautiful Queen
By William B. Bradbury

A Scenic cantata in Five Acts and Nine Scenes. Performance with or without scenic setting is practicable and effective. Solo Voices: 4S. 2A. 2Bar. 4B. Time, 2 hours.
Vocal Score, $1.00

HE TOMB OF
ANINI AT PARMA

"OPERETTA AND THE SOUND FILM" by Jeanette MacDonald

Each Book in
THE POCKET MUSIC STUDENT SERIES
supplies a definite gain for utilized spare time.

These compact volumes are designed to give authoritative guidance and information on things which every music lover *should* know of the subject, and which every student *must* know. They are written concisely, yet clearly and entertainingly. They are fully illustrated with photographs, diagrams and thematics, printed in clear type on a good grade of paper, and are durably bound in heavy paper covers.

The size, 5x7 inches, is large enough for easy reading, yet small enough to fit the pocket or handbag. The price is so low—only 60 cents for each volume—that every music lover and student should own a number of the volumes. Look over these attractive little books at your music store, or if they do not carry them, order the titles you want from our Distributing Headquarters.

Each

THE AMBITIOUS LISTENER
Leo Rich Lewis

Professor Lewis, Director of the Music Department at Tufts College, is well known in both Europe and America for his lecture work. A saving sense of humor makes this book an easy approach to appreciation of master-works in music. The musical examples are given in full in the companion book, *Masterpieces of Music.*

MASTERPIECES OF MUSIC
Compiled by Leo Rich Lewis

Pocket piano scores from Bach, Handel, Haydn, Mozart, Beethoven, Mendelssohn and Brahms. Every measure is numbered to correspond with references in the text of *The Ambitious Listener* by the same author.

THE WHY AND HOW OF MUSIC STUDY
Charles H. Farnsworth

Professor Farnsworth was for many years head of the School Music Department, Teachers College, Columbia University, New York. He is a national authority on music and pedagogy. Contents: *Study and Talent, Discovering Our Talent, Fitting Our Study to Our Talent, Mental Activities in Music Study and Their Application, Relation Between Teacher and Pupil.*

CLEARCUT SPEECH IN SONG
Clara Kathleen Rogers

Mrs. Rogers is acknowledged as a national authority on diction in singing and speaking. A few of the twenty chapter headings: *Classification of Consonants, Exercises to Promote Flexibility, Analysis of Vowels, Positions of Tongue, Breathing, Clear Enunciation on High Notes, Emphasis, Recitatives.* Fully illustrated with musical quotations and pronouncing exercises.

HANDBOOK OF MUSICAL TERMS
Karl Wilson Gehrkens

Professor Gehrkens is Director of the School Music Department at Oberlin College, and editor of *School Music.* He is internationally known as an educator and an authority on the terminology of music. The Handbook is much more than a dictionary for it covers a wide range of topics in pocket form. Adopted by many schools for student reference. The subjects are grouped under: *Notation, Performance, Musical Elements, Forms and Types of Compositions, Acoustics, Instruments, Voices, Historical and Critical Terms, Italian Equivalents, Reference Books.* Fully illustrated with musical quotations.

HEALTH HINTS FOR MUSIC STUDENTS
Dr. Wallace F. Hamilton

Dr. Hamilton is a successful practicing physician. As a student of music he studied the correlation of music and health. The confining nature of musicians' work makes it important to preserve health and vitality. Simple rules for exercise, posture, diet, relaxation, and disease prevention are given. The book contains setting-up exercises; special exercises for singers, pianists, and violinists; diet tables. The exercises are well illustrated.

MUSIC IN WORSHIP
Walter Samuel Swisher

The author is clergyman, organist, musical enthusiast, and special student of psychology. His book is a text for both organist and minister. Contents: *The Spirit of Worship, Unity of the Service, Function of the Service Prelude, Graded Lists of Church Music, Lists of Anthems for Various Services, Principles on Which Production of Good Music Rests, Bibliography, Function of the Anthem, The Hymn, Choir and Organ, Thematics.*

ORNAMENTS IN CLASSICAL AND MODERN MUSIC
Clarence G. Hamilton

By the author of *Touch and Expression in Piano Playing, Outlines of Music History, Epochs in Musical Progress,* etc., etc. Synopsis: *Historical Survey, Early Treatment of Tempo, Classes of Ornaments, Tonal Repetition, Nearby Tones, Connecting Notes or Passages, Chord Decoration.* Liberally illustrated with thematic passages. This compact book will enable the student to understand and correctly perform the various musical ornaments.

PSYCHOLOGY FOR THE MUSIC TEACHER
Walter Samuel Swisher

More copies of this book have been bought than any other music reference book issued in recent years. A practical working text. A real help to the teacher who wishes to improve his hold on students' interest and attention. Contents: *Music Study and Personality, Psychological Types, How We Learn, The Material with Which We Work, Suggestions and Imitation.* Questions, suggestions, and bibliographies at end of each chapter. Illustrated with musical quotations.

TOUCH AND EXPRESSION IN PIANO PLAYING
Clarence G. Hamilton

Author of *Piano Music, Its Composers and Characteristics; Piano Teaching, Its Principles and Problems.* Professor Hamilton, well known as a writer and editor, was for many years head of the Music Department of Wellesley College. His *Outlines of Music History* and *Epochs in Musical Progress* are used as texts in many schools and colleges. Subject headings from this pocket guide to piano playing: *The Finger Touch, The Hand Touch, The Arm Weight Touch, The Full Arm Touch, Pedals, Expression Values, Pulsation, Phrases, Irregular Accents, Dynamic Contrasts and Shadings, Tempo, Color and Style.* Liberally illustrated with thematics and pictures.

THE VIOLIN: ITS FAMOUS MAKERS AND PLAYERS
Paul Stoeving

The author is a member of the faculty of the New York University School of Music Education. This book outlines the development and history of the violin and its playing. It gives in narrative style essential information about more than one hundred and fifty violin masters and composers. Some chapter headings: *Origin and Construction, Makers, Early Fiddlers, Some Early Masters, Viotti, Paganini, General Development of Violin Art, Methods.*

FUNDAMENTALS OF VOICE TRAINING
D. A. Clippinger

Member of American Academy of Teachers of Singing, one of Chicago's leading teachers of the voice, organizer and conductor of the Chicago Madrigal Club and other choruses. Author of *Head Voice and Other Problems; Systematic Voice Training,* etc. Covers such questions as: *Is the Tone True to Pitch? Has It the Right Power? Is It Resonant or Breathy? Is It Steady or Unsteady? Is the Breath Support Right? Is the Vocal Organ Free from Tension? Is the Tone Emotional? Is It Produced without Effort? Tone, Diction, Interpretation, Practice, Technic, Use of Imagination, etc.*

HOW A DEPENDABLE PIANO TECHNIC WAS WON
Harriette Brower

The author made a lifelong study of the most practical methods for solving piano students' problems. Her book gives a common-sense way of studying the piano and its music. It is written in an informal style as a series of letters. Some of the subjects covered are: *Scale Playing, Staccato Chords, The Marcato Touch, Arpeggios.* Illustrated with thematic passages and diagrams showing correct finger and wrist movement.

TWENTY LESSONS IN CONDUCTING
Karl Wilson Gehrkens

As a first book it is a manual of practice by which baton technic can be secured. Success in conducting depends upon the acquirement of the fundamentals so clearly taught in this book. Music scores are provided that cover each problem, and cuts illustrate the rhythm for baton movements.

NOTED NAMES IN MUSIC
Winton J. Baltzell

As editor of *The Etude,* and afterwards of *The Musician,* the late Mr. Baltzell became himself a noted name in music. This handbook is a Who's Who in Music. It is brought up to date with the biographies of the most noted musicians, past and present, including Americans.

THE VIOLIN STUDENT'S VOCABULARY
Eugene Gruenberg

The author's lifelong devotion to the violin, both as an artist and as a distinguished pedagog, finds expression in this valuable handbook which tells every violin player and student concisely and exactly what he needs to know of musical terms, the rudiments of musical knowledge, practicing, the famous violinists, famous violin and bow-makers, with an historical sketch of the violin and bow. Illustrated with music-quotations.

THE GIST OF SIGHT-SINGING
Leo Rich Lewis

Written for class use in study-groups, supplying an abundance of practice material, covering all phases of pitch, rhythm, key and mode. In addition are 17 pages of Rudimentary Facts of Music.

IDEAS FOR YOUNG PIANO TEACHERS
Harriette Dexter Bosworth

This practical little volume is intended to assist the young piano teacher or the parent who supervises a child's work. It shows how to present the technical and esthetic points of piano playing in the most sympathetic and intimate manner. The author goes beyond mere technical means; she delves into child psychology and the reactions of various types of pupils to the understanding and sympathetic teacher.

MUSIC STUDY EXALTS LIFE

"CARVE OUT YOUR OWN CAREER"

by Ferde Grofé

Summer Spare-Time is Opportune Time for Profitable Reading and Study of Music Subjects

HARMONY BOOK FOR BEGINNERS

By Preston Ware Orem, Mus. Doc.

Some knowledge of harmony is an asset to every music student. It helps him to "think musically." This book begins with the rudiments and proceeds as far as the dominant seventh chord and makes a start in melody writing. Ideal for use as a text book for an intensive summer course. Blank staves are provided, right in the book, for writing out all exercises, making the completed work of added value for future reference.

Flush Cloth Bound—Price, $1.25

THEORY AND COMPOSITION OF MUSIC

By Preston Ware Orem, Mus. Doc.

An ideal text book for students past the elementary stages in the study of harmony. Fine for either class or private instruction. The work is presented in the same fascinating style as that in *Harmony Book for Beginners* and it enables the pupils to make a practical application of knowledge gained to the composition of music.

Flush Cloth Bound—Price, $1.25

THE ART OF INTERWEAVING MELODIES

By Preston Ware Orem, Mus. Doc.

This is a first study in counterpoint for students of all ages. Not a dry, pedantic series of exercises but a breezy, colloquial discussion of the subject that actually makes good reading. The author treats the study of counterpoint as a method of making enjoyable music, not as the assignment of a group of mathematical problems that must be solved. Of course, a thorough knowledge of harmony is presupposed before taking up this book.

Flush Cloth Bound—Price, $1.25

THE STRUCTURE OF MUSIC

By Percy Goetschius, Mus. Doc.

This volume represents the crystallization of many important principles the author learned from a lifetime of experience in teaching, lecturing and writing on theoretical subjects. Without being voluminous, it covers an amazing amount of detail on the subject. But, best of all, in writing it Dr. Goetschius has adopted "a simple, intimate diction, not disdaining homely metaphor" and anyone who loves music will find it thoroughly readable.

Cloth Bound—Price, $2.00

MUSICAL ESSENTIALS

By Harold B. Maryott

Information on everything from the rudiments of music to the study of musical form. Probably the most compact, yet comprehensive, book of its kind extant. Yet the elementary part of it is so plain that one with no knowledge of music readily can understand its precepts.

Price, $1.00

MANUAL OF MODULATION

By Preston Ware Orem, Mus. Doc.

A great deal can be accomplished with this little book in hours of leisure during the summer months. Organists and those who accompany singers will find it especially valuable. Teachers may use the book for "part-time" study classes. Self-help students should be benefited by a study of its contents.

Price, 40 cents

STANDARD HISTORY OF MUSIC

Latest Revised and Enlarged Edition

By James Francis Cooke

Organizing and conducting music history classes, using this book as the basic text, is a profitable and enjoyable undertaking for many teachers. No particular training or public speaking ability is necessary. The logical and practical arrangement of the *Standard History* simplifies the work of the teacher and makes the subject clear, interesting and entertaining to class members. The book reads like a fascinating story, includes over 200 illustrations and phonetically gives the pronunciation of hundreds of names and words of foreign origin.

Cloth Bound—Price, $1.50

LIFE STORIES OF GREAT COMPOSERS

By R. A. Streatfeild

In order to perform more efficiently the works of the masters, a knowledge of their lives, their ambitions, their struggles and their triumphs, is especially helpful. Read up on the great contributors to the art of music this summer. Here is a book that reveals the human side of our great in music, an author who makes them real living beings, not vague "footprints on the sands of time."

Cloth Bound—Price, $2.25

THE SHORTEST WAY TO PIANISTIC PERFECTION

By Karl Leimer and Walter Gieseking

This book, the collective work of a master teacher and a great piano virtuoso, gives an intensely interesting and helpful discourse on the technical and interpretive problems of modern piano playing. Such important points as *What touch offers the maximum of ease and accuracy? What is the best position at the piano? What is "pressure playing"? How can you produce a "singing tone" in piano playing?* are clearly and concisely explained.

Price, $1.50

CHOIR AND CHORUS CONDUCTING

By F. W. Wodell

A treatise on the organization, management, training and conducting of choirs, choral societies and other vocal ensembles. Also contains helpful advice on orchestral work, festivals and competitions. 260 pages.

Cloth Bound—Price, $2.25

Price, $2.00

OCTAVE VELOCITY

By James H. Rogers

Twenty-four short, interesting exercises and etudes of medium difficulty. All forms of octave work are introduced, each study containing plenty of work for either hand. The author made these studies musical as well as educational.

Price, 60 cents

EXERCISES FOR DEVELOPING ACCURACY IN PIANO PLAYING

By Gustav L. Becker

Here is a fine set of studies to work on during summer hours. They have been referred to as "keyboard gunnery" and, in addition to developing accuracy in piano playing, should help the student to improve his sight reading.

Price, 75 cents

FINGER GYMNASTICS

By Isidor Philipp

This original work on piano technic is not one for the beginner. In fact, it should be the prized possession of every earnest, ambitious student, not only for summertime activities but for daily practice of its exercises throughout the year.

Price, $1.50

MASTERING THE SCALES AND ARPEGGIOS

By James Francis Cooke

A thorough mastery of the scales is the foundation of piano technic. This book may be taken up by pupils as early as the second grade, and supplies material for practice throughout the entire student career.

Price, $1.50

Books That Piano Students Will Enjoy Reading—

WHAT THE PIANO PUPIL SHOULD KNOW

By Clarence G. Hamilton

The author, for many years, was editor of "The Teachers' Round Table" feature of *The Etude.* From his wide experience he outlines definitely helpful knowledge to guide and inspire ambitious students. This book also is a valuable manual for young teachers.

Cloth Bound—Price, $2.00

PIANO PLAYING WITH PIANO QUESTIONS ANSWERED

By Josef Hofmann

A highly esteemed source of information upon vital points in piano playing. All interested in piano music should have this great virtuoso's guide to modern piano playing and his authoritative answers to 200 specific questions.

Cloth Bound—Price, $2.00

DR. HENRY HADLEY

BORN–DECEMBER 20, 1871
DIED–SEPTEMBER 6, 1937

Jessie L. Gaynor
and
Dorothy Gaynor Blake

NAMES NOTABLY ASSOCIATED WITH SUCCESSFUL EDUCATIONAL MATERIALS FOR JUVENILE MUSIC STUDENTS

JESSIE L. GAYNOR, gifted composer and pioneer specialist in modern methods of juvenile piano instruction, was born in St. Louis (1863). She was a member of the Chicago Conservatory staff and later conducted her own school of music. Her music education was largely obtained in Boston. Mrs. Gaynor was one of the first to teach both clefs from the start and to use games, songs and drills to inculcate a sense of rhythm in juvenile students. She died in Webster Groves, Mo. (1921)

DOROTHY GAYNOR BLAKE is the musically gifted daughter of Jessie L. Gaynor. Being thoroughly imbued with her mother's principles and ideas of teaching music to children, she has not only brought to completion many unfinished works of her mother, but has published and is producing much valuable piano educational material. She has also written many interesting original compositions for piano (solo and ensemble) violin, organ, and chorus.

Educational and Recreational Books for Juvenile Piano Students

A METHOD FOR THE PIANO

For Little Children — **By JESSIE L. GAYNOR**

Published late in Mrs. Gaynor's career this book really is a transcription to the printed page of her successful plan of teaching by which little children quickly comprehend the beginnings of piano playing. Includes interesting pieces and teacher and pupil duets. Price, $1.00.

MINIATURE MELODIES

For the Young Pianist

By JESSIE L. GAYNOR — **IN 3 VOLUMES**

The very first supplementary material for tiny tots studying the piano starts Vol. 1; some are pieces of only 8 measures. These pieces are all progressively arranged and in Vols. 2 and 3 of Miniature Melodies the selections reach well into the second grade. Price, 75 cents, each volume.

FINGER PLAYS

Elemental Hand and Finger Exercises

By JESSIE L. GAYNOR

A half dozen games, with interesting and descriptive verses and charming tunes, for use in teaching hand position and finger movements. Numerous illustrations accompany the descriptions. Price, 60 cents.

FIRST PEDAL STUDIES

By JESSIE L. GAYNOR

This is probably the most frequently used of Mrs. Gaynor's educational works for very young piano students. It gives the juvenile the fundamental work in pedal technic which must prepare for the further study as an advanced student and does so in an understandable manner, interesting to the pupil. This book may be taken up in the second grade. Price, 60 cents.

MINIATURE DUETS FOR TEACHER AND PUPIL

By JESSIE L. GAYNOR

Fascinating little four-hand numbers that supply sight-reading material for tiny tots. Some have the pupil's part in the *Primo*, others in the *Secondo*. The pupil's part is printed in special large-size notes, almost all of the pieces remaining in the five-finger position throughout. Price, 75 cents.

MINIATURE MELODIES FOR TWO

Melodies by JESSIE L. GAYNOR

Arr. by Dorothy Gaynor Blake

These are duets for two players of equal grade. They will be found valuable for use as first recital material. Among them are four-hand arrangements of some of Mrs. Gaynor's most popular piano pieces. Grade 2. Price, 75 cents.

A DUET BOOK

For Teacher and Pupil — **By DOROTHY GAYNOR BLAKE**

A book of four-hand numbers for first grade pupils of more mature age, or those whose home environment has created an appreciation of good music. The teacher's part is full and rich harmonically while the pupil's part, sometimes in the treble, sometimes in the bass, always is interesting. P., 75c.

Song Books for Children

SONGS OF THE CHILD WORLD

Three Volumes

By ALICE C. D. RILEY and JESSIE L. GAYNOR

The most popular collections of children's songs published. For years these have been used in the home, in the kindergarten, in primary classes in public and private schools, and in juvenile clubs and societies. The songs are classified for various seasons and occasions, for various activities in the life of a child. They are educational, recreational, yes, and even devotional, as several sacred songs for Sunday school groups are included.

Cloth Bound. Price, $1.25 each

SONGS OF MODERN CHILD LIFE

By JESSIE L. GAYNOR and DOROTHY GAYNOR BLAKE

This book, the last work of Mrs. Gaynor, has groups of juvenile songs devoted to health, safety, science and invention, the home and community relationship. These were suggested by the Council of Public Safety and the Child Health Organization of America.

Cloth Bound. Price, $1.00

HEALTH SONGS

By JESSIE L. GAYNOR and DOROTHY GAYNOR BLAKE

These eleven songs are those listed under the above captioned classification in "Songs of Modern Child Life," and published in an inexpensive paper-bound book for convenience and economy in distributing copies to children and parents. Price, 25 cents.

SONGS AND SHADOW PICTURES

By JESSIE L. GAYNOR

A little art-music book of songs for children. The verses were contributed by Rachel Barton Butler and the shadow picture illustrations are in free-hand paper cutting by Susanne Fenimore Tyndale. Makes a most delightful gift book for youngsters. Price, 75 cents.

SACRED SONGS FOR LITTLE CHILDREN

By JESSIE L. GAYNOR

Here is a fine collection of devotional songs for children to sing, not only in Sunday school, but at home and in school on weekdays as well. The index is classified for various occasions and purposes. Price, 75 cents.

Children's Songs

By JESSIE L. GAYNOR

The Elephant	$0.50
Ho! St. Nick	.40
One-a-Penny	.30
The Tin Soldiers	.50
Twilight Song	.30
What a Very Handy Thing a Monkey's Tail Must Be	.40

DANCES AND GAMES FOR CHILDREN

The Descriptive Text by Susan Hoffman Gilman

The Silhouettes by Susanne Fenimore Tyndale

The Music by JESSIE L. GAYNOR

A book for teachers of dancing who wish to make their classes instructive play and formative activity. Ideal for juveniles, for grade school children and for playground groups. Price, $2.00.

THIRTY RHYTHMIC PANTOMIMES

Song Texts by Alice C. D. Riley

Music by Jessie L. Gaynor

Descriptions and Illustrations By DOROTHY GAYNOR BLAKE

From the celebrated *Songs of the Child World* volumes Dorothy Gaynor Blake has selected for this book thirty most attractive songs. Accompanying each are clever "match-stick" drawings which show the rhythmic action for young people. Besides the rhythmic consciousness developed, the child thus is given early training in music appreciation and group activity work. Mothers, too, can use these rhythmic pantomimes and songs with pre-school children in the home. Suggestions for use of the rhythmics with other songs in the original volumes also are given. Complete texts, of course.

Price, $1.25

Cantatas, Operettas, Chorus Collections

THE MAGIC WHEEL

An Opera in Two Acts

Book and Lyrics by Alice C. D. Riley

Music by JESSIE L. GAYNOR

A complete evening's entertainment in this romantic, old-world story, delightful music and clever dance numbers. It calls for a large cast and chorus which may be selected from senior and junior high school students. Vocal Score, $1.50; Stage Manager's Copy, 50 cents.

THE RETURN OF PROSERPINA

Cantata for Female Voices

Book by Alice C. D. Riley — **Music by Jessie L. Gaynor**

May be given in concert form, but is much more effective if given with actions, costumes and scenery. Requires two soloists and the average girls' chorus of high school age. Vocal Score, 60 cents.

Jessie L. Gaynor's SONGS FOR GIRLS' VOICES

Texts by Alice C. D. Riley

Part songs and unison songs for use in intermediate and high schools or girls' glee clubs. Price, 75 cents.

A Notable New Piano Course...

BERNARD WAGNESS PIANO COURSE

•

The Preparatory Book

of the Bernard Wagness Piano Course

Its New, Logical and Practical Procedures Lead to Real Achievements with Beginners

The individualized steps, which concentrate on each separate and distinct problem in the young piano pupil's beginning lessons, gradually develop and correlate each utilized faculty. These faculties—the tactile, the aural, the mental, the visual, and the rhythmic—then are coordinated in synchronous use through phrase-wise reading. This book gives a new approach to reading, presented and developed through logical laws of physiology, psychology, and pedagogy.
The "Wagness Preparatory Book" will serve as a most helpful preliminary book to any Piano Course or Method. It will serve the veriest beginning needs in private or class piano instruction.

Price, 50 cents

Book One

of the Bernard Wagness Piano Course

Excels in Features of Vital Importance to Teaching with Success

A full array of *Keyboard Diagrams* correlating through three octaves with notational principles. A thorough course in *Rhythmic Training*. A completeness in *Flash Card Assignments*. An adequate illustrated approach to *Keyboard Harmony and Transposition*.
A detailed illustrated course in *Piano Technic* objectively developing (1) Suppleness of arm and wrist, (2) Organization of the hand, (3) Passage Legato. A most even graduation of *Reading* material. A superb pedagogic development of Ear Training that makes teaching of piano beginners a grateful undertaking and makes first piano playing efforts a delighting experience.

Price, $1.00

Book Two

of the Bernard Wagness Piano Course

So Well Planned for this Stage of Study as to be Suitable for Following Any First Instruction Book

Progress is a paramount aim in this book and it is achieved as rapidly as is logically consistent with proper technical support, good ear discernment, and basic musicianship. The supplementary pieces which are used throughout this book supply the pupil with a first recital repertoire of a commendable character. These pieces "match up" and progress in the right sequence with the principles of keyboard harmony made clear in the moving along of lesson materials. Technic needs are developed through copiously illustrated principles to be practiced in gaining greater ability in mental control over the hands, arms and fingers.

Price, $1.00

FREE TEACHER'S MANUALS

Booklets giving valuable suggestions for teaching procedures with the above works will be sent FREE to any interested teacher upon request.

"A SYMPHONY A DAY" — an Editorial

PIANO EDUCATIONAL WORKS
of Unusual Merit

Modern Piano Instruction Books by LOUISE ROBYN

TECHNIC TALES—Book 1

By Louise Robyn **Price, 75 cents**

May be used in conjunction with any first grade instruction book for the piano. It contains the fifteen essential principles in first year piano technic, building up the child's hand so that his finger dexterity equals his music-reading ability, thus aiding his interpretative powers. Each principle is introduced in story element, a feature that appeals to the child's imagination and creates interest.

Teacher's Manual to Technic Tales—Bk. 1
Price, 75 cents

TECHNIC TALES—Book 2

By Louise Robyn **Price, 75 cents**

A continuation of Technic Tales—Book 1 for the second year of study at the piano. It contains fifteen additional technical principles, including the trill, arm attack for single tones and triads, various crossing problems, alternate wrist action, finger staccato, melody tone, marcato chords, repeated notes, two-note slurs, etc.

Teacher's Manual to Technic Tales—Bk. 2
Price, 75 cents

CHORD CRAFTERS
Technic Tales—Book 3

By Louise Robyn **Price, 75 cents**

The new and augmented edition of this work introduces the twelve fundamental chord-attacks—marcato, legato, staccato, hammer, arpeggiated, sforzando, pizzicato, accompaniment, single finger melodic, melodic high and low voice, passage chord, and alternate chords. These may be given to students about ready for grade 4.

THE ROBYN HARMONY—Book 1

By Louise Robyn and Howard Hanks **Price, 75c**

A JUNIOR COURSE, for students of ANY AGE, in written harmony, keyboard harmony, and ear-training, suitable for private or class instruction. A MASTER KEY for the teacher is included as part of the book. The nature of the lessons is that of a chain of fundamental harmonic facts, each necessary to complete the preparation for the mature study of harmony.

THE ROBYN HARMONY—Book 2

By Louise Robyn and Howard Hanks **Price, 75c**

This book continues the development of the material contained in Book One, and also includes a MASTER KEY for the teacher. Years of pedagogic experience have gone into the preparation of this book.

THE ROBYN-HANKS HARMONY—Book 3

By Louise Robyn and Howard Hanks **Price, 75c**

This new book carries on the work of Book 1 and Book 2, taking the student along in harmonic study right up to a point where continued work may go on into four-part writing. The authors of this book, and the two preceding books, are highly esteemed members of the faculty of the American Conservatory of Music, Chicago, Illinois.

Instruction Material for Juveniles

A PLEASURE PATH TO THE PIANO

By Josephine Hovey Perry **Price, $1.00**

This fascinating study book for the very youngest student of the piano starts as a rote-playing book wherein the child (a) sings and plays a selection by rote, (b) reads what has been played, and finally, (c) writes it. Gradually the young student is advanced until reading and playing are welded into one. All of the material is presented in story form and the book abounds in illustrations that appeal to the child imagination. Ask for FREE copy of brochure on the psychology, pedagogy and procedure in pre-school piano teaching.

THE HOUSE THAT JACK BUILT

By Josephine Hovey Perry **Price, 75 cents**

This is a splendid book for helping little children of primary grade ages to learn to read music notation and to play on the piano keyboard that which they read. By means of note, key, and finger charts it makes very clear the relation of the position of the notes on the staff to the keys of the piano. There are many charming illustrations accompanying the attractive little pieces and showing very graphically the various interval skips in a unique manner.

BUSY WORK FOR BEGINNERS

A Writing Book for Little Pianists

By Josephine Hovey Perry **Price, 60 cents**

The object of this book is to furnish entertaining and constructive "busy work" to little folk beginning piano study. Especially is this useful in class instruction. It aims to teach the relationship between the fingers, piano keys, and their note representation on the grand staff. All directions are in rhyme. Teachers of private pupils frequently assign this book as "home work" to stimulate the child's interest.

MORE BUSY WORK FOR THE PIANO BEGINNER

A Writing Book with a Musical Approach

By Josephine Hovey Perry **Price, 75 cents**

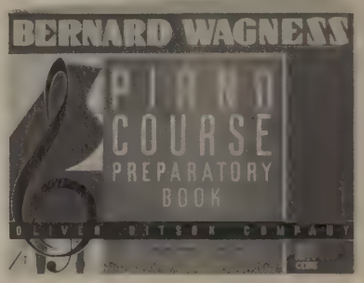
The immense success of the author's previous book "Busy Work for Beginners" inspired the publication of this book giving carefully prepared "busy work" for pupils who have advanced to the First Grade in music. It may be used, especially in class teaching, with any modern piano instruction book.

FOLK SONGS AND FAMOUS PICTURES

By Mary Bacon Mason **Price, $1.00**

A method book designed to meet the needs of piano beginners from seven to eleven years of age. Notation, rhythm, scales, keyboard harmony, transposition and musical form are presented in a most efficient and unique manner. Three dozen art pictures and over a half-hundred cards are provided. The former are to be cut out and pasted in the book at designated places; the latter are cut out at the teacher's direction and the item of information they contain memorized.

Teachers should be sure to send for the brochure *How to Teach the Nine Year Old Beginner*, a Teacher's Manual for this book. It's FREE for the asking.



YE CHRISTMAS PIANO BOOK
CHRISTMAS CAROLS
Made easy to play or sing
By MARY BACON MASON

An attractive Christmas gift for little players, with large-size notes, full fingering, the text of each of the 34 carols, and next to each a space in which to paste an appropriate Christmas card. Truly Ye Christmas Book.

Books of Music That Delight Child Pianists

MY FIRST SONG BOOK

Familiar Songs in Very Easy Arrangements

By Ada Richter

(Price, 75c)

HOLIDAY CASH PRICE 50c, *Postpaid*

40 songs that everybody knows, arranged so simply that almost anybody can play them on the piano, even youngsters who have had but few lessons. Complete texts are given to enable Mom and Pop to join in the fun.

PRISCILLA'S WEEK

Seven Little Characteristic Piano Pieces

By Mathilde Bilbro

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

These interesting first grade pieces in text, music, and quaint illustrations, follow busy little Priscilla through her week of domestic responsibilities.

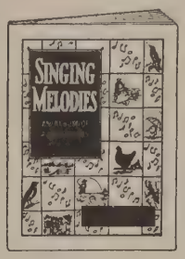
CINDERELLA

A Story with Music for the Piano

By Ada Richter

(Price, 60c) HOLIDAY CASH PRICE, 40c, *Postpaid*

A telling of the fascinating childhood story illustrated with descriptive piano pieces about grade 2. Can be given as a playlet. Plentifully interspersed with line drawing pictures that may be colored.



MELODY JOYS for GIRLS and BOYS

First Grade Piano Solos

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

This is an ideal type of piano album for a Christmas gift to a pupil in the first year of study because it just seems to fit into the happy play spirit of young boys and girls at Christmas-time. It contains 29 easy-to-play pieces which present a nice variety of tunes and rhythms.

SINGING MELODIES

An Album of Piano Solos with Words

(Price, 50c)

HOLIDAY CASH PRICE, 35c, *Postpaid*

These are not merely piano solos with texts selected at random as a stimulant for the imagination; they are real songs that youngsters can both play and sing. All are safely within the range of the average child voice.

A CHILD'S JOURNEY

16 Rote Songs for Primary School Activities

By Ada Richter

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

Stories of individuals, scenes and events a child might be expected to encounter on a holiday trip. The piano accompaniments are quite simple, about grade 2. Profusely illustrated with line drawings.

Attractive Albums for Advancing Pianists

PLAY WITH PLEASURE

An Album for the Grown-Up Piano Student

Compiled and Arranged By William M. Felton

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

Almost a half hundred melodies, known to music lovers as radio program "signatures" and motion picture "theme music", are given here in easy piano arrangements. Younger students in grade 3 will enjoy them, too.

BOY'S OWN BOOK OF PIANO PIECES

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

Every boy piano pupil ready for the second grade of study should have this album of 28 compositions. These pieces are of types which appeal to the lads whose imaginations are as lively as their physical selves.

GIRL'S OWN BOOK OF PIANO PIECES

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

Little ladies, gifted with dainty charms and graceful qualities, will find, in these 24 grade 2 and 2½ piano solos, musical prettiness appealing to them.

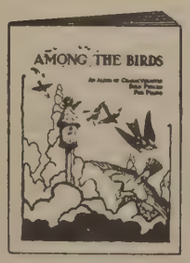
THE MELTING POT

Piano Solos Suggestive of Many Peoples Compiled by William M. Felton

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

This unique collection of easy piano solos in grades 2½ and 3 takes its title from the fact that the 33 numbers in it represent 20 nationalities and all the races.

SOUVENIRS OF THE MASTERS—For Piano



A First Introduction to the Classics

By George L. Spaulding

(Price, $1.00) HOLIDAY CASH PRICE, 60c, *Postpaid*

These 27 simplified arrangements (in second grade) of some of the world's famous music gems, bring young pianists to an enthusiastic appreciation for music of lasting worth. Title page with photographs of the masters represented.

AMONG THE BIRDS

An Album of Characteristic Bird Pieces for the Piano

(Price, 50c)

HOLIDAY CASH PRICE, 35c, *Postpaid*

The calls of our feathered songsters have been the inspiration of many composers. The early grade pieces in this book make attractive recreation or recital material.

YOUNG FOLKS' PIANO FOLIO

Pleasing Pieces for Progressing Players

(Price, 50c) HOLIDAY CASH PRICE, 35c, *Postpaid*

This is a rich offering of second and third grade material at a reasonable price, giving 34 pieces, three of which are duets.

THE SEA ALBUM

A Book of Piano Solos

(Price, 50c) HOLIDAY CASH PRICE, 35c, *Postpaid*

Early medium grade piano pieces with titles and content reminiscent of the sea and its denizens. Title design a striking sea coast picture.

Volumes of Permanent Worth for Capable Pianists

CELEBRATED COMPOSITIONS BY FAMOUS COMPOSERS

(Price, $1.00)

HOLIDAY CASH PRICE, 60c, *Postpaid*

This volume, with its 34 immortal piano solo selections, becomes the favorite of each and every good pianist or fairly advanced student into whose hands it goes. The numbers appeal to musicians and lovers of music, and an acquaintance with them is practically essential.

EVENING MOODS—An Album of Piano Solos

(Price, 75c) HOLIDAY CASH PRICE, 50c, *Postpaid*

This album contains piano compositions which carry one into the meditative mood, perhaps to become somewhat at peace with the world or to let the mind romance fancy-free. These 21 selections also are of a type suitable for church or Sunday school service that will appeal to pianists able to play fourth and fifth grade music.

A DAY IN VENICE—Suite for Piano

(Price, $1.50) By Ethelbert Nevin

HOLIDAY CASH PRICE, $1.10, *Postpaid*

The tremendous popularity of the 4 numbers in this suite—*Dawn, Gondoliers, Venetian Love Song* and *Good Night*—makes the artistically bound volume a fine gift book at this bargain price. *A Day in Venice* also is obtainable for Vocal Solo, Violin and Piano, Pipe Organ at the above price and for Trio—Violin, Cello and Piano at $1.50 during this month.

SOUSA ALBUM—For Piano Solo

Sousa

Favorite Marches by John Philip Sousa

(Price, $1.25)

HOLIDAY CASH PRICE, 85c, *Postpaid*

Some of the very best of Sousa's stirring marches are given in this album which includes *Stars and Stripes Forever, El Capitan, Bride Elect, Harmonica Wizard, The Royal Welch Fusiliers,* and others.

NUTCRACKER SUITE

For the Piano (Price, $1.25)

By P. I. Tschaikowsky

HOLIDAY CASH PRICE, 75c, *Postpaid*

INVEST YOUR MUSIC MONEY WISELY

WHY IS the Bible the cheapest book in the world? Why can you purchase the complete works of Shakespeare at less than the cost of the latest novels? The answer is simple—mass production; no royalties; constant demand.

By the same token you can buy Beethoven's "Moonlight Sonata"—15 pages of the world's best music—for only 15c. in the CENTURY EDITION.

Beautifully printed, carefully edited, the best of paper and workmanship throughout.

Think of it! Over 2,000 selections to choose from and none of them cost more than 15c. a copy. Century Sheet Music is truly dollar value for 15c.

TEACHERS who are today supplying their pupils' needs from the Century catalogue are making it possible for many parents to continue their children's musical education, and its low cost is likewise aiding them in their new student enrollment.

That's why we say, "Please Ask for Century Edition." You will get a new conception of your money's worth.

CENTURY PIANO SOLOS, 15¢ ea.

The World of Music

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

FREDERICK S. CONVERSE

FREDERICK SHEPHERD CONVERSE, widely known American composer, and the Dean of the New England Conservatory of Music, was elected to membership in the American Academy of Arts and Letters, at a meeting held on November 12th to fill ten vacancies caused by deaths. Mr. Converse holds for all time the double distinction both of having been the first American composer to have an opera presented at the Metropolitan Opera House ("The Pipe of Desire," on March 18, 1910), and of this having been the first opera ever sung there in English during the regular season.

THE NATIONAL INSTITUTE FOR THE BLIND, of London, reports that, in the period covered by its sixty-eighth report, nearly ten thousand pieces of sheet music and twelve hundred and eighty volumes were issued in the Braille notation, in which more than four hundred musical symbols have been created by combinations of the usual six domino dots of this system.

PIETRO MASCAGNI is said to have stated to an English journalist that he is actually at work upon the composition of an opera of which Napoleon is to be the central figure; and also that the work will not be ready before early in 1940.

EUGENE ORMANDY, conductor of the Philadelphia Orchestra, has been elected president of the Schubert Memorial, Inc., as successor of the late Ossip Gabrilowitsch. Leopold Stokowski, first conductor of the Philadelphia Orchestra, heads the Memorial Advisory Board.

THE NATIONAL ACCORDION CHAMPIONSHIP CONTEST (amateur) of England took place on November 6th, in Westminster Central Hall, with sixty accordion bands and twenty soloists registered. Alan Helm and his famous Accordion Orchestra, from Trossingen, Germany, were brought over by Matth. Hohner to give the closing concert. Haydn Wood, long known as one of Britain's best song writers, has turned to compositions for the accordion with a number of successful ones to his credit.

HENRY RUSSELL

HENRY RUSSELL, director of the Boston Opera House from 1909 till 1913 and advisory associate director of the Metropolitan Opera Company in 1910, died on October 11, at his London home, aged sixty-five. Mr. Russell was responsible for several seasons of perhaps the best opera in English ever produced in America, in which he gave much encouragement to American talent.

HER MAJESTY QUEEN ELIZABETH OF BELGIUM has recommended that the scope of the International Competition "Eugene Ysaÿe" of Brussels shall be expanded to include other instruments. While the original name will be retained, the present competition plans will include: 1937, violin; 1938, piano; 1939, orchestral conducting; 1940, violin; 1941, piano, and so on with other additions possible.

THE WOMEN'S CHORUS OF OTTAWA, which won first prize in the last Canadian Festival of Music, has been in England where it participated in the Grand Empire Festival.

RUTH LYNDA DEYO, American pianist ten years resident in Egypt, has written an opera, "The Diadem of the Stars," based on incidents in Egyptian history. Charles Dalton, husband of the composer, is the librettist; and they have been requested to prepare a performance to be given before His Majesty, King Farouk, the lately crowned ruler of Egypt.

THE CONCERTGEBOUW of Amsterdam, Holland, opened its season on October 7th, with Willem Mengelberg conducting a program on which Fritz Kreisler was the soloist.

DR. FRANK H. DAMROSCH, noted educator, and for many years the Director of the Institute of Musical Art of New York City, died suddenly of a heart attack on October 21st, aged seventy-eight. A son of Dr. Leopold Damrosch, eminent conductor, violinist, composer and prophet of Wagnerianism in America, he has had a notable influence on educational ideals in his adopted country, having been born June 22, 1859, in Breslau, Germany, where his father was then conductor of the Symphony Orchestra.

A HANDEL MUSEUM for London is reported to be the object of an effort to raise a subscription to purchase the house in Brook Street, just off Hanover Square, which was for some years the home of "The Old Saxon" while he dominated London's musical life.

ARTURO TOSCANINI visited the Holy Land in October to conduct the Palestine Symphony Orchestra in protest against the persecution of "Non-Aryan" musicians in Germany; this in spite of the fact that he is not Jewish himself, though his daughter Wanda is the wife of Vladimir Horowitz, the eminent pianist.

THE ANNUAL CONVENTION of the Canadian College of Organists met on August 30th, at Toronto, with representatives present from all parts of the Dominion. Dr. Healy Willan spoke on "The Relation of the Organ to Choral Music"; Mr. Campbell McInnes discussed "Diction for Singers"; and Mr. De Witt Garretson of Buffalo was among those giving demonstrations on important organs of the city.

A MUSICAL FEUD resulted in the longest active suit in the Cook County courts, one that has been before twenty-five judges in the last thirty years. This came to an end when on October 7th a municipal judge dissolved an injunction issued in 1906 which restrained the Chicago Federation of Musicians from interfering with the organization or members of the American Musicians Union. The Federation, it is reported, has now practically absorbed the local membership of the Union.

JASCHA HEIFETZ is reported to have made a contract with Samuel Goldwyn so that he will appear in a technicolor picture, "The Great Musical Festival," to be produced in the coming May. And so the Siren of Hollywood successfully lures another musical celebrity.

THE 36TH ANNUAL CONVENTION of Banjoists, Mandolinists and Guitarists, at Detroit, drew a record attendance, with president Giuseppe Pettine, of Providence, Rhode Island, in the chair. Among progressive legislation was the creation of a Student Membership with proper insignia to be worn.

DR. EDGAR STILLMAN KELLEY'S "Pilgrim's Progress" is announced for performance by the Choral Union of the University of Kansas, with Otto Miessner conducting.

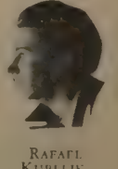
THE FAVORITE WALTZES for American audiences, according to a five years compilation by the National Broadcasting Company, are, in order of preference: *Dear Old Girl; Missouri Waltz; Down by the Old Mill Stream; Beautiful Ohio; Drifting Back to Dreamland; Kiss Me Again; Always; Three O'clock in the Morning; I Love You; Sweet and Low; Juanita; Remember; I'm Forever Blowing Bubbles; Isle of my Dreams;* and *Girl of my Dreams.*

LA SCALA of Milan announces that among the novelties to be presented during the present season are "Proserpina" by Bianchi, "Margherita da Cortona" by Refice, and "Il Volto della Vergine" of Camassi, of which composers Refice is the one best known to America.

LOUIS GRUENBERG has been awarded the prize of one thousand dollars offered by the Lake Placid Club. The successful work is a "Quintet for Piano and Strings," and it was recently heard on a program of the Lake Placid Club.

A "RUMANIAN RHAPSODY" by Liszt, formerly unknown, has been discovered in the archives of the Friends of Music of Vienna. It is in the form of a concert piece for the piano; and, aside from two themes used by Liszt in his sixth and twelfth Hungarian rhapsodies, it employs old Rumanian folk songs and dance tunes, including the opening measures of what is now the *Rumanian Royal March.*

FRED MORTIMER



FODEN'S MOTOR WORKS BAND, with Mr. Fred Mortimer as leader, won first place in the recent National Band Festival of Great Britain. Which is their sixth time in eight years to carry off the grand trophy of this so important event. Since the world famed Crystal Palace, in which all the previous of these festivals had been held, was burned in November, 1936, the competition for this year was transferred to Alexandra Palace, within the city. This seats a thousand more than did the Crystal Palace and thus nicely accommodated the five thousand competing bandsmen and the other thousands of supporters and spectators.

"THE SLEEPING BEAUTY," an opera by Beryl Rubinstein, with its libretto by John Erskine, is announced for its première on January 19th, at the Juilliard School of Music, New York.

THE ORCHESTRE SYMPHONIQUE DE PARIS, with Pierre Monteux as conductor, gave on October 11th a program which opened with the "Eighth Symphony" of Beethoven, and included the "Coronation Concerto" of Mozart with Mme. Wanda Landowska at the piano, and also Haydn's "Concerto for Clavecin and Orchestra" with the same soloist displaying "an incomparable technic" and "communicating to her audience the charming emotions so characteristic of this instrument."

THE SAN FRANCISCO OPERA SEASON opened on October 15, with a gala performance of "Aïda," with Gina Cigna in the title rôle, Giovanni Martinelli as *Radames,* Bruna Castagna as *Amneris,* Richard Bonelli as *Amonasro,* and with Gaetano Merola conducting.

HERE COMES THE BAND is the name of a journal published by the West Virginia Bandmasters' Association. It lists the bandmasters of the state and gives also a register of honor students in music in the public schools.

RAFAEL KUBELIK

THE PHILHARMONIC ORCHESTRA of Prague, conducted by Rafael Kubelik (son of Jan the wizard violinist), gave on October 13th a concert in the famous Queen's Hall of London. This was the first of three Continental orchestras invited to London for the concert season; the second to be the Orchestre Colonne of Paris, led by M. Paul Paray; and the third the Philharmonic Orchestra of Berlin with Wilhelm Furtwängler at the leader's desk.

(*Continued on Page* 60)

THE SOURCE OF PREHISTORIC IVORY

The illustration shown above is from Charles R. Knight's handsomely illustrated "Before the Dawn of History" (McGraw, Hill Book Co.), and is reproduced with the permission of the author, the publisher, and the Field Museum of Chicago. It is an artist's conception of a group of mammoths in Arctic Siberia.

You and Your Ivories

ONE hundred thousand years old! It is not impossible that your fingers have traveled many times over keyboards made from ivory that was part of the tusk of an animal who lived so far back in history that the imagination is staggered. There are numbers of instruments in existence which have keyboards manufactured from the tusks of Siberian mammoths, some of which lived as long as one hundred thousand years ago. At one time mammoths and mastodons roamed the entire earth. They probably walked over the very ground where you are now standing. In the age of ice many of these tremendous beasts were caught in the deep morasses and crevasses in Northern Siberia where they were imprisoned in Nature's cold storage from two hundred to a thousand centuries.

Siberian ivory found its way down into China, India and Japan, centuries ago. There it was worked into many kinds of art objects. The supply is said to be literally inexhaustible, although little has come into the London market in recent years. It has been displaced by African elephant ivory, because there is a great amount of wastage in cutting the Siberian product. Much of it is discolored and cracked. This is regrettable, in a sense, as some experts seem to think that the grain is even more beautiful than that of African ivory.

The state of preservation of much of the Siberian ivory has been extraordinary. The ponderous, lumbering elephantlike beasts, with their huge tusks and their hides covered with yellow brown woolly fur, sank in icy bogs as the frigid wave of destruction came down from the North Pole. Some of them became frozen in solid blocks of ice and were so protected that there is at least one specimen in a Moscow museum which when found, had edible flesh, which was soon devoured by dogs. The thought that parts of such an animal may now be the race course for Czerny exercises performed by little sister, is both comical and appalling. The tusks of these prehistoric animals were truly gigantic. Some have been dug up at Dungeness on the south coast of Kent in England, which were twelve feet in length and weighed two hundred pounds.

Modern ivory comes from many sources, the elephant, the walrus, the boar, the wart hog, the narwhal and the hippopotamus. One of the curious uses, to which hippopotamus tusks were applied in former days, was the manufacture of false teeth. Imagine having a set of teeth in your mouth that once belonged to what Barnum called "the blood sweating Behemoth of the boiling Nile." The importation of hippopotamus tusks was once a sizable industry in England, where the "beastie" was known as a "sea horse."

The quality of ivory varies pronouncedly according to the part of the world from which it comes. What is known as "soft" ivory is that which is conceded to be the best for piano keys; and the supply of soft ivory is now limited almost exclusively to elephant tusks from the east coast of Africa. The lordly African elephant is very different in many ways from his Indian and Ceylon cousins. The largest elephant ever exhibited in America was an African elephant, Barnum's famous "Jumbo," who was surprisingly docile for his type.

The African elephant is usually literally untamable and is never put to work. When Hollywood filmed "Trader Horn," the scene of which was laid in African jungles, the producers realized that it was out of the question to introduce African elephants, because there were only a very few in the United States and these could not be worked. Consequently the only alternative was to doctor up Indian cow elephants, with big artificial ears to make them look like African elephants. The result was a curious and impossible mongrel without the height and the tusks of the huge African type. Both sexes of the African elephant grow lengthy tusks. A pair of tusks was presented by African admirers to George V of England, on the occasion of his marriage in 1893. They measured 8 ft. 7½ in. and weighed 165 pounds. In 1898, however, natives appeared at a port in Zanzibar, bearing a pair of tusks weighing four hundred and fifty pounds. The record tusk, which is now in London, is eleven feet and eleven inches long. One can only imagine the size of an elephant with tusks twice as tall as a man.

Only the male Indian elephant has sizable tusks, and they are small compared with those of the African. Neither sex of the Ceylon elephant has tusks, and those of

A GLAD NEW YEAR OF JOY AND PROSPERITY TO ALL READERS OF THE ETUDE!

the American relative, the tapir, are insignificant. The quality of the Indian ivory is generally considered inferior for piano keys. African ivory is not so readily affected by changes of climate, and does not crack so easily. Moreover it is very agreeable to the touch. Just why the elephants on the west coast of Africa, in the huge Belgian Congo, do not produce the fine ivory that comes from Zanzibar, Ethiopia or Tanganyika, no one knows, but the line of division between good and bad ivory, judged from the standpoint of piano keys, seems to run right down the center of Africa.

Many imagine that the production of ivory is the result of a great slaughter of elephants. This fortunately is not the case. The ivory is "dead" ivory and most of it has been dead for over a hundred years. When an elephant died and his body was found by the natives, it was the custom to preserve his tusks and to use them as fence posts around a settlement. It is these posts that are brought in to the traders by the natives. Very little ivory has resulted from killing the animal. There are apparently still enormous reserves of this "dead" ivory in the interior of Africa.

The ivory used in piano keys is bleached to make it as white as possible. Strange to say, in England the organ builders and organists show a preference for unbleached ivory, yellowish in color.

Various kinds of materials have been used for keyboard purposes; bone, wood, metal, mother of pearl and various synthetic imitations of ivory. We once knew a pianist who claimed that his keyboard was made from human bones, but we are certain that this bore no more responsible confirmation than that of a nimble tongued press agent.

The black keys of the piano are of course, of wood, ebony being used in the finer instruments and hardwood, stained black, being used in others. None of the substitutes for ivory seem to equal it in its peculiar qualities of durability, beauty, agreeable feeling to the touch and general workability. Ivory is, intrinsically, cooler to the touch, and, being somewhat porous, it does not become slippery. Good ivory keeps in fine shape on the keyboard of a well kept piano, for at least twenty-five years; while many of the substitutes may deteriorate in five or ten years. The condition of the ivory is even affected by the physical condition of the individual player.

The perspiration from the fingers of some pianists is more acid than from others, and in time this acid will discolor ivories. Ivory will remain whiter when exposed to sunlight and air. Avoid exposing your piano to damp air, which is liable to make the action and keys stick and will cause the strings to rust.

Do not clean your ivory keyboard with soap and water. This may lead to softening of the glue and the ivory may drop off, causing you much inconvenience. The best way is to moisten a cloth slightly with pure alcohol. Be careful of course, that the cloth does not come in contact with the wood of the case, as that will injure the varnish. Alcohol is also a disinfectant and will kill bacteria and microbes, thus keeping the keyboard in more sanitary condition.

The Etude is indebted to Mr. James A. Gould, President of Pratt, Read & Co., Inc., and to Mr. George C. Seeley of the same company, the largest American manufacturers of ivory piano keys, for the valuable information contained in this editorial.

Extending the Ministry of Music

WHEN Alexander Graham Bell invented the telephone he had in mind quite a different project. It was a project to help those who are hard of hearing to be admitted to the joys of music. The result has revolutionized all ideas of communication, yet his main object was not immediately accomplished. It is only within comparatively recent years that inventive genius has provided apparatus which really makes it possible for one with diminished auditory sense to hear conveniently without making himself conspicuous. The writer has known many brilliant men and women who have been afflicted with deafness to a serious degree. One of these was the great Shakespearean scholar, Horace Howard Furness, who was passionately fond of music, especially the music of the Elizabethan period; and many times the writer went to his home and played for him these old Elizabethan melodies, while his wife sang them into the old-fashioned, funnel-shaped contraption upon which the deaf, up until a short time ago, were obliged to depend.

The writer also recollects seeing Thomas Edison, on different occasions, with his ear "glued" to the side of a piano, in order to get faint vibrations from the instrument. Edison's defective hearing may have been a help to him, because he was obliged to concentrate so intensely. He was distinctly a man of his own mind and selected the compositions which he chose to be made into records, despite the fact that he was not a musician. His good judgment in this connection is indicated by the circumstance that he picked several forgotten compositions by the empirical process which characterized all of his work, and these records were very successful. Even during his lifetime acoustical devices for the deaf were so cumbersome that the great inventor was not inclined to bother with them.

Now, however, there are devices some of them stationary in theaters, halls, and churches, and others carried by the individual, which virtually open up a new life to those with defective hearing. At first these devices, although not particularly conspicuous, attracted attention. Now they are so common and so inconspicuous that thousands use them and are blessed by their possession.

Signum Asinum

IN THE middle ages it was the custom to leave out the accidental sharp before the seventh degree in pieces written in the minor scale. In other words, anyone who claimed to be a musician, when he came to read a piece in A-minor, was expected to play G-sharp instead of G-natural, although there was no mark to tell him to do so. Such an accidental, when it appeared (according to the English *Music and Youth*), was called a *signum asinum*, or ass's sign, because it was inferred that anyone who needed such a remainder was an ass. Many musical terms have a similar curious derivation.

A Fine Precedent

MANY of the older readers of THE ETUDE are familiar with the name of T. L. Rickaby as the writer of a long series of excellent practical articles. For thirty-six years he has served as organist for the First Presbyterian Church at Taylorville, Illinois.

Taylorville is in Christian County, south of Springfield and Decatur. It has a population between eight and ten thousand and is a representative progressive middle western city, reflecting the splendid spirit of the Heart of America.

The First Presbyterian Church must have a congregation distinguished for both justice and heart; since, in recognition of this long and faithful service, they have made Mr. Rickaby their organist emeritus and have continued his usual salary for life. He is to give his customary number of organ recitals and also to train the church string ensemble; but he is relieved of all other duties. Only too often have we known churches where those in charge have forgotten both religion and long service and have summarily dismissed—after years of hard service—a worthy clergyman, a worthy singer, or a worthy organist, without any just and adequate consideration whatever for that tragic moment in some lives when a regular income is most needed.

All honor to the good people of Taylorville who are distinguishing a worthy servant of the Lord in this fine manner and making themselves a true example of Christianity in its highest sense. Sometimes we wish that many church members would read the forty-first verse of the ninth chapter of the Gospel according to St. Mark.

The Saga of Virgil W. Bork

The remarkable story of a successful musician who was "brought up under ground" and now directs the large Union County Band and Orchestra School in Roselle, New Jersey

Secured expressly for The Etude

By JAY MEDIA

NO MORE ASTONISHING story than this one of life struggles and musical achievements, ever has appeared in THE ETUDE. We have inspected personally the unusual work of the Union County Band and Orchestra School, in the High School Building at Roselle, New Jersey. We could write chapters about the hypnotic absorption of the students from six year old children to men along in years. The reason why it appears in THE ETUDE is that we are convinced that it must be only the forerunner of hundreds of such schools in the Americas. As for Virgil W. Bork himself, he is one of the most amazing figures in our individual and distinctive art life in America. We have heard him conduct such a work as Tschaikowsky's "Marche Slav," as played by his excellent leading student band at Roselle, in a way that would put to shame many a professional band. The orchestral work at the school, under the skilled baton of A. H. Brandenburg, head of the Instrumental Department of the Elizabeth (New Jersey) Public Schools, was also very fine. The accomplishments of the school have been highly praised by many foremost educators and musicians, including Dr. Walter Damrosch, Dr. Hollis Dann, Dr. Edwin Franko Goldman, Clifford Demarest, Thomas Wilson, and J. W. Fay.

Although Mr. Bork insists that he is only beginning his career, and modestly gives most credit for the success of the Roselle enterprise to his associates, his fortitude and achievements are distinctly heroic. Let us present them in his own words.—*Editorial Note.*

* * * * *

The Seeds are Sown

MY NAME IS Virgil Wladyslaw Bork, which the reader may discern is part German and part Polish. My father, Wilhem Gorgoniusz Bork, was a Pole of German ancestry, and I was born at Zakszow, Poland, June 13, 1892, youngest by six years of the family of ten children, six of whom died very young, and the remaining four of us were all boys—Michael, Jan, Alexander, and myself. Father was the administrator and manager of a large estate in this remote rural section. He was a man of cultural background and spoke, read, and wrote in the German, Russian and Polish languages. Our home, therefore, was not like the peasant's home, as there were plenty of good books, which were devoured, and some music. Conditions in Russian Poland were terribly oppressive (a fact well known). From sources unknown to me, we learned of the land of gold across the seas, and my oldest brother, Michael, ventured there. After a year or so he came back and told us about the wonders he had experienced in this new world of our dreams. I still can visualize him sitting in front of the fireplace and talking to us in his newly acquired English language, as we sat there with our mouths open in amazement, not understanding a word he was saying.

Shortly after this my father decided to venture to this wonderful land of opportunity. After he had been gone two years, he sent for us. While we were frightened at the thought of getting out of Russian Poland, we were thrilled with the opportunity to leave for the New World. We were soon on our way to the Austrian border

VIRGIL W. BORK AS A MINE WORKER IN 1910

which, when passed, insured our safety. Through friends we came in contact with one of the men who made a business of smuggling refugees over the border. We walked for hours with our heavy luggage until nightfall. Our guide led us into an old barnhouse belonging to his friend. The location being near the Austrian border, he told us to rest a little and to keep perfectly quiet while he went out scouting to make sure that the Russian border patrol was far enough away to insure our safe crossing. About midnight we were signaled to follow him very quietly or we might be caught by the guards, deported, and thrown into Ciurma (jail) for attempting an illegal escape from the country. (At this time a family having healthy sons could not leave the country without a permit, which was practically unobtainable; for all of the sons, with the exception of the eldest, were subject to service in the Czar's army.) We walked, and at times almost crawled, through a forest, with our guide just ahead of us. At one time we heard from a distance, gunshots which made our teeth chatter and caused us to be all the more cautious in moving. Slowly we were nearing a swampy stretch of land which, as we could see by the early dawn, was spotted with sheets of water and numerous winding streams which we had to cross. In making our way over one of these streams, I slipped off a log and fell into the water, losing my beloved cap. My brother reached down and pulled me out. Finally we got over the border, and, though we were exhausted, there was great rejoicing. Then came the long journey to the New World. Our destination was Snake Hollow in West Virginia, a little mining settlement near Glen Falls. The spot was well named, as the country thereabouts was simply alive with snakes of many kinds. The little settlement is now no more, but I have no doubt that the snakes are still there! Nothing frightened me more than a snake, and therefore I was very glad when my father, who had become a worker in the bituminous coal mines, took me at the age of eight down into the mines and started me off on the career of a coal miner.

In Darksome Mother Earth

THE SHAFT LEADING to a bituminous mine is ordinarily not sunk perpendicularly, as in the case of anthracite mines; and there are not the dangers from fire damp and explosive gases that are found in the lodes of harder coal. The entrance to these mines is through a horizontal shaft in the side of a hill. This shaft, called "a heading," winds through the various tunnels leading to the rooms where the coal is mined. There in this mine (and several others), far below the surface of the earth, I spent the most of the next decade of my life; and there I started my musical career. Of course, it would be illegal now for an eight year old child to work in the mines; but understand, I was with my father, and everything seemed tremendously interesting to me. The mine was my world. I had no regular attendance at school, but somehow I learned to read and write English. There were no modern equipments, no electric lights, no ventilation save bonfires here and there below vertical shafts which led to the surface and carried off the bad air. There were miles and miles of track in the mine, and the cars were pulled by trained mules and horses. We entered the mine at one-thirty, two, or three A. M., and we stayed down there until five or six P. M., that same day, in other words, about fifteen hours underground. My father did not force me into the mine. I followed him. In fact he could not keep me out. Despite the fact that I was an overgrown boy, I worked very hard, in the dark, at a very hazardous occupation, but my health was generally remarkably good. I honestly cannot see that the experience did me any damage physically.

VIRGIL W. BORK, TO-DAY

Digging "Black Diamonds"

THE MINING WORK was thrilling, though dangerous. One went into a chamber and, with a pick, dug into the side wall at its bottom a cavity along the face of the coal, about eighteen or twenty inches high, and excavated to a depth of about four feet. You see, one had to lie down on his side to bore in with a pick in this way. After this hole was made, a miner took an auger and bored a hole into the wall at a height of about five feet from the floor. Then the miner, with a dripping non-safety oil lamp on his head, would take a pick and break in the top of a twenty-five pound keg of powder. He would take a sheet of newspaper, wind it around the handle of his pick, to make a long tube, and then would fill this with powder as a kind of primitive cartridge. He would place two or three of these tubes in the hole he had bored, would attach a fuse, and get at a safe distance, so that the charge could be fired, or "shot." The coal would commence to tumble down and then it was ready to be loaded into the mule cars to be carted off to the surface.

I worked in the mines, not only at this job but also as mule-driver, motorman, machineman, trackman, pumpman, powerhouse operator, and blacksmith. But all the time there was something which seemed to keep before me making mind pictures of a life in another world, in which beautiful music was an inspiration. Here was the inspiration to practice, practice, practice—all my spare time, to reach out to a new and wonderful goal.

An Imponderable Urge

HERE AND THERE from some player I picked up a hint or so and had gradually acquired a kind of ability to play the fife, the violin, and the accordion. My brothers were musical, and we had played around at dances. Other than this I had no lessons up

to that time. Then I met a Polish immigrant, Bronislaw Bielak, who played second cornet in an army band, and I decided to study the cornet. After one month of struggle I was sufficiently encouraged to warrant engaging a real teacher.

I found such a teacher in Alfredo Steffano, an able Italian band leader, who had settled in Clarksburg, West Virginia, where I had been living at the time. I discovered in him, first, a fine musician and second, a traveled gentleman of culture. Unfortunately he spoke no English, but in some way we made out. I realized that from my surroundings I had become very crude and rough. I strove to imitate his poise and his gentle tone of voice as much as I did his playing. A teacher in those days, as well as now, was expected to play all the instruments of the band. His principal instrument was the trombone, but he taught me the cornet. I paid Mr. Steffano three and a half dollars per month for instruction, and he took such an interest in me that I spent most of my spare time above ground with him. He admitted me to his band and taught me enough theory so that I could transpose. I have worked for hours and hours transposing and copying musical works for his band. Music, however, was still my hobby, and I had no intention of becoming a professional. Yet I got into it deeper and deeper.

At the time I studied with Steffano we lived some three or four miles away from the bandroom in which the rehearsals were held, usually in the evenings. I shall never forget the thrill I received when I first played my little part in Steffano's wonderful band. He had given me as my first assignment, half of one certain "American Eagle March," which I was to have ready by the next rehearsal. Since walking was the only means of getting to the bandroom, I walked the distance, this half of a composition carefully prepared, to experience the thrill of playing it with a real band.

Inasmuch as in those days not many youngsters played musical instruments, anyone carrying an instrument case with him to and from rehearsals often placed himself in an embarrassing position. Boys who had nothing else to do often "razzed" a youngster who was carrying an instrument case. Because my little cornet case seemed too obviously to contain an instrument, I often left the case at home and carried my cornet under my coat or in some other wrapper to avoid such unwanted publicity. To-day, however, a young person takes great pride in carrying even someone else's musical instrument.

In 1912 I secured employment in the Phillips Sheet and Tin Plate Company, which was later called the Weirton Steel Company, recently widely discussed in the press. My father had, meanwhile, gone back to Poland, where he died during the war. Since I was making wartime wages in the mill, I was well able to care for my mother and had time and money for music and musical instruments. I directed bands, played in theaters, and at dances.

A Life's Ship is Launched

I ORGANIZED my first band in 1913. At that time I could play cornet, violin, clarinet, and flute. The band was composed of twenty-four friends, all workers in the zinc factory, the glass factory, the steel mill, and the coal mines. All found it a glorious escape from their daily work. Music unquestionably makes happier and better workers, and, if industrialists knew what I know, they would set aside a certain amount in their budgets to provide regularly for music, if only because it helps people to keep their balance.

Many amusing experiences attended the organization of my first band, which was called Bork's Band. I had agreed to teach its members, providing each member would loan me his instrument overnight, one at a time, giving me at least one evening to find the scale in the instrument and to prepare a lesson for its owner, who would receive his lesson the following evening. Not being aware that it was possible to secure lesson manuals for the various instruments to be taught, I painstakingly figured out the tone relations of the various instruments and laboriously wrote out scales and exercises for each pupil.

When it became rumored about that a band was forming in town, we suddenly received an unsolicited engagement. A prominent evangelist had arrived in the town, and he engaged us for parade at the opening of his campaign. All sizes and shapes, we gathered for the event, quite aware that we had never practiced playing and marching together before and that it would require all the ability we had to keep together musically, let alone maintain marching formation in a street parade. Well, at the signal up struck the band and forward stepped each member, his eyes glued to his music sheet. Hardly had we gone a block when I became aware that the long legged tuba player, his forward view obstructed by his music sheet, was doing a solitary goose step about twenty-five feet ahead of the band. The short legged fellows, between puffing and blowing, were having a hard time to keep up. To top it all, I, the solo cornet player, had permitted a musician friend to inspect my instrument shortly before the parade commenced with the result that I discovered, when about to blow my first note, that he had placed one of the valves in the wrong position. My first few blocks on parade were given over to getting out of this predicament. We finally straggled up to the evangelist's tabernacle. We were so ashamed that we refused to accept the money offered to us for the job.

"See the Conquering Heroes"

BUT WE RESOLVED, then and there, to develop ourselves into a real marching band. On the following Sunday afternoons we went out into the open country and practiced playing while marching. Up hill and down dale, over hummock and into hollow, we marched, spraying notes to the four winds. In fact, so enthusiastic had we become that one Sunday afternoon we unconsciously marched into a pasture containing several bulls. Although the bulls were somewhat taken aback, they rallied and charged toward us. Needless to say, we broke ranks and fled for the fence. In one case, at least, we proved that music hath no charms for the savage beast.

In about 1917 I was engaged to direct the Greater Clarksburg Band, of which I had been a member during my earlier days. This band had been organized back in the 1880's and is still giving musical treats through its public concerts, to the people of Clarksburg, West Virginia, under the capable leadership of Mr. A. J. ("Gus") Smith. I directed this band until 1927. It is to this band I owe much for the training I have received. The old-timers, who boasted of thirty years' experience as members and ex-conductors of this band, at times made me conduct, without score or lead sheet, compositions which I never had seen nor heard. This, along with later training under the late Frederick Neill Innes, enabled me to conduct at times complete concerts without score.

My best band came about in a very curious way. In 1907 there was a serious explosion in two of the Consolidated Coal Company's mines at Monongah, West Virginia, and, to my knowledge, all but one of the miners who were inside of the mines at the time of the explosion were killed, leaving a large number of orphans. Many of those killed were very close friends of ours; and, since we lived in the vicinity, we reached the scene the very morning on which the awful catastrophe happened. The scene, which I shall not attempt to describe, was a very pathetic one, a very sad picture, indeed.

The Band Militant

SOME YEARS LATER I undertook to organize a band of youths, many of whose fathers had lost their lives in this underground disaster. Shortly after the organization of this band, serious labor troubles developed. The coal companies broke their agreements with the miners, and this brought about strikes, walkouts, mass meetings, and evictions. At this time, the "sit down" strikes were not in style. Our young band, since it was supported by the local union, was called upon to furnish music at one of the first of the miners' mass meetings. The band made a tremendous hit. Moreover, through the efforts of Van A. Bittner, chief organizer of labor in that district, the band became the official United Mine Workers' Band.

John L. Lewis was beginning to be a power in his original field of mining, and he was holding meetings right and left, and the band was continually called upon to play at these meetings. That band traveled five days a week and was one of the busiest bands in the country. I am sure that it prevented a vast amount of sabotage and unnecessary labor disturbances. John L. Lewis was greatly interested in the band, as one might expect from a man of Welsh background. He was one of our strongest supporters. No one ever called him Mr. Lewis—it was always John—and he seemed never to forget the first names of his miner friends. That was before the days of C. I. O.

In a public speech in Indianapolis, at the convention of the United Mine Workers of America, Mr. Lewis said of the band: "Not the least among the ardent workers for our cause (in 1924) was the band of Monongah, West Virginia." The succeeding speaker said of the band: "The work of this band is a demonstration of the artistic ability of the members of the United Mine Workers of America. Many of the members of this musical organization were evicted from their homes by the armed guards in the employ of the contract abrogating coal operators of northern West Virginia. Many of the members of this band have been thrown into jail for alleged violation of injunctions while playing on the picket lines at the mines in northern West Virginia. This band has played for us night and day. They have appeared on the picket lines at three o'clock in the morning; they have been there in the evening;

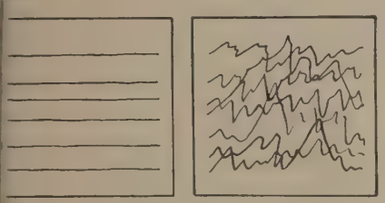
The Language of Music

"Harmony at Your Doorsteps"

By LAWRENCE ABBOTT

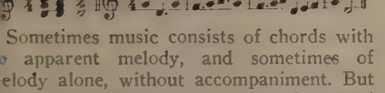
I. The Starting Point—Tones and Related Tones



Herewith begins the series of very instructive and practical articles, long announced in THE ETUDE. *Mr. Lawrence Abbott, grandson of the eminent clergyman, Dr. Lyman Abbott, has for two years been the assistant to Dr. Walter Damrosch at the National Broadcasting Company. Mr. Abbott had his academic training in music at Harvard University.*

F MUSIC IS TO BECOME for us a language, not merely an opiate, and if we are to detect meaning in the com- x patterns of tone of which even the iplest folk song consists, we must first n at least briefly to certain elemental ts. Music starts in the realm of physics. e need not be detained long in this realm ust long enough to glimpse the whys and erefores of the elaborate system of har- ny which we are later to explore.

he materials out of which music is made are tones



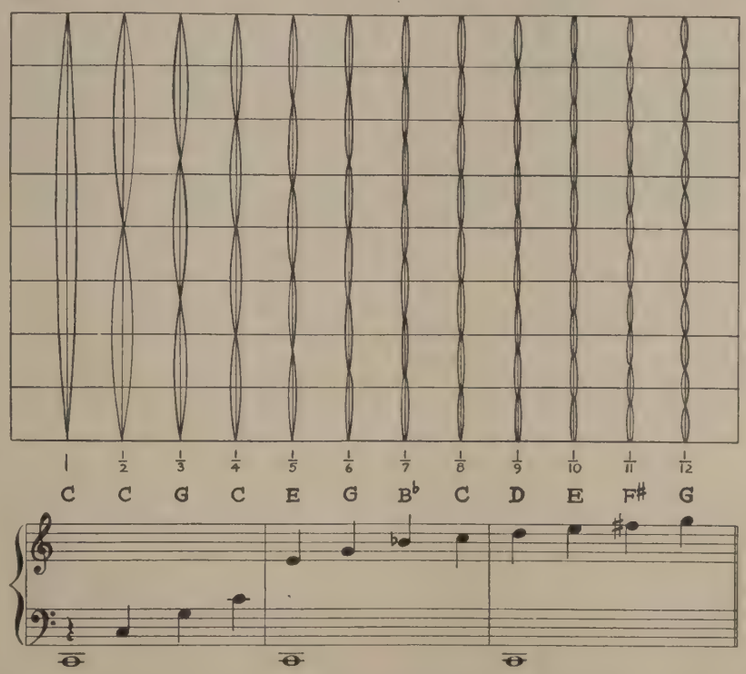
TONE IS DEFINITELY different from a ise in that it is a single sound that keeps an even level—a steady pitch—whereas noise is a jumble of sound at uneven, ndom heights and depths. On a chart e difference would look something like s:

Illus. 1

A tone by itself has no musical meaning; t when heard in connection with other nes, it does have a meaning—and that eaning depends entirely on what the other nes are. In our solar system we need not iow where the earth is located in terms absolute space; what matters is its rela- on to the sun, moon and planets. So it is th music. It is the relation of tones to ch other, not their absolute pitch, that unts. The whole art of music, in fact, is sed on the relationships between tones. At once it will be seen that music is a mplex affair, because the tones are many, d hence the relationships are many. Too, e element of time makes possible two nds of relationships—horizontal and ver- al—the relationship of tones that sound multaneously, which we call chords, or rmony; and that of tones which are heard e after another, which we call melody.

Ex. 1 Melody
Harmony from "Schubert's Unfinished Symphony"

Sometimes music consists of chords with apparent melody, and sometimes of elody alone, without accompaniment. But ost of the time the two must be heard gether to create a complete tonal picture— e melody being the outline, and the har- ony filling in color, texture and detail.



In any case, several tones are involved— d the thing that determines whether or t the music sounds agreeable or disagree- le—sad or cheery—harsh or mellow—is e relationship between them.

On a piano the tones—and hence the ssible relationships—are limited. Between e piano maker and the piano tuner, the wers that be have allotted us only eighty- ght notes. A violin permits an almost un- mited choice of tones—but hallowed tradi- on (or maybe just plain common sense) lds up a forbidding finger at most of the ssible tones, considering them out of ne or "sour." The carefully spaced frets the fingerboard of a mandolin provide even more "fool proof" means of ex- cluding tones which do not belong.

The truth is that certain relationships of tones exist naturally, in obedience to fundamental laws of physics. And the science of harmony concerns itself with these related tones to the exclusion of all others.

Why are some tones related and others not? On what basis are many perfectly good tones excluded, while others are admitted into the charmed circle of our harmonic system? To provide answers to these questions, nature has furnished us with a definite yardstick by which to judge the eligibility of tones. That yardstick is the series of natural overtones.

Illus. 2

Whenever a musical tone is sounded we hear not only its own fundamental tone or pitch but also a number of other very faint tones called "overtones." These overtones have an iron-bound mathematical relationship to each other and to the fundamental tone.

The string of a violin or violoncello, for instance, vibrates not only its full length, but also (very faintly) in fractions of its length—halves, thirds, quarters, fifths, and so on. The tones of these fractional vibrations are the ones which please our ears most in combination with the original tone, and it is out of these overtones that scales, chords and tunes are created.

Inside the tube or pipe of any wind instrument (trumpet, flute, saxophone, and so on), the air vibrates the same way, in waves of various lengths, some equal to the full length of the pipe, others equal to half its length, one-third its length, one-quarter its length, and so forth. The full-length vibration sounds the fundamental, while the fractional vibrations are the overtones.

Suppose we illustrate with a concrete example. The lowest of the four strings of a violoncello is C. By drawing a bow across it we start it vibrating, not only in its fundamental tone but also in its overtones. To show just how these vibrations occur, Illus. 2 is a diagram that lists the fractional vibrations of this low C string.

These are the overtones of C. Similarly, every other note has its set of overtones—or harmonics, as they are sometimes called—which bear exactly the same relation to it as these notes do to C.

Play the overtones to yourself, with the pedal down, until you get the feel of them, and until the upper tones appear to be a natural outgrowth and flowering of the root tone. If you have a piano, you will find this series much easier to understand and enjoy if you play over all the musical examples as you go along. Unless you do so, you never can hope to grasp the meaning of tone relationships or to recognize their various and distinctive personalities. If you do not play the piano yourself, be sure to get some friend to play the illustrations for you.

One thing in particular is worth noticing—a fact which points to the close connection between the mathematics of music and its effect on the ear. Whenever a wave length or a vibrating string is halved, the sound becomes an octave higher.

Suppose, for instance, that the C string on the violoncello is twenty-four inches long. We place a finger half way down the string, reducing the length to twelve inches; the tone becomes C, an octave higher. We reduce the length to six inches; and the tone becomes another octave higher. At three inches, the tone is still C, but three octaves above the tone of the full string.

If we place our finger a third of the way from the end, reducing the length of the string from twenty-four to eight inches, we hear the one-third overtone, G. As you may readily guess, lengths of four inches (half of eight) and two inches (one-fourth of eight) will also produce the tone of G, in higher octaves. That is why octaves sound virtually like repetitions of the same note.

We do not need to go any more deeply than this into the physics and mathematics

(*Continued on Page* 50)

DR. WALTER DAMROSCH AND LAWRENCE ABBOTT
The dean of American conductors is discussing National Broadcasting Company Programs with his Assistant.

AN ETUDE MUSIC CLUB IN CENTRAL AMERICA

This is a club conducted by Mrs. Clare Conklin Walker, a successful teacher in Panama, who has the distinction of being perhaps the only musical instructor who does regular weekly teaching on both the Atlantic and the Pacific coasts, dividing her time between Colon and Panama.

A "Once A Week" Musical Club

An Editorial with a High Practical Purpose

THE UNITED STATES is probably the best organized country in the world, from the standpoint of larger musical club units. Yet we feel that we do not possess the type of musical club destined to be of most value to the country. Therefore, we are proposing to our readers the organization of a giant chain of clubs, the sole purpose of which is that of making and studying music—these clubs to come under what might be called the "Once a Week Music Club" movement. They would correspond to the "music in the home" movement which has been promoted so actively abroad. They would be strictly "participation clubs" as distinguished from clubs in which a very large proportion of the members are "audience." The musical club movement, on a large scale in the United States, commenced with the founding of the Music Teacher's National Association by the late Theodore Presser, at Delaware, Ohio, in 1876. Since then, with such immense groups as the National Federation of Music Clubs, the National Music Educators' Conference, the choral, orchestral, band, fraternal and other groups, we have become splendidly provided with large musical movements. In fact we have many times the number of large musical clubs possessed by any other country. These clubs possibly encompass a million members.

As a nation, we have every reason to be immensely proud of the magnificent work that these clubs have done and are continuing to do. But in our large musical clubs the membership is composed principally of "audience," only a comparatively few members ever appearing as musicians upon the program, which is properly supplemented by engaging professional artists now and then. The clubs afford very delightful social occupation for the members, and it is farthest from our thought to suggest that the "Once a Week Music Club" should in any way supplant the large music club of the present type. Rather would it supplement this latter, and we can conceive of one of the large music clubs having several "once a week clubs" in its membership. The larger musical clubs have indisputably been of great value in promoting musical interest and progress in America. In many existing clubs there are clubs within clubs; and, if the larger musical clubs were to organize smaller musical units within their groups, their own efficiency in many cases might be greatly increased.

A "Neighborhood" Movement

MOST OF THE "once a week music clubs," however, will come from neighborhood friendships and activities. They will be composed of those who have had some training in music and know that the greater joys of the art come from participation, from making music and studying it. Like any game, such as bridge, "get together" music making increases interest enormously. "The once a week music club," like the bridge club, would depend for its interest upon every member taking part, upon having every member play or sing as frequently as possible at the meetings, either as soloist or in groups or through presenting acceptable papers upon some interesting musical subjects.

We feel that the country at this moment is eminently ready for the "once a week music club" movement. Our high schools have been turning out thousands of young people with excellent musical training. These young people should have a means of continuing and expanding their scholastic musical experiences through ensemble work or otherwise. Private teachers, if for no other reason than their selfish interests, should find the "once a week music club" a very practical means of extending their business interests.

The organization of a "once a week music club" should be simplicity itself. No constitution or by-laws should be necessary. Parliamentary wrangles might easily defeat the main purpose of an informal group of this type. As every club would be different in its immediate objective, club routine should be as elastic as possible, and unhampered with rules.

Where Simplicity Rules

IN ORDER TO EVADE formality the leader of the club might be given the office of "Prime" rather than the stilted title of president or chairman. The word "Prime" or "first" has a significance in music. The prime would, of course, be the presiding officer, would arrange for the time and the place of the meetings, and would confer with the members about the programs and determine upon those who are expected to take part. Probably only one other officer would be required; and this officer could be called "The Recorder," who would take over the duties of a secretary which in a very small organization should not be great. The recorder could also look after the club's dues and supervise the social duties of the group. The word "recorder" also has a musical significance, as it was the name of an obsolete form of the flageolet (a kind of flute held like a clarinet). "Recorders" were very popular in the days of Henry VIII, who had a large collection of these instruments.

Long observation of club work makes clear that those clubs are most successful in which the meetings are made "events." Here informality ceases. The members of such groups will find the meetings more attractive if they are "dressed up." That is, the members would come to the meetings in the afternoon or in the evening, dressed up in their best "bib and tucker." There is something very significant in the Englishman's habit of dressing for dinner. For years it has had a peculiarly refreshing effect upon the mentality of the British gentleman in all parts of the world. Club leaders will find that organizations, in which their members come to the meetings "dressed up" for the occasion, will take on an importance which slipshod, lackadaisical, "Bohemian" meetings never have.

And So We Go to Work

WE HAVE ALSO NOTED that club members are likely to be humanly hungry and thirsty after a meeting, just as they are after a bridge party. Carefully arranged, dainty refreshments, with menus changed at each meeting, may seem mundanely distant from Beethoven, Wagner and Debussy; but if you have ever been to Bayreuth and watched the faithful Wagnerites go out to eat *Wienerwürst* between the acts of "Parsifal," you will realize that artists and music lovers are not so different, in many parts of the world.

Here follows a possible program for a "Once a Week Music Club."

1. Announcements and plans for future meetings.
2. Ensemble—duets, quartets, trios, choral number.
3. A study of a master composer's life.
4. Representative works of the composer discussed:
   Piano
   Violin
   Vocal
5. A review of musical news of the previous week, prepared by a member, from newspapers and other sources.
6. Ensemble numbers.
7. Solo numbers.
8. Question Box:
   Musical questions proposed at one meeting and answered by the members at the next meeting.
9. Ensemble numbers.
   Refreshments.

Our conception of this small unit club is that a great number of clubs would be formed in each city, one to each block in some instances, in thickly settled sections where congenial musical groups may be found. We can also imagine that in our large cities having several hundred such groups, several different combinations of interesting instruments may be arranged—duets, trios, quartets and quintets. There are thousands of bridge clubs in America. One intelligent matron said to us recently, "I am getting so sick of going to bridge parties, and passing around slips of cardboard with the objective of winning some silly 'jimcrack,' that I would give anything to get together a group that would give my mind and my artistic inclinations something worth while to think about." There are thousands of bridge clubs in America, however, that give their members a pleasant social amusement outlet. We are convinced that there are vast numbers of people who would be delighted to become members of intimate neighborhood musical groups held with the regularity of bridge parties and they would get even more inspiration, entertainment and practical information from these.

Some Hit-and-Miss Suggestions

"THE ONCE A WEEK MUSIC CLUB" might give prizes for meritorious work accomplished. It also might tender receptions to important visiting musicians. It might invite capable critics or educators to speak before the club. It might give an annual recital or concert to reveal to others the work of such a club.

Hundreds of such "make music" clubs actually exist at the present time. Some have been meeting for several decades. One of the best known of these is the slightly different club of men with the same purpose but with many very advanced players, which has been meeting in Baltimore for many years. This club was described by Henry L. Mencken in THE ETUDE for May, 1936.

We would appreciate very much having the opinion of our members upon this subject. Have we inspired you to start such a club? Do you wish us to help you with further ideas through THE ETUDE? What have you to offer in the way of suggestions? Would you like to have the name of your proposed club and its officers printed in THE ETUDE? Would you like to have ideas for regular music programs, study notes, musical questions, ideas for menus, a letter forum, and so on, presented in THE ETUDE?

Let us hear from you; but please make your letters short and to the point, as our mail is enormous. Do not fear, however, that each letter will not be eagerly read.

* * * * *

"I think the subject of music is of the highest value in the public schools. I think it should be a part of every curriculum; and, of course, music is essentially a community product, and its social value in a rural community is of the highest quality."
—William Allen White.

JOSEPH SZIGETI

The Art of the Violin Lies Under the Surface

By the Brilliant Hungaro-American Violinist, Joseph Szigeti

A conference secured expressly for The Etude

By R. H. WOLLSTEIN

IT SOMETIMES HAPPENS that an artist, or an advanced student, is spoken of as a "specialist"—a Bach specialist, a Schumann specialist, a specialist in this or that "school" of music. To some, perhaps, such a title is a praiseworthy thing, reflecting special application. I do not look upon it in that light. To my mind, "specialization" involves an unnecessary and harmful closing of doors. It means a narrowing down of the personal point of view, which, while it may bring intensified application to bear upon one field of music, deliberately shuts that same application away from other fields. And this is a profound mistake. The least phase of any interpretative art must be founded upon that universal conception of this art which excludes nothing.

As I see it, the life task of those of us who devote ourselves to music is a striving towards that complete understanding which will enable the player to approach each "school," each age, and each type of composition in its proper focus. This sort of goal must be pursued apart from the routine of ordinary mechanical equipment and outside of the practice room. It requires an open mind and an inquiring eye. In other words, artistic playing is never an end in itself: it comes only as the result of certain habits of thought.

Seek the Spirit

THERE IS AN OLD oriental proverb which says (cynically perhaps) that words were made to hide one's thoughts. In the same way, though certainly with no cynical intent, it might be said that notes were made to conceal a definite and complete philosophy of life. It is the task of the interpretative artist to tear aside the veils of such concealment and to bring the meaning behind the notes to the surface. That, in a word, is what interpretation means. How, then, shall one proceed to penetrate to the core of musical meaning?

The first step, oddly enough, has nothing whatever to do with music. It has to do solely with habits of thought—the kind of thought that seeks constantly to find the relation between the surface of experience and the deeper universal meaning beneath that surface, of which the visible elements are merely the symbols. The sooner the student trains himself into this habit of questioning penetration, the sooner he will stop playing mere notes.

If you find yourself in the presence of a modernistic building, an impressionistic picture, a pre-Elizabethan poem, or a romantic *lied*, do not be satisfied with a hasty glance at its external form and a quick expression of either "I like it" or "I do not like it." Instead, question the thing. Try to find out for yourself what it means to say, what elements have gone into its making, the influences you can find between it and the age that produced it, the age that has gone before it. Try to focus your attention not upon the externals of the object under consideration but on the ideal it strives to express. In music, especially, it is fascinating to trace out the influences which bind the works of each "school" to the fundamental idea of truth expressed through tone. For that is the meaning of all music.

You will readily agree that Stravinsky, for example, stands on a high spot in modern musical thought. If you concentrate upon his notes alone, you may perhaps become a Stravinsky "specialist." But such a status would leave you miles away from the essence of musical interpretation. By a deeper, more thoughtful penetration, however, you will find a complete chain of relationships linked together in orderly fashion. You will find the influence that Stravinsky derived from Chabrier. A step further will reveal what Chabrier derived from Wagner. Another step, and you see what Wagner owed to Liszt; what Liszt owed to von Weber; what von Weber took from the great classicists.

This does not mean imitation or "copying"; let me make that very clear. But each composer, at some time in his development, founded himself upon an ideal of his own; and a study of the progress of this ideal (its beginning, its growth, its ultimate fusing with the native talents of the younger composer) gives you the only true picture of the composer's meaning. It affords one an insight into the endless, unbroken chain of musical truth. Such developments are not easily evident; still, they are there, and they must be understood if the performer wishes to penetrate deeper than the mere notes of the creative musician's scores.

So We Sense the Style

IT IS THIS comprehensive understanding of musical relationships (their reasons for being, their sequence, their dependence upon trends of thought) which forms our sense of style. Would you play Bach and Schumann in exactly the same manner? Of course not! Because they represent entirely different ways of looking at the world. And to understand what those ways mean, we begin again at the beginning, trying to penetrate, in an orderly and reasonable way, to the core of universal truth which lies under the surface of our music. A sense of style is comparable to the eye of a great diagnostician, who makes keen, personal observations about his patients, and arrives at his diagnosis by relating these observations to established truths which he already knows. Thus, the patient's pulse, his eyes, his motions, his hesitations of speech, even the color of his nails, each tells the doctor something; and by adding these various "somethings" together, he arrives at his own picture of the case. This is precisely what the thoughtful musician does with his scores. Certain tonal intervals, certain sweepings of melody, all tell him something about the composer, the age in which he lived, the ideals which that age cherished (all of which facts must represent familiar territory); and by combining those elements, he arrives at the plan of his interpretation, calculated in a correct sense of style. That is why specialization is a dangerous business, comparable to the closing of doors. A complete sense of musical style demands a perception of all these elements, for all express the same musical truth.

A complete sense of style, of course, often means the sacrifice of the player's personal equipment. The brilliant performer must, upon occasion, lay aside his sparkling *fioriture* in favor of the sober line of some sustained piece; while the player of slim tone must manage somehow to get into his fingers the rich, opulent tonal quality required by a work like Mendelssohn's "Concerto in E." And, if he cannot perform these "lightning changes" of style, he is not a complete artist. It is a fallacy to believe that performers come before the public with one fixed equipment which they must use on all occasions because it is "theirs." Not at all. They must modify their equipment according to the needs of the work upon which they are engaged, exactly as they modulate their voices, speaking differently in a church or at a party. In each case it is the same voice; but the demands of the occasion alter its use. If an artist becomes a "specialist," he has no one to blame but himself.

The Student Finds Himself

ONE OF THE MOST DELIGHTFUL relationships in the world is that existing between teacher and pupil. In a sense the teacher is what the orchestral conductor is to his men, using his greater experience and more matured will power to draw the desired results from his pupils. If he is a wise teacher, into the bargain, he will show his pupils how to teach themselves, which, in the end, is the most important gain they can derive from any instruction. At some time or other official lessons will end, and then the erstwhile pupil will have to depend upon himself. The sooner he develops the habit and applies it in coöperation with his teacher, the sooner he will set his feet upon the path of independent musicianship.

The pupil's task is not merely to play exercises, but to become the diagnostician of his own vulnerable points. Too many young pupils waste time on the frenzied, dutiful sort of practicing that carries no further than the fingers and ends by dulling the perceptions. The student's aim should be to save time. Let me hasten to add that I say this in no sense of "quick results." On the contrary, I mean that the field of penetrative art is so vast that it is a pity to waste time that might be devoted to it, upon a repetition of corrective measures which could be settled once and for all the first time they are needed.

Study That Tells

THE MOST IMPORTANT part of the student's working equipment is his memory. The moment the least unsatisfactory item in his playing shows itself, it should make an indelible impression upon him. He should then be on the watch for it and take care that it does not assume the same proportions a second time. The weak spots of every piece should be cataloged in his mind, and should then be the first and most important parts to be practiced. Avoid the temptation of permitting yourself frequent and satisfied repetitions of the parts that go well.

Every intelligent pupil can create for himself technical exercises out of those parts of his past pieces which have tripped him. By watching out for such parts, analyzing them, remembering them, and using them as stepping-stones instead of stumblingblocks, the pupil gradually becomes his own teacher. I have the greatest faith in this type of self-education, and take pleasure in experimenting with it. I have recently prepared an edition of Scriabine's *Study in Thirds,* supplementing the study itself with preparatory exercises that show just how study material may be deduced from the piece. I prepared several pages of such material, and then left a blank page in the score, so that teachers and pupils could add further exercises which might not have occurred to me, but which might be suggested by individual problems in the study of thirds.

Apart from this question of self-instruction, it is an ungrateful task to suggest the solution of definite playing problems, since these are so individual to each player that no one general counsel could be brought to apply to all. Just this matter of individuality is plainly illustrated by the *vibrato.* Every violin student is taught to "make" the *vibrato* in the same way, yet no two sound alike. Indeed a violinist, playing unseen, can be recognized by his *vibrato* which is—and should be—as personal as his handclasp or his handwriting. On the subject of teaching, however, I heartily advocate the use of personal models. Let the teacher play freely for his pupils, both new music and assigned pieces. Let the students hear their pieces in the performance or the recording of a reliable artist. This will never dwarf their individuality of style. On the contrary, it will open new doorways, through which the purely individual ideas about the piece will pass with even greater freedom. Every violinist has at some time founded himself upon a *beau idéal* who has led him on, at first through conscious imitation, and then suddenly left the young performer to develop something quite new and fused from the two elements of the model and his own personal expression. There is no danger of a pupil's becoming a weak copy through such imitation—every individuality will add something of its own.

Seeking the Unexplored

IT IS ALWAYS INTERESTING to ferret out new material for one's instrument. Personally, I am guided in my search by a wish to find some new angle of actual playing technic which has not been exploited before. I am now preparing a series of such pieces, all of which are transcriptions, from either songs or other instrumental works, and all of which emphasize some point which is tonally or technically new. There is, for example, an extremely simple little Norwegian song, which I use as an intricate study in double harmonics. The simple melody lies with the piano, while the accompaniment has been arranged for the violin in a series of harmonics. Some of these combinations are quite novel, as, for instance, double notes formed from one fingered (or stopped) note and one harmonic, played together. The effect is that of a deep flute and a high piccolo.

Another is the violin adaptation of a "Suite for Strings," by Peter Warlock. I have tried here to capture the feeling of the multiple strings by having the same note played at the same time on different strings of the solo violin. It gives the effect of several instruments, very successfully. Again, I have tried for new *pizzicato* effects by plucking the strings with the left side of the pointer, and also by using the thumb, not to pluck but to brush the strings in downward motion. This gives a new and interesting tonal color, especially in relation to the *ponticello* bowing which follows it in the score. Even at this advanced date, it is possible to develop new tonal effects upon a familiar instrument.

It makes delightful musical sport to seek out such effects for one's self. Imagine some tonal effect which has, thus far, been impossible, and then try to find a means of transferring that sound from your imagination to the violin. I was delighted, at a recent lecture, to hear the eminent Donald Francis Tovey remark that, "It is not only what is good for the instrument that should guide us in our search, but also what the instrument is good for." Do not be afraid of the unorthodox, in seeking out new effects; provided, of course, that they are truly musical effects and not merely the means of achieving something "different!" Every great pianist has invented his own nuancings of attack. Every ambitious violinist can try, at least, to do the same. And if he achieves nothing else, he will emerge from his efforts with a better comprehension of his instrument. Even in so external a matter as handling the body of a violin, it is a good practice to keep one's eyes and one's mind open for the many things that lie under the familiar surface.

* * * * *

"There is something so wonderful about music—so uplifting! But then, I have devoted myself to it. Other people do not get so much from it; perhaps because they do not feel as I do. That is destiny and as it should be. We cannot all be doing the same things; and if all loved music so intensely where would the other beautiful arts and necessary businesses come in?"

—Guiomar Novaes.

RECORDS AND RADIO

By PETER HUGH REED

ONE OF THE MOST IMPORTANT programs in the contemporary musical field of radio is that of the NBC-String Symphony. In the six years of its existence this program has developed and extended an appreciation of the chamber orchestra, and more particularly of the string orchestra and its intimate and refined music. Until Frank Black, the director and originator of the NBC-String Symphony programs, saw fit to intrigue the listening millions of radio with an orchestral program, which in character and scope was particularly suitable to the home, such concerts had been relegated into the still backwater of the stream.

Frank Black, musical director of the National Broadcasting Company, is one of the most versatile artists in present day music. It was almost inevitable that Black's programs sooner or later would be perpetuated on records. His first recorded program with the NBC-String Symphony (Victor set M-390) is a welcome one indeed. Its contents are excellently chosen for contrast and variety: "Symphony in C major," by Carl Philipp Emanuel Bach; *Canzonetta,* by Sibelius; *Variations on a Theme of Tschaikowsky,* by Arensky and Miaskowsky's "Sinfonietta, Op. 32, No. 2." The Bach work is delightful, and the Miaskowsky one is forceful, dynamic and songful. The recordings of these several works have been excellently realized, having been made in the studio from which the broadcasts emanate.

The opportunities for hearing Delius' music in our concert halls are few, hence it is well that a Delius' Society was formed in England to record his music, so that those who like it might have it to turn to whenever the urge is with them. Delius, in his music, invites us to forget the world and plunge with him into the mystic spaces and waning light of twilight. The realist distinguishes very little difference in his scores, yet that difference is there; for, just as the colors of sunset are multiple, so the moods of Delius' music vary and change. In Columbia set No. 305, we have his tone poem "Paris: the Song of a Great City." Although not one of his greatest scores, this work is an excellent one by which to become acquainted with the composer's style. "Eventyr (Once Upon a Time)" is another tone poem founded upon Norwegian folk tales. Here the composer takes us into a world of hobgoblins and strange creatures, a world of unreality which stirs our imagination and makes us momentarily young again in mind and spirit. In the scene from his opera "Koanga" we hear the plaintive pathos and melancholic beauty of Negro harmonies; for Delius wrote this music after a sojourn among the Negroes of Florida. The performance of all this music having been entrusted to Sir Thomas Beecham, the composer's chief champion, everything is as it should be.

For tonal gorgeousness, Stokowski's *Synthesis* from Moussorgsky's score of "Boris Godounoff" (Victor set M-391) is almost unparalleled on records. Here, we have in music the intensity, the force, the tragic pathos, the pageantry and anguish of the Russia about which Pushkin, Gorky and Dostoievsky wrote. Stokowski has fashioned his score from the original one of Moussorgsky, not the one that Rimsky-Korsakoff arranged and which we hear in the opera house. And he has created, according to one critic, a work that is "unexpectedly effective and coherent as a free and unbroken dramatic symphony." Whether one agrees with this statement or not, he will, without doubt, be thrilled with the lusciousness of orchestral tonalities which are invoked, and which Victor have so superbly recorded.

A new recording of Liszt's *Les Préludes* comes to us played by the Paris Philharmonic Orchestra, directed by Selmar Meyrowitz (Columbia discs 69033-4D). It is a brilliant reading, one which exploits the music's drama and virtuosity rather than its sentiment. Although Liszt attached a program to this work, drawn from Lamartine's "Poetic Meditations," the music was really written apart from this program, hence one need not concern himself with it truly to enjoy this music.

The *Dance of Death,* for piano and orchestra, which Liszt wrote, using as its theme the *Dies Irae* from the "Mass of the Dead" in the Roman Missal, is one of the most brilliant and thrillingly dramatic works of its kind ever devised. Although a virtuoso score, this music cannot be dismissed as such, for the theme, as Huneker once said, "is far too great to be depreciated, and the treatments of it [in Liszt's variations] are marvelous." J. M. Sanroma with the Boston "Pops" Orchestra, direction of Arthur Fiedler, give a telling performance of this work (Victor set M-392). The recording here is most realistic.

One of the most auspicious débuts of an American chamber music organization on records, was accomplished by the Kreiner Quartet in their performance of "Rispetti e Strombotti," by the contemporary Italian composer, Malipiero (Victor set M-397). This music is both neoclassic and neoromantic; for Malipiero is a romantic in spirit but a classicist and a modernist in thought and technic. His melodies are broad and sustained, and his harmonies are richly colored, but never diffuse. Since the annotator of the set errs in his statements about the insipration of the work, it might be well to point out that Malipiero has said that the work was inspired by the "open air in the country," and that in it he sought only to reproduce rustic atmosphere.

The Lener Quartet play Beethoven's last "Quartet in F major, Op. 135" (Columbia set 307), as well as anything they have ever played on records. Their performance of the slow movement is exquisitely realized; and in the quicker movements they maintain a vigor which we generally do not associate with their playing. Theirs is to date the best performance of this work on records.

Egon Petri, the eminent Dutch pianist, gives brilliant performances of Brahms' *Variations on a Theme of Paganini, Op. 35,* (Columbia discs 69027-8D), and of Liszt's transcription of the *"Faust" Waltzes* (Columbia disc 69031D). Petri's extraordinary technical accomplishments and sense of rhythm are well exhibited in both recordings.

Recommended: Johann Strauss' *Tales from the Vienna Woods,* played by Bruno Walter and an unnamed symphony orchestra (Columbia disc 60-29D); Certani's *Legend of the Dolomites,* a tone poem by a talented contemporary Italian composer, played by the Milan Symphony Orchestra (Columbia disc 69030D); Fauré's *Elégie* for violoncello and orchestra, played by Jean Bedetti and the Boston Symphony Orchestra (Victor disc 14577); and the Scandinavian tenor, Jussi Bjoerling's latest disc with an *aria* from "Tosca" and one from "Rigoletto" (Victor 4372); and also the recording of Hagen's *Call and Soliloquy* from Wagner's "Götterdämmerung," made at an actual performance in Covent Garden, London, with Beecham at the orchestral helm.

THE MUSIC OF THE CHINA OF YESTERDAY

The Music of War Torn China

By VANYA OAKES

Shortly before the roar and the horrors of war broke loose from the clouds over Shanghai, the following peaceful and interesting article came to THE ETUDE. *It describes the age old fight between Cathay's music of yesterday and the music of to-day. The squabble between modernist and fundamentalist seems mere chatter compared with the thunder of the bombs bursting from the skies; yet there is an ever curious interest which clings to this primitive oriental music.*—Editorial Note.

THE SIDE STREETS of Shanghai—those streets which have retained all the motley noises, the ceaselessness and the humor that belong to Chinese street life. From the second story of one of the larger shops emerge grievous sounds—the thump of a bass drum, erratic twitters from a smaller military one, and the squalls of very tinny trumpets. To style the perpetrators of this din musicians would be a gross exaggeration, for they are little more than coolies who have elected to blow and pound rather than run between the shafts of a ricksha around the city. Yet, uncouth as these sounds are, they have a certain battering rhythm, a rhythm that augments the confusion below.

Hawkers and their chattering chants so picturesque, mix in the motley crowd. Along comes a lad with the inevitable bamboo pole across his shoulder, with baskets of miscellaneous dry goods dangling at either end. He selects a busy spot, sets up shop, and shouts out the virtues of his wares. The more subdued proclamations of a sweets vendor drift across the street; while a man with a basket of bananas does a roaring business on a nearby corner. Go a little farther, down to the river, and listen to the *hi-ho—ho-hi* drone of the coolies as they goose step from truck to lighter, from lighter to truck.

All these songs of toil are the most primitive of folk songs, infinitely more so than the Negro melodies. They have not grown into really mature melodies but have remained like tribal music, mere snatches of rhythm. Tribal in other ways are these chants, the "tribes" being the various trades. The origins of these trade chants have never been definitely ascertained; but certain it is that for centuries the tea carriers have passed from one generation to the next, and by word of mouth, the melody that is theirs.

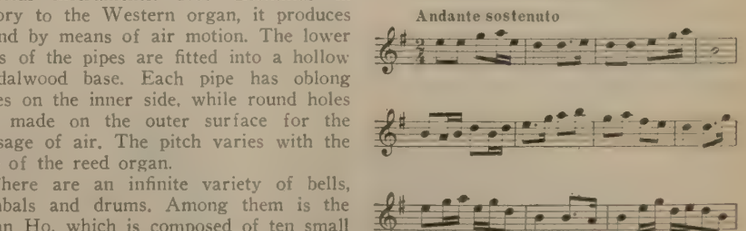
Down the street comes the fiddle vendor, his wares slung across his shoulder. As he meanders along he saws at one of his instruments, pulling from it harsh and querulous sounds. This cheap and crude instrument of two strings, with its rough hair-bow, hangs in almost every dingy dwelling. And of a summer's evening some member of the family will seat himself before the door and fiddle tirelessly and endlessly. Sympathetic fingers can coax from it a plaintive music-box melody, a pure clear tinkle—a single line of melody as undeviating, as buff-colored as the lives of the Chinese masses. This two stringed violin, the Hu Ch'in, is the easiest of all Chinese instruments to play; but it is rare to find those who play it well. It has a hollowed bamboo bowl shaped body, one end of which is closed with a piece of carved wood while the other is covered with snake skin. Its stemlike neck is slender and has a regular violin bridge; and the bow is likewise of thin bamboo with horse hair.

The P'i P'a is a much more complicated instrument, both in structure and in the technic it requires. P'i means the movement of the fingers away from the body, while P'a signifies their movement towards the body. The front of the instrument is made of topaz wood, the back of teak, and it has guitar-toned strings. The existent compositions for the P'i P'a are mainly descriptive of battles, of flower life, of the lament for a lover, and are full of charm. But the limitations of the instrument are apparent when heard in recital. There is too little flexibility of tone to portray any ranges of emotion; it can but suggest them.

The flute is an instrument which figures strongly in any Chinese orchestra. It is made of bamboo, and its birdlike tone is perhaps more characteristic than that of any other instrument of the delicate mentality and bodily grace which was Old China.

The Yang Ch'in, a harpsichordlike instrument, was first shaped something like a fan but later changed to resemble a butterfly. Its present contour is a compromise; across its bowl are strung, again, guitar-toned strings which are struck with very thin bamboo sticks. Like the P'i P'a, it is a very difficult instrument to master.

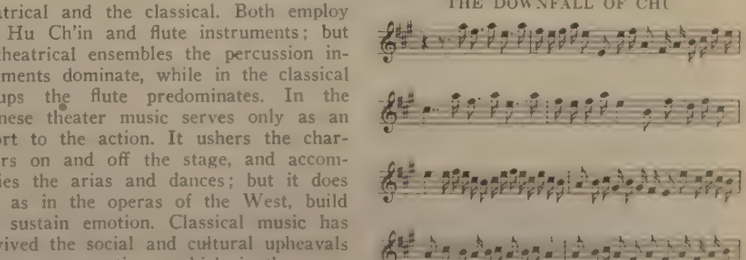
The Sheng is one of the oldest of Chinese musical instruments. Not dissimilar in theory to the Western organ, it produces sound by means of air motion. The lower ends of the pipes are fitted into a hollow sandalwood base. Each pipe has oblong holes on the inner side, while round holes are made on the outer surface for the passage of air. The pitch varies with the size of the reed organ.



There are an infinite variety of bells, cymbals and drums. Among them is the Yuan Ho, which is composed of ten small gongs hung on a wooden frame. Different pitches are produced on brass plates of varying thicknesses; and then there is the wooden fish—or "Buddha's Ear"—a hollow wooden percussion instrument, played with a hammer, also of wood. These simple instruments are used everywhere in Buddhist temples, the larger ones to call the monks to prayer and the smaller ones to accompany the chants.

There are two types of orchestras, the theatrical and the classical. Both employ the Hu Ch'in and flute instruments; but in theatrical ensembles the percussion instruments dominate, while in the classical groups the flute predominates. In the Chinese theater music serves only as an escort to the action. It ushers the characters on and off the stage, and accompanies the arias and dances; but it does not, as in the operas of the West, build and sustain emotion. Classical music has survived the social and cultural upheavals of many generations, which is the more remarkable considering the wholly inadequate system of notation of Chinese music. It has retained the charm of China's old traditions, the dignity of her sages, the grace of her reticent womanhood, the gentle bloom of the lotus blossom, the sweep of the pagoda. Yes, it has survived; but it has not advanced. It remains to-day in the embryonic stage of its development, still in the descriptive stage. It is in the same plight as its theatrical relative; it lacks form. Themes, color, rhythm—it has all of these, but it has no firmly constructed skeleton on which to drape them.

That Chinese music is made up of descriptive snatches, rather than expressions of emotions, can be readily seen in the program notes* here presented.

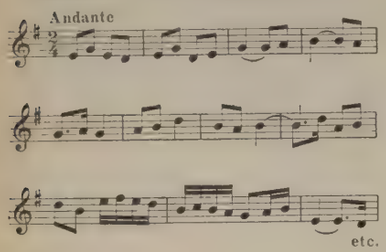


AUTUMN IN A HAN PALACE

Andante sostenuto

This composition portrays the melancholy lot of a Court lady who was far from happy. The first movement describes her arrival at the palace and her neglect by the Emperor. Court revelries, from which she was excluded, provide the theme of the second movement. Then the final passages are indicative of the unfortunate one's meditations upon her unhappy life.

THE DOWNFALL OF CHU



"This war song, the longest P'i P'a solo

* These program notes are taken from a program of the Shai Chao Chinese Music Research Institute.

ever written, describes the conflicts of two states and the victory of Liu Pong of Han. During the second fight the Emperor Chu Han Yu is defeated and escapes. Liu Pong's soldiers follow and overtake him. Although besieged, Hon Yu is so strong that no one dares to engage him in hand-to-hand combat. Finally Liu Pong calls Chang Liang, the musician, to his side and asks him to play the folk songs of Hon Yu's native land. When Hon Yu hears the familiar melodies, he becomes homesick and as he realizes that he will never see his native land again, he commits suicide."

MELODY OF THE GREEN LOTUS

This composition is intended to depict the beauty of a Chinese garden lighted by lanterns and the moon.

Morning Flight of Two Phoenix†

"Chinese lore ranks the phoenix as the king of birds. In this fanciful composition an attempt has been made to convey this sense of majesty, resulting in an atmospheric tone poem of unusual interest and vitality."

There have been attempts to create a form which will utilize the texture of the Western symphonic ensemble, and at the same time preserve characteristic Chinese themes as the basic motives. Aaron Avshalomoff (composer of "Kuan Yin," "Soul of the Ch'in," and "Hutungs of Peiping") in his piano concerto (performed in Shanghai, 1935) laid before the audience the entire problem of the future of Chinese music. The *adagio* was performed twice, first with the Symphony Orchestra and then with a Chinese Orchestra. The majority of Chinese insist that the old instruments should be kept, that only confusion will result from tampering with them in an endeavor to produce the same richness of tone as is possessed by the instruments of the West. But the ancient instruments originated in a civilization whose art was one of suggestion; whose ideals, furthermore, were grace and delicacy, almost to the point of asceticism. Civilizations feel the imprint of universal trends, and their artistic expressions should interpret their reactions to these changes. There is a wide gap between the China of the P'i P'a and the China of to-day—whether for good or for ill it is not relevant to discuss here—and this difference in outlook must find a mode of expression. It is all very splendid for theorists to say that the fundamental characteristics of a nation do not alter with externals. A common sense survey of history would seem to bolster this opinion, but that is not the point. Granting that traditions and ideals remain unchanged, modes of living do change, and the two must be reconciled; and an art form is an interpretation of the everchanging outlook in the life of a nation. The symbols of ancient China needs must be brought to life, made vital, made representative of new surroundings. And this cannot be accomplished by clinging to meager descriptive forms and stunted instruments.

The other vulnerable point in Chinese music is its lack of harmonic development. It is purely melodic, and even the most delightful of melodies become monotonous unless principles of harmony are introduced. But, for some mysterious reason, the Chinese mind does not seem to grasp harmony readily—in theory, yes, but not in practice.

Are then the Chinese people not musical? No one with ears and eyes would support such a contention. Assuredly they are musical, but in a primitive way. They are actively musical, singing as they work. Always there is movement with their music. Life along the streets is a pageant of chants.

Debussy, in writing of the People's Theater, said: "Let us rediscover tragedy, strengthening its primitive musical setting by means of the infinite resources of the modern orchestra and a chorus of innumerable voices. Let us, at the same time, remember how effective is the combination of pantomimed dance accompanied by the fullest possible development of lighting."

Can we not take this as the goal towards which experiments in Chinese music should tend? True, the difficulties are stupendous, but not insuperable. Debussy's suggestion involves the whole art of the theater in addition to musical composition. But there are at least two arguments in favor of it in relation to the Chinese music-drama. Much that already exists in the theater could so profitably be used—the traditional tales, some of the spectacular dances, and especially the eloquent pantomime. And secondly, even with the use of the Western symphonic ensemble, it would lose none of the Chinese characteristics.

Perhaps a national music will spring from another source; but that seems doubtful in that the already established patterns are foreign to the Chinese mind and the drama coincides with the instincts of the people who have a very highly developed sense of the theater. And composers must, after all, reflect a typical mentality of which they are a part. Thus we have from the French the impressionistic movement; from the more scientific German mind the sonata form; from Russia the color-drunk tone poem; and from Italy the spectacular gore of the opera. So, too, must China uncover that particular music form which will illuminate for other nationalities her interpretation of things universal.

The obstacles seem to be of a psychological rather than a technical nature. For China, with its overdeveloped aristocracy and oversenitized culture, will not stoop to using the chants of the coolies, street cries, and so on for material on which to base its music. And another grave stumbling block is China's resentment to outside influences. Although accepted in more practical fields, the suggestion that the West might be able to give something of value to China's decaying art is one which is not tolerated in some influential quarters. Until, however, the Chinese composer sees his way to adapting—not adopting—some of the rich musical heritage of the West to his peculiar needs; until then Chinese music will probably remain what it is to-day, what it has been for centuries, a charming melodic description of a dwindling civilization. And, as such, it will be interesting only as are archives, not significant as music.

(Many of the active musical leaders of the China of to-day believe that the only salvation of the future of Chinese music rests in its adaptation to Western forms. During the last year a thoroughly scholarly and competent book on Chinese music has been written by Mr. Levis and published by Henry Vetch in Peiping.—Editorial.)

Musicians of January Birth

By W. FRANCIS GATES

THE FIRST MONTH of the year is especially interesting, musically, because of having brought into the world so many who have made notable contributions to the tone art. Among these are Mozart and Schubert, perhaps the supreme spontaneous melodists of all time; Clementi, the father of piano technic; William H. Sherwood, premier American pianist; and Josef Hofmann, our greatest of adopted masters of the keyboard. Of the composers, pianists, vocalists, violinists, conductors, and others who have made the world's musical history, we present this list of musicians born in the first month of the year.

Musicians of January Birth

1st—Giuseppe Ferrata (1865), Tadeusz Jarecki (1889), Adolf Muhlmann (1867)
2nd—Fritz Giese (1859), Charles Heinroth (1874)
3rd—Henriette Sontag (1806)
4th—Giovanni Battista Pergolesi (1710), Josef Suk (1874)
5th—David Bispham (1857), Frederick S. Converse (1871)
6th—Max Bruch (1838), César Cui (1835), Xaver Scharwenka (1850)
7th—Sigismund Thalberg (1812)
8th—Hans Guido von Bülow (1830), William Wallace Gilchrist (1846), Lowell Mason (1792)
9th—John Knowles Paine (1839)
10th—Alexander Scriabine (1872)
11th—Reinhold Moritzovitch Glière (1875), Christian Sinding (1856)
12th—Adolf Jensen (1837), Anton Van Rooy (1870), Ermanno Wolf-Ferrari (1876)
13th—Louis Ehlert (1825), Richard Eilenberg (1848), Vassili Sergeievitch Kalinnikov (1866)

(*Continued on Page* 61)

CHINESE INSTRUMENTS

Top Row, left to right: 1. Lute; 2. Yuan Lo; 3. Er Hu; 4. Sheng. Lower Row, left to right: 1. Yang Ch'in; 2. Ku and Lo; 3. Kok Kok and Ch'ung; 4. P'i P'a.

Do You Practice Too Much?

By DR. THOMAS TAPPER

A Well Known Musical Pedagog and Business Executive Discusses This Very Practical Subject.

I

A GASOLINE STATION attendant said to me one day, "Do you know who make a fine, big profit of thousands, perhaps scores of thousands of dollars a day, for the gasoline business?"

"No," I replied.

"You don't?" he continued. "Then let me tell you. They are the folks who hop into their cars and start off to go somewhere without knowing how to get there. Even though they can get three kinds of reliable information for nothing; road maps, signs, and 'ask the man'; still they go wrong. They pile up the useless, 'I wonder where we are now?' miles, and often never arrive at their destination because the shades of evening begin to fall before they wake up. Imagine," he said, "what useless mileage is traveled by this gentry, on a fine Sunday or a holiday. And then remember that every foot of the way costs them money."

II

Reader, if perchance I have a reader, I present this gasoline philosopher's comment to you because he has discovered in his calling a great truth that we should recognize in ours. And he has expressed it in terms so simple that even the person qualified to hold a driver's license can understand it. I wish I had his narrative skill, as I sit here at my gasoline tank, to convince you of what his discovery can be made to mean to us, readers of THE ETUDE, followers of the art of Liszt, Paganini, Jenny Lind and their successors, even down to the present generation.

I, too, am about to discuss waste mileage—that aimless wandering of a people who surely were destined to carry the torch of heavenly beauty out into the world of shadows. The singers and players who, before they can hum or pipe the simplest tune right, must practice. Those numberless thousands who persist in trying, with all the patience of Sisyphus rolling his stone, to perform some complex act of music making so well that they feel they are attaining and mastering a worth while technic. All such are my public for the moment. Pursuers of skill by practice. And *practice* is the one emphatic word. The brand of gasoline consumed uselessly in this activity, wastefully and without getting mileage in the right direction, is the magical compound of time plus effort. Of time that never can be used twice. Of effort that piles up its results, right or wrong, and makes us own and possess them forevermore. Some things in this life, once we get them, are hard to shake off. It is best to get the right things in the first place and so avoid the necessity of shaking.

III

Significant people in the story of the world's work agree upon this: A little time, highly organized and directed with concentration upon a task, is productive of better results and of more lasting benefits than unlimited time indifferently applied. Many a pianist has testified to me (so I quote with justifiable authority) that, in the matter of practice, method of procedure is far more valuable than time; that the amount of available time is, in fact, a secondary consideration. The method of its use is the thing.

And so in all professions. The distinguished journalist, the late Arthur Brisbane, an indefatigable worker, has said to me many a time that his best possible concentrated work amounted to a very brief period daily, often not more than an hour or two of maximum intensity; that all the rest of it was performed at successively lower levels, down to routine. Charles Darwin, forced by conditions to work only in short periods, cut his working day to two hours. But in this time he brought to a reservoir head all the power he possessed. Many people work on the principle of the burning glass. You can test this most effectively for yourself. The equipment is a small lens, say the size of a twenty-five cent piece, and your own nose. Select a sunshiny day. Hold the lens so that the concentrated sun's rays gather at the point where the nostrils look out upon the world and its odorous life. Then wait. In a very short time it will have been demonstrated to you that concentration is taking place. Your nose will nudge your attention at the right moment.

Now in the matter of concentrated practice, as against just keeping at it in any old frame of mind—despite nature's call to quit, to let up, to have mercy—there is a Secret, with a capital S. And that secret, once you make it your side partner, will immeasurably increase the value of all the practice you do. And, further, it will save you, if not half your time, then something more than half.

First—as to how it works.

Let me present some pictures that will show so convincingly how the secret operates that they will tell us the whole story and set its great value before us. And, further, they will help us to apply the principle at the piano, or in those hopeful hours of vocalization when we wonder if we really are advancing toward the radio standard as rapidly as family and friends assure us.

Picture No. 1. The buzzing made by a mosquito's wings, as determined by a tuning fork, produces a pitch of approximately five thousand vibrations a second; this is in the octave above the top string of a piano. Yes—the prongs of the vibrating tuning fork and the mosquito's wings move out and back, or back and forth, five thousand times a second. But at the extreme of the swing they stop—dead. Were it not for this complete cessation, there could be no recurrent movement. To us humans who think in terms of years, months and days, the five or ten thousandth part of a second is not much. But it is a fact in nature's laboratory. And inasmuch as we, too, are facts in nature's laboratory, it behooves us to realize what our Universal Mother wants us to do, when we practice, so that she may, in turn, do something for us. And one of the things she most decidedly wants to do for us is just this very thing of punctuating our effort with rest; movement, with cessation; work, with relaxation. Keep at it unremittingly, she tells us, and I will make you heavy and drowsy. That is how I try to get your attention. But follow my law of work and rest, of flow and ebb, and I will give you power beyond all the pulling and hauling your anxiety can invent.

Picture No. 2. The heart beats, in health, for seventy, eighty, or even a hundred years, at the approximate rate of seventy a minute. Figure it out for yourself. Seventy beats a minute equal approximately one hundred thousand beats a day, or thirty-six and one-half million beats a year. Hence, in the Psalmist's allotment of seventy years, there are seventy times thirty-six and a half million beats. Now after every one of them the heart muscles relax *completely*. That is, the heart not only beats seventy times a minute, but it also rests seventy times a minute. The mosquito's wings not only move five thousand times a second, but they come to a full stop five thousand times a second, each way. Efficiency training in technical jobs has applied this principle in many ways, from bricklaying to filing systems. Even the *tour de force* called a prize fight recognizes it, for the three minute stretch of assault is followed by one minute cessation of effort. The participants sit, each in his corner, the muscles relax, the mind stress eases, and then, the gong sounds.

THOMAS TAPPER

IV

Let us apply.

Just as automobile travel consumes gasoline, whether one is on the right road or the wrong one, so practice at the piano uses up time and energy whether we do it the best way or the worst. And that is not all. For what we do in practice stays by us, every slightest motion of it. It automatically works its way into our physical organism to become more and more firmly established. Hence, the statement of Professor William James that "We learn to swim in winter and skate in summer" is based on fact; for, in these opposite seasons, nature is building into us, pounding in, forever fixing the habits we practice in the hours of performance. It pays, then, to have the act right in the first place.

Now the right way, in all practice, begins with an exact understanding of what we purpose to do. The experienced artist knows this and proceeds with the least degree of friction. But inexperienced pupils must be shown how. They should know as early as possible that the tuning fork and the heart beat tell us that uninterrupted effort is not nature's way. She moves not in the continuous line, but in this way,

Illus. 1

A beginning, a proceeding and a stop, over and over again. Or, picture it another way: Effort may not be a continuously unfolding *crescendo*, like this,

Illus. 2

but it should be a continuous series of *crescendos* like these,

Illus. 3

But they make the big *crescendo* just the same.

The error we commit in music practice, in our book reading, probably in all application of effort, is to ignore the fact that unrelieved continuity of motion is impossible. Consequently golf is a wonderfully logical game. You concentrate on the stroke. Then you relax and walk to the next point of concentration, explaining your last play on the way. Hence, recurrent concentrated effort and relaxed motion.

We spoke a little while back of the secret. The secret consists first in the mind's grasp or clear picture of what it is about to make the body do; to know that the doing must be performed in the highest degree of concentration one can command; and then, so to speak, to remove the burning glass for a moment. It all amounts to knowing that the basis of practice is:

1. The Idea of what is to be done.
2. The Effort, high-pitched and sustained as long as we can hold it.
3. The Release.

And of all three the release is the very life of the party. I quote the following to show the application of this principle and its value:

"The possibility of developing the power of relaxation by means of special training is being taken advantage of in teaching acts

of skill . . . where overtension hinders the acquisition or accomplishment of a useful act." Now note the importance of the following:

"By assuming the attitude of assurance and composure the actual condition is produced in a manner most astonishing to those who have never attempted it. No one can do his best when he is hurried and fearful."

Now let us see what we have gathered thus far:

1. All practice assignments must be clearly set before the pupil so that he shall not fall into the temptation to drive over unknown highways.

2. Not long hours of practice do the trick but concentrated effort in short periods with perceptible rest periods between.

3. The device of shifting from one composition or type of practice to another always helps, because it relieves the tension of sameness.

4. Unrelieved effort makes the mind stale. It becomes deadened by its own persistence.

5. The very heart and soul of all practice is method. Not time. This means that those with little time may, if they have the right method, do wonders in technical attainment. What a godsend to those music lovers who possess but little time for practice. Method will at least double it.

6. When, at practice, the fingers keep moving while the mind begins to wonder what kind of fishing there is in the country, there is only one proper thing to do—quit and go fishing.

7. But, do it right and there is no limit to what one may accomplish even with a limited time allowance. This should open the world of art to countless people who keep out of it because they think it is an all-absorbing time investment. It is not. *Multum in parvo* never proved a richer investment than in this application to practice.

V

Well, so far, so good. What else is there to it?

There is all this:

The particular human intellect (if intellect it was) that invented the practice of counting jumping sheep as a cure for insomnia elucidated a truth well worth our attention. It is this: once you permit monotony to enter into any mental or physical operation, you become drowsy. Then you do not know whither you are driving your car. You are wasting mileage and the gasoline that capitalizes it. (In this instance time and effort.) This drowsiness is inevitable. Inertia sets in. Attention wanes. And once attention ceases to inspire and supervise the job, the rest of the gang quit work. By the gang I mean the workers who are 1. *Observation* (of exactly what is before one to do). 2. *Investigation* (the impulse to get at the facts which, by the way, is known and experienced only by the wide-awake). 3. *Initiative* (the impulse to start, to move, to keep going). 4. *Analysis* (the act of finding and keeping in sight all the mechanism of your effort to lift yourself out of the ordinary which you are into the extraordinary which, in some degree, you can become).

It seems to us, self-hypnotized into dullness as we so often are, being human, when we chant "one-and-two-and-three-and," that we are counting beats intelligently. As a matter of fact, we are merely drowsing. Half the time, at least, we are counting sheep, doing the bleating ourselves as they (the sheep) lead us gently into the Land of Nod. Many a good nap is ruined by our persisting in sitting slumped on a piano bench, when we should be prone on a couch.

I have waited for a long time for a capable person to set forth the many different practice approaches possible to a piano composition of any degree of difficulty or simplicity. The job has undoubtedly been admirably done, and I have missed it. I am not that capable person. But I am going to have a try at it. For, unlike the sleight of hand fraternity who keep their tricks to themselves, I conceive it to be the ethics of our craft to tell all we know—but no more.

Once upon a time I read an article by an English teacher of singing that did me a world of good, not alone in music but also in business, social, individual and all other interests I had. He set forth the number of possible entrances into a song; he pointed to the many doors possible to open, enter and look around. He made it plain that you can, as he put it, "go at" a song in an unbelievable number of ways. It was wonderful to note the multiplicity of fascinating adventures a practicing singer can find in two or three pages of simple music.

And so, here, at the piano:

Here we are with three hours before us, this sunny morning, to do our piano stunt. There should be several different factors on our program. We should recall the absolute cessation of the mosquito's wings, five thousand times a second, each way. (Since I heard that fact I have ceased killing this vibrating wonder. I drive him away.) That means rest, rest, rest, as you forge your way along to noon. First follow this recipe every little while:

"When you are tired and let down, go to the nearest window for a few deep breaths of fresh air; being sure, too, that your idea of a deep breath is not just a big gulp of air that expands you like a balloon through the upper story and is puffed right out again. A really deep breath is one so complete that you are conscious of it all the way down to the back of your hips. Your lungs do not extend down that far, of course; but the muscles controlling them do, and you should feel motion there. In fact your breathing apparatus really runs through the whole center of your body, from top to bottom, and that is why the slow, rhythmic deep breathing calms your jumping nerves as well as gives you the widest possible flow and distribution of life-giving oxygen."

If this begins to seem like a soap box oration on physiology, be patient. We are about to begin to count a few of the many practice approaches for your three hour stunt of this morning.

1. *The First Reading:* You should practice nothing that you have not first read away from the piano, just as you read the best book you know. Look at it, hear it, feel it in your hands and body, appraise its effect as you read. This is the one only intelligent way to break in a new piece.

2. *Then at the Piano:* Play it slowly, all the way through, at the *tempo* the most difficult measures demand. Say at fifteen miles an hour, instead of a stretch at sixty miles and then a standstill. In this slow reading at the keyboard, get everything set right: fingering, phrasing, the pedal, the climax measures. Your gang is now at work (Observation, Investigation, Intuition, Analysis).

3. *Phrasal Practice:* Now you are ready to break the composition down to its components. Each full short unit, usually a phrase, one hand at a time, if that be wise (and often it is not). Then the coördination. Next, the way to shift the hand from one strategic position to the next will be revealed. And, incidentally, handshift offers more difficulty, ordinarily, than fingering or speed.

4. *The Chord Basis:* There is just as great difference between the chord basis of a composition and its melodic rhythmic flow as there is between a yeast cake and a pan of fluffy biscuits. If you would quicken the memory grasp, reduce all phrasal groups to their chord basis. Then spin them out again. In Beethoven's "Sonata, Op. 2, No. 1," first movement, the composer spins one chord (tonic) for two measures; then another chord (dominant) for two measures; then tonic again; then dominant again. You can reduce the whole movement, in notation, to the solemn appearance of a hymn tune. Do it. And you will never again fail in the memory demand of this or any other composition.

5. *Seeing What You Play:* The chord basis fixes the rhythmic picture on the mind. You can play the four opening measures of the above mentioned sonata first as two chords, then in their rhythmic expansion. You can do this with your eyes shut. You will then have actually pulled the notation away from the printed page and set it up for all time to come, in that marvelous safety deposit box—Your visual memory. So proceeding, memorizing will begin to take care of itself.

6. *Joining the Phrasal Groups:* Just as word sequence is at the basis of a poetic line, so a sequence of tone groups (motives) produces a phrase or period or complete section in music. Having photographed the first link of the chain upon your mind, you add the second, and so on. (If you are as young as you appear, you will go on doing this perhaps for half a century. By that time you will have become a master.)

7. *Repeats and Variants:* One does not merely practice these. In every sonata, for example, there are two approaches to the second subject. The material is quite the same, but the turns into the two keys are different. You compare. You do the thing in two ways. You are not practicing with your hands, you are working with your two-gang foreman: Observation and Analysis. These variants appear in all music more or less. Unanalyzed, they are a tangle-foot trap to the memory.

ERNA SACK

Her singing upon a November program of the General Motors Corporation both astonished and delighted music critics and music lovers everywhere.

VI

It is now time to go to the window again. We remark on the way that the above is not a full roster of practice approaches. There are still the Pedal, Pedal-listening, Climaxes, Interpretation (the composer's intention and not our self-display), Fidelity in interpretation to the period. (I believe one must play Bach with a Bach mind and not with a Stravinsky mind, with a candle-mind and not with an arc-lamp mind.) Then the ensemble as a work of art. When I reflect that a mind of the length, depth and amplitude of Beethoven's actually sets out to say something and says it, I know it behooves me to stop, look, listen and meditate in respectful wonder, knowing, as it is my duty to know, that I am in a great presence.

VII

It is only courteous to return to the gasoline stand and extend thanks to the attendant for the hint he gave us on waste mileage and the consequent cost of the fuel that pays for it. He being a sententious gentleman, sums it all up like this:

1. It matters not where you want to go, there is a route number and a road map to be had for nothing. This, Reader, in our lingo, means there is one best way to do anything, but human nature drifts into the worst way with imperceptible persistence.

2. Useless mileage in our craft means not merely waste of that precious fuel time plus effort. It means brewing bad habits with them. It means that we never absolutely empty the bag of a composition of all its contents and look at it in full consciousness. In that full consciousness alone lies any success in this life that we are destined to have. (Do you realize that children are generally completely present in what they do, while adults are off somewhere else dreaming, as the sheep of their

Music, "According to Webster"

An Interesting Discussion of the Musical Background of the Great American Lexicographer, Noah Webster

By ANNETTE M. LINGELBACH

THE ETUDE *is indebted to the G. & C. Merriam Company, of Springfield, Massachusetts, publishers of Webster's New International Dictionary, second edition, for much valuable material used in this article.*

* * * * *

NOAH WEBSTER, dictionary-maker, patriot, and schoolmaster, was a strong supporter of music. Strangely enough, although Webster's Dictionary has been, in the past century, one of the most used books in the English language, few people know about the remarkable man who wrote it. Webster was born at West Hartford, Connecticut, October 16, 1758 and died in 1843. During his long and active life he produced many works of wide popular adoption, including his great dictionary and his famous spelling books. The latter had for years an annual sale of a million copies. They were the first American spelling books and were published with leather backs.

Webster was a descendant of John Webster of Hartford, Governor of Connecticut, 1656-1657, and also of Governor William Bradford of Plymouth Colony. Brought up on his father's farm, he prepared for Yale and graduated at the age of twenty. For a time he taught in the village schools and then studied law, being admitted to the bar in 1781. His bent, however, was education, and in 1785 he completed the publication of what he called *A Grammatical Institute of the English Language*, which included a spelling book, a grammar, and a reader. The success of this book enabled him to spend twenty years in the preparation of his great dictionary.

NOAH WEBSTER

This portrait is furnished to The Etude through the courtesy of the G. & C. Merriam Company.

Scholar and Patriot

SOME OF HIS TIME was devoted to political writing and he did at least one momentous thing in this field. In 1785 he wrote a pamphlet, "Sketches of American Policy," and carried a copy in person to Mount Vernon to place it in the hands of General Washington. This, he contended, was the first distinct proposal for an American Constitution. In 1787 he started *The American Magazine* in New York, which limped for a year, after which he returned to Hartford to practice law and enjoy the convivial company of his friends. In 1793, in support of President Washington, he started a newspaper in New York, known as *The Minerva*, which later became the famous *Commercial Advertiser*. Thereafter he lived in New Haven, Connecticut, and at Amherst, Massachusetts, devoting most of his efforts to philological subjects, but finding time to serve in the legislature and as a county judge. In 1806 he published "A Compendious Dictionary of the English Language" and two years later began work upon his great dictionary. His researches took him abroad, and he spent the years 1824-1825 in England and France, completing his manuscript at Cambridge University. The work appeared in 1828 in two volumes, and it had, according to the Encyclopedia, from thirty to forty thousand more definitions than had ever been included in any previous dictionary. This refers to definitions and not to the number of words, as Robert C. Munroe, President of the G. & C. Merriam Company, present publishers of the dictionary, has informed the writer; and that the first edition had twelve thousand more words than Todd's edition of the famous dictionary of Dr. Johnson.

Webster was an intensely patriotic American. He was a freshman at Yale when the news arrived of the shedding of blood at Lexington. Food was then so scarce at Yale that the students were obliged to return home to secure proper nourishment. Upon graduation, Webster's father, impoverished by the war, sent his son out in the world with a capital of eight dollars. This same father was evidently in need of one of his son's spelling books, as he always signed his name "Effectionat Father." The junior Webster became an able public speaker and lectured extensively upon many subjects, one of which was the need for copyright protection.

Early Musical Bent

AS A STUDENT at Yale he played the flute. When General Washington passed through New Haven, on his way to assume charge of the American Forces at Cambridge, Webster with a group of students escorted him out of town. When Webster was an old man he wrote of this: "It fell to my humble lot to lead the company with music." Once on a visit to Charleston, South Carolina, Webster, brought up in staid New England, was shocked by the announcement that Miss Storer, a singer, would present parts of Handel's "Messiah." He wrote at that time: "Pleased with the appearance of the town. Go to St. Michael's Church and hear Parson Smith. Miss Storer sings part of Handel's Oratorio. Very odd indeed! A woman sings in Public after church for her own benefit! I do not like modern taste in singing." Webster, however, put a quarter in the collection plate and cheered his soul by attending the "White Church" in the afternoon where psalm singing in the New England style was held. He was devoted to his flute and wrote in 1784: "Musing myself with books and with a flute. What an infinite variety of methods have (sic) man invented to render life agreeable! What a wise and happy design in the human frame that the sound of a little hollow tube of wood should dispel in a few moments, or at least alleviate, the heaviest cares of life." Note the "have" for "has"; evidently Homer was nodding.

Webster enjoyed teaching, but evidently was not a continuous success in this field. Here is the very quaint announcement of the opening of his school in Sharon, Connecticut:

> "On the first of May will be opened, at Sharon in Connecticut, a school, in which children may be instructed, not only in the common arts of reading, writing, and arithmetic, but in any branch of academical literature. The little regard that is paid to the literary improvement of females, even among people of rank and fortune, and the general inattention to the grammatical purity and elegance of our native language, are faults in the education of youth that more gentlemen have taken pains to censure than correct. Any young gentlemen and ladies, who wish to acquaint themselves with the English language, geography, vocal music, etc., may be waited on at particular hours for that purpose. The price of board and tuition will be from six to nine shillings lawful money per week, according to the age and studies of the scholar; no pains will be spared to render the school useful."

Later in Baltimore (1785) he proposed establishing a school in which young ladies and young gentlemen would be taught to speak correctly, and to read and write the English language. He adds: "I will also teach vocal music in as great perfection as is taught in America." He turned to lecturing, however, and this school never opened. Later that year Webster opened a school of vocal music, which was to be taught by "a regular scientific method." Webster at least, had the form of many other vocal teachers. He claimed everything. His studio in this school was in the church and was paid for by his students becoming members of the church choir. After a six week instruction period, his first class of ten pupils sang in the church with remarkable success. His class grew to twenty-one members and his price was twelve shillings for books and a dollar for instruction. Now and then he accepted merchandise as tuition, such as gloves, slippers, silk stockings and shoes. Webster believed in rewarding good work. He once gave a banquet to his class, including three dozen bottles of wine at a cost of four pounds one shilling. He followed a similar method at home with children. Candy, raisins, new canes and various small gifts were given for excellent music and school lessons.

A Family Man

THE SIX WEBSTER daughters, Emily, Frances Juliana, Harriet, Mary, Eliza and Louisa, were taught by their father to sing and to play the harpsichord. William, the only son, performed beautifully on his father's flute. As soon as they were old enough, the seven children joined the church choir then directed by the father.

In the Webster spelling book his children are shown at their favorite pastimes, such as gardening, reading, studying and sewing. Emily, Mary, Harriet and Frances Juliana, each sing a short song allegedly composed by the father.

Webster advocated a national school of music, with native composers as its leaders. He gave a great deal of time to preparing articles and to urging personally a better type of musical instruction and appreciation, especially in the art of singing. He sang to the end of his days. His granddaughter, Emily Fowler, describes how in the midst of one of her solos "he would strike up with a very true, quavering voice." In advanced years, he had the misgivings of age and wrote something very much like the occasional outbursts of pessimism we hear in these days. "I am now eighty years of age, but in good health. I feel all the interest I ever felt in political affairs, but I am continually pained to see the disorders and corruptions which mean the ruin of our republic."

The first known musical dictionary was that written by the Belgian Johannes de Tinctoris (circa 1475). This was a book of eight pages, in octavo size. In the latest Webster the number of words devoted to

the definition of subjects or terms relating to music, is approximately five thousand. The total number of entries in the dictionary exceeds six hundred thousand.

Early definitions of *music* and *song* in English have a great interest for the musicologist, and through the kindness of the Merriam Company, who made extensive researches for THE ETUDE, we present the following:

A New Dictionary of the English Language, by William Kenrick, *LL.D., (London) 1773:*

mu'sick—mu-sick. *n. s.* [⌣; *musique*, French.] The science of harmonical sounds.—Instrumental or vocal harmony.

A New Dictionary of the English Language, by William Kenrick, *LL.D., (London) 1773:*

song—song. *n. s.* [from ⌣, Sax.] Any thing modulated in the utterance.—A poem to be modulated by the voice; a ballad.—A poem; lay; strain.—Poetry; poesy.—Notes of birds.—*An old Song.* A trifle.

Sheridan's Dictionary of the English Language, by Thomas Sheridan *(London) Printed for Charles Dilly; B. Law and Son; W. Richardson; J. Scatcherd; and T. N. Longman. 1797:*

musick, mu'zik. s. The science of harmonical sounds; instrumental or vocal harmony.

Sheridan's Dictionary of the English Language, by Thomas Sheridan *(London) Printed for Charles Dilly; B. Law and Son; W. Richardson; J. Scatcherd; and T. N. Longman. 1797:*

song, song'. s. Any thing modulated in the utterance; a poem to be modulated by the voice; a ballad; a poem, lay, strain; poetry, poesy; notes of birds; An old Song, a trifle.

An Universal Etymological English Dictionary, 28th edition, by N. Bailey *(Edinburgh) 1800:*

mu'sic } [*musique*, F. *musica*, L. ⌣, Gr.]
mu'sick } one of the seven sciences termed *Liberal*, belonging to the *Mathematics*, which considers the number, time, and tune of sounds, in order to make delightful harmony; the art of singing and playing on all sorts of musical instruments.

Practical **music,** shews the manner of composing all sorts of tunes or airs, with the art of singing and playing on all sorts of musical instruments.

Theoretical **music,** is that which searches into the nature and properties of concord and discord, and explains the proportion between them by numbers.

An Universal Etymological English Dictionary, 28th edition, by N. Bailey *(Edinburgh) 1800:*

A song [⌣, *Sax.* song, *L. S.* gesang, *Teut.* and *Dan.*] a verse or composure sung; notes of birds, &c.

A Critical Pronouncing Dictionary, and Expositor of the English Language. The fifth edition, by John Walker *(London). Printed for T. Cadell and W. Davies, Strand; G. Wilkie and J. Robinson, No. 57, and George Robinson, No. 25, Paternoster-Row; J. Walker, Paternoster-Row; and J. Johnson & Co. St. Paul's Church-yard. 1810:*

Musick, mu'zik. s. (400) The science of harmonical sounds; instrumental or vocal harmony.

A Critical Pronouncing Dictionary, and Expositor of the English Language. The fifth edition, by John Walker *(London). Printed for T. Cadell and W. Davies, Strand; G. Wilkie and J. Robinson, No. 57, and George Robinson. No. 25, Paternoster-Row; J. Walker, Paternoster-Row; and J. Johnson & Co. St. Paul's Church-yard. 1810:*

Song, song. s. (408) (409) Any thing modulated in the utterance; a poem to be modulated to the voice; a ballad; a poem, lay, strain; poetry, poesy; notes of birds; An old song, a trifle.

A Dictionary of the English Language (Todd's Edition), 1818, by Samuel Johnson, *LL.D.*

mu'sick. *n. s.* [⌣; *musique*, Fr.] **1.** The science of harmonical sounds.

The man that hath no *musick* in himself,
Nor is not mov'd with concord of sweet sounds,
Is fit for treasons. *Shakspeare, Merch. of Ven.*

Now look into the *musick*-master's gains,
Where noble youth at vast expence is taught,
But eloquence not valu'd at a groat. *Dryden, Juv.*

2. Instrumental or vocal harmony.

When she spake,
Sweet words, like dropping honey, she did shed;
And 'twixt the pearls and rubies softly brake
A silver sound, that heavenly *musick* seem'd to make. *Spenser, F. Q.*

Such *musick*, as 'tis said,
Before was never made,
But when of old the sons of morning sung,
Milton, Ode Nativ.

By *musick* minds an equal temper know,
Nor swell too high, nor sink too low;
Warriours she fires with animated sounds,
Pours balm into the bleeding lover's wounds.
Pope.

We have dancing-masters and *musick*-masters.
Arbuthnot, and Pope.

3. Entertainments of instrumental harmony.

What *musick*, and dancing, and diversions, are to many in the world; that prayers, and devotions, and psalms are to you. *Law.*

A Dictionary of the English Language (Todd's Edition), 1818, by Samuel Johnson, *LL.D.*

song, *n. s.* [⌣ Saxon.] **1.** Any thing modulated in the utterance.

Noise other than the sound of dance and *song*,
Milton. P. L.

He first thinks fit no sonnetter advance
His censure farther than the *song* or dance.
Dryden.

2. A poem to be modulated by the voice; a ballad.

Pardon, goddess of the night,
Those that slew thy virgin knight;
For the which, with *songs* of woe,
Round about his tomb they go! *Shakspeare.*

In her days every man shall sing
The merry *songs* of peace to all his neighbours.
Shakspeare, Hen. VIII.

3. A poem; lay; strain.

The bard that first adorn'd our native tongue,
Tun'd to his British lyre this ancient *song*.
Dryden.

There we a while will rest:
Our next ensuing *song* to wonderous things addrest.
Drayton.

4. Poetry; poesy.

This subject for heroick *song* pleas'd me.
Milton. P. L.

Names memorable long,
If there be force in virtue, or in *song*. *Pope.*

5. Notes of birds.

The lark, the messenger of day,
Saluted in her *song* the morning grey. *Dryden.*

6. *An old* SONG. A trifle.

I do not intend to be thus put off with an *old song*.
More.

A hopeful youth, newly advanced to great honour, was forced by a cobler to resign all for an *old song*.
Addison.

Webster's American Dictionary of the English Language, Published by S. Converse, (New York) 1828:

mu'sic, *n. s* as *z*. [L. *musica*; Gr. ⌣; Fr. *musique*. See *Muse*.] **1.** Melody or harmony; any succession of sounds so modulated as to please the ear, or any combination of simultaneous sounds in accordance or harmony. Music is *vocal* or *instrumental*. *Vocal* music is the melody of a single voice, or the harmony of two or more voices in concert. *Instrumental* music is that produced by one or more instruments.

By *music* minds an equal temper know,
Pope.

2. Any entertainment consisting in melody or harmony.

What *music* and dancing and diversions and songs are to many in the world, that prayers and devotions and psalms are to you. *Law.*

3. The science of harmonical sounds, which treats of the principles of harmony, or the properties, dependencies and relations of sounds to each other. This may be called *speculative* or *theoretical* music. *Encyc.*

4. The art of combining sounds in a manner to please the ear. This is *practical* music or composition. *Encyc.*

5. Order; harmony in revolutions; as the *music* of the spheres.

Webster's American Dictionary of the English Language, Published by S. Converse, (New York) 1828:

song, *n.* [Sax. *song*; D. *zang*; G. *sang, gesang*; Sw. *sång*; Dan. *sang*. See *Sing*.] **1.** In *general*, that which is sung or uttered with musical modulations of the voice, whether of the human voice or that of a bird.

2. A little poem to be sung, or uttered with musical modulations; a balad. The *songs* of a country are characteristic of its manners. Every country has its love *songs*, its war *songs*, and its patriotic *songs*.

3. A hymn; a sacred poem or hymn to be sung either in joy or thanksgiving, as that sung by Moses and the Israelites after escaping the dangers of the Arabian gulf and of Pharaoh; or of lamentation, as that of David over the death of Saul and Jonathan. *Songs* of joy are represented as constituting a part of heavenly felicity.

4. A lay; a strain; a poem.

The bard that first adorn'd our native tongue,
Tun'd to his British lyre this ancient *song*.
Dryden.

5. Poetry; poesy; verse.

This subject for heroic *song*
Pleas'd me. *Milton.*

6. Notes of birds. [See Def. 1.]

7. A mere trifle.

The soldier's pay is a *song*. *Stillingfleet.*

Old song, a trifle.

I do not intend to be thus put off with an *old song*. *More.*

The following is the definition of "Music" as given in the latest Webster's New International Dictionary, Second Edition unabridged:

***mu'sic** (mu'zik), *n.* [OF. *musique*, fr. L. *musica*, fr. Gr. *mousikē* (sc. *technē*), any art over which the Muses presided, esp. music, lyric poetry set and sung to music, fr. *mousikos* belonging to the Muses or fine arts, fr. *Mousa* Muse.] **1.** The science or art of pleasing, expressive, or intelligible combination of tones; the art of making such combinations, esp. into compositions of definite structure and significance, according to the laws of melody, harmony, and rhythm; the art of inventing or writing, or of rendering, such compositions, whether vocal or instrumental.

Greek music was generally subordinated to verse, and was further limited in expressiveness by the primitive instruments used, chiefly of the lyre and flute class. It accomplished, however, the establishment of the diatonic scales or modes, based on the tetrachord as unit, and of the rudiments of key relationship. The further growth of the art was in the early church, beginning with the derivation from the Greek of the ecclesiastical modes followed by the invention of neumes to indicate the pitch of tones, the development of staff notation, and the superseding of the tetrachordal unit by the hexachord, with the device of solmization ascribed to Guido d'Arezzo (c. 990-c 1050). The practice of descant, or simultaneous melody gave rise to the system of mensurable music, from which rose the medieval school of counterpoint. This advance in church music was accompanied by the growth of secular song, both popular minstrelsy and the more artificial forms such as the English round and catch, the settings of madrigals, villanelles, chansons, virelays, etc., throughout western Europe, the productions of the knightly troubadours and minnesingers, and those of the burgher guilds of Meistersinger. Settings of the Mass, psalms, and motets were carried to great contrapuntal elaboration, esp. by Dutch and Italian masters, until, with a reaction against the abuses of secularism and excessive intricacy, the a cappella church music culminated in the work of Palestrina (about 1550). The establishment of the modern major and minor scales with the octave as unit, and of equal temperament, making possible modulation into any key led to the development of harmony, as in the fugues of Bach (1685-1750), in which it forms the basis of a masterly polyphony. The progress of music since Bach has been rapid and varied. Vocal music has branched out in the great forms of (1) *opera*, which, beginning in Italy about 1600, was perfected in the work of Gluck, Mozart, Weber, Rossini, Wagner, Moussorgsky, Debussy, and Strauss; (2) *oratorio*, best represented by Bach's contemporary, Handel; (3) *lyric*, both secular and sacred, as in the *lied* and choral. Meanwhile great improvements in the making of instruments marked the growth of purely instrumental music, the modern symphony originating with Haydn and others, about 1770. The classical sonata form, most representative of absolute music, was brought to its highest expressiveness in the sonatas and symphonies of Beethoven (1770-1827). The masters of the succeeding romantic school, Berlioz, Schubert, Schumann, Chopin, etc., have diversified and enriched the expressive resources of music, breaking over too formal restrictions, until both romantic feeling and classical form have been united in the work of Brahms (d. 1897). The flavor of folk music has been added by various national composers, notably Moussorgsky; delicate, luxurious harmonic and orchestral shades, the whole step and ancient Greek scales, by Debussy and other French impressionists. More recently, increasingly dissonant linear counterpoint has characterized the Germans and Austrians, especially Schoenberg; polytonality, the French; and barbaric, dynamic rhythm, the influential Russian Stravinsky, while American jazz and the revival of the 18th-century forms have contributed to the animated and antiromantic temper of the time. See INSTRUMENT, MODE, NOTATION, 6, SOLMIZATION, COUNTERPOINT, FUGUE, HARMONY, etc.

2. Sounds having rhythm, melody, or consonance, whether vocal, instrumental, or made by birds, running water, etc.

3. **a** *Obs.* A composition so made. **b** Tones arranged into such a composition; as, to set to *music*. **c** Such compositions collectively. **d** Musical composition.

4. The score of such a composition or compositions, or any part thereof; also, scores collectively.

5. Figuratively: **a** *Obs. exc. Mil.* A band of musical performers; as, the *music* of a regiment. **b** *Now Rare.* Musical instruments. **c** Responsiveness to music.

The man that hath no *music* in his soul. *Shak.*

d Anything giving the effect of music.

The still, sad *music* of humanity. *Wordsworth.*

6. Instrumental music (in churches). *Scot.*

7. *Colloq., U. S.* **a** Fracas. **b** Fun; sense of humor.

8. *Hunting.* The cry of hounds at sight of the game.

COMBINATIONS are:

music-copying, *adj.*
music-drawing, *adj.*
music-flowing, *adj.*
music-footed
music-mad
musicmonger
music-panting, *adj.*
music-stirring, *adj.*
music-tongued

mu'sic (mu'zik), *adj.* **1.** Musical.

2. Pertaining to, used in, or concerned with music.

mu'sic, *v. t.* To affect (in a specified way) by music; also, to set to music. — *v. i.* To produce music; practice, or listen to music.

"As for the pianoforte of to-day, it is a perfect instrument. True, I cannot sing on it as Kreisler sings on his violin. But I can do many other things on my piano that are beyond the power of the greatest violinists and singers."—Sergei Rachmaninoff.

FIFTY YEARS AGO THIS MONTH

INSTEAD of making the usual quotation from an article, for this feature, we are presenting a reproduction of an entire story which appeared in the January issue of THE ETUDE for 1888. It is a tale of the beginning of the career of Joseph Hofmann, who now stands at the forefront among living pianists. He is this year celebrating the fiftieth anniversary of his debut; and he has been showered with honors in recognition of this unusual event. Possibly he may see this fifty years old account of his start towards fame, attesting to a long friendship with THE ETUDE.

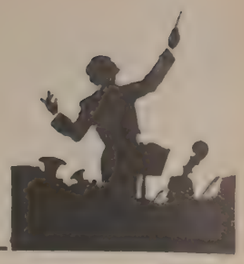
JOSEF HOFMANN.

Whether Josef Hofmann, the ten-year-old child who has lately created such a commotion in the musical world, be destined, says London *Truth*, to grow into a second Mozart, to fill the place of Liszt, or to fade into mediocrity as he advances in years, there is no doubt that at the present moment he presents a singularly interesting example of juvenile precocity. And that not alone as a musical genius.

Young Josef was born at Cracow on June 20, 1877, and at the early age of seven he attracted the notice of Anton Rubinstein, who is responsible for the bold prophecy that he is a prodigy such as the world has never yet produced. He is a sturdy lad, though small for his age, and the mere grasp of his hand betokens no small physical strength. A child of ten must indeed be possessed of no little endurance to play ten or a dozen long and difficult pieces at a concert, and then to rush off eagerly to join in a game of lawn-tennis. Yet this is what he did not long ago, and when a friend expressed a fear that he would tire himself, he answered: "It is easy to play the piano, but so hard to play tennis, I must go and learn!" He is, in fact, a thorough boy, with all a boy's enjoyment of fun and mischief.

At the Crystal Palace, the other day, when his performance was over, he was eager to escape from the applause of the crowd in order to sample the different species of pea-shooters to be purchased there. The adoration he receives from the softer sex is at present a great bore to Josef.

Not long since, a gentlemen who had heard that he was going to perform at Hull, asked him to stay at his house, holding out, among other inducements, the society of little girls of his own age. Josef did not like to refuse point-blank, but he climbed on to the knee of his great friend, Mr. Lindlar, and whispered in his ear: "I don't want to go! The ladies will cut off pieces of my hair, and they take the ribbons off my clothes, and make me sign my name all day—and they are always kissing me, and I don't like it at all!" He does not practice very much, about an hour and a half a day being deemed sufficient for the present. He cares very little for the tremendous applause with which he is greeted, but is keenly sensitive to criticism or blame. The avowed object of his present tour is to collect funds for his musical education, and at the end of 1888 he will retire for a space, not to reappear until he has attained maturer years.



BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

VICTOR J. GRABEL

FAMOUS BAND TRAINER AND CONDUCTOR

The Clarinet Choir

PART I

SINCE the clarinets constitute the basis of the woodwind section of the modern concert—or symphonic—band, it is of importance that band directors and arrangers make a careful and serious study of methods designed to secure the most balanced and pleasing results from this choir. Composers and arrangers should learn to score for these instruments in the most effective manner and band conductors should study how to utilize them to the best advantage.

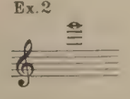
Various textbooks on orchestration have treated quite adequately of the manner of employing the B-flat clarinet in the orchestra and composers have invariably written for this instrument in a most admirable manner, but practically nothing is available in published form concerning the manner of writing for the alto, bass, and contrabass clarinets. In the orchestra only two clarinets are generally employed—with the bass clarinet only occasionally used—and they merely constitute a portion of the woodwind choir. In the modern band the clarinets constitute a complete choir. The B-flat clarinet parts are written for three or four voices, and these, when joined by the alto and bass instruments, form a well balanced choir.

In addition to these instruments there are the E-flat and A-flat clarinets which are employed in some bands to extend the upper register of the clarinet. The A-flat instrument has not been used in America since the time of Patrick Gilmore; but it is still employed in German, Austrian, Italian and some other of the European military bands. The justly famous Garde Republicaine Band of Paris, which is probably the world's finest band, still uses this instrument.

In recent years the E-flat instrument has lost favor in America and has generally been replaced by the flute. This has been due mainly to an absolute lack of appreciation of the instrument on the part of the arrangers, with the result that parts for the instrument have been so atrociously written that the instrument often became an offense to good taste—rather than a valuable asset. In the case of professional bands it has been generally difficult to secure competent and expert players of the instrument.

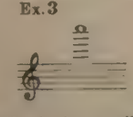
The E-flat clarinet is an instrument that must be treated with a great deal of respect, care, and consideration. To be played well in tune, with the proper delicacy and flexibility of tone, and to blend properly with the B-flat instruments, it should be played only by one who will devote to it his exclusive attention. The musician who plays the B-flat instrument regularly cannot hope to play the E-flat instrument occasionally and do satisfactory work. No! The fault has been not so much with the instrument as with careless, ignorant arrangers and performers.

In the case of the Garde Republicaine Band the men chosen to play the A-flat and E-flat instruments are artist performers who devote their time exclusively to these instruments. Not only this, but parts for these voices are prepared by writers who understand the possibilities of the instruments. In consequence, artistic and highly pleasing results are attained.



A glance at the following table will reveal the practical compass of the clarinet choir.

Ex. 1



This represents a total compass of five octaves and a minor sixth. While it is possible for the upper register to be extended a major third so as to complete the sixth octave, this extreme register should never be employed except in solo performance by artists of exceptional ability.

Ex. 2

In fact, the upper G of the B-flat clarinet should not be written as a sustained tone, but employed only in rapidly moving passages. This, and the A above, may be used occasionally in rapid *forte* passages. Since they are not often employed it cannot be expected that all the players will play them with certainty and correct pitch. At best the tone is likely to take on a quality of harshness and shrillness which is best avoided in any except rapidly moving passages of loud intensity.

Ex. 3

While it is possible for an expert performer to ascend to the second C above the staff, no sane arranger would ever consider writing at this extreme altitude. The same comments are equally applicable to the extreme upper register of the A-flat clarinet.

Our table has indicated the practical compass of the several clarinets, and arrangers and composers would do well to confine their scoring to these limitations. Only in solo composition should these limits be exceeded.

We digress here for a brief reference to the theory that the clarinets of the concert band should parallel the strings of the symphony orchestra and that, in consequence, they should be employed in comparable proportions. Those who hold this view argue that the ideal clarinet section should consist of about the following ratio: twelve first B-flat clarinets, twelve second B-flat clarinets, eight alto clarinets, eight bass clarinets, and six contrabass clarinets. Such a combination could truly produce mellow, sonorous, rich, organlike effects of unusual quality. It is unfortunate that no bandmaster has possessed the finances that would enable him to experiment with such a combination—a combination which possesses unrealized possibilities. Bandmasters of the past have not seemed to hold with this theory, however, and the arrangers and composers of band music have most certainly not done so.

The first violin part is not always allotted to the first clarinet. In the extreme upper register it should more often be allotted to the flutes. Important solo violin passages have been often assigned to the cornet. Sticklers for good taste may readily question the wisdom of this choice, but it is true that the oboe—either alone or in fusion with some other suitable voice—can quite adequately substitute for the violin in an expressive passage.

Orchestral Counterparts in the Band

WITH THIS EVIDENCE of departure from the theory concerning the violin part, we should not be surprised to learn that the viola, violoncello, and bass parts have been transferred with even less discrimination and good taste. The violoncello part, for instance, is generally assigned quite indiscriminately to euphonium, trombone, alto or tenor saxophone, bassoon, or bass clarinet—or to all of these voices or any combination of them. This is often done even though the first violin part may be assigned only to the first clarinet. Certainly this combination of voices will produce a composite tone of greater richness than that of the violoncellos but it does not always make possible good tonal balance or necessary color contrast.

The orchestra did not come into existence until the development of the double bass, which could serve as the foundation of the string family. Likewise, the band did not come into existence until a brass tuba was developed to serve as a foundational bass voice. The tuba will perhaps always remain the basic voice of the band, but it should not serve to exclude the contrabass clarinet, bass saxophone, contra bassoon, contra sarrusophone, or string bass from the band.

The contrabass clarinet should not be employed solely to reënforce the tuba, nor should the bass clarinet be used merely to supplement the bassoon, tenor or baritone saxophones, or euphonium. Its individuality should be displayed as often as can be done effectively—and the clarinets should often be written for as a distinctive group just as are the strings of the orchestra.

Well balanced effects can be secured when only two alto, two bass, and two contrabass clarinets are used with sixteen to twenty B-flat clarinets. This can be more readily understood when we realize that the B-flat instruments are divided into three or four groups. Yet, we challenge any bandmaster to cite even half a dozen compositions in which he can find the complete clarinet choir written for as an independent group for the space of even four bars.

This brief extract from my arrangement of Goldmark's *In Springtime Overture* will serve to illustrate the point.

Ex. 4

No other grouping or mixture of voices would provide the softly subdued and mellow richness, and the tonal contrast, as the use of the clarinets alone—as this is immediately followed by flutes, oboes, and horns.

One important lesson learned in the study of orchestration is that a voice should be so treated that it will occupy a position either in the *background*, the *middle ground*, or the *foreground*. Yet, I have heard many bands employing alto and bass clarinets in quantities of two to four of each, and several bands in which one or two contrabass clarinets were also present, without these highly important voices ever being brought into the foreground—either individually or in conjunction with the soprano clarinets as a unit. Their voices are

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Mus appearing in the Music Section of this Issue

LAMENT

By THURLOW LIEURANCE

This Lament has all the Indian "flavor" that one instinctively associates with the works of Thurlow Lieurance, who has been so successful in collecting authoritative tribal melodies of the American Indian.

A two measure introduction opens the piece and establishes the accompaniment figure used throughout the composition. The triplet figures of the accompaniment should be rolled rather than fingered, and played in a manner to suggest the reed instrument used by the Indians—a primitive pipe of the flute family. The first note of the melody appears on the fourth quarter of the second measure, lies in the inner, or tenor voice, and is played by the right hand. Let the melody be as resonant as possible, clearly marked throughout.

An *accellerando* is in effect at measure nine. Note that the melody is divided between the hands from measure eleven to measure twenty-one. At this point, by means of a *rallentando* the *tempo* resumes normal pace and continues thus to the end. Pedal strictly as marked.

REFLECTIONS

By CHESTER NORDMAN

Here is a cross hand piece with the melody played by the right hand, tenor voice, while the left supplies basses and accompanying chords.

The *tempo* throughout the first section is *Andante espressivo*. Do not hurry the sixteenths that appear in measures 3, 4, 7, 11, 12 and 15.

The second section, beginning with measure 17, is in the dominant key, A major, and is played somewhat faster. The tone, too, increases and builds up to *fortissimo* in measure 21. At measure 25 the first theme reënters, this time heard in the upper or soprano voice as it is doubled in octaves for the most part.

The next section, marked *tranquillo*, is in the subdominant key, G major—as is usual with the *Trio* section—and it presents a theme in thirds for the right hand against a broken chord accompaniment. Play this piece in the style of a nocturne.

MARCH OF THE CALIPH

By WILLIAM BAINES

The Caliph was the ruler of certain oriental countries and this march depicts the pomp and oriental circumstance always in evidence when the "most high" put in an appearance. It begins very softly and grows in volume as the cavalcade approaches, then diminishes as it passes into the distance.

Be sure to observe the sustained tones in the bass, also those of the melody in the upper voice of the right hand.

Keep the march spirit throughout and pedal sparingly; in fact, it would be safest to pedal only as marked.

SOUNDS FROM THE VIENNA WOODS

By STRAUSS-SAWYER

The waltz reached the height of its popularity in Vienna during the nineteenth century. The compositions of the Strauss family had a great influence in this regard, and Johann Strauss (Junior) gave to the world a set of beautiful waltzes that will probably live on forever. Among the most beloved is the one here given—simplified, in this instance, by Henry S. Sawyer.

Unlike most dance forms, the waltz is not limited to a strict or precise *tempo*. The matter of *tempo* varied from year to year with "the fashion." The waltzes of Strauss, however, were actually written to be "danced to," and a moderate *tempo* should be established from the very beginning and carefully preserved thereafter.

Make the most of the occasional *staccati* and accents—all clearly marked.

This version presents but two of the half dozen or more themes used in the original and is reduced to about third grade of difficulty. It makes an interesting introduction to the waltz form and prepares the way for the concert transcription that may follow later.

MINUET

By ARTHUR TRAVERS GRANFIELD

The minuet was a popular French dance of the seventeenth and eighteenth centuries. Its stately measures found great favor in the French court, and during a certain period, one's culture was in a way, measured by his ability to dance the minuet with daintiness and grace.

The example here given is a very interesting one and preserves all the original characteristics of the old dance.

It opens with majestic and sonorous chords—although, in these opening chords, there should be a slight separation between them, as indicated by the little line and the dot shown above each one.

Phrasing is very important in the *Minuet* and must be observed exactly as marked. This is particularly true of the second section, beginning with measure 17, where various slurred groups all indicate certain steps of the dance. As in all dance forms, rhythm is uppermost.

NEAPOLITAN SERENADE

By J. W. LERMAN

This *Neapolitan Serenade*, written after the manner of a *tarantelle*, opens with an ascending passage in unison—partly diatonic and partly chromatic. After the pause the first theme proper begins. Be sure to toss off the last note under the slur sign rather sharply. This is a characteristic of the dance and must be observed at all times.

The first theme is in the key of G major; the second theme is in E-flat major; and a third theme, beginning with measure 85, is in C major, subdominant key.

Since the rhythm remains more or less alike throughout, it is advisable to do all possible toward creating contrast by careful observance of the marks of dynamics.

EXCERPT FROM SONATA, OP. 27, NO. 1

By L. VAN BEETHOVEN

Beethoven is said to have passed through three distinct "periods" in the matter of style. The early period showed the influence of Haydn and Mozart; the middle period developed originality and a style peculiarly "Beethovenian"; and in the last period he reached the heights. He developed the sonata form to its highest state of perfection.

This particular sonata lies in the borderland between the first and second periods. It opens with a beautiful *Andante* which sings its way in typical Beethoven fashion until it reaches the *Allegro* theme where suddenly, without any warning whatever, there is a change of *tempo*, key and rhythm.

Here we find a very avalanche of *arpeggi* and scale passages which remain in effect till measure 65 is reached when the music becomes suddenly peaceful and the first theme is again heard and brings the movement to a close.

Be sure to observe the unexpected accents (*sforzando*)—a favorite device of Beethoven's and found frequently in his works. Note too, the sudden and abrupt change from *forte* to *piano*.

The *Allegro* section should be clearly articulated with finger *legato*.

IN OLD VIENNA

By LOUIS VICTOR SAAR

Here is an old friend in new setting that will be sure to find favor among readers of THE ETUDE.

Louis Victor Saar, the well known pianist and teacher, has given free treatment to this grand old melody and the result is an entirely new version, most pleasing and quite pianistic.

The melody moves from one staff to the other—sometimes from one hand to the other. But it is so well known there is little if any danger of its being lost. All the performer needs to do is to make the finger carrying the melody tone produce its best possible singing quality, and success is assured. Since the harmonies are very active be careful of the pedal, although even this is carefully looked after in the editing.

ALBUM LEAF, NO. 3

By ROBERT SCHUMANN

Here is a gem from the pen of Robert Schumann, an exponent of the so-called Romantic Period of musical composition. Schumann was often at his best in simple melodies and this is an excellent example of the lyric style of that great master.

Play this music as indicated in the text; that is, somewhat slowly but very much in the singing style. Make it expressive but keep it simple. Its title indicates that it does not suggest anything in particular. It is simply a passing musical thought—pure inspiration; and it should be played as spontaneously as it was conceived.

Observe carefully the phrasing of the melody in the right hand and do not overlook the occasionally sustained bass notes in the accompaniment.

WALTZ, OP. 39, NO. 6

By BRAHMS-BURMEISTER

This is number six in a set of waltzes by Brahms frequently heard on the recital platform.

Several of the set are often played separately as short encore numbers. This is one of the favorites; and Richard Burmeister, himself a pianist of note, has made a quite difficult concert arrangement which should prove of interest to the piano student.

Use full, free arm attack on the octaves, combined with wrist where the octaves in eighths occur. The *staccati* in thirds should be played with hands close to the keys, using a very short wrist movement. Keep the *staccati* crisp and brittle and make fine tonal distinction as indicated by the marks of dynamics.

It is suggested that the original be mastered before attempting this concert transcription.

GRASSHOPPERS AT PLAY

By HESTER LORENA DUNN

In this number Miss Dunn cleverly makes use of the psychology so necessary at times to capture the imagination of young pia pupils. The cross hand work suggests t hopping of the grasshoppers, while accor ing to the four line verse which accor panies the piece, "Curved finger joints w imitate the bending of their knees."

This makes a nice little etude for t first grader, and it should develop freedo of arm action in hopping over a consi erable portion of the keyboard while t trill figures give excellent practice in fing development.

BIG GRIZZLY

By RENÉE MILES

The young student, in this number, taken to the Zoo, and proceeds to give musical imitation of the grizzly bear he ceaselessly paces up and down in h cage.

The left hand employs only two chords the tonic and first inversion of the seven as found so often in first grade pieces.

Various effects are indicated in the mus such as Bruin stopping to look aroun continuing his walk, and so on, and final from sheer weariness, curling up for h afternoon nap.

The piece remains within the five fing position—although two positions are us for the right hand.

Follow out the *tempo* changes exactly given in order to obtain the effects ou lined in the text.

THE STREET BAND

By FABIAN D'ALBERT

A march is always popular in the ear grades and here is one that is very ea to play and sounds more difficult than is in reality.

This time the big tuba holds the spo light throughout. The left hand carri the melody against a typical bandlike cho accompaniment in the right hand.

The repeated chords in the right ha call for a nice bouncing wrist, and becau of the child's eagerness to play the marc this detail will undoubtedly receive mo practice than would be given a convention wrist exercise designed for the sam purpose.

A very clever number that should popular with early graders.

DISTANT CONVENT BELLS

By WALLACE A. JOHNSON

The title of this piece is self-explanator Play it *pianissimo* to obtain the effe of distance and try to give a bell-like to to the notes so indicated. This can accomplished by striking the key sharp but with shallow touch and with a certa amount of rigidity in the finger.

The pedal should be used freely as ind cated—and note the *sostenuto* marks ov the chords played when the pedal is n in use.

SWINGING ON THE GATE

By ADA RICHTER

Another cross hand piece employing sho diatonic passages which afford practice finger *legato*.

The first theme is in the key of C majo the second in the dominant key of G majo The pedal may be used at the discreti of the teacher.

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Bach and Studies

1. It seems as if I cannot interest my pupils in Bach's "Little Preludes and Fugues." How many preludes and fugues in this book would you suggest for a pupil to memorize, or, would you suggest another book? I use "First Lessons in Bach," Book I and II (Carroll), together with Czerny-Liebling studies, before taking up the "Little Preludes and Fugues."

2. Should pupils memorize studies from Czerny-Liebling? I require my pupils to work up several to metronome during the year; the easy ones I use for sight reading.—Mrs. J. W. H., Georgia.

1. I almost never use the "Little Preludes and Fugues," especially with young students. After the Bach-Carroll books (which are admirable) or the "Preparatory School to Bach" (Liftl), or the first volume of "The Hundred Best Classics" (Whitemore), I would put them on one of the volumes of selections from the suites, or better still the newly published "Twenty Pieces from Bach's Book." This book, edited by the writer, contains twenty selections from the original bulky instruction book which Bach wrote for his children. Besides eleven *Preludes* from the "Well-Tempered Clavichord," appearing in their original, sometimes shortened and simplified versions, the "Clavier Book" contains fascinating pieces by Bach and other composers. Although some of the material is more difficult than the "Little Preludes," I recommend it highly as a substitute.

As you have found out, great care must be exercised in enticing our youngsters to swim in the Bach pool. At first, when they dip in their toes, the water must be carefully heated to the proper temperature, and you must take them reassuringly by the hand. Once well in, they won't notice the depth or the degree—for the water is so eternally fresh, stimulating and life giving; and swimming is such a "cinch"!

2. During all grades beginning with the third, students should memorize one good Czerny etude illustrating each kind of technic—finger independence, scale, arpeggio, octave, and so on. These must be practiced for some weeks; then afterwards, at intervals, several times restudied.

A Slow Shy Pupil

I am writing to ask your advice about my twelve year old son who is studying piano with me. I am new at piano teaching, but I chanced upon the John Williams' "First Grade Piano Book." We began on this, together with Books One and Two of Williams' "Major Scales."

We are now in the midst of Williams' "Advanced First Grade," and some doubts have assailed me as to whether I am trying to be too thorough and am progressing too slowly with a boy of this age. The desire to study the piano was expressed by him in the fall of 1936. At first his progress was very slow and his touch very heavy and lumbering. He enjoys the major scales and really excels at transposition. Recently he complained that Grade two pieces sound too simple and that he wants pieces that "sound like something important" and suited to his age. Am I wise to follow the Williams' courses through Grade four? How fast shall I try to push this slow, shy pupil? His goal, astonishingly enough, is the pipe organ.—Mrs. M. C. D., Nebraska.

In your son's case you are justified in pushing him along just as fast as he can go. But why do you call him "slow"? On the contrary, I think he is a very apt, quick pupil, to have accomplished so much in such a short time. Yes, follow the Williams books, but feed them to him faster. In addition, try some other material like John Thompson's "Let's Join The Army Now," or his "Velocity Studies," or his "Fifty Selected Studies" (from Gurlitt, Czerny, Behrens, Burgmüller, and so on); also duets, such as Jessie Gaynor's "Miniature Melodies for Two"; "Recreational Album for Duet Players"; Howard Kaschau's charming duet arrangement of familiar, easy pieces by Brahms, Haydn, Schumann, Beethoven, Bach and Grieg.

Later you might give him the first volume of "Studies in Musicianship"—miscellaneous Heller etudes selected and edited by Isidor Philipp. Any of these books may be secured through the publishers of THE ETUDE.

Poor Rhythm

Will it help a pupil with poor rhythm to have her beat or clap out the time of her pieces?—B. M. Oklahoma.

Do you remember, at the Mad Tea Party in "Alice in Wonderland" and during the discussion of knowing "Time," Alice says, "I know I have to beat time when I learn music," whereupon the Hatter retorts, "Ah! that accounts for it: he won't stand *beating* . . ." There's your answer! It is better to teach the girl simple, flowing conducting movements, elementary dancing—or anything which will help her to coördinate her whole body. She may also tap out various rhythmical figures very lightly and relaxedly on a table. (See this page of the July issue of THE ETUDE). Avoid any beating or clapping; both are unmusical and tend to rigidity.

A Balky Pupil

One of my pupils is a boy, a fine, intelligent youngster of nine years who has so far found his music fairly easy. That is, he can play about second grade pieces and has learned to do so without a great deal of exertion on his part. But now, to continue, he has learned that he must apply himself to some honest to goodness work and he has rebelled to the nth degree.

He starts his lesson with a frown, and from then on is determined not to do even his best with the usual small amount of practice. At first I made him continue his old lessons until he could play them correctly—or at least I tried to. He got tired of them and spent less time than ever. I thought perhaps he needed more material in the second grade before proceeding to the third. So I hunted what I thought would be quite interesting material for him and still there is that determination not even to try.

So it is up to me. And I am just as determined to get him interested as he is not to be interested.—F. A. C., Ohio.

Your boy is not a phenomenon—as all of us know to our sorrow. To music teachers the world often seems inhabited by millions of just such pesky little boys; in fact all other beings seem quite extinct! I hope you won't think that I am being flippant or smart alecky, or that I am unduly pessimistic when I suggest the following methods for bringing the "dear" little boy around; for I am writing in all sincerity.

Give him very simple arrangements of popular radio, movie, or musical comedy hits, even if you have to make the arrangements yourself. If necessary teach these to him by ear or rote, and add a simple second piano part for yourself to play. He won't be able to hold out long against such blandishments. Try to get him to play other easy two piano music, and let him "show off" these pieces with you to the pupils whose lessons come before and after him. Let him play the popular tunes, with another lad of his age and grade at the second piano. Give him and the other chap their lessons together. Persuade him to enter one of the numerous contests for ensemble playing. Have him "conduct" some six or eight-hand pieces played by other students, with him sometimes filling in at the piano for one of the others.

Ask him to buy a harmonica or a cheap ukulele. Buy one of these instruments yourself with instruction book to go with it. Keep one jump ahead of him. Use some of the lesson time teaching him to play his harmonica or ukulele; and sometimes ask him to accompany you on the piano with simple chords as you play a tune, or have him sing a humorous or sentimental song while you accompany him on the uke. Don't let it worry you if your voice cackles, croaks or caws; just sing "soft and low," and on pitch—if you can. Stop every few minutes to put in some work at the piano, thus alternating harmonica-piano or ukulele-piano throughout the lesson. Who shall say to what results such treatment will lead? The boy (or you) may develop latent, unsuspected crooning or harmonica virtuoso talents, leading from a triumphant début on Major Bowes' hour, to the radio, or to the movies. Who knows? At any rate it is well worth trying!

Above all, don't carry out your grim determination policy. It doesn't work with young boys. Be relaxed, try your best to interest him, play (the piano) often and as beautifully as you can for him, and smile—even if your face cracks; then trust to growth, development, and time to do the rest.

Fingering Arpeggios

1. In fingering diminished seventh arpeggios is it correct to place the right hand thumb on A, B, and E, and the left hand thumb on C, F, and G no matter on which key the arpeggio is started?

2. Is it correct to finger all dominant and tonic seventh arpeggios with the thumb falling on the first white key in both hands?

3. In major arpeggios how would you finger the fundamental position and the second inversion of D-flat, E-flat and A-flat?—Sister J. J., Missouri.

1. Your fingering is the best possible one, for it not only unifies the whole diminished seventh series but simplifies its finger patterns. However, for practice purposes I often work at the diminished sevenths which start on white keys, using thumb (right hand ascending, left hand descending) on all first tones.

2. Generally speaking, yes, but there are so many exceptions to this that I would not dare call it the rule.

3. The thumb plays the white key in each. Your way may be practiced, but must almost never be used; it is too bumpy.

"Mastering the Scales and Arpeggios," by J. F. Cooke, will help you to solve your arpeggio problems.

"Dessert Pieces"

As a teacher of children I am torn between two purposes. The first is to satisfy the musical and childlike nature of my little juvenile players and to let them go along their natural way and keep them loving it, offering them the help that they themselves realize is needed. On the other hand, I am afraid to indulge in this method, for it is so important for them to develop habits of accuracy and to establish a fine standard demanding precision and close attention to details. But most of them do not really see the whys and wherefores of such "fussing," as I have heard them name this manner of approval. What I do to counteract any nervous strain or boredom I may have imposed upon them is to include what we call a "dessert piece" as part of their daily practice schedule. This is a composition slightly below their grade, of a lighter type, entailing no hardships whatever. There they are allowed to let go, play as they please, choose their own tempo, providing it is kept even. As a rule I get the best results from these little numbers, as unimportant as they are musically. I even get tempted to include them on our repertoire list, though I don't, because as a rule, they are below our musical standard. But there I get the free, happy playing which I think belongs to the child world. —S. H. A., New York.

I could not suppress a broad grin when I finished reading your interesting and helpful communication. Each sentence led me to the next, eagerly anticipating the question to come; but you tricked me—the interrogation point never arrived! Your suggestion is a capital one, and only strengthens my own conviction that all students, elementary or advanced, should be given two kinds of work, the thorough, digging out tasks of technic, memorization and interpretation, over which the teacher must "fuss" until the proper standard is attained, and the lighter assignments, such as you use, to cover a wide range of musical terrain, to develop technical or reading facility, or with no other end than pleasure. After all, the aim of music study is enjoyment. Yet how often we forget this! While we are preparing the students to appreciate the matchless gems locked in the inner treasure house of music, we must not let them miss the wealth of lesser jewels glittering along the way. Indeed it is only by thoroughly enjoying the sparkle and loveliness of these wayside gems (even if, as you say, some of them are "paste") that they will learn to appreciate the magnificence of the crown jewels. By which effusion I mean that students must not be pushed along too quickly; they ought to explore much music in their own grade before being driven ahead. For instance, an advanced student should have one Beethoven sonata after another assigned to him for "reading" acquaintance. First the easier movements, then the harder ones are studied for a week or two, with no emphasis on finish, technical polish, or memory, but only for the purpose of playing the notes clearly, in time and with as much expression (this includes pedals of course) as is possible in a short time. How well this can be done will depend on the talent of the student. Teachers are surprised when they see how much music a pupil will "eat up" if this policy is put into practice for a season or two. Is it not pathetic to see how many advanced students know only one, or at most two, Beethoven sonatas? In fact, they haven't even read over any of the others. Let us do away once and for all with this teaching of a few stilted pages of notes, and get down to teaching *music!*

"A choir which cannot sing unaccompanied and on the key has no right to sing at all."—Eric De Lamarter.

From Typist to Prima Donna

As told by the eminent Franco-Russian Contralto

SIGRID ONEGIN

To L. WEILICH

An Inspiring Story of Success because an Artist Refused to Compromise with Obstacles

SIGRID ONEGIN

WHEN YOUNG SINGERS come to me for criticism and advice, I am sometimes encouraged, often disheartened. I hear beautiful natural voices, I see personal charm and high hopes. I listen to declarations of serious purpose, I realize the intelligence of the neophyte, and I think "Here is the material from which a fine artist is made. Here, perhaps, is the dawn of a great career."

But when I put the fatal question "Why do you want to become a public singer?" I nearly always suffer acute disappointment. The answer is generally the same. Boiled down it spells personal ambition. There is in it no hint of real consecration to an art that demands the utmost service in every sense of the word. There is no real appreciation of the fact that ambition in singing must be an ambition of self-effacement, an ambition to give rather than to get.

These young students, these eager girls with their zest to succeed, dream of audiences under their sway. They may be ready to sacrifice pleasures to gain this end, but the end is one in which they themselves are glorified. They have no vision of themselves as humble servitors whose duty is to give beauty rather than to get money and fame.

Advice of a Peeress of Song

YEARS AGO I read an article written for young singers by a great singer of her day, Emma Albani. After advising them to "read good books, see fine acting, pictures and sculpture, and to live in an atmosphere of art and intellect," she added: "But remember that this does not mean shutting yourself up in a selfish contemplation of your own career. If you would sing so that you can touch people's hearts, you must be in sympathy with those hearts yourself."

Then Albani altered Coleridge's famous lines about prayer:

"He prayeth best who loveth best
All things, both great and small,"

To:

"He singeth *best who loveth best*
All things, both great and small."

Here is text enough for many a sermon on singing .To love "all things, both great and small," to be in sympathy with the hearts of that mighty composite assembly, an audience, one must understand those people, must have had many of the experiences which are woven into their personal histories. The less vicarious, the more actual, such knowledge is, the better. If the acquisition of knowledge is a painful process, never mind. If the student's path is strewn with rose petals, she will never learn to step firmly.

Once I shocked a girl who assured me that her uncle would pay for her tuition if I considered her "promising."

"Thank your uncle," I said, "but tell him that you will earn the money for your lessons. Keep your independence, it is a precious thing. Get a job and give your employer full value for your wages. You must learn life, as well as music, if you expect to become a singer."

At first she thought me merely hard-hearted; but, when I told her something of my own early training, she began to see what I meant.

The University of Struggle

MY EARLY YOUTH was filled with the splendor of riches and independence. A home in Paris; a country place on the Marne River, where my younger brother was born and where he died a victim of the Great War. But overnight all the splendor vanished. My father died suddenly, leaving my mother and her three children penniless. I was then fourteen years old, tall and rather strong and very conscious of my voice. No free scholarships were dangled before my eyes as an incentive to musical study. Whatever I decided to do had to be done alone. Narrow-minded kinfolk, who looked on concert and theatrical work as unladylike and beneath our dignity, would not help me. Although still a child, I was forced to find a way to support my family while, at the same time, struggling to earn means to develop my voice.

I got a job as a stenographer in a lawyer's office, doing night work. During the day I worked for an exporter, took my lessons in my lunch hour, and even found time to read books to my employer's sick wife! Strong coffee kept me awake for my night job; a short sleep gave me strength for my long daily work. Thus I started at the beginning and climbed up in the business world, paying the family bills and having enough money left over to continue with my music.

Often I made the terrible mistake of carrying fresh memories of my singing lessons into the office. As I mechanically typed out letters dealing with shipments and invoices, I imagined myself seated at a piano instead of a typewriter; the brittle clicking of the keys merged to me into the notes of an exercise or an aria. I had a conviction that I was destined for such a tedious job only until I could turn my musical training to practical account.

"It will not last long," I repeated to myself, over and over again. But the longer I worked, the more my spine stiffened. I learned resolutely to put music out of my mind during office hours, to concentrate on whatever came before me. It was not easy at first. Nor was it easier when, as I grew more expert at my desk, my working time stretched to meet office demands. The tedium seemed worse, too, because of the progress I was making in my singing. Yet I knew that without the tedium the progress would not be possible. This taught me a finer honesty in my job; and, although I did not realize it at the time, this conscientiousness was the price I paid for yet another valuable lesson—study of human nature.

Formerly I had taken dictation and transcribed notes mechanically. Now I began to see the workings of minds and hearts in letters dealing with trade and commerce. When the gruff Mr. X wrote a kindly letter to a client who owed him money, my eyes were opened to a side of Mr. X's character that was new to me. Subconsciously, at first, I came to the knowledge that I was an actor, even if only an unimportant one, in a fascinating drama of human hopes and fears, joys, sorrows, successes and failures, the things by which we are always surrounded whether we see them or not. "All things, both great and small" took on a vitality I had not known they possessed. Friendships developed. I found myself intensely concerned over the weal or woe of my associates. I gained glimpses of the infinite variety of life, and my horizon broadened in proportion.

Art Enriched by Having Lived

AND AS MY VISION EXPANDED, my music took on new and deeper meanings. As my teacher put it, I began to "wake up." Once I had tried to carry my music into office hours, and failed. Now I carried into my singing the priceless knowledge of life learned in the office, and succeeded. My singing was not yet of the highest standard, but it was perceptibly better than it had been.

There were no idle dreams of public acclaim, of rousing triumphs, of glitterin fame. There was but a stark and ste awareness of life. Mine was a gift, a Go given talent, laid in hands with fingertip hard from typing. A gift laid in my hea which had fought against misunderstan ings. A gift laid in my brain which ha grown into a "man's brain," as my em ployer told me when finally I quit h service.

For quit business life I did, naturall when public singing followed private en gagements. I had reached a point at whic famous conductors took an active intere in my work, took me seriously, accepte the erstwhile child as an experienced, sin cere and responsible person with will pow and a knowledge of the world—that wor which was now open to me as I stepped o the illimitable platform of life, equippe with an appreciation of "all things, bo great and small."

To anyone who wants to become a publ singer I say, "Go home and tell your unc that there is no such thing as achieveme in music without the proper understandin of 'all things, both great and small.' G this understanding through hard work. may have been unhappy once, when fa made me poor; but to-day I feel happy th my success came in the way that it di that I did not start real life easily. To your uncle that you do not need his su port, that you are willing to go up th steep path alone, to undergo the hardshi which teach you the value of 'all thing Save; suffer, and see. If you do, the ho will finally come when you can say 'A now I sing best.'"

* * * * *

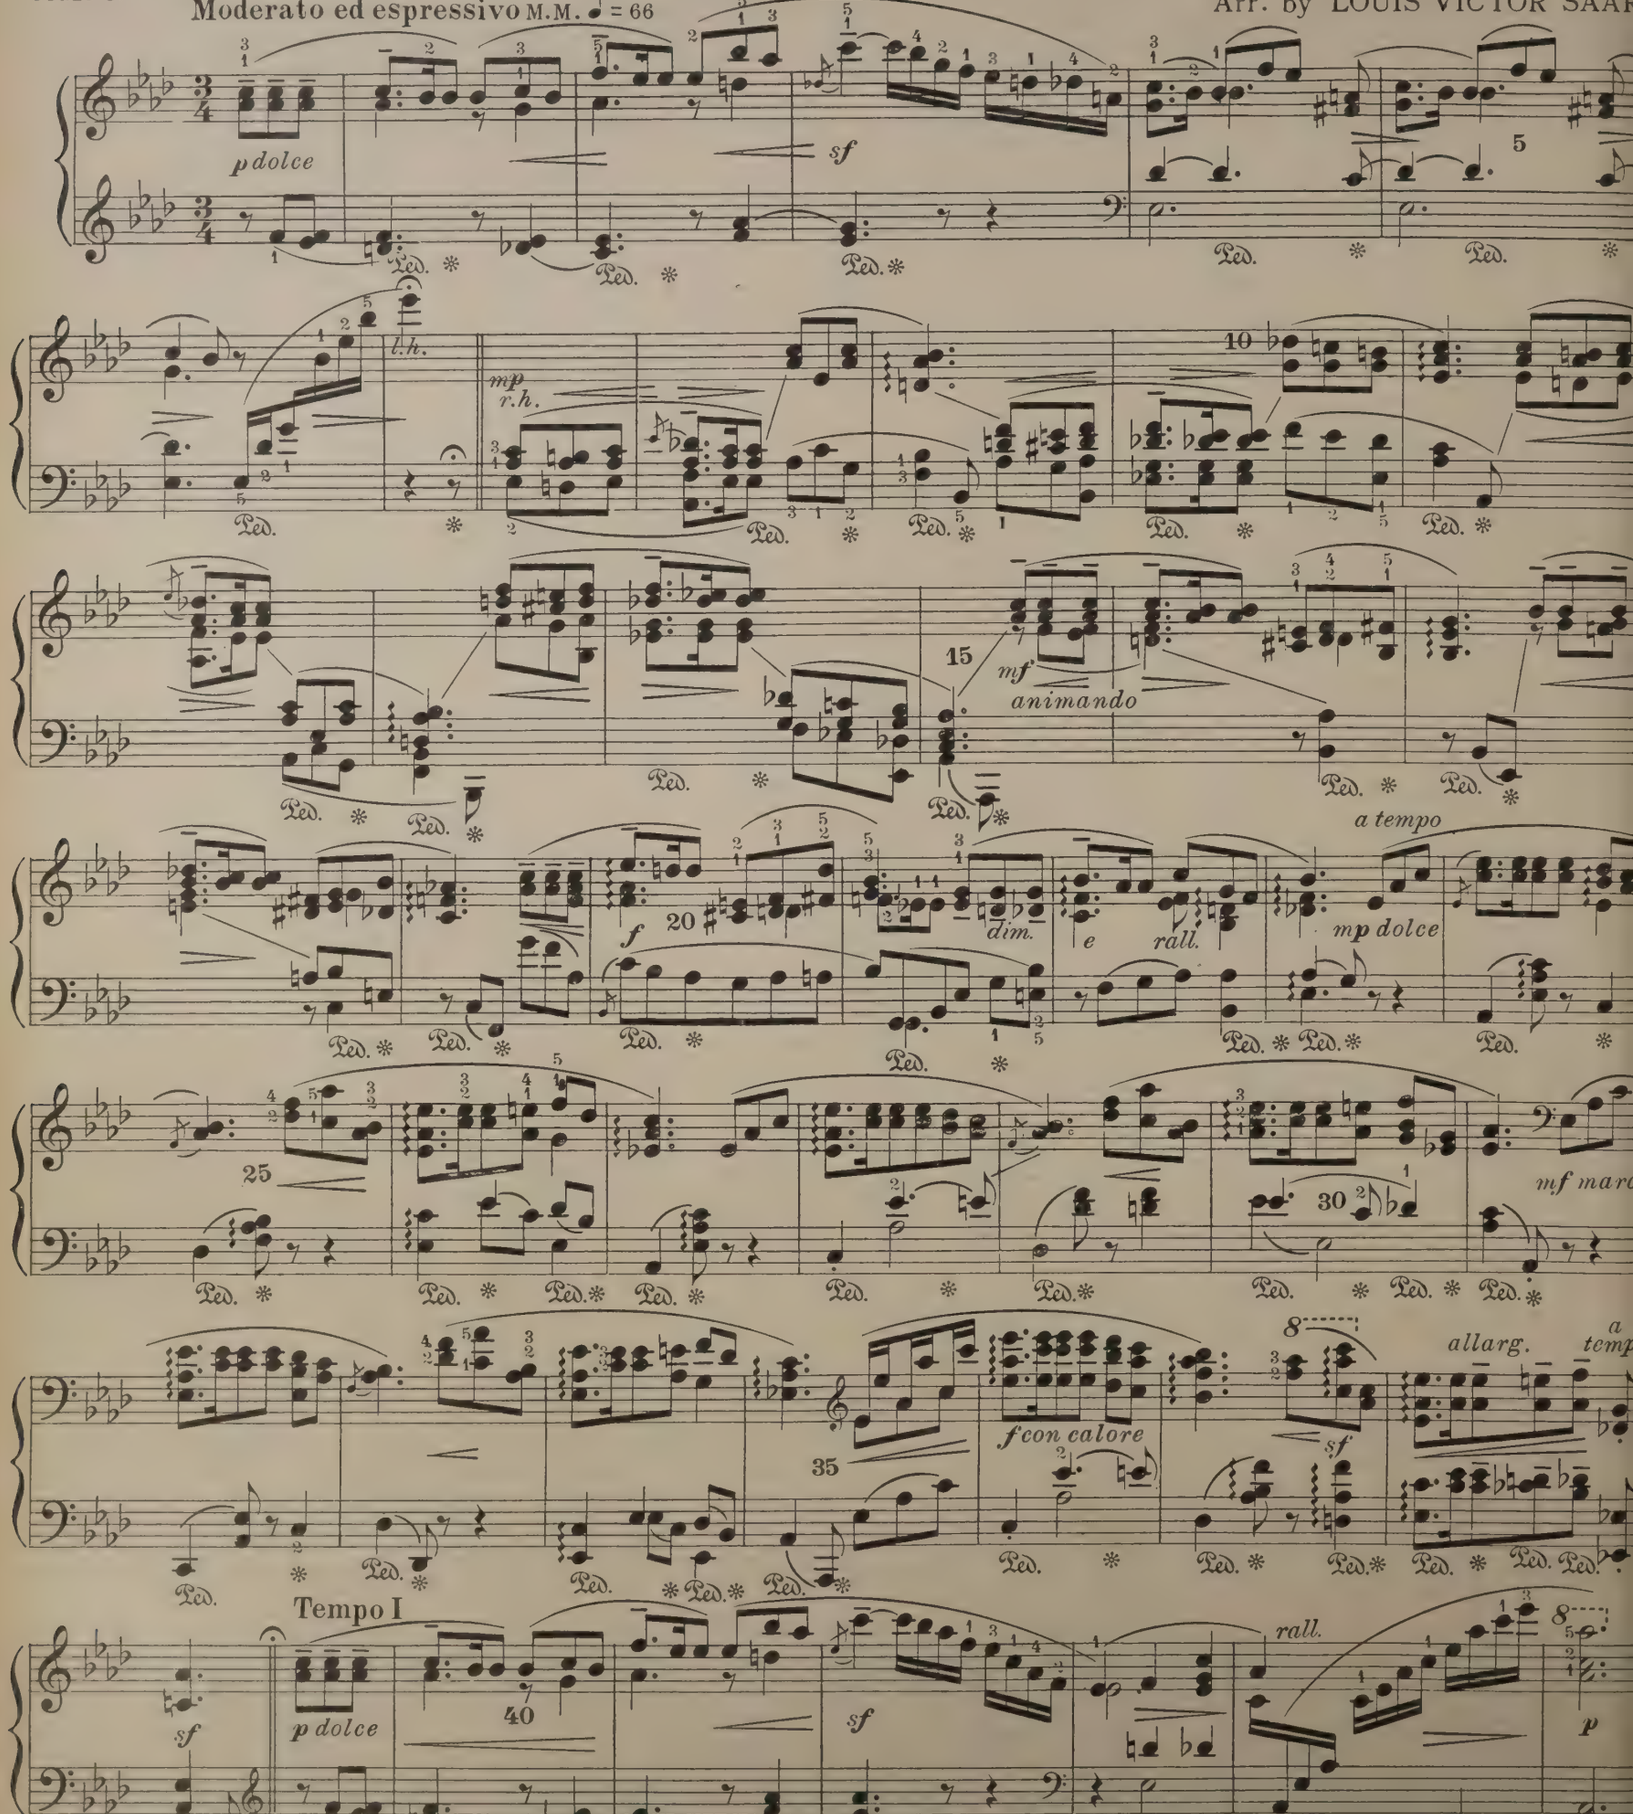
IN OLD VIENNA



THE OLD REFRAIN

This ever lovely melody from Vienna has appeared in many different arrangements. This particular one by Louis Victor Saar is redolent of the year tha he spent in Vienna as a pupil of Brahms. The melody is "Du alter Stephansturm" and is dedicated to the Tower of St. Stephen's Cathedral where bot Mozart and Haydn were choir boys. Decorated with many colored tiles this great building dominates the centre of old Vienna.

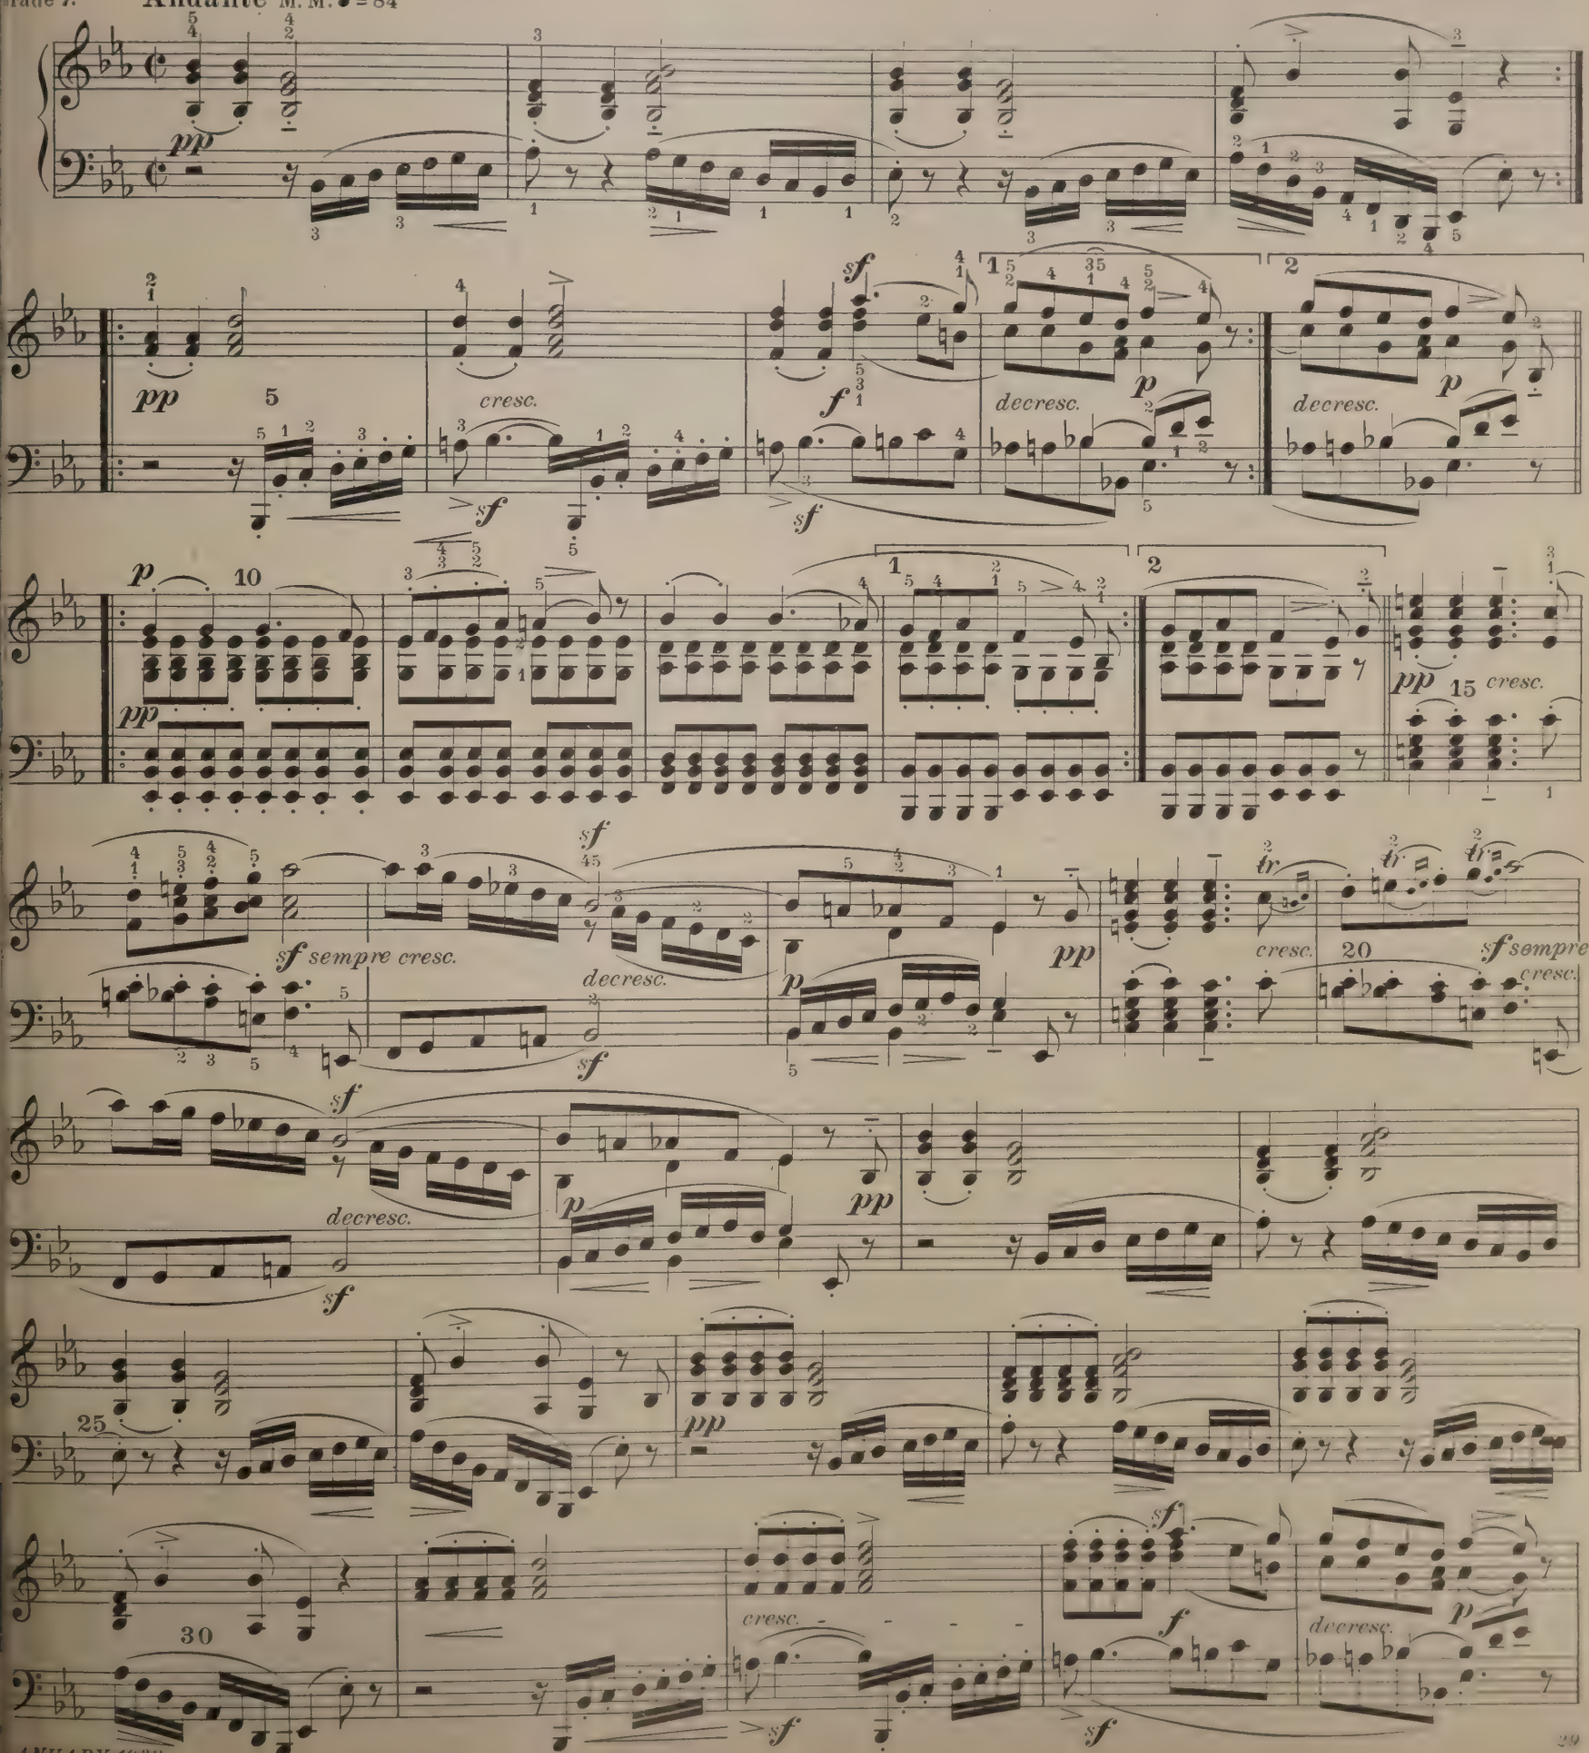
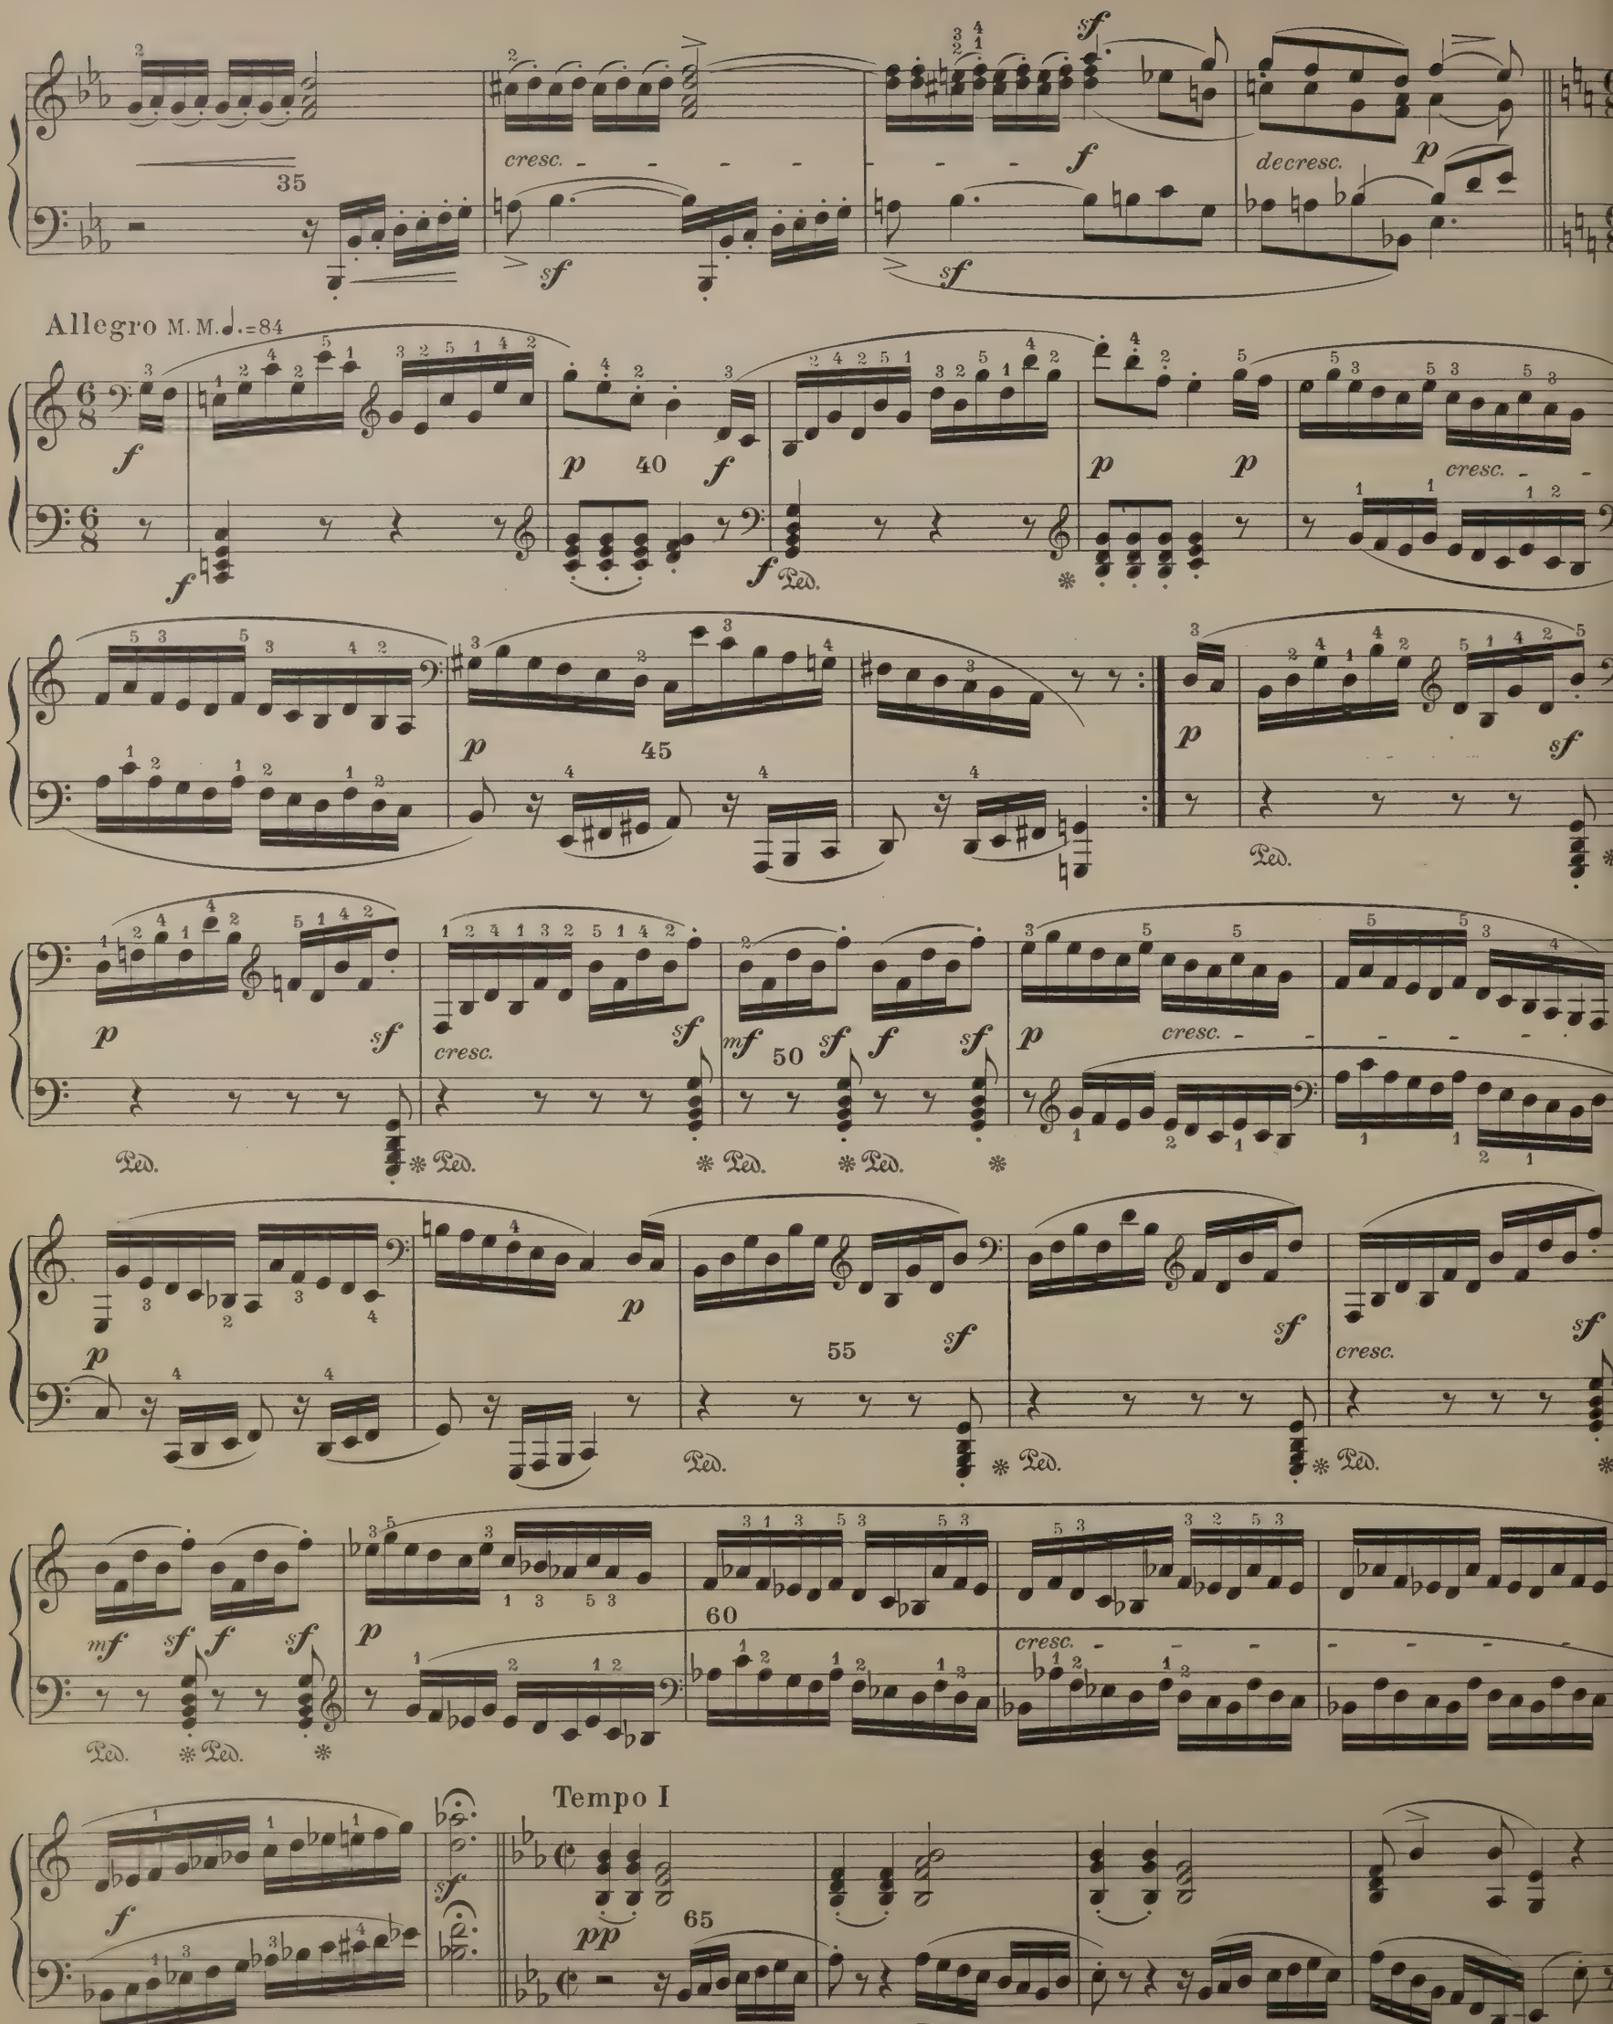
EXCERPT FROM SONATA



QUASI UNA FANTASIA



Op. 27, No. 1

In this excerpt from Beethoven's delightful "Sonata Quasi una Fantasia" (Sonata like a fantasy), the composer, while still under the benign influence of both Haydn and Mozart, begins to show a freedom of style which anticipated his wholly original and fresh inventiveness that came shortly thereafter in his Opus 31. This Sonata therefore is very interesting historically.

A. Louis Scarmolin — B. Schio, Italy, July 31, 1890. Comp., piano teacher. Studied in New York. Has written songs, piano teaching material, choral works. Res. Union City, N. J.

Edward Schaaf — B. East New York, Aug. 7, 1880. Comp., wrtr. Stud. in Berlin. For yrs has been active in Newark, N. J. Has wrtn. orig. misel. wks. and many arrgmts. for player-piano.

Albanus Schachleiter — B. Jan. 29, [illegible] ...led, Leipzig Cons. Ha... ...much for the cause of ... music. Fdr., 1922, of Schola Gregoriana in Fellibach.

...ter Schacht—B. Bremen, ...er., July 30, 1901. Comp. ...upil of Julius Weismann ...d Schonberg. His writings ...lude string quartets, ...chl. works, piano pcs., ...ngs. Res. Berlin.

Albrecht Richard Leopold Schade — B. Königsberg, Ger., Nov. 20, 1876; d. Seattle, Wash., Nov. 16, 1933. Comp., cond., organist, tchr. Fmly. in New York, and Spokane, Wash. Misel. wks.

Dirk Schäfer—B. Rotterdam, Nov. 25, 1874; d. Amsterdam, Feb. 18, 1931. Comp., pnst. Appearances in Europe. In 1913, gave a series of 11 historical piano recitals. Misel. works.

Karl Schäfer—B. June 29, 1899. Comp. Studied at Cons. of Würzburg. Located in Bamberg, Bavaria. Has had wks. prod. at music festivals in Duisburg, Munich, Dresden and Coburg.

Franz Schalk—B. Vienna, May 27, 1863; d. Reichenau, Switzerland, Sept. 2, 1931. Cond. For 18 yrs., cond. of Vienna Opera. Succ'd. Karl Muck at Graz. Also cond. at Metro. Opera, N. Y.

Irene Scharrer—B. London, Concert pianist. Studied at R. A. M., and with Tobias Matthay. Début 1901. Has appeared with leading Eng. orchs. Tours of U. S., Holland and Belgium.

Philipp Scharwenka — B. Samter, Posen, Feb. 16, 1847; d. Bad Nauheim, July 16, 1917. Comp., tchr. Fdr., 1880, with bro., Xaver, the Scharwenka Cons.; merged, 1893, with Klindworth Cons.

Xaver Scharwenka—B. Sa... ...ter, Jan. 6, 1850; d. Ber... Dec. 8, 1924. Comp., pi... tchr. Toured Europe and Amer. Fdr., of own cons. in N. Y., 1891-98, then r... turned to Berlin.

...ifred Schattman — B. ...lom, Poland, June 11, 1876. ...mp., writer, music critic. ...died with Julius Schaeffer, ...Breslau. Active in Berlin. ...s written operas, piano ...ces and songs.

Hans F. Schaub—B. Frankfort-on-Main, Sept. 22, 1880. Comp., teacher, editor. In 1906 became tchr. at Benda's Cons., Berlin. Former faculty member of Breslau Cons. Has written misel. wks.

Nanette Schechner-Waagen—B. Munich, 1806; d. there, April 30, 1860. Operatic sopr. Sang in Italian opera, and from 1827 a great favorite in Ger. opera at Berlin and Munich.

Fritz Scheel—B. Lübeck, Ger., Nov. 7, 1852; d. Phila., Mar. 13, 1907. Noted cond. Came to Amer. in 1893. From 1900 until his death, was cond. of newly formed Phila. Symph. Orchestra.

Josef Gallus Scheel—B. Trebnerz, Ger., Oct. 16, 1879. Comp., orgnst., dir. Since 1913 cond. at Cath. of St. Gallen. Was active in Constance, Ger. Works: operas, masses, org. pcs.

J. Alfred Schehl—B. Cincinnati, O., July 12, 1882. Comp., orgnst., chl. cond. Has been long active in Cincinnati. For 15 yrs., cond. of Mozart Club. Has wrtn. masses, motets, songs, pia. pcs.

Karl Scheidemantel — B. Weimar, Jan. 21, 1859; d. there, 1923, Baritone. Member of Dresden court opera, 1886-1911. For many years sang at Bayreuth. In 1911 became teacher in Weimar.

May Scheider — B. New York, Soprano. Studied in New York and Paris. Operatic début in Zurich, 1908. Has sung in princ. opera houses of Ger. In 1915-16, mbr. of Boston Gr. Op. Co.

...muel Scheidt—B. Halle-...Saale, 1587; d. there ...arch 30, 1654. Famous ...gnst., comp. Pupil of ...eelinck. His works marked ... important epoch in de...loping true organ style.

Johann Hermann Schein—B. Grünhain, Saxony, Jan. 20, 1586; d. Leipzig, Nov. 19, 1630. Comp., organist. From 1616 to his death was cantor of Thomasschule at Leipzig. Important organ works.

Paul Scheinpflug—B. Loschwitz, Ger., Sept. 10, 1875; d. Memel, Lithuania, Mar. 11, 1937. Cond., Violinist. From 1914-20, cond. Blüthner Orch., Berlin; 1929-31, cond. Dresden Philh. O.

Ernest Schelling—B. Belvedere, N. J., July 26, 1876. Comp., cond., pianist. Concert tours Europe and U. S. Cond. of children's concerts with Phila. Orch. Orchl. works and misel. pieces.

Elliot Schenck—B. Paris, April 4, 1868. Comp., cond., lecturer, teacher. Cond., Damrosch Opera Co., and Savage Eng. Gr. Opera Co. Wagner lecture-recitals, Orchl., str. qt., vln. wks.

Johann Schenck—B. Wiener-Neustadt, Lower Austria, Nov. 30, 1753; d. Vienna, Dec. 29, 1836. Gave lessons in secret to Beethoven while latter was Haydn's pupil. Wr. ch. mus. and operettas.

Hermann Scherchen—B. Berlin, June 21, 1891. Comp., cond., lecturer. Self-taught. Fdr. and cond., New Mus. Soc., Berlin. In 1922 became cond., Frankfort Museum concerts. Misel. wks.

Victor Schertzinger—Comp., violinist, cond., motion picture director and producer. For many years has been active in California. Has pub. successful songs. Formerly orch. cond. in Los Ang.

...to Scherzer—B. Ansbach, ...r., Mar. 24, 1821; d. ...uttgart, Feb. 23, 1886. ...mp., violn., organist. From ...'41, violn., court orch., ...uttgart; 1860-77, music ... at Tübingen Univ.

Johann Gottfried Schicht—B. Reichenau, Saxony, Sept. 29, 1753; d. Leipzig, Feb. 16, 1823. Comp., pianist, orgnst., cantor. In 1785 succ'd. Hiller as cond. of Gewandhaus Concerts.

Ludwig Schiedermair — B. Regensburg, Ger., Dec. 7, 1876. Musicologist. Studied in Berlin and Leipzig. In 1912 became fac. member, Bonn Univ.; in 1920, prof. Valuable literary works.

Ernst Schiffmann—B. Munich, May 8, 1901. Comp. Studied at Academy of Mus. Art., Munich. His activities center in Munich. Has wrtn. symphonic poems, chamber music, songs.

Emanuel Schikaneder — B. Ratisbon, Ger., Jan. 3, 1748; d. Vienna, Sept. 21, 1812. Singer, writer, theater mgr. Wrote libretto of Mozart's "Magic Flute;" also libretti of 35 "Singspiele."

Max von Schillings — B. Düren, Ger., Apr., 19, 1868; d. Berlin, July 24, 1933. Comp., cond. For many yrs. active at Bayreuth. Opera, "Mona Lisa," prod. at Met. Opera House, N. Y., 1923.

Anton Felix Schindler—B. Medl, Moravia, June 13, 1795; d. Bockenheim, Ger., Jan. 16, 1864. Vlnst., wrtr. Beethoven's faithful friend and biographer. Was Kapellm. at Ger. Opera, Vienna.

Hanns Schindler—B. ...fenhofen, Bavaria, Oct. 2... 1889. Comp., cond., teache... Since 1913 tchr. of org. ... harmony at mus. sch. ... Würzburg. Wr. pls. p... choruses, songs

...urt Schindler—B. Berlin, ...b. 17, 1882; d. New York, ...ec. 16, 1935. Comp., cond., ...tor. Asst. cond., Metro. ...pera Ass'n, 1909. Schola ...ntorum. Val. ed. work ...r G. Schirmer, Inc.

Tito Schipa—B. Lecce, Italy, Jan. 2, 1889. Operatic ten. Amer. début, 1919, with Chicago Civic Opera Co. Mem. Metro. Opera Ass'n. Also popular in Europe. Radio appearances. Has wrtn. songs.

Gustave Schirmer, Sr.—B. Königsee, Saxony, Sept. 19, 1829; d. Eisenach, Thuringia, Aug. 6, 1893. Music publr. Mgr., 1854, Kerksieg & Breusing; sole control, 1866; est. G. Schirmer (now Inc.)

Gustave Schirmer, Jr.—B. New York, Feb. 18, 1864; d. Boston, July 15, 1907. Mus. publ. Studied in Europe. Partner with his father in firm, G. Schirmer. In 1885 he estbld. Boston Music Co.

Rudolph Ernest Schirmer—B. New York, July 22, 1859; d. Santa Barbara, Cal., Aug. 20, 1919. Music publr., philanthropist. In 1893, at his father's death, became pres., G. Schirmer, Inc.

Alfred L. Schluma—B. Buenos Aires, June 25, 1885. Comp., cond. Among leading music educators of S. Amer. Dir. of cons. in Buenos Aires. Has written operas and symphonies.

Gerhard Schjelderup — B. Christiansand, Norway, Nov. 17, 1859; d. Benediktbeuern, Germany, July 29, 1933. Comp., critic. Was active in Dresden, Ger. and Christiania, Norway.

Ilya Schkolnik—B. Od... Russia. Violinist. Has made ... successful tours of Europe ... Amer. Since 1919, first violi... and concert master of De... troit Symph. Orch. Solo appearances with major orchs.

THE SINGER'S ETUDE

Edited for January by Eminent Specialists

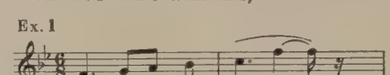
It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

The Terminal Grunt

By HOMER HENLEY

IF IT BE TRUE that great voices are fading from the singer's scene, then great vocal art appears to be ready to follow them; for we hear very little of it in these times. Even the demands of ordinary good taste are not always present in the singing of those universally publicized contemporary figures we call our "great artists."

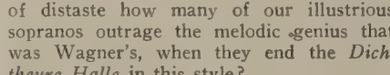
It is quite true that,



"Genius may sometimes gloriously offend,
And rise to faults true critics dare not mend."

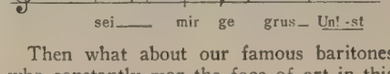
Let the reader note the words, *"Sometimes* offend." That does not mean the extenuating of faults that have become habitual with "great artists," whether through carelessness on their part, or through their copying (consciously or unconsciously) certain tonal solecisms of other "great artists." Greatness, or what passes for greatness, has its obligations to well defined standards in every field, and in none more important than in that of song.

The first demand of song is *beautiful vocal sounds.* What then are we to think of those great singers—some of them very great indeed—who so ingloriously offend both ear and taste by cutting off the ends of dramatic phrases with a combination of a grunt and a shout? In the old days of true *bel canto,* singers would have been promptly hissed off the stage for such a fault. To-day we hear it committed, with more or less exaggeration, by almost every public singer of any consequence, operatic or otherwise. The incomparable Caruso, with perhaps the most movingly beautiful tenor voice the world has ever heard, was the most conspicuous offender in the terminal shout-grunt; and it is notable that, with the rise of his fame, this, perhaps dramatically effective but wretchedly unmusical device, began to appear in the singing of nearly all of the vocal "artists" of the last generation—tenors and baritones, sopranos and contraltos, alike.



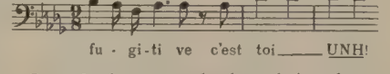
Who can forget the wooing loveliness of Caruso's tones in the first few notes of *Celeste Aida?* And who can forget the disastrous death of loveliness when he (invariably) ended the last syllable of his loved one's name with this,

Ex. 1



And who can fail to recall with shudders of distaste how many of our illustrious sopranos outrage the melodic genius that was Wagner's, when they end the *Dich, theure Halle* in this style?

Ex. 2



Then what about our famous baritones who constantly mar the face of art in this phrase from *Vision Fugitive?*

Ex. 3

Or of those numberless beloved contraltos who shatter our dreams of their glory when they deliver the poignant cry from *Ah! mon fils,* with some such disillusioning grunt as

Ex. 4

This deplorably vicious habit all of them carry to the concert stage, to our sorrow—and theirs, if they but realized it. Great singers are just as human as you and I; and they are prone to fall into bad habits quite as easily as all the remainder of the world. It is not that they do not know better, and have not been taught better, but in the heat of a thrilling performance they commit faults of which, perhaps, they are only subconsciously aware. These faults need to be pointed out to them, and also to those who look to them for models after which to pattern. Such ruthless urges for dramatic effects that will "go over" with the public are no legitimate excuse for defacing an otherwise beautiful vocal picture.

The Abode of Evil

A CONSTRUCTIVE LESSON may be gained by both professional and student singers by explaining exactly what happens in the termination of any given phrase with that shout or grunt; and a still better lesson by showing how simply it may be avoided. What occurs is this: a summoning of all the resources of vocal power at a singer's command; the consequent explosion of the loudest sound of which the singer is capable; and the expulsion of all the breath remaining in the lungs. On the last named, hang "all the law and the prophets."

The old Italian masters of the voice told their students, "Drink the tone." "Sing in." Which is only another way of saying, "Keep the breath under *withheld* control in every part of every tone, whether that tone by *pianissimo, mezzo-voce, or fortissimo."* "Hold back. Sing in. Drink the tone!" they would cry, over and over again. And they meant exactly what they said; for, by seeming to drink in a tone as it is being sung, a singer soon acquires the sensation of actually singing inward instead of outward. Does this appear impossible, or absurd? In fact it is entirely practical, and in it lies the true secret of breath control. It compels the proper balancing of tone and breath stream, and it also inhibits the escape of superfluous breath with the tone, thereby creating a sound which is all pure tone and nothing else.

But just how is one to "sing in." By *thinking in* as the tone is being sung. It is as if the singer were, while singing, *inhaling* both tone and breath. Again possible, absurd? Not at all. Try it, learn how soon your attitude toward it change.

Impaling the Dragon

BEGIN ANY COMFORTABLE NOTE in your sc with *Ah.* Sing from *pianissimo* to *fo* and back again. With the swelling of *crescendo,* do your utmost to feel that are drawing the sound *into* your body, strive to maintain that sensation as the t graduates into the concluding *pianissi* Practice this daily until you have wel the idea and its execution into one. W —as will surely happen—you are satis with the result, extend the practice to ev note in your scale, and on all vowel sour The next and more difficult step is to le how to stop the voice both quickly beautifully as the note is ended on a *f* tone. Work gradually up to this desira result by going back to your first c fortable note and singing a graduation o from *piano* to *mezzopiano,* and instant eously terminating the tone there, but actively feeling that you are drawing quick ending of the tone into your bo Having mastered this throughout y scale, and on all vowels, in equally care steps, go on from a *mezzopiano* to *mez forte:* and, lastly, from a *mezzoforte forte.*

You will find that the thing can be d —and beautifully done. No longer will think it necessary to conclude a drama note with a raucous grunt in order to tain the effect you desire. Any such d matic climax will prove fully as arrest if done beautifully, and you will always the happiness which comes from surmou ing an obstacle to artistry—an obstacle the removal of which many of our v greatest singers would add greatly to th artistic stature.

Moreover, you will have incidenta mastered the final step in perfect bre control.

Opening the Mouth in Singing

By E. HERBERT-CAESARI

"THERE IS, and indeed can be, no hard and fast rule, and certainly no artifice, as regards the opening of the mouth in singing, for the simple but cogent reasons (a) that the actual mouth-opening (lip-to-lip aperture) is, or should be, determined solely by the height of the particular sound column, which height varies according to the pitch; (b) that the degree of such opening is essentially and strictly an individual one, as no two mouths are exactly alike in size and shape. The word 'mouth' too often is used vicariously.

"What constitutes the real mouth of the singer? Assuredly not the aperture formed by the lips, but the pharynx where the various shapes are obtained for the maturation of the embryonic vowel sound prepared in the larynx. So many teachers and singers consider the lips of prime importance in vocal emission, whereas actually they are secondary and subsidiary. In the last analysis, their shape reflects the adjustment of the pharyngeal parts for the particular vowel and pitch. When a vowel has been correctly shaped in the pharynx, the external mouth, constituted by the lips, automatically shapes itself to conform to such internal adjustment. Consequently, a vowel well formed internally in the pharynx is, by reflection, expressed externally by properly adjusted lips. This is invariably the case when the singer possesses a correct vocal mechanism, because the several elements constituting the vocal machinery work as a single unit with harmonious action, every single part performing its peculiar office in active interrelation with every other part.

"A wide-open mouth or nice adjustment of the lips does not necessarily induce, or include, or imply, or reflect, a correct adjustment of the laryngo-pharyngeal parts. Indeed, sometimes the most unpleasant noises issue from a charmingly opened mouth, and all because the external shape (lip-to-lip aperture) does *not* reflect the internal distortion. Where *correct* vocal emission is concerned, the shape of the external mouth (lips) is the final expression of the internal adjustment (internal and real mouth of the singer); the lips follow and reflect internal adjustment as natura as the rear wheels of an automobile foll and reflect the slightest movement of front wheels.

Let Nature Decide

"THE LIP-TO-LIP APERTURE (commo called the mouth) is not a matter w which the singer need be concerned as *degree of aperture is determined by the ternal adjustment.* Ten tenors, or sopran or baritones, producing a high note equally good quality and balance will suredly not have *exactly* the same mou opening, either internal or external. mouth-opening is secondary to, and sho result *solely* from, an exact internal

tment and dilation of the pharyngeal
ts to accommodate the particular sound
umn the height of which varies with the
ch (the higher the pitch the taller the
umn, and *vice versa*). When the singer
ows the *exact height* of a given column,
en, in other words, he knows *the exact ght and location* of the apex of that par-
ular column, then he automatically, aye tinctively, creates sufficient, exact space *ernally* to exactly accommodate the par-
ular column, thereby permitting its apex ocus) to lean solidly up against, and 'tune to, a very definite spot on the resonating face. (A dainty little well-bred lady will n public at least—politely nibble at a eetmeat, whereas the ebullient boy, all mach and no manners but gloriously tural, opens his mouth externally and in-rnally to exactly accommodate the big ce he intends to bite off.)

"Procedures such as employing 'wooden sts,' 'showing six teeth,' 'the lips smiling,' smiling form of mouth,' mean absolutely thing to the student seeking the truth; leed, they mislead because they teach thing. The fact of 'smiling with the lips' assuredly not the keystone to vocal chanics. Did anybody ever see a great ger produce a high note *forte* with a ile' on his lips, or with his mouth open more than 'sufficient to introduce the tip a finger' as advocated by Santley? Now ntley was a fine singer; but like so many eat artists (and teachers), he omitted to plify or complete his ideas, and just vealed one aspect of a many-sided pro-lure.

And so Dictates Discretion

ON THE OTHER HAND, where *mezza-voce* ging is concerned, irrespective of pitch and vowel, the good singer instinctively reduces the lip-to-lip aperture which very often does 'incline to a smile,' as Tosi said. Although governed by the sense of the word, or words, such 'inclination' to a smile is merely the external result and expression of a reduced intensity and adjustment *internally*. When reducing any note, high or low, from *f* to *p* or *pp*, the gradually diminishing intensity is invariably accompanied by a change of both size and shape of the mouth (lip-to-lip aperture—that is, say, from an O-shape to a flat or flattish opening (smiling form, if you will). But as the smiling form is not always appropriate from the standpoint of expression, the diminishing from *f* to *p* can quite well be made without reducing the lip-to-lip aperture or changing its shape. Indeed, sopranos can secure remarkable effects, called 'echo' by the old school, by attacking the highest notes *pianissimo* with the mouth wide open, externally and internally.

"The earnest student of singing must be circumspect as regards the sayings, and writings even, and particularly of distinguished artists who so often do not know *how* to explain themselves lucidly. Let him not mistake a mere crumb for the whole loaf. In this particular case let him not adopt blindly the 'smiling form' of mouth without amplification by their authors, and plaster his face with a permanent grin, an unnatural and artificial facial stance."

(These significant thoughts on a subject interesting to every singer, are quoted from a rather extended symposium which some years ago was conducted in the columns of *The Musical Times* of London, and to which leading British authorities on the use of the voice in song contributed.)

—The Editor.

The Saga of Virgil W. Bork

(*Continued from Page 6*)

ey have worked with us for the better-nt and strengthening of our organiza-n."

In Which We Arrive in Port

FORE I KNEW IT, the thing I wanted ost in life had happened. I organized the rk School of Music in Clarksburg, West rginia. I also organized a band at Salem llege, a Seventh-Day Baptist institution. addition I started several church or-estras. I organized and developed an chestra in St. Mary's High School, a rochial school. There the kind priest, other Fideles, principal of the school, inted out to me the obvious fact that I s without an education. I had literally ver been to school up to that time. He plained that, if I was planning to con-ue teaching music in the public schools, would have to have a certain number of dits. He offered to help me get the high ool education necessary for these credits. was willing to work all night long, for ars, if necessary, to accomplish this. I s then thirty-two years old. I had my ife, my mother and six children to sup-rt; but I matriculated and became a gh school student. At thirty-five I com-ted the course and graduated. I then ntinued my quest for credits at Salem llege, and I now am still working to mplete my A.B. degree at Rutgers Col-ge, New Brunswick, New Jersey.

Meanwhile I had taken time off to study th noted band teachers, including Vander ook and Innes in Chicago. Seven years o I was sent to New Jersey as a repre-ntative of the Holton Instrument Com-ny, to promote the establishment of nds. Dr. John R. Patterson, Supervising rincipal at Roselle, New Jersey, engaged e as director of instrumental music in e Roselle Public Schools. In 1933 we rted the Union County Band and Or-estra School, which is a six weeks in-tensive course in study and practice. The first year we had one hundred and fifty pupils, six teachers and three assistants; the second year two hundred and seventy pupils, fourteen teachers, two assistants; the third year, four hundred and fifty-four students and sixteen teachers; the fourth year, six hundred pupils, with twenty-four teachers; and the fifth year (1937) six hundred and twenty-eight pupils, twenty-seven teachers and a staff of nine. The school has the use of the magnificent new High School building at Roselle, as it is conducted in the public interest. There are one hundred and sixty-three study periods of class work each day. The ages of the students are from six to thirty years. The instruments are owned by the players, except certain unusual instruments provided by the school. There are courses in theory and the Survey of Music, and very elementary courses in History, Harmony and Conducting. The cost of this course is almost nominal—ten dollars for six weeks.

Toots Mischief Out The Window

I AM OFTEN ASKED what effect the course has upon the morale of the students, and can only say that in five years there has never at any time been any occasion for discipline in any form. From the tiniest tot to the mature players, some of whom have been at famous music schools, there is so much enthusiasm that there is never any time or opportunity for mischief, or even "cutting up," at the school. Everyone comes hungry for work, and they have such splendid fun in their music that they never think of anything that might give us trouble.

I am also asked what economic effect this is likely to have upon the private teacher. All I can say is that we cannot do more than a fraction of the work that the student who wishes to advance to greater

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Scientific Registration

By MARVIN ANDERSON

NOTHING MORE DEFINITELY distinguishes the intelligent organist from the one who is quite ordinary than does the quality of his judgment in the matter of registration. Many organists seem never to suspect that the art of registration follows such rather definite rules that it might be called a science. Certainly it is not a field for aimless experiment.

The basic rule with which to begin is: The stops which are not of eight foot tone are included in the organ to reënforce the natural harmonics that are present in the normal eight foot tone. An acute ear can detect in the tone of a single open pipe not only the fundamental note for which it is named but also other tones above it in the following order: the octave; the twelfth (twelve diatonic scale steps above the fundamental); the fifteenth (two octaves above); the seventeenth; the nineteenth; the flat twenty-first; the twenty-second; and, theoretically at least, others above this. Thus a tenor C open pipe actually sounds in some degree all of the following tones: C, c, g, c, e, g, b-flat, and c. These upper tones are called by various names such as harmonics, overtones, or partials. It is the presence or absence of these harmonics in various degrees which gives to any tone the particular character which distinguishes it from others. It is the presence of all of these harmonics in a generous measure which gives to the full organ a majesty and power that is perhaps not surpassed by the symphony orchestra.

Once the student understands the principles explained in the preceding paragraph, he should not have to experiment in order to know what stops he must use to produce a given effect. He can definitely control the harmonic development of the tone. This is something which can be done on no other instrument, and the organist should use but not abuse this unique privilege.

A Study in Variety

LET US BEGIN by drawing the *Open Diapason* alone and playing on it for some time. Notice that this tone soon becomes tiresome. The intelligent ear demands more harmonic development. We can secure this development by adding the *Octave* or *Principal* (4ft.) and the ear again becomes interested. Later we can add more foundation tone by drawing other eight foot stops, perhaps *Dulciana* and *Melodia*. To strengthen the octave we add other four foot stops such as *Dolce Flute*. The higher harmonics are reënforced by adding the twelfth (2⅔ft.) and the fifteenth (2ft.). Large organs have still other ranks and mixtures making it possible to carry the development still further.

The above paragraph is not intended as a suggested order of registration; it is a lesson in tonal appreciation. A logical *crescendo*, using the stops mentioned, would begin with *Dulciana* 8ft., to which would be added in turn *Melodia* 8ft., *Flute* 4ft., *Open Diapason* 8ft., *Octave* 4ft., and then the higher pitched stops. If there is a sixteen foot stop on the manual, it is used to give a broad and full effect to the registration. Intermanual couplers may be added at any point where they do not cause a sudden change in volume or tone quality. As for Great to Great couplers, they should be never or seldom used.

Registration on the Swell and Pedal organs follows the same rules, except that in the case of the Pedal the tone is built upon a foundation of sixteen foot tone. In coupling manuals to the Pedal, care must be taken lest the Pedal tone become unbalanced.

The student should have all of the stops on his instrument classified in his mind according to families. Even small organs have groups of stops representing diapason, flute, string, and perhaps reed tone. If there is any doubt about the classification, a descriptive list of stops, such as that found in "The Organ" by Stainer, should be consulted. With this classification in mind, it should be understood that the normal use is to build up on any stop by adding to it other stops of the same family. In exception to this rule it will be found that certain "freak" registrations are useful, for variety, especially as solo voices. For example a good solo tone is usually obtained by using a four foot flute with *Dulciana* 8ft.; this registration is a soft diapason foundation with an octave of flute quality.

In selecting the registration for any piece, first study the music carefully. Locate the point at which the greatest volume be required, and choose a suitable re tration. Then select the passage that require the least volume and decide the registration. The intermediate st of dynamics within the piece can be fo between these two registrations, by ad or subtracting stops in logical order. some point in the piece it might be desir to capture the attention of the ear switching abruptly from one quality of to some tone of entirely different chara For example, it is usually effective to b up to the *fortissimo* of the full organ then reduce to a soft flute tone, perh with *tremolo*.

Trust to Moderation

IN THE MATTER OF DYNAMICS it is portant that the organist should realize limitations of his instrument. The organ never should be used except to the effect of *fortissimo*. If we use all of stops for *f*, what shall we use for Likewise, only for *pianissimo* may we duce to the softest stop with the s closed.

The study of registration never can exhausted. Even the smallest organ of an interesting range. Unfortunately, tain popular fads in organ tone and unrestricted use of unification have rest in the building of many organs that do conform to the natural laws of good t but it is encouraging to notice an increa tendency in the sane and right direct

Making the Most of a Small Reed Organ

By S. JUDSON EWER

THE ORGANISTS of our smaller rural churches have little incentive for excellence. In the majority of instances they are unpaid individuals who give their time on Sunday mornings to the playing of the congregational hymns and possibly some short voluntary as prelude or offertory. There may or may not be a choir composed of a few mixed voices from the local community. But neither the efforts of such a choral group nor those of the congregation are often conducive to inspiring work upon the part of the one furnishing the instrumental background. Furthermore, inadequate instruments, badly out of tune and with but certain portions in correct working order, add to the difficulties. The result is a service that, from the musical standpoint, falls far short of what it should be either for the pastor or congregation, and which, as a spiritual offering to Almighty God, is practically noneffective. There can be no question as to the value of music in the church service; for all concerned its correct rendering leads the thoughts to higher realms and supplements all other phases of worship.

In many cases, however, the situation may be greatly improved if the organist will but study carefully the resources of his instrument and spend a little time in mastering its eccentricities. Ofttimes the player is really a pianist and not an organist at all. As a result he has little understanding of the technic necessary for the proper rendition of organ music. A more or less crisp touch is used that results in a nonlegato type of playing not at all in keeping with the dignity of the service. Stops are drawn with no adequate knowledge of their types or purposes; and the knee swells are used indiscriminately without regard for their proper value in securing certain effects of *crescendo, diminuendo,* or full organ. The smaller reed instruments are usually pumped by the foot power of the player, and this but leads to further discomfort when the pumping is momentarily neglected and the tones dwindle to a dismal wheeze or wail.

Make Humble Resources Count

THERE IS, HOWEVER, little need for confusion in this service. Even the most obscure organist in the most remote hamlet, whether paid or unpaid, may make something of his opportunities for church musicianship, if he will but analyze his difficulties and proceed to correct them. In the first place let him find out what is wrong with the instrument and bring it to the attention of the church authorities; the "Board" will usually coöperate with the organist who has the temerity to voice his needs. It may not be possible to have a new organ, but the old one may be at least put in a playable condition.

In the second place the organist must analyze his own musicianship, endeavor to correct his faults, and attempt to develop the technic necessary for the proper manipulation of his instrument. A *legato* pressure touch may be easily acquired by a little conscientious and persistent practice. There should be much listening to one's own playing and watching for smoothness and careful phrasing. The organ is an instrument of sonority, of full, round tone; make it sound that way. A bit of careful examination and experimentation with the different stops will lead to an understanding of their resources and to a satisfactory use of them in registration. Tonal qualities and pitch are easily determined whether the stop is labeled adequately or not.

For many years my home has been in a small rural community of a few hundred inhabitants. There is but one church, and in that church it has been my privilege to act as organist intermittently almost from childhood. The organ is a small one ma Estey reed instrument of the year 1 There are no pedal keys and the win supplied by foot power. The stops ar follows:

Treble	*Bass*
Dulciana—8 Ft.	Dolce—8 Ft.
Diapason—8 Ft.	Melodia—8 Ft.
Vox Jubilante—8 Ft.	Harp Aeolien 2 Ft.
	Viola Dolce—4
Flute—4 Ft.	Viola—4 Ft.
Bourdon—16 Ft.	Bourdon—16 F
Choral—8 Ft.	Sub Bass—16 (13 notes)

Mechanical Stops and Accessories

Treble Coupler—} coupling upward
Bass Coupler— }
Flute Forte— }
Melodia Forte—} give increase of vol
Vox Humana—a tremolo merely and little value
Crescendo and Grand Organ Knee Sw

With such equipment it is quite prising how many beautiful effects obtainable. The sonority of the full grand organ is powerful and strong, gesting a much larger instrument o

ipe organ. Training upon the latter instrument has, perhaps, given me a greater bility to appreciate and utilize the meager alues of this reed organ; but without such aining it would be fully possible to analyze ie opportunities offered for varied and ffective registration.

Some Helpful Hints

A FEW SUGGESTIONS as to certain combinations that have been found of value ay prove of interest to those having struments of similar or like specifications. Diapason and Melodia tone is, of course, ie foundation for all accompaniment work nd for the leading of congregational sing-ig. If one wishes a softer effect, the ulciana and Dolce may be used. These pen the same sets of reeds, but do not low them to speak so loudly. The Vox ubilante, as its name suggests, adds brilance to the treble parts and is effective r all voice leading. For further brilliance support of the hymns or full choir, the Ft. stops, Flute and Viola, are impornt. The Bourdon or a bit of pressure on the Grand Organ knee swell (left) lds the deep 16 Ft. tones that fill out the semble and give full support for hymn companiments. The bass of hymns should played in octaves while the right nd takes the tenor part. The powerful ub Bass then comes into play and fills t the volume giving a deep pipe organ uality. The left knee swell full over adds ie octave couplers and completes the full rgan.

There are many suggestions for solo ork against a soft accompaniment—an rrangement often desired when playing oluntaries or for the "giving out" of cerin hymns such as *O Love That Wilt ot Let Me Go; Jesus, Saviour, Pilot e;* and *Abide With Me.*

The 2 Ft. Harp Aeolienne plus the 4 Ft. iola Dolce is a splendid combination for left hand accompaniment, while the "tune" being played with various solo arrangeents for the right hand. Diapason and ox Jubilante are effective, as are Diapason d Choral (reedy in effect), Diapason d Bourdon, Bourdon alone, or Vox ubilante and Flute. Diapason, Bourdon, d Flute 4 Ft. give a fine solo for a rong, virile melody. The Diapason or Dulciana with coupler added may also be used.

For very soft effects the Harp Aeolienne alone, when played in the lowest octaves, gives an ethereal harmony to which a melody may be added in the treble range with Dulciana or Diapason. Harp Aeolienne, or Aeolienne and Viola Dolce (or Viola) are also satisfactory alone when used in the lower octaves.

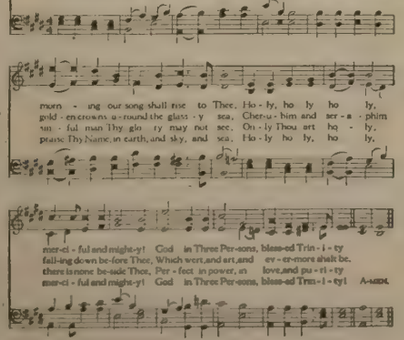
And Treasures Inexhaustible

A "HYMN TUNE" VOLUNTARY is very effective when played with accompaniment and solo stops throughout, or with certain phrases played thus and others with a partial full organ. At such times the Grand Organ Knee swell is invaluable for changing the tonal make up quickly and smoothly, without destroying the original stop arrangement. Standard hymns played in such a manner are much appreciated by the older members of the congregation. Those who wish to experiment further will find a keen delight in bringing out certain tenor or alto parts.

The reed organists repertory is not, however, limited to hymns. Many reed organ collections are available, or certain simpler pipe organ selections are adaptable if the pedal part is incorporated by the left hand. Much depends upon the dexterity and ingenuity of the player. It has been found possible to render some of the simpler Bach preludes and fugues in a fairly satisfactory manner and without too much sacrifice of the contrapuntal developments.

On the whole, there are many avenues open to the alert player who is willing to study his small organ and who has the patience to experiment and try what he can do. Any feat of dexterity in handling the stops or in using the hands in various octaves according to the stop used and the effect desired is entirely legitimate. The aim should be to make the musical part of our church services more effective. Good music, well rendered, is a distinct aid to all spiritual life, and whether it be made upon a costly pipe organ or upon a small reed organ, makes little difference. Even though the incentives for excellence in the instrumental work of our rural churches may be largely lacking, let us make the most of that which we have.

Holy, Holy, Holy



By MRS. W. HENRY HERNDON

Author: Bishop Reginald Heber, 1783-26, was born in Malpas, England. He is a child poet and received praise from r Walter Scott. He later gave up his erary work and devoted all his time to issionary travel and other similar service. e baptized the first native Christian in lcutta. Years later, though sick with ver, he baptized forty-two people in one y. The effort was too much, and he died at afternoon.

Tune: "Nicea" was composed by Rev. hn B. Dykes of Hull, England. At the rly age of ten he was an accomplished anist. Rev. Dykes was among the first demonstrate that hymn tune making uld be a science and the spiritual purse be retained. He composed some three ndred hymn tunes. This tune was named Nicea" because the text of the hymn deals th the doctrine of the Trinity as exunded in the Nicene Creed.

Interpretation: This hymn is usually ven the title of "Trinity"; but the only rect reference to the Trinity is "God in ree Persons, blessed Trinity." More emasis is placed on God himself. The moral d spiritual perfection of God is emphaed by the beginning of each stanza. The omnipotence of God is stressed by the words, "Lord, God Almighty" and "perfect in power." One is reminded of the Fatherhood of God by the one word "merciful."

Holy, Holy, Holy!

"The language of music is infinite; it contains all, it is able to express all."—Balzac.

Earn A Teacher's Diploma or A Bachelor's Degree

In every community there are ambitious men and women, who know the advantages of new inspiration and ideas for their musical advancement, but still neglect to keep up with the best that is offered.

It is too easy for them to say "I am busy and haven't the time for more study myself." They find that excuse instead of making the effort to use the minutes each day which so often go to waste.

The most successful musician, of course, is a very busy one. The demands upon his attention are never ceasing—yet he is the one who can find the extra time for something worth while. It is for such a one, chiefly, that the Extension Courses are the greatest benefit. For him it is hard to give up his interesting class or position and go away for instruction.

Extension work is also equally advantageous to the beginner and the amateur. The work can be done at home in spare time, with no interference with one's regular work.

The Increased Demands for DEGREES have Resulted in Larger Classes for the ADVANCED COURSES offered by the UNIVERSITY EXTENSION CONSERVATORY.

Look back over the last year. What progress have you made? Perhaps you've wanted to send for our catalog and sample lessons before—just to look into them. That is your privilege. We offer them without obligation to you. Ours is one of the leading musical institutions and we urge you to take advantage of the spare moments you are sure to find. You must not rely upon your good intentions, as you have in the past, or you will miss this opportunity.

The service offered to teachers in our classes continues long after the diploma or degree is awarded.

There is a greater demand all the time for the courses we offer, as they fit teachers for better positions. This is an age of specialization and the specialist is earning fully double or more the salary of a musician with only a general knowledge. Openings in the music field are growing very rapidly. There are big paying positions for those who are ready for them.

A Diploma is the key to the best teaching position. Do you hold one?

Our Diplomas and Degrees are Awarded by the Authority of the State of Illinois

It is up to YOU. On your own decision will rest your future success. Fit yourself for a bigger position—demand larger fees. You can do it! You can easily and quickly fit yourself right at home through Extension Courses.

This great musical organization now in its 34th successful year—has developed and trained many musicians and many successful teachers. And to you we offer the same advantages which have been given to them.

Now is the opportune time for you to clip the coupon below. Get it in the first mail. Don't waste any more time! The coupon will bring you information about the lessons which will be of untold value.

This Is *Your* Opportunity—Mail the Coupon TODAY!

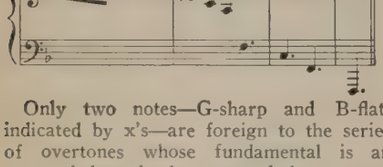
"Harmony at Your Doorsteps"

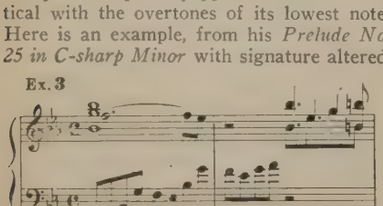


(*Continued from Page 7*)

behind music; but without this scientific background you might be misled into supposing that the theories and laws of harmony were the arbitrary concoctions of narrow-minded pedagogs, instead of something quite natural and fundamental.

Once you become familiar with the existence of overtones, you will be surprised to discover how frequently the music you hear travels the path of the overtones. The famous horn passage from the symphonic poem, *Till Eulenspiegel*, by Richard Strauss, for instance, follows nearly note for note the natural overtones of F.

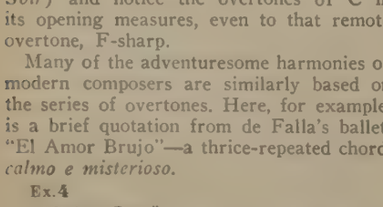
Ex.2



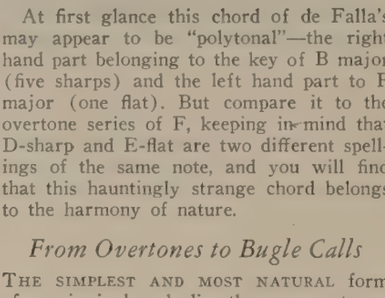
Only two notes—G-sharp and B-flat, indicated by x's—are foreign to the series of overtones whose fundamental is an octave below the last note of the passage.

The sonority of Chopin's piano music is largely due to his respect for overtones. Many a Chopin *arpeggio* is almost identical with the overtones of its lowest note. Here is an example, from his *Prelude No. 25 in C-sharp Minor* with signature altered.

Ex.3



If Chopin had changed but one note in the left hand *arpeggio*, which occupies the first measure and a half of this quotation; that is, if he had omitted the first F, and substituted D-flat just above middle C; his *arpeggio* would then have contained, note for note, the fundamental and the first nine overtones of E-flat. The *arpeggio* that follows has a similar kinship to the overtones of A-flat.

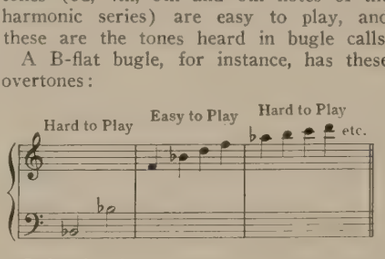


Debussy's ear was unusually sensitive to the higher overtones, and many of his harmonies, which seem at first discordant, are closely related to the system of harmonics. If you own his First Book of "Preludes," turn to his *Prelude, No. 4* (*Les Sons et les Parfums Tournent dans l'air du Soir*) and notice the overtones of C in its opening measures, even to that remote overtone, F-sharp.

Many of the adventuresome harmonies of modern composers are similarly based on the series of overtones. Here, for example, is a brief quotation from de Falla's ballet, "El Amor Brujo"—a thrice-repeated chord, *calmo e misterioso*.

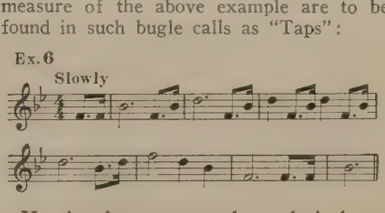
Ex.4

"El Amor Brujo"



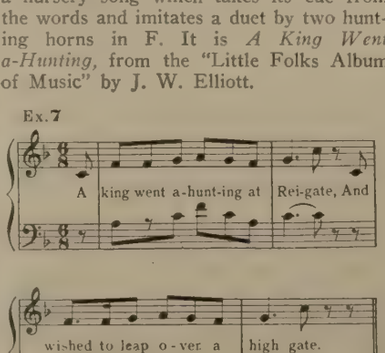
At first glance this chord of de Falla's may appear to be "polytonal"—the right hand part belonging to the key of B major (five sharps) and the left hand part to F major (one flat). But compare it to the overtone series of F, keeping in mind that D-sharp and E-flat are two different spellings of the same note, and you will find that this hauntingly strange chord belongs to the harmony of nature.

From Overtones to Bugle Calls



THE SIMPLEST AND MOST NATURAL form of music is based directly on overtones. It is the bugle call. A bugle is nothing more than a long pipe, twisted and doubled into convenient size, and its only possible tones are the actual overtones of the pipe. Buglers cannot hold their lips loosely enough to play the fundamental tone. Even the first overtone (which we call the second note of the harmonic series) they find hard to manage. But the next four overtones (3d, 4th, 5th and 6th notes of the harmonic series) are easy to play, and these are the tones heard in bugle calls.

A B-flat bugle, for instance, has these overtones:



Only the four overtones in the second measure of the above example are to be found in such bugle calls as "Taps":

Ex.6

Hunting horns, too, rely exclusively on the overtones for their melodies: but, since they often explore the harmonic series as far as the eleventh and twelfth overtones, their melodies are less restricted. Here is a nursery song which takes its cue from the words and imitates a duet by two hunting horns in F. It is *A King Went a-Hunting*, from the "Little Folks Album of Music" by J. W. Elliott.

Ex.7

The lower of the two horns, you will notice, plays only three overtones (numbers 5, 6 and 8 in the harmonic series), while the higher one makes use of five (numbers 6, 8, 9, 10 and 12 in the harmonic series). The "empty fifths" on the syllables "Rei" and "high" are especially characteristic of hunting-horn music.

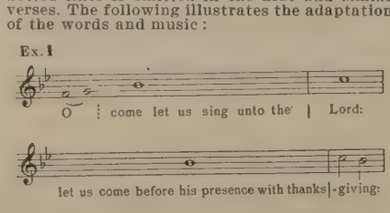
ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.



Q. Can a reed organ be tuned an octave lower than the original pitch? Will it correspond with another organ of the same kind with original pitch? Can an electric blower be attached to the wind chest of a reed organ? Please explain how it can be done. What would be the cost of a quarter horse power used electric blower?

A. It would not be practical to tune a reed organ one octave lower than the original pitch. If the space provided for the reeds will permit, the reeds might be moved up one octave and new reeds supplied for the lower octave. If this shift is possible, the instrument might be used with another organ if the two instruments are put in tune with each other. We simply suggest, but do not advise the change. The directions given us for the attaching of a blower to a reed organ are as follows: "cut a hole in movable part of bellows—about six inches above the bottom—size of hole 4 inches in diameter—run 4 inch pipe from hole to blower, and install in line the check valve supplied by the manufacturer of the equipment, who will also suppy diagram showing hook-up." We suggest that you write to a reed organ manufacturer, asking for the address of nearest reed organ dealer in your vicinity, who can supply your needs and perhaps quote you price on used blower.

Q. Will you explain the manner in which the words should be fitted to the music in setting No. 28 in the "Chant Book" used in the Protestant Episcopal Church. I understand the meaning of one dotted line, but cannot properly reconcile music and words where there are two dotted lines as in setting mentioned. What is the most effective march written or arranged for the organ? Most effective sonata? Is the Widor edition of Bach's organ works considered final, or is it open to criticism? I am substitute organist of a large Episcopal Church, but would like a permanent position. How should I go about it?—L. S. S.

A. We are taking it for granted that you refer to setting No. 28 in the Hutchin's "Chant and Service Book." The Chant is Gregorian and the second dotted line shows the ending of the first section of the first verse and other verses with a single accented syllable at the end of the section. In the second verse the first section ends with the note following the dotted line, it having two syllables with the first accented. The note following the second dotted lines is omitted in the first and simlar verses. The following illustrates the adaptation of the words and music:

Ex.1

The question of the most effective march is one of personal preference. This is also true of sonatas. For processions in the editor's parish, Meyerbeer's *Coronation March* is perhaps the favorite one. Sonatas for the organ (except an increasing use of those by Bach) are not very popular. The best known sonatas probably are those of Rheinberger, Mendelssohn, Merkel and Guilmant. The Widor edition of Bach has not been completed and therefore cannot be considered final. It is difficult to advise you in reference to securing a permanent position. Let it be known that you are seeking an appointment and endeavor to have your work favorably known. An advertisment in some Church periodical might be an aid.

Q. I desire information regarding a phase of organ-playing used by practically every organist on the radio, that is, the sliding from one tone to another, up or down, commonly called "crooning." Sometimes one voice slides and sometimes the whole chord. How is it done?—J. W.

A. We have never heard the name "crooning" in connection with the organ "effect" you mention. We cannot give you details as to how the effect is produced, except to say that we have heard of a *chromatic glissando* which may be what you have in mind. Its use is not considered artistic by serious minded organists.

Q. What are the duties of a chorister? May processionals be with or without singing, and should the same music, vocal or instrumental, be always used? Should the choir "keep step" in the Processional, and if there is no singing will any sacred instrumental piece be suitable for use? Will you suggest some music suitable for funeral processionals and recessionals?—M. E. E.

A. The word "chorister" is frequently used to designate a member of a choir. We are, however, taking it for granted that you refer to the duties of a choirmaster. As a general rule the choirmaster is in charge of the music (subject to whatever church authority exists), training the choir, selecting music, and exercising general oversight of matters pertaining to the musical activities. Processionals may be accompanied with singing or instrument music, or both. We would not advise the use of the same music for all processionals. The choir should "keep in step" in the Processional but it is a matter of preference whether they keep pace with the music, or "walk" in step. If the choir "walks" in the Procession, any suitable music may be played. Use any of the well known funeral numbers for processionals and recessionals, such as the *Dead March* from "Saul" by Handel, the *Funeral March* by Chopin, and so forth.

Q. I have an old tracker action organ with stops as per enclosed list. Does this list of stops as per enclosed list. Does this list dictate a good balance of stops? The Oboe does not stay in tune more than a few weeks after tuning. Is this due to worn out pipes or improper tuning? When in tune the quality is harsh. The Octave on the Great is also harsh in quality. Can these matters be remedied? The Melodia and Dulciana both emit a hissing noise. Is this due to improper seating of the pipes? The pedals often have valves stick. Can electric action be substituted without great cost? What would be an estimate of the cost of material to accomplish this? Where can I secure information as to how this is accomplished, and on electric action for organ in general? If stops were to be added to the organ what stops would you suggest to insure good balance? What solo stop would you suggest? When the pedals are played a hissing noise is the first thing heard. If additions are made, where can I obtain the pipes? Can I secure second hand ones? What would be the cost?—F. C. B.

A. The specification indicates a fair balance of stops for the size of the organ; though, of course, one pedal stop only is not ideal. Your instrument is apparently so unsatisfactory that we suggest that you have it examined by a thoroughly reliable practical organ builder, to secure advice as to what to do to make the instrument satisfactory, or to provide a new one. The Oboe stop often requires frequent attention—yours may need revoicing, or some new parts. We do not know whether the harshness of the Octave stop can be remedied. The hissing of pipes may be caused by their being improperly seated. Electric action has been applied to tracker action organs, but we would not care to advise it, especially if the instrument is old and the chests in bad condition. We cannot estimate the cost of the material necessary for electrification. For information on electric organs we suggest the following books: "The Contemporary American Organ" by Barnes; and "The Electric Organ" by Whitworth.

For additions to the instrument we suggest Swell—Bourdon 16′, Violin Diapason 8′, Octave 4′, Mixture, Cornopean 8′ (bright); Great—Twelfth, Fifteenth, Mixture, and Trumpet 8′; Pedal—Open Diapason 16′, Flute 8′, Lieblick Gedackt 16′. Additional stops might also be included in the Swell, such as Vox Celeste and Vox Humana, but the stops suggested are more in keeping with the ideas of good organ building. Oboe or Cornopean may be used as solo stops. Pipes may be secured from some pipe makers or from an organ builder. The latter might be able to furnish second hand pipes, and to furnish you estimate of cost. Our advice would be the purchase of a new organ, using whatever pipes from the old organ that are considered absolutely worthy of being included in the new instrument.

Q. I am enclosing a list of stops of our church reed organ. How can I obtain different tones and combinations? I have been using the Corno 16′ with the 8′ and 4′ stops in the treble, and Sub Bass 16′ with 8′ and 4′ stops in bass and playing hymns one octave higher. Is this combination correct? Kindly give the principal use of the 2′ stops. I have been using the 2′ stop (in the bass) and playing two octaves lower during the Communion service.—H. F. H.

A. The combinations to be used will depend on the requirements of the passage to be played. For congregational singing perhaps "full organ" (obtained by opening both knee swells) will prove satisfactory. You might also try the combination you mention, omitting the Corno 16′ and playing the music as written instead of one octave higher. The 2′ stops may be used for additional brilliancy in ensemble or for the purpose you name. A "pedal" effect is possible sometimes by playing the bass part an octave lower than written (using Sub Bass stop) and playing soprano, alto and tenor parts with the right hand. 8′ stops produce normal pitch (same as piano) while 4′ stops produce tone one octave higher—2′ stops two octaves higher, and 16′ stops one octave lower, than normal pitch.

Q. Can you advise where I might secure keyboard and action of a tracker organ? Also need a pedalboard from tracker organ as other supplies.—W. W. W.

A. We are sending you by mail the name and address of a party who has a pedalboard, bench and some parts of action for sale. If he cannot supply all that you need, we suggest your communicating with some organ builder who might have such material available from a used organ.

With an easy playing Conn band instrument, you can be ready for band or orchestra in 4 to 6 weeks. A sure road to popularity if you start on a Conn. Choice of the world's greatest artists. Magnificent tone. Many exclusive features—yet they cost no more.

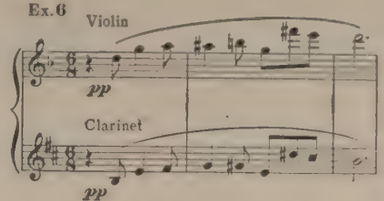
(*Continued from Page* 17)

of too great importance to be constantly hidden in a heavy maze of pernicious scoring.

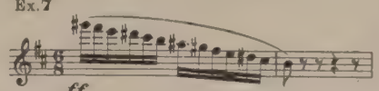
When the bass clarinet is employed in the orchestra of one hundred pieces it is heard—and such great composers as Wagner and Richard Strauss often allotted to it important solo passages and fragments. When Wagner wrote the lovely *motif* of *Brünnhilde* for this instrument he brought it into the immediate foreground by providing a softly veiled background to support it.

Ex. 5



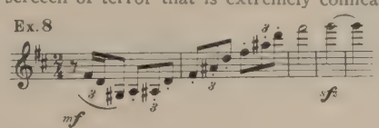
The same sort of careful scoring is essential if the lower clarinet voices are to assume the importance in the band which is their due.

The E-flat clarinet should be treated more as an occasional voice rather than one that is to be employed constantly in conjunction with the B-flat clarinets. Arrangers have quite generally treated this voice as though it belonged to the flute family and have persistently written for it in octaves with the B-flat clarinet—a most pernicious practice. It should be so employed only at rare intervals. It may sometimes be used to take up an ascending passage where the B-flat instrument leaves off—and where the flute tone is not desired. It is risky to join the two clarinets in their extreme upper register in subdued passages due to the difficulty of maintaining accurate pitch between the two voices.



Richard Strauss made a soloist of this instrument in his tone poem *The Merry Pranks of Till Eulenspiegel.* The part was written for the *D* clarinet but it is more commonly played upon the E-flat instrument. In this poem Strauss has employed the instrument with comical effect in its harsh upper register—though not entirely so. At one point it joins the first violin in a subdued passage—an octave below the violin.

Ex. 6



But for a humorous effect he does not hesitate to ascend to the upper *G.*

Ex. 7

When the court pronounces his sentence of *Death,* the craven miscreant emits a screech of terror that is extremely comical.

Ex. 8

In band scoring the E-flat clarinet can be employed occasionally as a solo voice but should much more often be used to supplement the B-flat clarinets—at the same pitch rather than an octave above.

The scale of B-flat (concert pitch) played by a B-flat and an E-flat instrument in unison

Ex. 9

will be noticeably different in quality than if it were played by two B-flat clarinets in unison. It will be found that the throat tones—*F, G* and *A*—of the B-flat clarinet will be strengthened by being joined with the *C, D,* and *E* of the E-flat instrument. This single example should be sufficient to indicate to the conscientious arranger that this instrument should be written for more commonly in its low register. Indeed, it should be treated with great care and consideration if it is to be used at all.

Do You Practice Too Much

(*Continued from Page* 14)

job jump the fence?)

3. Music biography has never yet convincingly set forth the supreme intellectual act of writing music that endures. And no psychology has ever yet set forth the necessary effort to be made fully to comprehend it. We have to stumble into the way of that ourselves.

Well, is practice to be this detailed stunt over and over again, life without end? Reader, if you have joined our craft, the answer is—Yes. If not, suit yourself.

Let me, in conclusion, give this anecdote.

An American tourist stood one day watching an oriental artist at work on a vase that had already cost him many months of labor.

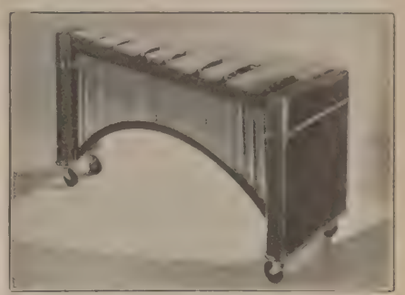
"Do you not," he asked, "regret it when you have finally finished so beautiful an object on which you have worked so long?"

The artist moved his eyes as if visioning the uplifting inspiration of a mountain top and said, "No, the next one will be more beautiful than this."

Music Extension Study Course

(*Continued from Page* 18)

version by Bruce Carleton. Mr. Carleton has preserved the illusion of thirds in the right hand by using double notes on the first beat of each measure.



The *Trio* section appears without the usual accompaniment, as the left hand is employed in helping divide the melody. This has been ingeniously done in a manner that avoids the necessity of passing the thumb under or the hand over.

In this version the difficulty is reduced to about easy second grade.

* * * * *

"Good literature is at most only the orchestration of platitudes."
—Thornton Wilder.

Carry Out that IMPULSE

Play This *Thrilling* Instrument—It's *Easy!*

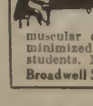
There's no music so sweet to a musician as applause—and no surer way to win applause than to play the new Deagan Imperial Marimba.

It's a masterpiece of design so beautiful you'll be proud to give it a place in your living room—and so rich in tone that you'll fall in love with it the moment you hear it.

Easiest of all instruments to play—and especially easy if you've studied piano. Write today for full details.

J. C. DEAGAN, Inc.
Dept. E-1 1770 Berteau Avenue Chicago, Ill.

EASY



● Such beautiful tone, and so easy to play! Just touch a key and blow normally; you can't miss. Nothing to compare with these new P-A Saxes, Clarinets, Trumpets, and other P-A instruments. Fully guaranteed; your success assured. See your music dealer or write direct for beautiful, free book. No obligation. Easy terms. Greatest fun, easiest with P-A. Write today sure. 1288

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself.

Teaching the Tone Deaf Student

By T. DUNCAN STEWART

TEACHING AN ADEPT and enthusiastic child is one of the greatest privileges and pleasures any teacher could realize. Logical instruction founded on a teacher's good schooling, coupled with careful understanding and a consequent enthusiasm, invariably produces a violinist of high merit.

The word "talent" has been applied so vigorously to children of normal quality that its use must be reckoned with. Unquestionably the talented child should possess positive pitch, inviolable time, a creative ear, the ability to "play by ear" a given subject in any key, an introspective nature, physical qualities such as strength, control, suppleness, pliability, and a dozen or more favorable inherent characteristics. Such a child, with correct training, invariably comes out doing the "Concerto" of Brahms masterfully, or if he is so inclined, writing one of his own.

However, upon checking through these qualifications, any teacher will find that few, if any, of his pupils can muster the most of these favorable traits. Naturally this challenge is not meant for teachers of national reputation. They, in very few instances are confronted with the every day problem of the teacher in the smaller town. The obscure teacher can, however, nurture or annihilate the fundamentals that are necessary to any degree of proficiency.

Here are some observations gathered by the writer while teaching in a city of approximately fifty-thousand, a class of average ability, found in any city of the same size. In a class of forty normal youngsters, less than twenty percent, between the ages of ten and sixteen, had a sense of pitch that would justify any suspicion of talent. It is not implied that they were "tone deaf," but the ability to discern rapidly and correctly a false tone was not theirs.

One girl was so uncertain that she could not identify the higher pitch when two successive tones a major sixth apart were sounded. But, while apparently an impossible subject for violin training, her interest and willingness to go over and over things encouraged a trial.

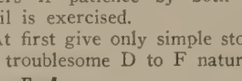
An Interesting Experiment

PREVIOUS TEACHERS had given the girl scales and a few pieces, neither receiving anything like justice at her hands. She could not hear. Investigation disclosed that she had never sung—"could not carry a tune in a bucket," as she put it. One year later this young lady performed quite nicely the cycle of scales and arpeggios through three octaves and one could not wish for better execution of Kreutzer etudes than she prepares. To further add to the seemingly impossible—she plays double stops in tune and loves them. And the interesting thing about it all is that there has been no evidence of bluff about it. A pitch was given on which she concentrated for two minutes. She was asked to sing with the syllable "lu" or "loo" the given tone ("la" breeds a tendency to flatness). Subsequent tones were treated alike, then transferred to the violin. The effect was quite unlike the proper sort of violin lesson, but the end, in this instance, justified the means.

It is not intended to offer this "pitch culture" as a panacea for all pitch ills, but its trial might relieve a sensitive, sincere person from the belief that he is "tone deaf"; and the teacher who can ferret out the mental kink that holds a student, can serve nobly by taking time out from accepted teaching practice and balancing the "talent budget." It is rather safe to state that any student who can sing an etude, or the singable portion of it—can also play it in tune.

In larger cities, schools offer ear training courses that are excellent. Access to their text books will back up the feeble beginning by associating pitches theoretically. But, naturally, the finding of a pitch deficiency in a pupil while he is quite young will save much time.

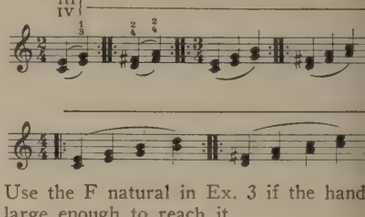
The writer has never seen harm in "playing by ear." Of course too great an aptitude fosters a certain carelessness, but the good greatly overbalances the evil.



One student who afforded an unusual experiment had great trouble playing in tune. Her playing ran erratically from moderately clean to terrible. She would get off pitch on a whole note—and stay off. She lacked the process of shifting up or down to make a mistake less noticeable—and the effect left nothing for conjecture.

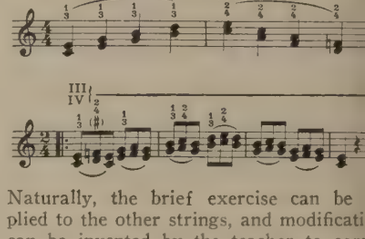
A school book of simple songs took the place of her usual etudes and *All Through the Night,* and *Dear old Central* "pinch hitted" for the *Minuet in G.* Before she was permitted the luxury of playing the favorite songs—she had to sing them, and in neighboring keys too. It took but three weeks to produce amazing improvement. As she progressed, more difficult songs were undertaken and finally she came to her lessons singing as well as playing her studies. When double stops were to be reckoned with, she learned to sing the tones contiguously, and her work now is, happily, of different character.

Every teacher knows of the child who plays single tones with the certainty of a mature violinist, but when he gets into a passage of double stops the "waters are troubled"—and continued playing makes them worse than ever. This evil can be overcome more easily than any of the others if patience by both teacher and pupil is exercised.



At first give only simple stops—omitting the troublesome D to F natural

Ex. 1



and all intervals of sevenths and seconds until simple thirds and sixths, played at first with broken bows, have been fairly well achieved. Then, when shifting is to be employed demand perfect execution of the following exercises before more seri efforts are permitted.

Ex. 2

Use the F natural in Ex. 3 if the hand large enough to reach it.

Ex. 3

Naturally, the brief exercise can be plied to the other strings, and modificati can be invented by the teacher to cor a student's particular difficulty. Play scales in thirds cannot be overdone. embodies all the elements of shifting, time spent on such study will prove v constructive. One cannot avoid reality refusing to face it, likewise, a surplus double stop study is infinitely prefera to the amount given the average stuc to-day.

It is the belief of the writer that g eral scale playing, through two and th octaves, in sixths, thirds, octaves, much neglected fourths, will send f material from our smaller cities to bigger teachers in the larger cities.

There is no greater satisfaction than veloping a brilliant young violinist—un it is to start him.

Two Masterworks for the Violin

By PAUL STOEVING

PART III

Coming back to our previous contention that the Mendelssohn "Concerto" remains the highest achievement in this form of violin composition, notwithstanding the efforts made in the same direction by other later masters, we are aware of the outspoken or veiled derogative estimation in which certain progressively modern professional circles to-day hold Mendelssohn's music in general and even this supreme masterwork, pronouncing it *passé* and deserving of being shelved.

In the very, almost unbelievable, popularity it has enjoyed all over the civilized world, for nearly a century since its appearance, would seem to lie the danger of audiences getting a surfeit of, and turning away from it, at least temporarily. But, fortunately, this has not been the case with this concerto. It still reigns supreme with the violin loving public and let us be frank about it, with the majority of violinists, professionals, students and amateurs. The reason is not far to seek. Apart from its artistic merits which we have tried to extol, the unsought beauty and sincerity of its themes, the clarity of construction and happy variety of rhythms have appealed to audiences of every description and level of musical taste, the man in the street who just loves music and to the more sophisticated listener who brings to his enjoyment a discriminating understanding.

The work even loses little of its inherent charm by being played with a piano accompaniment instead of an orchestra, which cannot be said of the Beethoven "Concerto." The latter, admittedly more a kind of symphony with violin obbligato than a typical violin concerto, sounds cold and incomplete without the warm orchestral coloring.

But this brings us to the consideration of other violin concertos in comparison with the one by Mendelssohn.

Appraising Brahms

FIRST TO ONE'S MIND springs the "Concerto," by Brahms, also the only one left to us by this great master and the most important contribution to violin literature since Mendelssohn's death in 1847.

I would not wish to be apart from the thousands who do homage to its loftiness of purpose and design, who admire its workmanship and profundity, and who enthuse over passages of a singular, haunting beauty quite Brahms' own, such as adorn still more abundantly the pages of his symphonies and chamber music works. But, with it all, who can deny that the concerto is unviolinistic? It is too difficult except for the most accomplished interpreters, technically unattainable for the average student and amateur; and the average audience it is hard to ass ilate. In addition it loses more than of its impressiveness when being pla with a piano accompaniment, and it therefore, seldom heard that way.

Brahms is said to have experienced usual difficulties in composing it and great misgivings about its success. Jos Joachim, to whom it is dedicated and doubtless assisted the master with ad on technical matters appertaining to violin, confessed that it was a conc against rather than for the violin; Brahms absolutely refused to write a ond one when asked. The first one enough for him. Its composition put irksome technical considerations and straint on his mind accustomed to th in different idioms of musical creativen

I was present at the first performa

the "Concerto" by Joachim and the wandhaus orchestra in Leipzig. It was ew Year's night and the cultured audi- ce, while warm towards the revered terpreter, seemed only moderately so in reception of the novelty. The work eded more than two decades of pioneer- g before it became established in the ncert repertory of a few violinists, and other decade or two to gain its present ce in the hearts of music lovers. That itself would not signify much in the preciation of such an outstanding work art; some might, on the contrary, think complimentary to it as much as uncom- mentary to a past unappreciative gen- ation. But in its relation with the point der discussion, that is, a comparison with e Mendelssohn "Concerto," this slow cognition appears to be a strong argument favor of the older work.

The "Concerto," by Brahms, in spite of great qualities and its many beauties, ks what Mendelssohn's possesses in such undance, namely real spontaneity of in- ntion, a universal appeal in its themes d a true, striking originality of form thin the accepted classical formula. Nor s the work of the younger master, ough modeled after that of the older one, e simple grandeur, and classic simplicity d lucidity of the Beethoven concerto. It too ponderous, too complex, too serious, relieved by lighter touches and happy ntrasts. Taking into consideration the ten forced, antiviolinistic nature of the hnic of the solo instrument and the near unplayableness of many passages in the last movement —and their heavy tread— can it honestly be said that the Brahms concerto represents as fine and lasting a monument to the true genius of the violin, at once simple, sweet, unostentatious, mild-voiced, feminine rather than masculine, as the concerto by Mendelssohn?

Nor can this claim be made for the Tschaikowsky concerto, so much heard and admired in the last few years; also the only work of this kind by the great Russian composer. For here is a work quite as unviolinistic, on the whole, as the concerto by Brahms. Of excessive length and depending on a colorful orchestral accompaniment to set the solo part into an effective relief, the many fine ideas in the work, the pages of striking originality, beauty and strength (of rather Muscovite caliber) cannot atone for the long stretches of labored material and lapses into technical vulgarities and bombast.

Altogether, though now a favorite with some noted violinists and, through their exceptional interpretative gifts, also a favorite with audiences, the Tschaikowsky concerto, for the reasons stated, will not unlikely share in time the fate of so many other violin concertos from Mendelssohn to the present day. Perhaps this is due to the fact that not violinists or composers with a special love for the instrument, but pianists and composers for orchestra, have undertaken to write violin concertos more as a matter of routine and general fitness than from any particularly justifying urge.

(To be Concluded in February Etude)

Silent Practice

By ROBERT FRANCIS

SILENT PRACTICE on the violin? Does it sound strange or even impossible? Then you have yet to learn helpful secret. Silent practice is a time ver whenever audible practice has to interrupted or postponed. While someone telephoning or there are callers in the xt room, or after the baby has been put sleep, we can still practice silently. But it is not all. The kinds of silent prac- e described are not merely substitutes; y are valuable in themselves.

Calisthenics for the Left Hand

ESE EXERCISES for the left hand are aat setting-up exercises are for the whole dy. Lay down the bow but hold the violin playing position. Lift the first finger h and strike it down hard on the E ing to produce F-sharp. Repeat the vement until the finger has improved in uracy of striking. Then hold the first ger down on the string and strike with second finger to produce G and later produce G-sharp. Hold both first and ond fingers down and strike with the rd finger. Hold three fingers down and ike with the fourth. Remember to lift finger high and to strive for accuracy striking. The finger should be struck rd enough to hear the note softly and is judge the intonation. The exercise may varied by striking with the second, rd, and fourth fingers (one at a time) thout the lower fingers being held in ce on the string; and it should be done on the other three strings.

Shifting also can be practiced silently. in by shifting from the first to the rd position and back again, using va- us combinations of fingers, such as one two, one to three, one to four, two to ur, and so on. Then shift from the first the fourth position, and from the first the fifth position, using different com- ations of fingers. Repeat the exercise on other strings. Judge the accuracy of ur shifting by the sound of the finger iking the string at the completion of h upward shift.

The vibrato, like any thing requiring skill, can best be learned in installments. That is why it is best to try it first without the bow. Begin with the second or third finger. The first step is to attain an easy rocking motion somewhat like the "push-pull" of the Palmer method of penmanship. The second step is to make the motion smooth and regular so that a graph of it would show a uniformly wavy line. Only after the second step has been mastered (and it may take weeks or months) should the third step be attempted, which is the increasing of the speed of the motion. While practicing the vibrato thus silently, it is sometimes a help at the beginning to hold the violin mandolin fashion, or, while holding it in regular playing position, to stand with the scroll pressed firmly against the wall for support.

Bowing Exercises

THESE SILENT EXERCISES help to develop bow control. 1. Draw the bow back and forth not *on*, but about an inch or a half inch *above*, the string. The point is to take whole bows and to keep the bow at the same distance above the string. 2. Practice setting the bow down on one of the strings without making any sound. Do this at the nut, middle, and tip, and on all the strings in turn.

Practice Without the Violin

ONE OF THE MOST valuable kinds of silent practice is done without either bow or violin. This is studying the music—the time, bowing directions, fingerings, expression marks, and analyzing difficult passages such as *cadenzas* into simple elements. After studying a piece in this way, it can be learned more quickly and with far fewer mistakes.

One reason that the violin is difficult is that the player must do many things at the same time. But these different things can be learned separately, and then be put together. Silent practice is one way of concentrating on one thing at a time.

Every Lesson a Tune - Every Tune a Lesson

Melody-First Band Book

30c Each Book — A *Unisonal* Instructor for ALL BAND INSTRUMENTS — **Piano Acc. and Teacher's Guide 60 Cents**

by Fortunato Sordillo, Assistant Director of Music, Boston Public Schools.

Mr. BAND INSTRUCTOR:

WITH MELODY-FIRST BAND BOOK, there are no uninterested players, because (with two exceptions, and these players can be assigned alternative books) *every book is a melody book.* You can send the student home with something that *he will practise* because he will *enjoy* practising it; whether he play Alto, Oboe, Bassoon, or Baritone—it makes no difference! Especially if, with a pianist available, advantage is taken of the *cleverly-harmonized* Piano Accompaniment, which makes even the playing of the *scales* a truly musical experience.

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

A Gabrielli Violin

C. S.—Giovanni Baptiste Gabrielli, Firenzi (Florence, Italy) was a noted violin maker. He made some remarkably fine instruments, and also some of second and third rate quality. A well known American violin dealer offers a first rate specimen of this maker for $1,500. Some specimens sell for more and some less according to quality. As you wish to sell your Gabrielli, your best course would be to take it to New York City, which is near your home, and offer it to dealers in old violins in that city. If it is genuine, and in good condition, you can probably get some offers.

Buying a "Cremona"

T. H.—You are running an extreme risk in buying a high priced violin, supposed to have been made by one of the Cremona makers, on the strength of the label alone. There are hundreds of thousands of fake Cremonas scattered all over the world, each with a correctly worded label pasted inside. You ought to have the advice of a good expert before you buy a high priced violin.

A Violoncello Label

C. W.—The label "Mi-Fin," in the French violoncello you recently purchased, was no doubt used as a trade mark. I am not familiar with instruments bearing this label, nor do I find it in any catalog listing rare violoncellos. You might write to several dealers in old violins, and violoncellos, and possibly they can give you some information.

The Lesson Schedule

L. R. C.—The frequency with which violin scholars take lessons varies to a great extent. Here in the United States the great majority of pupils take one lesson a week; a considerable number take two lessons a week; while a few take only one lesson in two weeks. Spohr, the great violinist and teacher, advised one lesson every day, but very few have followed his advice.

Bow Pressure Controlled

M. V.—When one desires a soft tone in violin playing, the wrist must be flexible, and the bow hair skims lightly over the string with very little pressure. When a louder tone is desired, pressure is applied to a degree corresponding with the loudness of tone desired.

Making a Violin

C. G. S.—Your idea of making violins and violoncellos from thin pieces of wood, which are then molded into shape is entirely wrong. This method has been tried repeatedly in the past, but it was found that it did not produce good instruments. The thin pieces of wood were placed on a violin shaped mold, and pressed into shape with heat. The best method, and the one used by all good violin makers everywhere, is to carve the back and belly from solid blocks of wood. This requires much skill and labor, as these two pieces must be graduated until each is brought to the thickness which has been found to produce the best tone. This thickness varies somewhat according to the theories of different makers.

Becoming a Professional

J. M. B.—I receive so many letters like yours, and they trouble me, because it is impossible for me to answer them as the writers would like to have them answered. To do so, I would have to be a combination of clairvoyant and fortune teller. You name the books you have studied and ask me whether you have made sufficient progress to warrant your taking up music as a profession. Without hearing you play these works, it is impossible to tell anything about your progress. It all depends on *how well* and *correctly* you play them. You seem to want to become a violinist, and yet you have been studying the violin with a piano teacher. If you were my pupil for a few months, I could give you some dependable advice, as to whether you have a real violin talent, how far you could expect to go and whether you could hope to become a professional. I note that you are studying the piano as well as the violin. This will be a great benefit to you, although you must constantly guard against neglecting the violin.

The best piece of advice your teacher has given you, is for you to study under a really good violin teacher in a large city. This would be an excellent plan if you can see your way to do it. A first rate violin teacher could advise you as to your talent, and whether you could make the grade of becoming a professional violinist. You could learn from a few months study in a large city also, whether you would care to become a professional.

Number of Stradivarius Violins

O. H. K.—Heinrich Bauer, in his "Practical History of the Violin," estimates that Stradivarius made two thousand violins during his long and busy life. Other authorities estimate the number as greater, and some as less. It is largely a matter of guess work, as Stradivarius kept no exact records. 2. The exact number of his violins now in existence is not known. This, also, is a matter of guess work. There no doubt are a considerable number of Strads tucked away in out of the way places, of which there is no record. 3. There is no way of setting the exact year in which these violins began to become famous. Perhaps it was ten or fifteen years after their excellence began to be recognized. From this time on their fame sp rapidly. 4. Just when other violin ma started copying his labels is not known, b probably dates from the time his violins be famous and were in great demand. 5. St varius labels are practically the same, some slight differences in spelling his n 6. His labels read, "Antonius Stradiv Cremonensis Faciebat Anno (the year the violin was made)—I. H. S." 7. Vi with the word "Conservatory," stampe the back are imitations, the word being as a trade mark. Stradivarius never empl it. 8. On some of his labels his name is sp Stradiuarius. 9. It is contrary to the poli THE ETUDE to recommend certain e violinists, violin makers, and so on, as "best."

Cannot Examine Violins

E. H.—I am sorry to state that I do have time to examine violins sent by subs ers, nor would I be in a position to arran trade of your violin with some other scriber. Any good violin dealer can do work for you.

A Good Concert Piece

L. G. A.—An effective composition for to play at the concert you speak of woul the *Souvenir de Wieniawski*, by Haesche. piece is melodious, has some good left *pizzicato* work, and passages in harmo It is about the right length for your co and is a "sure fire" hit with an audience. you are so enthusiastic about the Violin Etude. Every young violinist should re good musical magazine like THE ETUDE.

Violin Varnish

H. S.—There always has been discussio to just what part the varnish used by great Cremona makers, plays in improving tone of their violins. Some authorities main that the varnish penetrates the wood softens and mellows the tone; others c that the violin would sound the same "in white," without varnish, and that the var was used principally to protect the wood decay and disfigurement. Many arguments, and con, have been advanced without an getting very far on the subject. Violin ma and varnish manufacturers have spent y in trying to rediscover the secret of the mona varnish; and at frequent intervals one announces that he has discovered the s of the Cremona varnish, as used by St varius, Guarnerius, Bergonzi, Amati, and Cremonese makers. The difficulty is that violin making world will have none of the discovery, and so it refuses to "stay dis ered." 2. I have never seen a Strad, pictures and writing in the varnish as describe. 3. Famous Strads are known by erent names, such as the "Dolphin," "Messiah," the "Betts," and so on, but St ivarius did not give them these names; were given by the owners, by violin dealers musical historians and by others. 4. Crem violins have various colors, but the varnis the same. 5. You ask, "Would the rediscov of the Cremona varnish be worth while? certainly would, if the quest were succes 6. You will find a great deal of interes information on violin varnishes, formulas making different types of varnishes, direct for varnishing violins, and so on, in the work "The Violin and How to Make It," Master of the Instrument. This may be cured through the publishers of THE ETUD

A Vuillaume Specimen

G. W.—Vuillaume was one of the two gr est violin makers of France, and his violins valuable. He excelled in copying the vio of the old Italian masters, such as An Stradivarius, Guarnerius, and others. fortunately, many lesser violin makers tated the violins of Vuillaume, so you have to send your violin to an expert to whether it is an original, or only a copy. laume is said to have made three thous violins during his lifetime.

To Play Sonatas by Bach

R. A.—Yehudi Menuhin, the eminent yo violinist, is twenty years of age. His Amer violin teacher was Louis Persinger, of York. He also had some lessons from emi violin teachers in Europe. 2. If you can the famous violin composition. *La Folia* Corelli, really well, I should think you w be able to play the "Six Sonatas for Vi Solo," by Bach, or at least the easiest an them; but it would be necessary to hear play *La Folia* before giving a positive opin You must also remember that the violin m of Bach requires an interpretation all its 3. If you can play *La Folia*, you should be to play also the two sonatas, Op. 105 and by Schumann.

Studies in Double Stopping

S. T.—Almost every instruction book, book of studies contains a certain amoun work in double stopping. Schradieck's "S Studies for Violin," has scales in thirds, six octaves, and tenths, which are excellent in veloping double stop work, especially in case of advanced pupils. Double stops ca introduced into practice in a year and a or two years after the pupil st Schradieck's "School of Violin Technics," three sections, is also excellent. Sectio deals with double stops.

Piano Accordion Department

The Accordion on the Air

By PIETRO DEIRO

As told to ElVera Collins

THE SUBJECT of broadcasting is one of great interest to accordionists. Due to the rather late recognition and acceptance of the accordion as a standard musical instrument, there is much to be learned about the technic of broadcasting its music. Under the proper conditions, the tone of the accordion is greatly enhanced over the air. There are many details, however, which may hinder and almost ruin accordion broadcasting. Each musical instrument has its individual characteristics which must be coped with; but it seems that the accordion has more points to be taken into consideration than any other one instrument. Let us analyze them in the order of their importance.

These suggestions are intended for the amateur about to make his radio début as an accordion soloist. Orchestral playing would naturally call for different rulings. Professional accordionists, through practical experience, have learned the many elementary details to be given so our advice will be confined to the novice.

Naturally the volume of tone is the first item to be considered. Some players have the mistaken idea that it is impossible to play an accordion softly. It not only can, but must be played softly with every note distinct and clear. There must be no blurring of tones. Much of the prejudice which formerly existed against the accordion was due to the fact that players persisted in blasting out as loud as possible. A general control of volume can be taken care of by the engineers in the control room but there is much less likelihood of distortion of tone if the player controls the volume as much as possible when playing before a microphone.

It is customary for solo accordionists to have an individual microphone. Due to variance in equipment, it is not possible to state the exact distance one should stand from the microphone. The player must be ready to observe signals given for him to move either closer or further away from the microphone. These signals are given by the program director, having been relayed to him from the control room.

Player's Position

ACCORDIONISTS MAY EITHER SIT or stand during their solos; but, whichever it may be, careful observance should be given to see that the microphone is directly in front of the accordion at about the middle of the instrument so there will be a perfect blending of melody and accompaniment. The reason for this is that the tone from the right hand side of the accordion comes out from the openings in what is termed the gallery or grill. Naturally if this side of the accordion were turned toward the microphone, the music from it would be most prominent and the accompaniment would scarcely be heard. The tone from the bass section passes through the openings in the bass panel which is directly under the wrist strap. By projecting this section of the instrument toward the microphone, the bass accompaniment would overshadow the melody. A perfect blending is essential, hence the placing of the accordion exactly in front of the microphone. The only exception to this would be if the player wished to feature a right hand cadenza. He would then turn the instrument to bring out the full tone from the right hand. Likewise if he wished to feature a bass solo or passage, he would turn the instrument accordingly.

The playing of rapid novelettes on the air is often accompanied by the sound of a constant thud on the right hand keyboard. This sound is not noticeable when one plays on a stage or in a large auditorium, but the microphone seems to pick up the sound and amplify it. The thud is caused by the fact that the player is not employing the correct right hand technic. He is striking the piano keys too hard and depressing them too much. The keys should be struck very lightly in rapid passage playing. Perfect coördination of the bellows is required to produce the correct effect. Remember that no matter how hard the keys are struck, nor how much they are depressed, the tone is entirely governed by the air in the bellows. Therefore, save the energy and strike the keys lightly as birds in passage. This will abolish the unpleasant thudding noise. It might be mentioned that there are occasional instances where the thudding sound is not the fault of the player but due to the fact that the pads on the accordion need renewing. This is a minor repair job and can be taken care of by your repair man at a very slight expense.

A draggy bass accompaniment is very noticeable on the air. If a selection has a straight bass and chord accompaniment, touch the buttons lightly and release them immediately.

A general softening of tone for both sides of the instrument may be accomplished by the placing of mutes. The mute for the bass section is placed under the bass panel, whereas the right hand mute may be placed either over or under the gallery. Such mutes are usually constructed for the individual instrument and designed according to the degree of volume to be decreased. Some accordionists find these mutes convenient when practicing in apartment houses or hotels where the sound is objectionable to others. When both sides of the accordion are muted, the general effect is similar to the tones of an organ.

While on the subject of an organ, it is well to mention that an accordion lends itself admirably to the broadcasting of selections which simulate the organ tone. And right here is another caution. When rendering such selections, the main point of course is to bring out the deep sonorous quality of the organ tone. To do this, special attention must be given so that the bellows are manipulated without jerking. All shading of tone can be acquired by gradual movement of the bellows. The reversal should be arranged to occur where it is least noticeable.

Selecting the Program

AND NOW a few words about the program. Many a discouraged heart has gone forth from a broadcast which proved a failure, not from lack of ability, but from a poorly arranged program. The general subject of programs is too extensive to be discussed in detail here but the main point is to keep the program well within the technical range of the player. Selection of individual numbers depends upon the occasion and allotment of time. The radio novice should never make his début playing a selection which is new to him. The initial broadcast is somewhat of a nervous strain so

WIN A FREE TRIP TO Italy
ALL EXPENSES PAID!

BE THE GUESTS OF CAV. MARIO SOPRANI ON THIS GLORIOUS TOUR TO *Romantic* CASTELFIDARDO

● Would you like to take a trip to picturesque Italy next August with all expenses paid? The opportunity is yours. If you have never tried to play an accordion, you are eligible to enter Soprani's nation-wide aptitude contest to win one of these glorious vacation trips. No special qualifications required. It is open to all ages. Juveniles will not have to compete with adults. And the ten final winners will be given, next summer, August, 1938, a grand trip to Italy, all expenses paid, the guests of Cavalier Mario Soprani, titled Italian maker of the world-famous Soprani Ampliphonic Accordions. You have a full chance of winning. The purpose of this national Soprani Accordion contest of aptitude is to prove how easy it is to master a

CAV. MARIO SOPRANI

SOPRANI ACCORDION

Your local Soprani Accordion dealer is authorized to enroll you and start the first event of this contest for your town, in his store after January 1st. Immediate registration is imperative. See your local Soprani Accordion dealer at once. Registrations close February 7th. Final contest July 9th. File your application immediately. Or, if you do not find a Soprani dealer in your town, write direct for registration blank and full details. Every beginner has an equal chance. It's a grand opportunity. Call or write today.

Creative Interpreters

"The greatest interpreters of the past were composers, in most instances. Paganini, so we understand, was a king of virtuosity—but he was a composer, too. Liszt and Rubinstein; and in our own time Paderewski and Kreisler. Ah! I know what you are thinking; but it doesn't matter. It makes no difference whether these are first or fourth rate composers. What matters is, they had the creative mind and so were able to communicate with other minds of the same order."—Rachmaninoff.

Chicago Conservatory

Edgar Nelson, President — Edgar Brazelton, Dean
Glen Dillard Gunn, Artistic Director
O. E. Robinson, Public School Music — Loro Gooch, Manager

Chicago Conservatory was established in 1857. Among the distinguished faculty of 165 teachers are many who have received national acclaim • Thorough instruction in all branches of music and dramatic art. Piano, Voice, Violin, Cello, Organ, Public School Music, Dramatic Art, Special courses in Harmony, Counterpoint, Composition, Orchestration, Ear Training, and Normal Methods. Bachelor and Master of Music and Dramatic Art degrees. *Students may enroll at any time.*

Voice Questions Answered

By FREDERICK W. WODELL

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Young Soprano's Preparation.

Q.—I am a girl sixteen years of age. Have had eleven years of piano study; three certificates of proficiency; possess a knowledge of French, German and Italian; dramatic ability; have had three years of training in painting; have made several radio and stage appearances; am ambitious and willing to work. My voice range is two octaves, from Middle C upward; high notes good, and clear; now working on the low notes. Am planning, after my graduation next year, to study under a vocal teacher who could and would help me to get ahead in the musical world. Am able to play my own accompaniments.

1. Would it be advisable to concentrate on vocal study and discontinue piano, or study both?

2. Do you think that I could do concert work successfully?—M. G.

A.—1. After graduation concentrate upon vocal study.

2. Your preparation, other than vocal, for concert singing, has been very favorable. Much of course depends upon your gift of voice, its correct development and skillful use. As you have been studying singing for but one year and a half, there undoubtedly is yet much to be done by and for you vocally. See THE ETUDE for announcements of Western teachers of standing

Thanks for your kind words regarding help derived from this Department.

Too Much Method.

Q.—I have been a voice student for many years. My first teacher taught me a too high breathing method. After studying and singing for a number of years I changed teachers and the new one taught an entirely different method, which I now think was a too deep breathing method. After studying and singing some years in this way I found myself trying to employ both methods at the same time, and that I would have my mind on breathing so much that I was unable to sing a song which I thought was passable. A few years later through reading some hints on breathing, and experimenting alone, I fell on the diaphragm breathing which I feel is correct, that is, it is neither breathing with your chest nor with your stomach, but in between, and even swelling away around in the back when you inhale. This way seems to be so comfortable when I inhale, instead of a hurt and uncomfortable feeling when I would push my stomach out when I inhaled, as my last teacher taught. If I am not correct in this last method, please correct me, and also tell me the best and quickest way to get rid of the bad methods used so long. I have been a subscriber to THE ETUDE *for only three months, and it pains me to think of the many things I have missed all these years.*—R. A. B.

A.—Stand with your weight balanced on the ball of either foot, with heels near together, with chest well up without strain. Send out, silently, a tiny puff of breath, sinking a trifle at the pit of the stomach, and allow the air to return, silently, into the lungs automatically, whereon the pit of the stomach, just beneath the end of the breastbone, returns to its normal position. Repeat this operation rather rapidly a dozen times. This is the diaphragm at work. Now will that you shall feel the "throbbing" not only at the pit of the stomach but also up under the shoulder blades until you have a rather full, comfortable breath, when you will also find the very lowest part of the abdomen slightly drawn in and an easy expansion at the waist, front, sides and back. This is the combined diaphragmatic and rib breathing for singing. On exhaling keep the chest well up, but without strain, noticing that the lower abdomen, sides and back move slowly inward, the points under the breastbone and shoulder blades coming in last. See a small book, "Gymnastics of the Voice," by Oskar Guttmann, second edition, in English, Part IV, pages 152-55; also, "Art of Singing," by William Shakespeare, last edition, pages 14-17.

We are not acquainted with the special method of voice training which you mention.

For the benefit of others beside yourself, we note that it is only too easy to have the mind so occupied with the "way in which the wheels go round," that good singing is impossible. Keep the body in a good standing position, the mind willing a tone of truly musical quality, and try letting nature do something for you in the act of singing.

The High School Sopano.

Q.—1. I am a soprano, sixteen years of age, junior in high school. Have been told my voice is above the average. Sing high A without strain; have sung in school choruses for four years, and done solo work in cantatas, also solo work in a church choir. The leader tells me that with training I would have a great future. I wish to become an opera and concert singer. Have had one year of piano and can read notes. Though my parents wish me to become a singer, they are not very rich and cannot afford to give me lessons. Would you suggest I try to obtain lessons now (work, if I am compelled to), or wait until I am of college age and then go to some free musical conservatory?

2. Should I renew my study of piano? I would like also to become an organist.

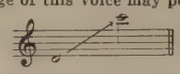
3. My teacher and director of the choir being the same person, would it be advisable for me to withdraw from the choir on beginning lessons. I have a strong voice and she depends upon me, as the choir is small.
—J. J. C

A—1. We think you would do well to c
plete your high school course. Possibly
might find a choir in which you could ob
something for your services each Sunday.

2. It is of great advantage to a singe
be able to play her own accompanime
therefore resume the study of piano as
as you can do so. But remember that p
and organ playing come second, if one is
pecting to make a success as a public sin

3. It depends upon the present condi
of your voice. A conscientious teacher
choir director, who knows her business,
advise you as to this point.

Lyric—Coloratura



*Q.—I am a soprano; have studied
month. My teacher thinks I could be a
fessional singer if my rhythm was gre
improved.*

*1. Could you tell me how to develop
rhythm.*

*2. What is the range of a coloratura
prano; of a lyric soprano?*—H. M.

A.—1. Confer with the Supervisor of M
in your city schools as to finding a good pri
teacher of singing by note, and study the
ject seriously and for a considerable pe
with such an instructor. Learn to sing to
beating, which is not the same thing as bea
to your singing.

2. The coloratura soprano is the ligh
highest, and most agile of women's voices.
average range of this voice may perhaps be

Ave Maria ("Otello"), by Verdi.

2. For this pupil you might try,
The Fairy Pipers, by A. H. Brewer.
If I Were Your Sweetheart, by Frederick
Wodell.
Hark! Hark! the Lark! by Schubert.
Sing, Smile, Slumber, by Gounod.
Pastoral, by Veracini.
Quel Ruscellato, by Paradies.
Musetta's Waltz Song ("La Boheme"),
Puccini.
L'Ete (Summer), by Chaminade.

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

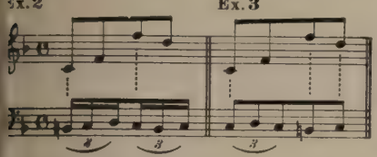
No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

nplifying Trills in Chopin.

). 1. What is the tempo for the Prelude F. Op. 28, No. 23, *by Chopin?*

2. How do you play the trills?—Miss N. M.

A. 1. The tempo of this *Prelude* is about M. ♩=116.



2. Theoretically, the trill is played as writ- below (Ex. 1). According to the metro-

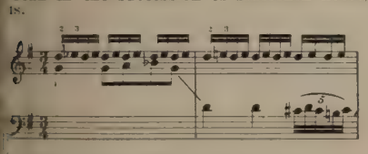
Ex.1

ne mark this would be four thirty-second es to the quarter notes. This might be too for you. If it is, you may play it as in 2 or Ex. 3.

Ex.2

Ex.3

aying Octaves.

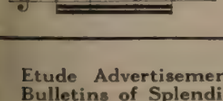


). I find it difficult to play but a short while octaves without tiring. Please tell me how make such playing less strenuous.—Miss G.

A. This is probably because your hands too small'; or else you are playing your aves from the wrist instead of using the ole forearm, letting the action be at the ow. All small hands should play octaves m the elbow. This type of octave needs high set wrist joint instead of a loose as in octaves played from the wrist. nd stretching exercises will help you. Do be afraid of house-cleaning; especially shing windows. There is nothing better for engthening these weak muscles than nting woodwork.

Paderewski Trill.

). In measures 72 and 73 of Paderewski's inuet," how do you make the change from lat to E-natural in the trill?—T. H.



A. When playing this trill, the change m minor to major should be made without break in the succession of sixteenth notes, as.

o Notes But Only One Stem.

). Please tell me the correct way to play two sixteenth notes that are joined on stem in the fifth measure of Callirhoe, de Ballet, No. 4, *by Chaminade. Are the es struck simultaneously, or are they yed in succession?*—Mrs. A. K.

A. The notes are struck simultaneously. fingering as given in the example below l show you how this measure is played.

Common Time.

Q. 1. I have never been satisfied with the information which I have received in regard to the rhythm signature, C. What is the difference between this sign and four-four?

2. Just how is the mordent executed in the Trio *of Schubert's* Minuet in B minor?—E. H.

A. 1. There is no difference. At one time the perfect circle stood for triple measure and the broken circle for double. The sign C is a modified form of the broken circle which now means the same as four-four. But if it has a stroke through it, thus ¢, it stands for $\frac{2}{2}$.

2. Play the mordent very lightly, ahead of the beat, with a good accent on the melody tone D-sharp, thus.

Liszt's Second Rhapsody.

Q. 1. In Liszt's "Second Hungarian Rhapsody" *(measures 35 to 40), should there be an eighth rest following the first eighth note in the bass?*

2. I have been playing the three grace notes as an eighth rest. What is the correct way to play it with reference to time?

3. Do you know any book or literature available which contains a "Master Lesson" on this Rhapsody?—J. P. P.

A. 1. Yes, there should be an eighth rest following the first eighth note in the bass.

2. In all of the editions of this Rhapsody that I have seen these three grace notes are placed directly beneath the sixteenth note; no doubt, Liszt played them thus. Of course if you take too fast a *tempo* you cannot play them this way.

3. No.

Tempo of Debussy's First Arabesque.

Q. 1. Would you please inform me about the tempo *throughout the whole of the* First Arabesque *by Debussy?*—Miss M. C.

A. 1. The general movement from beginning to the end is about M.♩=138. Of course there are many little retards and *accelerandos*, but these are all very carefully marked by Debussy. The heartbeat, so to speak, is ♩=138.

Mozart Duets.

Q. 1. What is the correct speed for—(a) Gipsy Rondo *by Haydn; (b)* Gavotte *by Gluck-Brahms?*

2. In Chopin's Nocturne, Op. 37, No. 2 *(G major), should the grace notes, which are found in measures 7 and 8, and elsewhere, be played before, or on the beat?*

3. Are any duets that were played by Mozart and his sister still published, and are they suitable for children? If not, are there any easy arrangements of Mozart's own compositions?—Mrs. H. C.

A. 1. (a) ♩=138; (b) Not too fast, about ♩=108.

2. The rule is to play such grace notes on the beat; however, artists pay little attention to this rule. It seems, at least to me, that the grace notes here sound better played before the beat.

3. Several of the sonatas written as duets by Mozart are still listed in the Peters Edition. An easy number would be *Minuet* from *"Symphony in E-flat,"* arranged by Schulhoff. If you have two pianos, a most excellent number would be Grieg's arrangement of Mozart's easy "Sonata in C major"; also, his arrangement of the "Fantasie and Sonata in C minor."

4. I cannot answer your last question because you do not state the publisher of the work mentioned.

Lent, Holy Week and Easter Music

Just a reminder to choirmasters and those in charge of selecting music for the church! Ash Wednesday, this year, falls on March 2 and it is not too early now to begin looking over material for your Lenten, Holy Week and Easter programs. Easter Sunday, April 17, will be here all too soon for those who fail to start rehearsing in ample time.

For many years the liberal examination privileges of the "On Sale" plan, created by the Theodore Presser Co., have been of much help to choirmasters. Single copies of any publication—cantata, anthem or solos for voice or organ—may be had "on approval" with full return privileges. The numbers to be looked over may be chosen from helpful literature, such as the *Easter Folder P-1*, a copy of which may be had free of charge. Or, experienced music clerks, some of them holding permanent positions as organists, choirmasters and soloists, will make up a selection for you.

Here are a few suggestions in Lenten and Holy Week cantatas:

Christ's Words from the Cross (Forman) 40c
Penitence, Pardon and Peace (Maunder) 75c
The Message from the Cross (Macfarlane) 75c
The Wondrous Cross (Bergé) 60c
The Seven Last Words (Dubois) $1.00
Calvary (Sheppard) 60c
Stabat Mater (Rossini) 75c
Last Words of Christ (Spross) 75c
The Crucifixion (Stainer) 75c

We suggest just a few Easter cantatas:

Victory Divine (Marks) 75c
Everlasting Life (Forman) 60c
Rabboni (Loveland) 75c
From Death Unto Life (Stults) 60c
The Risen King (Wooler) 60c
The Dawn of the Kingdom (Wolcott) 60c
The Glory of the Resurrection (Spross) 75c
He Lives, the King of Kings (Risher) 60c
The Rainbow of Promise (Baines) 60c

Why not ask now for copies of any of these with which you are not familiar? Theodore Presser Co. gladly will send them for examination.

The Spring Programs

As preparations for the opening of this season's final semester get under way, music educators everywhere will be giving thought to the selection of numbers for Spring concerts and for the graduation or commencement program. Teachers of piano, voice, violin and other instruments, too, will wish to assign numbers that are to be memorized in time for the annual recital.

To assist active music workers in choosing appropriate material for these public presentations of pupil talent, Theodore Presser Co. issues catalogs and descriptive literature and offers the facilities of the liberal examination privileges of the "On Sale" plan.

Folders and booklets listing and describing chorus publications (cantatas, operettas, etc.), orchestra and band numbers, may be had FREE for the asking. Thematic catalogs of piano solos in all grades and the convenient *Handbook of Piano Ensemble Music* will greatly aid piano teachers. Similar booklets and literature may be obtained by teachers of the violin and other instruments; also by teachers of the vocal art. And the *Music Teacher's Handbook* lists, with numerous illustrations, suitable awards for music students—medals, certificate and diploma forms, musical art goods.

Write today for literature covering your needs and allow ample time for the students to practice sufficiently for their Spring programs.

A Half-Decade of an Interesting Exhibit

The appearance of *The Etude Historical Musical Portrait Series* in this issue marks the completion of the fifth year in which this feature has been presented. Begun in the February, 1932 issue of THE ETUDE MUSIC MAGAZINE this page each month has given 44 portraits and miniature biographies of all individuals, past and present, who have made a notable contribution to music—composers, performers, teachers and patrons of the art. Published in alphabetical order the series now has reached those whose family name begins with the letter S and, therefore, still has a couple of years to run.

Readers have manifested considerable interest in the series and not a few are making individual scrap-books in order to preserve all issues as a ready-reference library. As a result, shortly after the series first appeared, a demand arose for additional copies, or reprints, of this page because many subscribers do not wish to mutilate their copies of THE ETUDE.

Printings of separate copies of this series are made as each appears in the magazine and these copies are available at the nominal charge of 5 cents each, special price on quantities.

Beware of Fraud Magazine Agents

So many complaints are received each month where music lovers have paid out cash to strangers and have received no copies that we again wish to warn ETUDE readers to exercise greater care in verifying the responsibility of any one representing himself as an agent, before paying out money. Look out for unadvertised bargain offers.

There are several swindlers working through the provinces in Canada who sell THE ETUDE for any price they can get and then pocket the money. These men carry fake receipts, presumably issued by reliable publishers and magazine agencies.

If in doubt as to the responsibility of the solicitor, take his name and address, send to us the subscription price and we will give him credit. If he is an accredited representative, or a responsible magazine salesman he will be glad to co-operate in this manner. Help us to protect you.

Your LUCKY Day

Millions of people, who would be highly insulted if you called them superstitious, continually refer to charms, horoscopes, "Lucky Days" and other devices. However, there is something to the thought that if you are convinced that such and such a day is your "lucky day," you may work harder and more confidently so that it may indeed become your "lucky day."

Everyone, however, should wake every morning of the year, to scan the horizon of life for new and finer opportunities. Somehow the "lucky" teachers we know, have always done this. To them the advertising columns of such a magazine as THE ETUDE are just as interesting as the reading columns, because they are brimful of opportunities for purchases which lead to self-advancement in many ways.

THE ETUDE and its publishers, and a large and eager staff of experts and earnest workers, always waiting for an opportunity to serve you, find a real joy in wishing all of our readers for 1938,

A Whole Year of LUCKY DAYS!

The Cover for This Month

Doubtless the New Year ever will be associated with resolves to turn over new leaves, to make better uses of opportunities and, in general, to play our part in life better than ever before.

When THE ETUDE staff came across the picture taken by the H. Armstrong Roberts Studio of Philadel showing a charming baby with its hand the positions often used by some of foremost conductors when before their chestras, there was the immediate tho of its suitability for a New Year idea on January 1938 cover. All of us, as pla participants in the symphony of life, put everything into the part that is expe of us, and must play that part with pr consideration for all of the other parts order to make the perfect ensemble.

So we called upon Miss Verna Ev Shaffer, whose art work already is fam to readers of THE ETUDE, to add the ne details of a music stand in order to p reminder of this thought in our New Y cover. Special art work also was necessar give us the new dawn suggestion in the and, to provide our horizon and foregr upon which to superimpose the cun youngster representing the New Year, t has been utilized a beautiful photogra shot of the ocean.

With its unceasing roll of waves at shore line, it speaks to us of the never-hal onrush of time, and its far-reaching hor beyond which the ships disappear suggests great goals toward which we should point lives. It would take a genius and a poe do justice to this New Year trend of thou in an adequate manner without mixing m phors, so we leave the cover to you in hope that you will enjoy the developmen thoughts which it in itself provokes in y own mind.

One String Solos

For Violin Beginners
***By* Kate La Rue Harper**

In view of the many fascinating "w play" books to make easy and pleasant first efforts of the piano student, it is sur ing that so few books of a similar style been prepared for the little violinist. Att tive melodies in the easiest grade, cou with story-texts and charming illustrati prove a strong influence in stimulatin child's ambition to become a good perfor Such a book is *One String Solos* for v beginners by Kate La Rue Harper.

This work may be used as supplemen material with any elementary method of lin study. As the title indicates, each piece is confined to the tones of one st Only three fingers and the open strings used, as the small player finds difficult placing the fourth finger correctly in the ginning. While various keys are introd throughout the book, there are no accide in the violin part. The A and D strings given first because they have the same tern of fingering; then follow the E an strings. The texts not only create interest assist in establishing the correct rhythm

Two separate books are provided, the lin part for the student and the piano for the teacher, or accompanist. These b will be published in the oblong size so venient for youngsters. *One String Solos* prove especially useful for classes, and violin part may be ordered separately if sired. The special advance of publication price for both books is 35 cents; violin alone 15 cents, piano part 20 cents postp Be sure to specify which books are des

Child's Own Book of Great Musicians

Brahms-Tschaikowsky-MacDowell

***By* Thomas Tapper**

Orders continue to pour in for copies of these three booklets, soon to be added to the *Child's Own Book of Great Musicians* series. Teachers of young students, and mothers desirous of extending every cultural advantage to their children, appreciate the economy of being able to obtain the Brahms, Tschaikowsky and MacDowell books at the special advance of publication cash price 10 cents each (or 25 cents for the three books), as the other thirteen books in the series, previously published and now on the market, are priced at 20 cents each.

For years progressive teachers have realized the inspirational stimulus given young pupils, both in class or private teaching, by the early introduction of the study of the history of music. These little biographical booklets tell children something about those who made the music they play, usually interesting anecdotes of their childhood. The jacket of pictures that accompanies each copy provides fascinating pastime for hours and the pasting of these pictures in their proper places in the booklets serves to familiarize the youngster more readily and distingly with the biographical data given. Of course the art cover, and the needle and cord supplied with each copy for binding the book, are further aids in maintaining interest by the "work and play" method.

The Publishers consider themselves fortunate, indeed, to be able to secure these three new books for the *Child's Own Book* series as the works of Brahms, Tschaikowsky and MacDowell are becoming much better known in recent years, largely through radio broadcasts of programs by our leading symphony orchestras. Teachers who encourage work of this kind on the part of their pupils find it mutually advantageous.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

***By* Ella Ketterer**

This forthcoming publication, presenting 28 miniature etudes created by Miss Ella Ketterer, gives promise of becoming a very popular adoption for use with piano pupils in the third grade of study. Miss Ketterer's creative ability has been well demonstrated in her many successful piano compositions, and her gifts in presenting practical piano study aids have been made evident through her successful books covering the first two years of study—*Adventures in Music Land* ($1.00) and *Adventures in Piano Technic* (75c), so all but remains for the many users of these works to become acquainted with these *28 Miniature Etudes* to bring them into widespread use. The studies have been confined wisely to a one-page limit, concentrating within that page an advantageous technical point which the pupil finds it easy to perfect because it is met in a tuneful etude with all the qualities of a delightful short piece, including the attractive title it bears. These 28 pages mean much in the progress of the third grade piano pupil.

The book may be secured at the advance of publication cash price of 30 cents, postpaid, if an order is filed now together with remittance, and with the understanding that a complete regular copy of this work will be delivered without further charge immediately upon its publication.

Little Pieces from the Classic Masters

For Violin and Piano
Compiled and Arranged by
Leopold J. Beer

This book will be heartily welcomed by the foresighted teacher of beginners who seeks to retain pupils until they really have accomplished something, and who realizes that the most effective means of accomplishing this is to build pupil-interest in music on a substantial foundation. The students of no instrument have need for the development of music appreciation as have young violinists with an eye to playing eventually in an orchestra, or those who aspire to a career as a virtuoso.

Many editions of well-known classics, composed or arranged for violin and piano, have been published. Some of these are so familiar that they defeat their purpose, as they fail to arouse any enthusiasm. Here is a book of little known classics that may be presented to pupils as a genuine novelty. Henry Purcell (1658-1695), Francois Couperin (1668-1733), Jean Philippe Rameau (1683-1764), Johann Sebastian Bach (1685-1750), George Frederic Handel (1685-1759), Christoph W. R. von Gluck (1714-1787), Johann Kuhnau (1667-1722) and Louis Couperin (1630-1665) are the composers represented.

All of these numbers are within the playing ability of advanced first position students but there are special fingerings given for third position playing, if desired. The scholarly arrangements are the work of the noted Viennese teacher and composer, Leopold J. Beer.

Single copies of this book may be ordered in advance of publication at the special cash price, 35 cents, postpaid.

Musical Visits with the Masters

Easy Piano Solos Arranged from the Classics

Every experienced teacher knows that a taste for good music best can be cultivated in young piano pupils by having them play, as early as possible, compositions of the masters. Accordingly, many simplified classic collections have been made and published, and some of these are "stand-bys" in hundreds of studios.

Teachers occasionally complain, however, that not a few pupils rebel at playing these pieces. Influenced by modern "popular music" standards, the pupils protest that classics are "too dull."

"Possibly a more attractive style of presentation will create interest," was a suggestion made. The Publisher's answer is this book, made by experienced members of the editorial staff. The book departs from the usual type of piano album by a most fascinating presentation of each and every number accompanied by biographical notes on the composer and a space where the composer's picture is to be pasted. A page containing pictures of all the composers represented is included in the book.

Examination of this list of contents will show that numbers most representative of the composer's style have been chosen: *Angelic Dream* from Kamennoi-Ostrow (Rubinstein), *Ballet Music* from Alceste (Gluck), *Castanet Dance* from Carmen (Bizet), *Chanson Triste* (Tschaikowsky), *Chasing Butterflies* from Etude in G-flat (Chopin), *Gavotte* from French Suite V (Bach), *Gavotte in B-flat* (Handel), *Hungarian Dance* from Rhapsodie No. 2 (Liszt), *Intermezzo* from Rosamond (Schubert), *Minuetto* from Rigoletto (Verdi), *On Tiptoe* from Sonata in G-major (Beethoven), *Reverie* from Children's Pieces (Mendelssohn), *Romance* (Schumann), *Sabbath Morn* from Quartet in F-major (Haydn), *Sleepy Time* from Piano Concerto in E-flat major (Mozart) and *Waltz* (Brahms).

In advance of publication orders for this book may be placed at the special cash price, 20 cents, postpaid.

Play with Pleasure

An Album for the Grown-Up Piano Student

There are many contributing causes to the revival of interest in music study—the teaching of music and music appreciation in our schools, the broadcasting of high-class programs over the radio, the introduction of the very best music in motion picture productions. The result has been that many a young man and young lady who passed up opportunities of securing a music education in school days, now is enthusiastically taking up the study of an instrument.

The piano, offering most satisfactorily a means for the sought-after self-expression in music finds itself the object of thousands of new devotees. New styles in apartment-size instruments and miniature grands have appeared and an entirely new system of piano instruction has been devised by clever teachers.

Books like *Grown-Up Beginner's Book* (Felton) ($1.00) and *Progressing Piano Studies for the Grown-Up Student* (Felton) ($1.00) have helped thousands of adult students, as well as pupils of high school age, in their first year or two at the instrument. *A Book of Piano Pieces for Adult Beginners* (75c) and *A Book of Piano Duets for Adult Beginners* ($1.00) have supplied recreation material for these students.

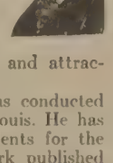
Now we will issue this book of attractive pieces for grown-ups who have passed the beginner's stage. There will be simplified arrangements of compositions from the classic, romantic and modern schools, transcriptions of songs and of arias from grand opera and light opera; also excerpts from symphonic works. The editing, fingering and pedaling will be most carefully done.

A single copy of this book may be ordered at the special advance of publication cash price, 40 cents, postpaid. Available only in the U.S.A. and its Possessions.

Master Pieces with Master Lessons

For Piano

The study of music abroad always has been the goal of ambitious students. The main reason is the belief that only abroad, in the atmosphere in which most of the classics were created, will be found the environment and master teachers necessary for the proper development of musical interpretation.



While there is much truth in this reasoning, there also is the fact that much of the great expense of such study could be saved by the simple process of having scholarly teaching brought right into the home. This is exactly the result that can be obtained by investing in a copy of *Master Pieces with Master Lessons* and absorbing the valuable instruction accompanying the different selections.

In this book will be found full directions pertaining to the mastering of difficult passages and all problems of interpretation. These instructions have been prepared by such master teachers as Moriz Rosenthal, Sigismund Stojowski, Katherine Goodson, John Orth, Walter Spry, and others, and cover important works of such composers as Bach, Mozart, Chopin, Liszt, Handel, Schubert, Schumann, Brahms and Mendelssohn. Because the printed word is always more enduring than the spoken, it will be apparent at once what a valuable collection this is, as it brings into your home the very best instruction and piano literature, and at a trifling expense.

In advance of publication copies of this book may be ordered at the special cash price, 50 cents, postpaid.

Ten Studies in Style

For the Piano
***By* Carl Wilhelm Kern**

In the curriculum of every teacher there should be included a variety of supplementary study material, ready for immediate use with pupils when needed. Much has been published for this purpose, but not all of it contains the two specifications by which such works should be judged—practicability and attractiveness.

Mr. Kern, for many years, has conducted his own school of music in St. Louis. He has prepared successfully many students for the teaching profession and any work published under his name certainly should be practical. In the catalogs of most of the leading publishers there are highly successful piano compositions by this prolific composer, some having most impressive sales records. Surely, a book of studies from his pen should not be lacking in attractiveness.

This new set of *Ten Studies in Style* is designed to aid pupils in problems met in the second grade—crossing hands, contrasting dynamics, scale passages, phrasing and various rhythms. To enhance their value each has been given an imaginative title like *Banjo Joe, At a Military Post, Rustic Dance, At Midnight* and *At the Airport.*

Soon to be published in the *Music Mastery Series,* copies of which are uniformly priced at 60 cents, a single copy of this book may be ordered now at the special advance of publication cash price, 20 cents postpaid. Copies will be delivered when the book is published.

Grown-Up Beginner's Violin Book

***By* Maurits Kesnar**

While titled for "grown-up" beginners on the violin, and especially suitable for use with groups of beginners in community orchestra undertakings, the directors of high school orchestras needing additional violin material also will find this work invaluable. For individual instruction the second violin part for the teacher will enrich the harmony and increase the pupil's interest. In group teaching this part may be played by more advanced students.

The Key of C approach is used in order to acquaint the student with the finger patterns of each string. Illustrations and charts simplify problems of holding the violin and bow and the placing of the fingers on each string.

Plenty of exercise material is given, but the feature that will appeal to most students is the fine collection of easy tunes included in the book. There are simplified arrangements of copyrighted pieces that never have hitherto appeared in any compilation; also violin with piano accompaniment arrangements of dances and classics from the masters and of familiar as well as little-known folk songs.

In advance of publication a "get-acquainted" offer of 40 cents a copy is being made. This means cash with order, delivery to be made when the book is published. This book will be available only in the U.S.A. and its Possessions.

A Child's Journey

Rote Songs for Primary School Activities
***By* Ada Richter**

All children respond to the fascination of relating to others, either some happening they have witnessed, or some story that interests them. And when the narrative, or the story, can be told through the medium of song, with its flow of regular rhymes, the fascination increases. During the past twenty years or more there has been an increasing demand for collections of this kind, and all meritorious output has sold well; so well that the supply has fallen far below the demand.

We are glad to announce the near publication of *A Child's Journey,* a new book combining all the good features of the best publications of this kind. The composer, Ada Richter, whose *My First Song Book* (75c) and *Kindergarten Class Book* ($1.00) already have large and increasing sales, is particularly well qualified for such work, being herself an experienced teacher of children. The book contains sixteen short, simple songs. The subjects of the different selections all deal with scenes and incidents that might happen on a child's holiday, thus being of a kind that is interesting and familiar to young minds. In addition, the melodies are all so rhythmic that they can be sung without accompaniment should there be no piano available.

Here are a few of the interesting titles: *The Barber Shop, On a Double Decker, Mr. Policeman, Mrs. Kangaroo, The Camel, The Cow, Two Frogs, Lazy, Sleepy Crocodile, The Bee, Mr. Turkey Runs Away, Hallowe'en,* and *My Christmas List.*

Copies of this book may be ordered now, with delivery to be made when published, at the special advance cash price, 35 cents, postpaid.

When you Change your Address

Magazines are mailed under special regulations by the United States Post Office and where a copy is undeliverable at the address given, it is not forwarded but destroyed if not called for.

To prevent the possibility of any copies going astray when changing your address, be sure to advise us at least four weeks in advance, giving us both old and new addresses. This will enable us to correct our records and insure the delivery of every copy to you.

(*Continued on Page* 60)

Fourth Year at the Piano

By **John M. Williams**

The special offer on this work will be continued during the month of January. Orders may be placed now for copies, to be delivered when the book is published, at 50 cents, postpaid.

Advance of Publication Offers Withdrawn

With the advent of the New Year, and the approaching opening of the final semester, our Publication Department completes three works which, this month, are placed upon the market. Copies will now be available from your local music dealer, or at the Publishers. Of course, the special advance of publication price offer is hereby withdrawn. Copies may be had for examination. Be sure to look over these interesting publications.

Golden Key Orchestra Series, Compiled and Arranged by Bruno Reibold, Edited and Annotated by Peter W. Dykema, is a collection of some of the world's best orchestra music brought within the playing ability of the well-trained high school orchestra. Yet, the intentions of the original score have been retained to such an extent that even with orchestras of less than the customary number of parts a satisfactory rendition is possible. There are 24 books for the instruments, each containing the 12 masterpieces in this series. Price, 50 cents each. The Piano Accompaniment book includes a well-cued Conductor's Score. Price, $1.00.

The Art of Interweaving Melodies, by Preston Ware Orem, Mus. Doc., is a first book on counterpoint for students of all ages. Students hoping to become composers have little chance for success unless they acquire a thorough knowledge of counterpoint. In this up-to-date work the author follows the same fascinating, colloquial style of presentation that has contributed so greatly to the success of his *Harmony Book for Beginners* and *Theory and Composition of Music.* Price, $1.25.

Albums of Songs, by Charles Gilbert Spross, Mus. Doc., are two volumes, one for high voice and one for low voice, containing a selected group of outstanding solos by this favorite American composer. Some of the numbers appear in both volumes, but the high voice volume, in the main, contains songs that have proved especially effective when sung by sopranos and tenors, while the low voice book contains those virile songs of this composer that are so highly favored among baritones and basses. Price, $1.00 each.

The Grate Problem

Perhaps to get homophonous, we may be pardoned for saying that the lessening of the "grate" problem has become a "great" problem with the anthracite industry. Thousands rattle their heater grates out of sockets, or snap pieces off their grates because they have shoveled into their fire boxes other things besides pure coal. At the mine breakers there is a separating of culm shale rock and slate from the coal, but at that it is practically impossible to get delivered into one's coal bin pure coal. It takes the fire test to show up the lumps which will not burn to a pure ash but which form hard clinkers which will not pass smoothly through the grates.

In the music world there is the fire test of actual, successful use of publications, and those which smoothly serve their purpose, whether it be for the music student, concert artist, the school chorus, experienced choral society, the volunteer choir, or the professionally trained choir group, are the publications which gain a steady sale and regularly require reprints to replenish stocks.

An opportunity to get acquainted with publications having such records is afforded in reviewing regularly the publisher's printing orders. Selected from the printing orders of the past month are the following items. Theodore Presser Co. gladly will grant examination opportunities, with return privileges, on single copies of any of these numbers.

SHEET MUSIC—PIPE ORGAN

26370	Adoration — *Borowski-Stoughton* (*Organ and Piano*)	$0.90
26073	Legend—*Nordman*	.40
26159	Idyll—*Duddy*	.40

A FAVORITE COMPOSER . . .

Each month we propose in the Publisher's Monthly Letter to give mention of a composer who, by reason of the marked favor in which music buyers of today hold his compositions, is entitled to designation as a favorite composer of piano music.

LEON RINGUET

Leon Ringuet was born in Louiseville, Maskinongé County, Province of Quebec, on January 3, 1858. His fame rests on his successful piano compositions of a standard character and his musical activities in Canada, particularly as a band conductor.

He was 13 when he began taking piano lessons under a Mr. Letondal in Montreal. His musical education, along with his general education, was continued at St. Joseph's University at Memremcook, New Brunswick. He graduated from that university in 1878. While he was in Montreal, he also studied pipe organ under R. O. Pelletier.

From his student days he went almost immediately to a teaching position at the College of St. Cesaire, Rouville County, Quebec. In 1881 he left this position, going to St. Hyacinthe to become the director of the Philharmonique Band, a band with which he had been associated for about a year previous through weekly trips to St. Hyacinthe for the purpose of teaching the players.

In St. Hyacinthe, Mr. Ringuet took on a great number of musical activities which he carried through successfully. He directed the St. Hyacinthe Regiment Band for more than 40 years, he became organist of the Cathedral in St. Hyacinthe in 1888, founded the Cathedral Choir in 1912, and organized the Drummondville Harmony in 1914, successfully continuing his position with each of these groups until his death on September 21, 1932.

Mr. Ringuet frequently officiated as a judge in important band competitions in Canada, and he deserves credit for having made a great contribution to the advancement of music in his native country. An indication of the esteem in which he was held by the Canadian people was the beautiful loving cup, holding within it a sum of $1241.50, which was presented to him on November 27, 1930, by the citizens of St. Hyacinthe and the members of the various musical organizations which he had assisted, in commemoration of the Golden Jubilee of his directorate of the Philharmonique Band.

Music teachers and music pupils throughout the United States and Canada may not have known these things about Mr. Rinquet, but they have known for a number of years that his *Le Carillon, Mill Song, Valse Venetienne,* and other piano compositions have a real melodic appeal. A selected few of his compositions are listed below.

Compositions of Leon Ringuet

PIANO SOLOS

Cat. No.	Title	Grade	Price
23121	A Toi. *To Thee. Grand March*	4	$0.50
6773	Le Carillon. *Polka Brillante*	3	.40

World of Music

(*Continued from Page 2*)

THE JAPANESE GOVERNMENT, i stringent economic measures to finance invasion of China, has ordered the canc tion of all contracts for the appearanc foreign artists during the current sea which included Leopold Stokowski, Schipa, Alfred Cortot, Jacques Thib Pablo Casals and Grace Moore.

THE WOMAN'S SYMPHONY ORCH TRA of Chicago opened its season, November 2nd, with a concert in the A torium Theater, of which Frank St. L was the guest conductor and Bidu Sayao, gifted South American coloratura sopr was soloist.

THE ALEXANDRA PALACE ORG of London, rated as "an unrivalled ins ment for recital purposes," is to have pitch lowered so as to make it available use with orchestra and thus render this g auditorium adaptable for the mamn musical festivals which for the greater of a century have been held in the rece burned Crystal Palace. When renovated enlarged in 1929, as a memorial to Q Alexandra, the organ was placed at high cert pitch for the sake of brilliancy. A f of six thousand dollars is now being ra by public subscription, for the needed alt tions.

MAUDE VALERIE WHITE, comp of many song favorites of the last genera —including *Until* and *The Devout Lo* died in London, on November 2nd, at age of eighty-two.

A VIOLIN CHIN REST, which may fect the tonal problems of violinists, is ported to have been invented by Marjory Fisher, music critic of the *San Franc News.* It consists of an ebony chin which clamps over the tail piece of the v and an adjustable L-shaped bracket which a comfortable velvet shoulder pa slipped. As this pad does not touch the strument, there is a ten to twenty per increase in resonance. The accessory is yet announced as on the market.

COMPETITIONS

THE AMERICAN SOCIETY OF T ANCIENT INSTRUMENTS is offering Prize of Five Hundred Dollars for a com sition to require not less than fifteen min nor more than twenty-five minutes in its formance, and to be suitable for interpr tion by this ensemble. The competition cl August 31, 1938; and full information be had from Mr. Ben Stad, founder and di tor of the organization, 4331 Chestnut St Philadelphia, Pennsylvania.

A PRIZE OF ONE THOUSAND D LARS is offered by the Cincinnati Festival Association, for a composition f children's chorus of six hundred voices which an adult chorus may be added), orchestra, or organ, or both. The work be performed at the May Festival of 19 entries close August 31, 1938; and full formation may be had from the May tival Association, 142 West Fourth St Cincinnati, Ohio.

THE WALTER DAMROSCH FELLO SHIP in the American Academy of R is open for competition. Registration manuscripts must be filed not later February 1, 1938. The competition is to unmarried male citizens of the Un States. Further information may be from Roscoe Guernsey, Executive Secret American Academy in Rome, 101 Park A nue, New York City.

A COMPETITION for a song hono Benjamin Franklin is announced by Franklin Institute of Philadelphia, to be at the dedication of the Franklin Memo The composition will be published, and royalties from sales, broadcasts and rec ings will accrue to the composer. For c plete information address Mr. Henry Be Allen, Secretary of the Franklin Insti Parkway at Twentieth Street, Philadelp

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

GEORGE C. KRICK

R NEW DEPARTMENT of tted Instruments came into E ETUDE last nth on "gum es." We had de no special nouncement it; but, nevertheless, a large nber of our ders have expressed their delight with this innovation. e Department is to be edited by George Krick, for several years the president the American Guild of Guitarists, Banjoists and Mandolinists, and an Honorary Member of the International Mandolin-Guitar Society. His repertoire includes compositions by Bach, Chopin, Mendelssohn, Schubert, and many other masters; and he has appeared as guitar soloist in representative concerts in New York, Boston, Philadelphia, Vienna, Paris, and Munich. Among his pupils have been many now famous concert and radio artists. His library of classical guitar music ranks as one of the most comprehensive in existence, including many rare manuscripts.

If you are pleased with this new department and are interested in its continuance, we would be glad to have you to send us a message to that effect.

* * * * *

The Plectrum Guitar

THE PHENOMENAL GROWTH in public favor of the plectrum guitar during the past few years must be ributed to its introduction into the dance ds. Always on the alert for novel effects, orchestra leaders were not slow in dis- ering that the sonorous tones of this trument would provide a beautiful back- und and add something different to their thmic sections. The manufacturers also ped the cause along, by producing in- uments of superior workmanship and ater carrying power. The plectrum gui- differs from the classic guitar mainly being constructed of carved or arched and back and having two plain wire l four wound wire strings, these being yed with a "plectrum" or "pick."

Most guitarists agree that the classic itar is out of place in a dance orchestra. e mellow tones of gut and silk wound ings, while they are distinctly heard in ncert halls, when the instrument is in hands of an artist, are entirely overdowed by the penetrating tones of the mpet, saxophone and other instruments the modern dance orchestra. Here is ere the plectrum guitar properly belongs, ying rhythmic chords in the higher posi- ns, bass runs and occasional solo pas- es.

A Budding Prima Donna

A SOLO INSTRUMENT it may be said to still in its infancy, although there are ite a number of clever compositions and nscriptions on the market, mostly in a lter vein and of the popular type. hether the tone quality of the wire strings uld have sufficient appeal to hold the at- tion of a sophisticated concert audience an hour or two, remains to be proved some great artist, who has yet to make appearance on the guitaristic horizon. Since radio stations and orchestra leaders e continually on the lookout for talented yers, the plectrum guitarist will find un- ited opportunities for artistic and finan- l gain. The days of the guitarist with a owledge of only the three principal chords the commonly used keys, have passed, d in order to hold down a job with a ominent orchestra he must know his itar as a good pianist knows his piano. e must be able, when called upon, to read sight, transpose from a piano or second olin part, and to play bass runs and treble ale passages and solo parts. He should be roughly familiar with the entire guitar gerboard, and be able to form chords in ery key in all positions. A study of har- ny is also essential, so he may know hat it is all about." Instruction books and other study material for the beginner as well as for the advanced student can be found in the catalog of almost every music publisher. These should be thoroughly mastered under the guidance of a reputable teacher. The advanced student will also find it profitable to get acquainted with the right hand technic of the classic guitar and its music. The literature for this instrument is so extensive, that amongst it many items can be found that will interest and benefit the plectrum guitarist.

The Hawaiian Guitar

THE NATURAL CHARM and beautiful tonal qualities of the Hawaiian guitar have endeared it to a large portion of the American public, so that to-day it has become one of the most popular instruments. Since its introduction into this country by native Hawaiians some twenty years ago, it has undergone many changes and improvements at the hands of American players and manufacturers. The original guitars were mostly constructed of Hawaiian koa wood, strung with six wire strings tuned from the first string to the sixth, E, C-sharp, A, E, A, E. This tuning was adopted as standard, and most of the numerous instruction books, exercises, albums of music of every variety have been published in this form. When shopping for a guitar to-day we have a choice of those made of rosewood or mahogany and spruce top, and some made entirely of aluminum or German silver. Amongst the prominent professional players one uses a guitar with two fingerboards, another an instrument with ten strings, and still another with fifteen strings. The tuning of the strings also varies considerably with many radio and orchestra players. The recent development of the electric guitar is responsible for its introduction into the modern dance orchestra, and its enchanting, powerful new orchestral voice is proving a revelation. This guitar has probably "arrived" and its future looks bright. Plectrum guitarists will have to take up this instrument as a part of their professional equipment in order to double on both instruments. For the young student of the Hawaiian guitar, we suggest the instrument made of selected wood, with six strings in the original A tuning. Having mastered this, he is ready to delve into the other tunings. The strings should be somewhat heavier than those for the regular guitar and the three wound bass strings should be of the polished kind, in order to avoid a grating sound, when using the steel. For the same reason the strings should be kept free of rust.

(*Continued on Page 64*)

WHERE SHALL I GO TO STUDY?

PRIVATE TEACHERS (Western)

VERA BARSTOW

The Editorial Offices of THE ETUDE receive hundreds of requests in the course of a year for names and addresses of established music teachers in the various metropolitan centers. In order to afford teachers the opportunity to make contact with these prospective students, this directory has been established as an inexpensive advertising medium. Detailed information will be supplied on request.

Musicians of January Birth

(*Continued from Page 12*)

14th—Jean De Reszké (1850), Hans Schmitt (1835), Vladimir Stassov (1824)

15th—Jean-Baptiste Faure (1830), Heinrich Vogel (1845)

16th—Johann Joachim Christopher Bode (1730), Ilma di Murska (1836), Nicola Piccinni (1728)

17th—Benjamin Franklin (1706), François-Joseph Gossec (1829), Alexander Taneiev (1850)

18th—Emmanuel Chabrier (1841), R. Huntington Woodman (1861)

19th—George W. Andrews (1861), Tom Karl (1846), August Ferdinand Kretzschmar (1848), Josef Reiter (1862)

20th—Mischa Elman (1892), Josef Hofmann (1876)

21st—Henri Duparc (1848), Manuel del Popolo Vicente Garcia (1775), Albert Lavignac (1846)

22nd—Vincenzo Righini (1756), Karl Stecker (1861), Charles-Arnould Tournemire (1870)

23rd—Antoinette Sterling (1850)

24th—Muzio Clementi (1752), Farinelli (1705), Alexander Iljinsky (1859), William Mason (1829)

25th—Jan Blockx (1851), Antonio Scotti (1866)

26th—Karl Kneisel (1865), Frederick Corder (1852)

27th—Edouard Lalo (1823), Wolfgang Amadeus Mozart (1756)

28th—Louis-Joseph-Ferdinand Herold (1791), Victor E. Nessler (1841)

29th—Daniel-François-Esprit Auber (1782), Sir Frederick Cowen (1852), Frederick Delius (1863)

30th—Walter Damrosch (1862), Charles Martin Loeffler (1861), Johann Joachim Quantz (1697)

31st—Stephen Adams (Michael May brick, real name—1844), James Gibbons Huneker (1860), William Hall Sherwood (1854), Franz Schubert (1797)

ELIZABETH A. GEST

Code of Honor for 1938

By Gertrude Greenhalgh Walker

History tells us that away back in the early ages primitive tribes had *Codes of Honor*. Even the Knights of the Middle Ages respected *Codes of Honor*. These codes have come down through the years to the present days in which we live. Our doctors, nurses, lawyers, and, in fact all business and professional men have certain ethics in their professions or business, which honest men uphold.

The *Code of Honor* for young musicians is:

I shall practice regularly.
I shall practice diligently.
I shall practice with concentration.
I shall practice technical exercises as well as pieces.
I shall play graciously when requested.
I shall play on school, church and public programs when asked.
I shall take lessons regularly.
I shall determine to succeed musically.

Wendell Improves His Playing

By Gladys M. Stein

Wendell's piano teacher gave a discouraged sigh as she watched him calmly pass by several music signs which she had marked with both red and black crayons. She had called his attention so many times to the *staccato* dots in certain measures, the slurs in others; but apparently he never noticed them.

"What does your teacher at school do, Wendell?" she asked, "when you miss a word in the spelling lesson?"

"Oh, she makes me write it over twenty-five times."

"Why not do the same with your music?" suggested Miss Wilson. "I'm sure you realize that it's just as wrong to neglect the signs in music as it is to omit certain letters in spelling words. So, suppose I give you some staff paper," she continued, "and you see if you cannot copy each of those troublesome measures ten times without missing a single music sign!"

Wendell was not very enthusiastic about the plan, but he promised to try it out during the coming week.

At the next lesson, after he had finished, his teacher exclaimed, "Oh, it did work! You observed all the signs and your playing sounded SO much better!"

"I could not help seeing the signs after copying them ten times," Wendell confessed; "and it must have made me more careful, too, because even dad remarked that my playing sounded more musical this past week."

A MESSAGE IN MUSIC

By MARY CLEMENS FURZE

It was Uncle Roy's first evening at home from a year's absence in old Mexico where he had been working as a mining engineer. As a reward for the many stories he had told Peggy Ann of his adventures, he asked her to play the piano for him.

Delighted to do something for her favorite uncle, Peggy Ann played all the pieces she knew the best and in her very best manner. When she was through she turned around on the stool to see what Uncle Roy thought of her performance.

He was smiling proudly. "That was fine, youngster," he said, "now come over and sit on my knee. I want to ask you something."

Eagerly Peggy Ann settled herself on her hero's lap. When she was comfortable he asked such a surprising question. "Tell me, Peg o' My Heart, why do you study music?"

"Why—why," the girl stammered, "because Mother and Daddy want me to, I guess." She had never before given such a thing a thought.

"Is that the only reason?"

"I guess so."

"So I thought when I heard you play."

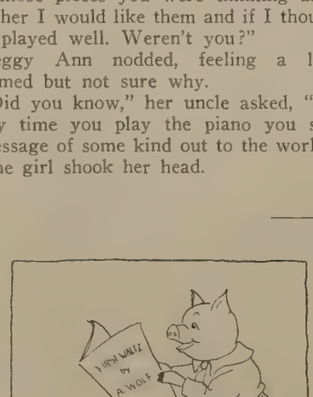
"What do you mean?" asked Peggy Ann, wondering if somehow she had displeased her hero.

"I will wager that when you were playing those pieces you were thinking about whether I would like them and if I thought you played well. Weren't you?"

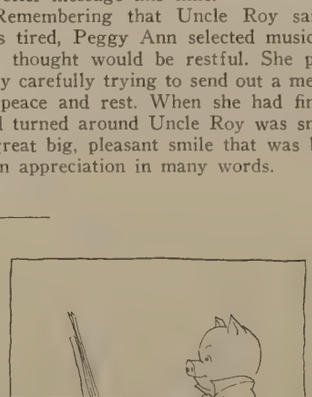
Peggy Ann nodded, feeling a little ashamed but not sure why.

"Did you know," her uncle asked, "that every time you play the piano you send a message of some kind out to the world?"

The girl shook her head.



"Well, you do. And the kind of message you send depends upon what you are thinking about while you are playing. What goes on in your mind finds its way into your arms, your hands, your music, then through the air and into the hearts of everyone who is listening. The message you sent out just now was: 'I want Uncle Roy to like my playing; I want him to see how much progress I have made in the last year.' I am glad you wanted me to like your music but I wanted more than that. I wanted something that would rest me for I am very tired tonight."



"But how can I learn to send the right message through my music?" asked Peggy Ann.

"First, you must study music because you love it, not just because Mother and Daddy want you to. Then you will try to get from your pieces the beautiful thoughts the composers put into them. Always play as if the composer were standing beside you. He wrote into tones a message that he hoped would be a joy and a comfort to all who heard the music, and it is for you to interpret that message and send it on to your listeners. Do you see, Kitten?" Uncle Roy gave Peggy Ann a tight squeeze.

"Oh, I do," exclaimed the girl, jumping down from his knee. "Now, I am going to play for you again. See if you can get a better message this time."

Remembering that Uncle Roy said he was tired, Peggy Ann selected music that she thought would be restful. She played very carefully trying to send out a message of peace and rest. When she had finished and turned around Uncle Roy was smiling a great big, pleasant smile that was better than appreciation in many words.

Music Vocabulary

By Mary Clarene

On Saturday afternoon, when A Longnote had finished her piano lesson Miss Steber's studio, she was in a v grumpy mood. Her teacher had stop her a great number of times, and war her to watch the various Italian te above the staff which explain the mood *tempo* of the piece. But the words Alice little good, for she had no idea their meaning.

"How am I to know what *allegro* *andante* and *vivace* mean?" she asked mother rather impatiently. "It is h enough learning my Latin vocabulary w out having musical terms on my mind to

Her mother smiled. "I don't believe can know your Latin vocabulary very w Alice," she said, "or you would very s recognize a great many of these ter and their meanings would be quite cl to you without having to look them

Alice picked up her Latin gramm doubtfully.

"What does the Latin verb *vivo* mea asked her mother.

"Why, it means—to live—I believe," the answer. "But what can that have do with music?"

"The word *vivace*, meaning lively, qu full of life, comes from that verb, me ing—to live," said Alice's mother. "Let try a few more. The Latin word, *fo* means brave, strong, and unrelenting. He the musical terms, *forte* and *fortissi* meaning loud and forceful."

"How easy it seems," exclaimed Al "And Latin isn't the only subject which you will find a repetition of y musical terms," encouraged Mrs. Longn "You are now studying in your Eng class at school about John Milton and works. He wrote a famous poem ca 'L'Allegro.' Do you remember?"

"Oh, yes," agreed her daughter. "A our teacher said the person referred to the poem was happy, active, gay and ca free. Why, that will help me to remem the meaning of *allegro* perfectly."

The rest of the afternoon Alice spent going through her music and picking familiar terms and expressions which had already met in her everyday sch work and conversations.

At the next lesson, Miss Steber openly surprised. "Why Alice," she claimed, "you know your terms alm perfectly. How did you do it so quickly

Alice laughed. "By studying my La vocabulary," she said, "and keeping eyes and ears open."

WHY THE WOLF HUFFED AND PUFFED

By N. MARTIN AND I. RIPPLINGER

The Wolf composed a little waltz;
"You Pigs," (his voice was gruff)
"Play this by Monday without faults;
Then I won't huff and puff."

The first Pig said, "Oh, that's a snap,
Like drinking from a cup."
When Monday came—alas, poor chap—
The bad Wolf ate him up.

The next Pig said, "I will not fool
With sharps and flats, or counts";
So Wolfie caught him on the stool
And ate him, every ounce.

"I'll practice hard," said Number Three;
(This Pig was very wise);
He played the waltz so beautifully
The Wolf gave him a prize.

Mary's Stairway Game

By Ada May Piaget

ARY had ten good little fingers, but Oh! ey wanted to go so quickly over the keys; d they stumbled and stumbled, and that not the right way at all, you know. So ary and her teacher invented a game hich cured Mary of her rapid and un- rtain playing. They called it the "Stair- y Game," and this is how they played it.

"Mary," said Miss Miller, "when you m upstairs and stumble because of your eed, do you turn around and begin at e bottom step again?"

"Why no," answered Mary, "that would silly."

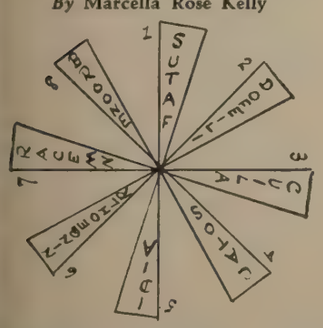
"Of course it would. But you go right up, noticing what it was that made you umble, so that the next time you will be ore careful and not stumble in the same lace."

"Yes," answered Mary, with assurance.

"Well, let your fingers travel over the keys slowly and carefully, so that you will not stumble, and if you do stumble, do not go back to the beginning and start over, but remember the "stair" or the place where you stumbled and see what made you do it. You may find you did not finger it correctly, or that you did not know the notes perfectly."

So from that time Mary always thought of the "Stairway" and cured herself of the habit of playing too rapidly and of the habit of stumbling. She worked over the stumbly parts carefully and patiently until the wrong notes were just right and her playing sounded ever so much better.

See how few times you stumble, and see if you can make them still fewer.



Keys and Notes

By Janet Nichols

o YOU like to write music notes on paper? ts of practice will make it easy. Try it me time. Sit at the keyboard with a ncil and manuscript paper, close your es, strike any key and hold the hand in ace on the key struck, open your eyes, termine the key, and write the note on the anuscript paper. See how fast you can it correctly. Write the notes, and see w many minutes it takes. Then see if u can beat your own record the next y.

Opera Wheel Puzzle

By Marcella Rose Kelly

IE LETTERS in each spoke of the wheel, en correctly arranged, give the name of opera.

??? Who Knows ???

. Chopin was born one year after Mendelssohn. Mendelssohn was born thirty-three years after the signing of the Declaration of Independence. In what year was Chopin born?
. Did Beethoven write the "New World Symphony," the "Surprise Symphony" or the "Choral Symphony?"
. Is Heifetz a conductor, violinist, or singer?
. Is the oboe a brass, wood-wind or string instrument?
. What composer was deaf?
. How many measures are in the tune "America?"
. What instrument did Benjamin Franklin invent, or at least, improve in mechanism?
. What was Wagner's first name?
. What interval is it from E-flat to C-sharp?
. What is meant by *stringendo?*

(*Answers on this page*)

When Music Speaks

By Eugenie F. Gluckert

Oh, when I hear a martial strain
Alive with drum and flute,
I always see parades and bands,
And soldiers at salute.

And for a quick, staccato piece
I picture elves at night,
In prankish play beneath the moon—
It's really quite a sight.

But when I hear loud, crashing chords.
A minor symphony,
I think of cities, noise or storms;
It does strange things to me.

Then little sparkling dainty trills
Remind of babbling brooks,
And dancing fairies in a ring,
Or stars and flowery nooks.

So, music means so much to me,
Since I have heard notes speak.
Now I can know their stories all—
It's really quite a treat.

Answers to Who Knows

1, 1810; 2, The "Choral Symphony"; 3, Violinist; 4, Wood-wind; 5, Beethoven; 6, Fourteen; 7, The Glass Harmonica, in which the tone was produced by pressing the fingers against small revolving glass disks; 8, Richard (pronounced ree-card); 9, Augmented sixth; 10, Somewhat hurried.

My Ambition

(Prize Winner in Class A)

EVERYWHERE you go people ask, what is your ambition? My answer has been the same for quite a while, and I do not think I will ever change it. It is to be a conductor. When I give this answer they say there are not many women conductors in music, and why do I want to be one?

That is one of my reasons—the scarcity of women conductors; and also the fact that I am musical and have very good rhythm. And I like to stand in front of my radio and pretend that I am leading the orchestras and bands that I hear. Of course I will have to know how to play most of the intruments, but I already have a start on six.

I realize I have lots of work ahead of me, but I am willing to work and hope some day to be a concert conductor.

LOUISE COBB (Age 15), Massachusetts.

My Ambition

(Prize Winner in Class C)

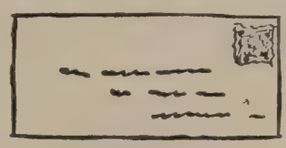
WHEN I GROW UP I would like to be a singer like my mother and many other people. Another thing I'd like to do is to teach dancing. I have danced ever since I was four years old and I am eight now. There are many other things I would like to do also, but we cannot do too many things at once and do them well.

MIRIAM WESTERVELT (Age 8), Iowa.

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether a subscriber or not and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.



Subject for story or essay this month, "Does Practice make Perfect?" Must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by January eighteenth. Names of prize winners and their contributions will appear in the April issue. The thirty next best contributors will receive honorable mention.

RULES

Put your name, age and class in which you enter on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet. Write on one side of paper only. Do not use typewriters and do not have anyone copy your work for you.

When clubs or schools compete, please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules and conditions will not be considered.

DEAR JUNIOR ETUDE:

For only eight months I have been taking piano lessons. In that short time I have learned to love music and everything in its connection.

In our last recital I won first prize, taking into consideration the grades my teacher had given us, and I received a gold medal with a great musician on it.

We have organized a Junior Music Lover's Club of which I am President. We are to meet once a month to play games, and to entertain our parents. We think we shall like this very much and will strive for the best.

From your friend,
LEXIE BREVARD (Age 12), Texas.

DEAR JUNIOR ETUDE:

Music is a large factor in my life. I am doing sixth grade work on the piano and intend to start violin, or flute, or organ in a few years. Our school music appreciation classes had a varied program. We were encouraged to learn about modern singers and composers besides the masters, and we attended several operas and ballets. We all did a little composition work. There will be some advanced classes next year which will take up this work more in detail.

From your friend,
ALICE RUTH BRUCE (Age 14), New Jersey.

DEAR JUNIOR ETUDE:

Perhaps your readers would be interested in reading about our Keyboard Club, composed of twelve girls between the ages of ten and twelve; the club has been in progress for four years.

We hold our meetings once a month, and give a recital every May, to which each child is entitled to bring one friend and her parents. Each member makes her own programs and serves refreshments. The money from the treasury goes for refreshments and gifts for our parents.

Our motto is "Practice makes perfect," and our colors are black and gold. We also have small black and gold pins in the shape of a baby grand piano.

From your friend,
RUTH URBAN, Ohio.

Answers to October Hidden Instrument Puzzle

'Cello; bugle; harp; cornet; organ; tuba; drum; zither; fife; mandolin; horn; bassoon.

JUNIOR MUSIC STUDY CLUB
Dennison and Uhrichsville, Ohio

My Ambition

(Prize Winner in Class B)

MY AMBITION is rather a large one, but I will try my best to make it real, not just a dream.

I want to be a medical missionary to the Far East, but I love music so much I cannot give it up, so, with my ambition to become a medical missionary I should like to be able to go on tours through America and Europe, giving concerts to raise money for medicine, supplies or hospitals.

I have played the piano for six years and have often dreamed of being a great musician, but until I had to spend a week in a hospital last summer I did not care to be a doctor.

This may seem a rather strange ambition, but as I really want to do both these things I will try to do them well.

RUTH STEWART (Age 12), Arkansas.

Honorable Mention for October Essays

Roberta Monette; Lenore Glaser; Edna Louise Price; Ralph Gerald Cathcart; Margery Johnson; Ethel McClelland; Eula Reeves; Elizabeth Angell; Cleo Atkinson; Marilyn Zess; Constance Ervey; Nancy Anuta; Kathryn Shinholser; Lois Mae Tomhave; John Edward Price; Eloise Trometre; Sally Ackley; Thomas Petrik; Rachel Timmerman; Lucy Lytle; Shirley Hall; Lois Wells; Anderson Tracy; Miriam Donaldson; Annette Scott; Drew Irwin; Patsy Rimmer; Janet Hatcher; Jeanette Bilodeau; Betty Jean Cooper; Stella Mayer; Zola Jacobson; Louise Draper; Gayle Rasmussen; Hoyle Sorenson; Harry Hinkle.

Prize Winners for October Puzzle:

Margaret Yeates (Age 15), Class A. Ontario.

Lavonne Farrell (Age 12), Class B, Idaho.

Betsy Harris (Age 10), Class C, Virginia.

Honorable Mention for October Puzzles

Betty Krueger; Rachel MacDonald; Sara Flanders; Thelma McNamee; Irma Pederson; Rachel Senft; Mary Ellen Greene; Betty Jordan; Flo Curran; Edna Louise Price; Esther Barton; Eloise Trometre; Lois Mae Tomhave; Elizabeth Johnson; Julia Johnson; Kathryn Shinholser; Ann Doris Oates; Jean Dunlap; J. Lee Weimar; Thomas Petrik; Ruth Armes; Lorraine Jensen; Curtis Derrick; Joan Larkins; Teddy Wolfe; Janet Hatcher; Addie Ruth Dunlap; Eula Reeves; Alethea J. Kanyuck; Rita Elaine Scohna.

(N. B.—*Many* other correct answers were received, as usual, but the list must be limited to thirty names, owing to lack of space to make it longer. Neatness and a careful following of the rules are the chief considerations in selecting these names.)

Enigma

By Bill Eley (Age 11)

My first is in *laugh*, but is not in *cry;*
My second's in *cookies*, and also in *pie;*
My third's in *realistic*, and in *fantastic;*
My fourth is in *jazz*, but is not in *classic;*
My last's in *unearth*, but not in *bury;*
My whole—a musician from *Hungary.*

(Answer Liszt)

Letters from Etude Friends

Do Not Look at the Hands

To The Etude:

I read in The Etude for December, 1935, a discussion of how to overcome looking at the hands while playing the piano. If I may submit my experience with pupils, I find this the result of a lack of confidence in the fingers' ability to find the right keys. To gain that confidence, *staccato* playing, by playing with the hands bounding high, to the level of the bottom of the music rack, is excellent practice. In this same December, 1935, issue of The Etude, *The Merry-go-round*, by James H. Rogers, is very suitable for this work.

—Mrs. William Jones

The Saga of Virgil W. Bork

(*Continued from Page* 47)

heights, must have. Some teachers were at first opposed to this work; but, when they found that it was destined to become a "feeder" for their private classes, their opinions changed.

I have no exaggerated misconceptions about our accomplishments. In the first place they would have been impossible without the enthusiastic and interested coöperation of our fine staff. In addition to this we have had the support of Dr. A. L. Johnson, Superintendent of the Union County Public Schools, and of Dr. John R. Patterson, formerly Superintendent of the Roselle Public Schools, as well as the present Supervising Principal of the Public Schools of Roselle, Joseph L. Bustard, and the Roselle Board of Education, through whom we have our excellent facilities for promoting this work in the interests of musical education in Union County. In the second place we can do only so much in six weeks. In addition to this the students must acquire, when possible, deeper musicianship. They should also study on an instrument like the piano, so that they will have a knowledge of the whole range of music, not merely the instrument they play, which represents one tonal line in the orchestral fabric.

And So to Victory

It goes without saying that our work is a pioneer effort and will awaken thousands of musical talents which otherwise might have remained dormant. All of the faculty of the school are music supervisors, and all of established experience.

The summer session of 1937 covered a period of six weeks from June 30th to August 11th. The daily session was three and one-half hours, divided into six thirty-five minute periods. The school operates on six levels of advancement, or six grades. Each of the six levels has its own band and orchestra. The student is assigned to the level in which he can do his best work and make the most progress. The schedule of band and orchestra rehearsals in each grade is arranged in a coördinating manner with the work in other grades.

In our school the teacher may specialize on any instrument or group of instruments. He may start as a beginner and progress as rapidly as his ability permits. At the end of the session he should have not only a working knowledge of the instruments studied but also a knowledge of practical procedure and methods of teaching in various levels of advancement.

For those teachers desirous of improving their conducting, every type of procedure could be practically absorbed from organization and procedure with beginning groups to actual experience in conducting superior organizations under expert and experienced guidance.

Students in our school receive secondary school credits for the summer's work, approved by the State Department of Secondary Education.

Fretted Instrument Department

(*Continued from Page* 61)

A great variety of steels are in use, different in shape, size, weight and length. Most professionals prefer the round steel rounded at the end, of medium size and weight, and made of rustless steel. The tips for the fingers are made of metal and the thumb pick of celluloid. The technic of the steel in Hawaiian guitar playing is of great importance and should be carefully and thoroughly mastered. In that connection we may say that a relaxed position of the left hand, wrist and forearm is absolutely necessary for a free oscillation of the steel and this should be a part of the daily practice. For right hand technic, we suggest scale practice in two and three octaves with alternating thumb and first finger, and again with alternating first and second finger. This should be carried out in all major and minor scales. Being an instrument complete in itself, the Hawaiian guitar is admirably adapted to the home. Music of every type to suit everyone's taste is now published, so with very few exceptions it is not necessary to be able to transcribe. To obtain still more musical satisfaction a group of players consisting of first and second Hawaiian guitar, Spanish guitar, and ukulele, may come together and find real enjoyment in making music instead of just listening.

Fretted Instrument Questions Answered

R. S., Pittsburgh—The society you refer to is evidently the "American Guild of Banjoists, Mandolinists, and Guitarists," 117 Broadway, Providence, Rhode Island. Organized thirty-six years ago, the American Guild has held yearly conventions in different cities, and in connection therewith, has conducted orchestra concerts, artists recitals, banjo band and mandolin orchestra contests. The last convention was held in Detroit, in July of 1937, with an attendance of over 500. Organizations devoted exclusively to the Guitar are: The Chicago Classic Guitar Society, 1229 West Jarvis Avenue, Chicago, Illinois, and the American Guitar Society with headquarters at 2280 West Twenty-third Street, in Los Angeles, California.

* * * * *

"The contribution of music in the home to the general and musical culture of the members will depend more upon the warmth and genuineness of the responses of the members to musical appeal than upon the degree of knowledge they attain or the skill they exhibit. The desire to be informed or skilled to the point that one can participate creditably in the soci. l doings of intelligent human beings is, of course, not wholly objectionable, but it is likely to lead more to the pursuit than to the capture of culture."—Will Earhart.

Next Month

THE ETUDE for February 1938, brings these vital, instructive and inspiring articles.

HARRY ADJIP

FROM JUNGLE TO SYMPHONY HALL

The amazing story of an American Indian, brought up in Singapore as a Mohammedan, who has written works of symphonic character performed by orchestras in America. This is one of those incredible stories which carry one from word to word with singular interest.

BANDS IN INDUSTRY

Ralph T. Senter, President of the Philadelphia Rapid Transit system, trained in music and art, tells why his great company maintains musical organizations with an aggregate of two hundred and thirty-four members, which he considers indispensable for the welfare of the work.

ALL ABOUT FOUR-HAND MUSIC

Dr. Preston Ware Orem probably has arranged more piano duets than any other living man. For over a third of a century he arranged almost all of the duets that appeared in THE ETUDE. In his forthcoming article, he gives some highly valuable information upon four-hand playing.

MUSICAL LIFE IN AUSTRALIA

Richard Crooks, whose golden tenor voice has carried the musical fame of America to many parts of the world, made a tour of Australia and came back with such enthusiasm that he tells all about it in THE ETUDE.

LINCOLN MUSIC

February is birthday month. It is said that more famous people have been born in February than in any other month, among whom was Abraham Lincoln. The music written about Lincoln is discussed in a delightful article by Pearl B. Brands.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

Musical Books Reviewed

A Musical Misconception

MRS. SEE: "Turn off the radio, dear. The static is awful!"

SEE: "Static, my love! Why, it's just one of those mellow modern music-dramas."

* * *

Try It!

A nimble-tongued young fellow at a concert continuously jabbered away to his young lady, much to the discomfort of his neighbors, till he finally asked:

"Did you ever try listening to music with your eyes shut?" and then proceeded to expatiate on its charms, till a nearby gentleman pointedly inquired,

"Did you ever try listening to music with your mouth shut?"

And there was silence, with a query unanswered.

EDITION

CENTURY

COSTS ONLY

15¢ A COPY 15¢

20¢ IN CANADA

TEACHERS:—You can encourage parents to keep up children's music lessons if you don't discourage them with the cost of music. CENTURY EDITION —at only 15c—keeps the cost of pieces at a minimum —yet, doesn't restrict your teaching in any way.

Remember, this standardized price has not been achieved by printing an inferior Edition. If you are at all skeptical regarding this, we would urge you most earnestly, for your own sake and for the benefit of your students, that you secure a copy of Century and compare it with any other existing edition which you may have or may be familiar with, and we are certain that Century will prove positively and conclusively that it has no superior.

All the suitable classics and a multitude of Standard modern compositions are available in "CENTURY" at this standardized 15c price, irrespective as to whether the Edition contains two or twenty pages.

Here are a few selected at random from our catalogue:

CENTURY PIANO SOLOS, 15c ea.

(Capital letter indicates key—number the grade.)

132 Amaryllis (Air of Louis XIII), E—4....Ghys

The Editorial Offices of THE ETUDE receive hundreds of requests in the course of a year for names and addresses of established music teachers in the various metropolitan centers. In order to afford teachers the opportunity to make contact with these prospective students, this directory has been established as an inexpensive advertising medium. Detailed information will be supplied on request.

WANTED!

CIRCULATION DEP'T
THE ETUDE MUSIC MAGAZINE
1712 CHESTNUT ST., PHILA., PA.

THE WORLD'S LARGEST COUNTER

THE largest counter in the world is made from the advertising in the newspapers and magazines. It is thousands of miles long and millions of dollars pass over it every minute of the day and night. Without this counter stimulating the exchange of merchandise and services, trade would dwindle and the world's income be reduced tragically. THE ETUDE commands a portion of this important counter because it has to do with a group of highly intelligent, forward looking, discriminating purchasers, with means to gratify a great and beautiful desire for the finer things of life. THE ETUDE presents in its advertising columns news about what this fine audience needs.

It Pays to Read Etude Advertising.

The World of Music

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

ANTONIO STRADIVARIUS

THE YEAR OF STRADIVARIUS' birth has been long a doubtful issue among musical antiquarians, as are the house of his birth and his grave. Now comes Michelangelo Abbado and, in an article in the May number of *Musica d'Oggi*, of Milan, states rather conclusively that the study of the labels of several of his instruments makes it quite certain that the greatest of all violin makers was born in 1643 and not in 1644, to which year the best authorities have generally inclined.

THE GOLDSMITHS' SYMPHONY ORCHESTRA, with the assistance of the Goldsmiths' Choral Union, gave on November 27th a performance of Coleridge-Taylor's "Hiawatha" at Goldsmiths' College, New Cross, S. E., London. An interesting survival of the guild activities that in past centuries did so much for the propagation and preservation of learning and culture.

THE ONE HUNDRED FIFTIETH ANNIVERSARY of the first performance of Mozart's "Don Giovanni," which occurred at Prague on October 29, 1787, has been celebrated in Germany.

OF SEMICLASSICS IN MUSIC, a survey by the National Broadcasting Company shows that the most popular are, in order of preference: *Liebestraume, No. 3,* by Liszt; *Serenade,* by Drdla; *Caprice Viennoise,* by Kreisler; and *Estrellita,* by Ponce.

DR. WALTER DAMROSCH'S "The Man Without a Country" has been recently presented by the Chicago City Opera Company, with the New York cast, and with the composer conducting.

A HANDEL FESTIVAL has been recently held at Breslau, Germany, which attracted music lovers from all over Europe. It featured organ and orchestral compositions of "The Old Saxon," with a "stupendous production of his 'Hercules'" as the crowning event.

MRS. R. R. FORMAN

MRS. R. R. FORMAN (in private life, Mrs. Addie Walling Forman), the widely known composer, especially of music for the church service, passed away on December 10th, at her home in Hightstown, New Jersey, at the age of eighty-two. Born in Brooklyn, New York; at eight she began study of the organ and later was under the instruction of Samuel P. Warren of New York and Adam Geibel of Philadelphia, for composition. Mrs. Forman had that inestimable gift for creating melody which at once touches and holds the human heart.

PADEREWSKI is reported to have accepted a commission to direct the preparation of a new national edition of all the works of Chopin.

THE HELZINKI UNIVERSITY CHORUS of Finland, with Jean Sibelius as Honorary Sponsor and Martti Rurunen as conductor, has returned to its native land after an American tour covering December and January. Its American début was with the Boston Symphony Orchestra under the baton of Serge Koussevitzky.

ANDRE MARCHAL, the famous blind organist of St. Germain de Pres of Paris, is announced for a transcontinental tour of America in the coming fall. Mr. Marchal was here in 1930 for a series of ten recitals at the Cleveland Museum of Art after which he filled a few other engagements.

FROM MERIDA, YUCATAN, we have a letter appealing to us to send THE ETUDE regularly, as it is one of the chief sources of information for a musical page in *El Diario del Suroeste* (*The Daily of the Southwest*), the only such page edited in Mexico. It is under the supervision of Samuel Marti, conductor of the Orquesta Sinfónica de Yucatan (Symphony Orchestra of Yucatan), the only such organization among our southern neighbors of North America, outside of Mexico City.

THE MUSICAL COUNCIL of the German State is reported to have issued instructions that no foreign musicians shall be employed in its musical life, including teaching, and with especial restrictions on soloists.

EUGENE LIST, nineteen year old American pianist, has been awarded the Five Hundred Dollar Prize of the first cycle of the Sealtest Rising Musical Star contest radio program of November seventh, last.

A VIVALDI SOCIETY is planned for Venice, to make the works of this old master better known. On October 29th local artists—including two such suspiciously Yankee names as Olga Rudge and David Nixon—gave a concert as an "Homage to Antonio Vivaldi (1680-?-1743)," to inaugurate the movement.

THE METROPOLITAN OPERA COMPANY has abandoned its visits to Brooklyn, where it has given irregular Tuesday night performances since 1908. Subscribers in the borough have been invited to transfer their patronage to the Metropolitan Opera House in New York.

IGOR STRAVINSKY is announced for a tour of America as guest conductor, to begin in January of 1939.

MME. ERNESTINE SCHUMANN-HEINK'S estate has been valued at $33,-932.28, by the Superior Court of Los Angeles. It consists largely of jewelry received from eminent artists and statesmen. Her diplomas and decorations were bequeathed to the Smithsonian Institution (National Museum) at Washington.

THE ALLGEMEINE DEUTSCHE MUSIKVEREIN, which for seventy-five years has lent its efforts to the presentation of new music, recently disbanded after its sixty-eighth festival at Darmstadt and Frankfort.

DR. HOWARD HANSON, Director of the Eastman School of Music, Rochester, New York, and also a distinguished composer and conductor, has accepted the chairmanship of the International Music Relations of the National Federation of Music Clubs, as successor of the late Dr. Charles N. Boyd.

COVENT GARDEN THEATER of London has been presenting on its historic stage a series of performances of "Le Coq d'Or (The Golden Cockerel)," with the music of Rimsky-Korsakoff adapted by Nikolai Tcherepnin for the choreography of Fokine.

QUEEN ELENA of Italy visited Cremona to partake in the closing ceremonies of the Stradivarius celebrations and to be present at the concert in the Cathedral provided by Tancredi Pasero, basso; Gioconda De Vito, violinist; Raffaele Bonucci, violoncellist; Ulisse Mattey, organist; and the Scola Cantorum of the Seminary of Cremona.

WHEN TOSCANINI conducted two concerts of the British Broadcasting Company Orchestra, on October 30th and November 3rd, the audience was chosen by ballot from the thousands of applications for seats beyond the available supply. And the concert might have been heard at home by the turning of a knob. So has radio "devastated" the concert room when fine art is furnished.

DR. LOUIS VICTOR SAAR, one of the most widely known of the composers, pianists and teachers of America, passed away on November 23, 1937, in St. Louis. Born December 10, 1868, in Rotterdam, Holland, his musical education was finished under Rheinberger at Munich and Johannes Brahms at Vienna. He came to New York as accompanist at the Metropolitan Opera and later held important positions in the New York College of Music, the Institute of Musical Art, the Cincinnati College of Music, Chicago Musical College, and the St. Louis Institute of Music.

THE PITTSBURGH SYMPHONY SOCIETY, lately organized, had as its guest-conductor for the first three pairs of concerts in three weeks, Carlos Chaves, the Mexican composer-conductor.

MAURICE RAVEL

MAURICE RAVEL, world famous French composer, passed away on December 26th, at Paris. Born March 7th, 1875, at Ciboure, near Biarritz, he began piano study at twelve, and later, the Paris Conservatoire had piano under Bériot, harmony under Pessard, counterpo and fugue with André Gédalge, and com sition under Gabriel Fauré. His *Bolero* *La Valse* are played by all leading orchestr "Daphnis et Chloë" was produced by Ballet Russe; and "L'Heure Espagnole," presented in 1911 at the Opéra Comique, later had much success at the Opéra.

MARIO CASTELNUOVO-TEDESC the eminent Italian composer, is announ for a tour of America during the season 1938-1939.

"REJOICE, BELOVED CHRISTIAN a cantata by Dietrich Buxtehude, the e nent Belgian organist of the late 17th early 18th centuries, and a friend and structor of the youthful Johann Sebast Bach, was given performance in an app priate service on November 7th, at Home Moravian Church of Winston-Sal North Carolina.

THE JOSEPH HOFMANN GOLD JUBILEE, on the evening of Novem 28th, at the Metropolitan Opera House New York, was a veritable triumph the master pianist, who was thunderou acclaimed in a program including the "C certo in D minor" of Rubinstein, teacher; the *Ballade in G minor, Noctu in E-flat, Valse in A-flat, Andante Spian* and *Grande Polonaise* of Chopin; and own *Chromaticon for Piano and Orches* The receipts of $22,000, from sky-pri seats and souvenir programs at a do each, went to the fund of the Musicia Emergency Aid.

THE FIFTH PIANO PLAYING TOU NAMENT of the National Guild of Pia Teachers, Irl Allison, president, will be h in May.

FRANCO GHIONE

A BUST OF OSSIP GABRILOWITSCH, by Brenda Putnam, was unveiled with appropriate ceremonies, at the November 11th concert of the Detroit Symphony Orchestra. The dedication was followed by a "deeply moving" interpretation of the "Death and Transfiguration" tone poem of Strauss, as led by Franco Ghione. Ghione and Victor Kolar, as co-conducto succeeded the late Dr. Gabrilowitsch, w led this major organization from its foun tion till his death.

(*Continued on Page* 131)

Australia's New Day in Music

FEW countries of the globe have more of interest for Americans than Australia. This is particularly the case since the great war, when American soldiers in France discovered a peculiar bond of similar interests and ideals with those men of the British Empire who had traveled over so many seas to give their all for a great cause.

The huge irregularly rectangular island continent of Australia, which measures about two thousand miles by two thousand four hundred miles, nearly as large as the United States, was first sighted by the Portuguese mariner, Manuel Godbino de Eredia, in 1601, and in 1605 it was visited by the Spaniard, Luis Vaez de Torres. Later the Dutch Abel Jansen Tasman discovered Van Diemen's Land (now Tasmania), not knowing it was an island. Captain Cook reached Botany Bay in 1770 and claimed the country for Great Britain. It was not until after the United States was well established (1788), after the Revolutionary War, that colonization commenced in Australia.

AUSTRALIA'S BRIGHT PARTICULAR STAR

The late Mme. Melba (Nellie Mitchell-Armstrong), immortal soprano, with her father and a niece

The Commonwealth of Australia includes the following continental states: New South Wales, Queensland, South Australia, Western Australia, the Federal Capital Territory, The Northern Territory, Victoria; and the island State of Tasmania. The five large continental states and Tasmania were separate territories until in 1901 they were federated in the Commonwealth of Australia. The population is estimated at eight million, or one-fifteenth that of the United States. That is, the vast continent of Australia has a population but about that of greater New York. Three-fourths of this population are located in the five capital cities, of which Sydney, New South Wales, with a population of one and a half millions, is the largest. The others are Melbourne, Adelaide, Brisbane and Perth. New Zealand is not a part of the great Commonwealth but a self-governing dominion. Those who know it say that it is more English than England and more Scotch than Scotland. It is thirteen hundred miles, or a boat journey of four days, from Australia.

From the very earliest days, the people of Australia and New Zealand have manifested a keen and active interest in music. For instance, in the large Australian centers "Community Sings" on a vast scale are now held. These are fostered by the Broadcasting Commission which sends out special parties to conduct them. The astonishing thing is that every one in the immense audiences which these events draw, pays an admission price. The enthusiasm is enormous. The "Sings" are broadcast over the air.

The Eisteddfau, which Australia inherited from Wales, also draw very large crowds. The largest of all of these is in Sydney and lasts two weeks. It is held in six different halls, and there may be as many as fourteen adjudicators. Last year there were sixteen thousand contestants. The father of the Australian Eisteddfau is that at Ballarat in Victoria. In the process of elimination many of the foremost Australian artists have been discovered. The most famous Eisteddfod of New Zealand is that at Wellington. There is an interchange of champions and adjudicators between the two countries.

The leading music schools of Australia have been a striking and interesting development. In all of the States, excepting New South Wales, the music schools, or conservatoriums, have been started by the universities. In Sydney, however, the New South Wales government founded the conservatorium. which has a fine building of its own situated in the Botanical Gardens that are generally considered among the most beautiful in the world.

The large, active music dealers and publishers, W. H. Paling of Sydney, as well as Allen and Company of Melbourne, have for years conducted an active promotional campaign to develop musical interests in Australia. Mr. C. S. Darling, manager of Palings, on his recent world tour in search of new musical creations, told us that never in the history of the country has there been such widespread interest as at this time. Next year music becomes a compulsory part of the curriculum of all of the state public schools. In other words, Australia, which is now said to have relatively less illiteracy than any other large country, intends to see to it that none of its children remain musically ignorant.

Mr. Darling was largely responsible for starting the "Music Week" movement in Australia. This was borrowed from the United States, where it was originated by C. M. Tremaine. In Australia it has been a conspicuous success. In Sydney it is especially popular. Practically all the clergymen, of every denomination in the city, make music the subject of their sermons on the Sundays beginning and ending the two weeks devoted to music. All of the newspapers generously give a great amount of space to it. There are concerts every day, lectures, organ recitals, and concert parties at all of the schools. Bands, playing fine music, parade the streets every day. There is also an imposing procession, with floats, including representation of all of the musical interests. The most popular slogan has been, "Music, God's Greatest Gift to Man." About one hundred thousand "Music Week" buttons are made each year; and, wonder of wonders, the public buys them for twelve cents each. From the Lord Mayor (President of Music Week) down, "everyone" is proud to wear a "Music Week" button.

Nothing has been said in this brief review of the very high artistic standards of the lands of Melba, Grainger, Hutcheson, Austral, and other distinguished artists; but the achievements of these famous artists have been discussed many times in THE ETUDE. Australia has, of course, many other musicians of very high standing; but as they are not as yet widely known in "the States" it is not within the peculiar province of THE ETUDE to discuss them.

Music in Australia is splendidly advanced through the well organized facilities of the great music firms of Allen and Company in Melbourne, actively represented by Mr. George Sutherland, and by W. H. Paling in Sydney. The concert and theatrical business operated by the remarkable Tait family, under the firm name of J. G. Williamson, Ltd., has taken most of the great artists to Australia. Their representative, Mr. Claude Kingsford, a splendid enthusiast for THE ETUDE, has brought large numbers of subscribers to our publication. Gordon and Gotch of Melbourne also have been active in promoting the interests of THE ETUDE in Australia.

The Great Musical Revival

HERE is an editorial we did not write, as the National Broadcasting Company was good enough to do this for us. We may be pardoned, however, if we call our readers' attention to the fact that for ten years we were certain this revival must inevitably come as a result of the force of the radio. We said this in just these words at a time when our professional friends were begging us to say just the opposite, and abusing us because we persisted in holding to what we felt would be the inevitable and happy outcome. The NBC report follows.

"Radio is primarily responsible for a 300% increase in piano sales during the past year, according to letters recently received by the National Broadcasting Company, from executives in the piano industry. Once considered a dangerous competitor of the instrumental music industries, radio is now credited with being one of the fundamental factors in the recent upturn in that business; and statistics now offered by the music trades provide significant confirmation of repeated claims by broadcasters that radio is the most effective medium yet devised for stimulating music appreciation and promoting general musical culture.

"After a careful and dispassionate study of the nearly 300% increase in piano sales during the past twelve months, over 1933, W. A. Mennie, secretary of the National Piano Manufacturers Association, declares, 'radio must now be considered one of the major reasons for this increase. Millions of listeners, who otherwise might never have attained an appreciation of music, are manifesting an interest in musical culture and endeavoring to become participants themselves.'

"Theodore Steinway, president of Steinway and Sons, wrote,

" 'We have found it (the influence of good music on the air) to be a tremendous stimulus to people toward music as an art and as an enjoyment. Of late years the broadcasting of music not only of the voice and of stringed instruments, but also of the piano, has reached such a degree of perfection, that it can only have an influence for good upon the listeners; and, in the degree that the technical improvement continues, so much the more will the love of music be instilled into the hearing public.'

"William A. Alfring, president of the Aeolian-American Corporation, commenting upon the increase of piano sales in general and of the better grade pianos in particular, says,

" 'This can be attributed directly to a very distinct increase in public interest in better music in the last few years, and principal among the contributing influences are the very fine programs for which the National Broadcasting Company is responsible.'

"Lucien Wulsin, president of the Baldwin Piano Company likewise credits radio as being responsible for 'developing the appreciation and enjoyment of fine music.' He continues:

" 'Once people become conscious of the spiritual and intellectual benefits which follow from music appreciation in general, they wish their children to be able to obtain the same benefits to an even greater degree. They realize the importance of musical training for their children, even though the children at the outset may not be completely enthusiastic about the plan.'

" 'Instruction in piano builds the best and soundest foundation, even though later on the student may prefer to play some other instrument. During the past few years it is indeed remarkable how the piano has grown in public favor. Radio unquestionably played a most important part in this new development in the music industry.'

"More Americans are reading more books about music, too. W. W. Norton, president of the publishing house which bears his name, said, *'The considerable increase in the sale of books about music during the last few years can be in part attributed to some of the excellent programs which the National Broadcasting Company has sponsored.'* "

The Scars of Triumph

WHEN Elbert Hubbard said "God will not look you over for medals, degrees or diplomas, but for scars," he wrote the skeleton of the biography of most of the successful men of all time. What you are able to suffer and withstand, with a smile, is that which keeps you going on, on, on, upward to ever greater things, to the real glory of life. If you are familiar with the biographies of the great masters of music, you know that the scars are deep and cruel. The scars of injustice, of jealousy, of lack of understanding, of malicious calumny, are long and broad, but they seem to have been an inevitable part of the careers of many musicians. Just why the lash of destiny should cut so hard and mercilessly into the souls of those whose only aim is to bring to the world joy and beauty and nobility, is one of the sublime mysteries. Yet these very scars carve the character in men's souls, which makes them strong and magnificent personalities.

Read the lives of Handel, Mozart, Schumann, Chopin, Beethoven, Wagner, Berlioz, Debussy, Ravel, MacDowell, and you will find this idea far more eloquently expressed than in the feeble words of this editorial.

Coronation

WE HAVE just beheld the crowning of a queen—a queen in the loveliest of realms—music. Mrs. R. R. Forman, after eighty-two years of activity as a composer of hymns, anthems, songs and heart touching music, was laid to rest, during December, in the little community of Hightstown, New Jersey, where she spent the better part of her life. Her friends literally crowned her with love and buried her in flowers. Simple, sincere, unpretentious, sweet, and devoted to her ideals, she wrote hundreds of works which have been used in churches in all parts of the world.

Many of those who sang her hymns possibly never heard of Beethoven's "Fifth"; but they found spiritual nourishment in her music, which was of great and lasting importance to them. Her beautiful life was reflected in her face, and she was rich in the grace of the Lord.

Musical Life in Australia

By RICHARD CROOKS

Leading Tenor of The Metropolitan Opera Association, Distinguished Concert and Radio Soloist

In A Conference Secured Expressly for The Etude

By ROSE HEYLBUT

ALTHOUGH IT WAS PRIMARILY "business" that carried me on my first visit to Australia, I was delighted at the prospect of studying at first hand the musical conditions of a country that lies so far removed from what we are inclined to call "the music centers of the world." What should I find there? I admit I knew but little about Australia. It had sent us Melba, of course; Percy Grainger, Florence Austral, Ernest Hutcheson, Marjorie Lawrence, and John Brownlee. But it is never a good practice to judge the musical qualities of a land solely in terms of its "celebrities," and so I was curious as to what I should find by way of an organized musical life.

At once, I was impressed by two things. First, the general musical interest throughout Australia is tremendous; and, second, its way of expressing itself is rather different from anything we know here at home. Everywhere you go in that great island continent—from Sydney and Melbourne, to Adelaide, Brisbane, or Perth, and in New Zealand from Auckland to Dunedin, one feels the keen personal interest the people take in musical matters. It is not an "inherited tradition," in the way that you might expect to find a love of opera, for instance, among the Italian colonists of the Argentine; it is entirely a personal reaching out towards music, for no other reason than that the people appreciate it and want more of it. The Australians are mostly descended from pure British stock—the sort of stock which, if found in the more cosmopolitan centers at home, might or might not devote itself to musical pursuits. But transported those many thousands of miles away from amusements and distractions of the ready made variety, the people have had to make a fresh start, planning spiritual recreations for themselves, instead of depending upon the age old traditions of Drury Lane or Covent Garden. This, to my mind, is important. When you find Australians reaching out for music, it means that they voluntarily classify it among the needs of living.

An Inherited Culture

I WILL MAKE IT CLEARER, perhaps, to risk a brief digression about the character of these people, who derive from the British, but who seem more like Americans, in their outdoor breezy charm and their hardy independence. The Australian, I may say, takes nothing on faith. He follows no fads or movements simply because they are the thing to do. Whatever habits or customs he adopts, represent a very discriminating means of filling some definite need in his life. Australia, you must remember, lies thousands of miles from anywhere. It takes time to bring new styles and new fashions to the people out there, and generally considerable expense as well. New fashions in clothes, new music, new "stars," new games are not matters of everyday occurrence. As a result, the people are thrown more upon their own resources. Instead of depending upon foreign leads, they think and devise for themselves. All of which proves that when the Australians take music to their hearts, it means something.

The first thing that impressed me was the fact that in the Australian cities music seems able to thrive independently of the "star system." The question in the minds of the concert goers is not "whom are we going to hear, and is he the 'fashion'," but "what are we going to hear, and is it good music"? There is a vast difference in those points of view; and, in judging of the musical life of a land, it is an important difference. Concerts are not necessarily dependent upon visiting celebrities. There is a fair amount of local professional talent; and besides, the very excellent conservatories, which one finds in all the major cities, are usually equipped with recital halls, where the students frequently offer solo and ensemble concerts. These concerts are enthusiastically attended. Many of the programs are also broadcast, with the result that the public hears fine music at the same time that to-morrow's native stars are afforded a splendid opportunity of making themselves heard. Programs of this type are not sandwiched into unimportant hours, either. These concerts of native talent are accorded every possible dignity and encouragement.

Obstacles Overcome

IN THE PROFESSIONAL concert field, we found a great difference in the arrangement of the concert season. Here in America we plan our seasons fairly completely in advance. If you are a concert subscriber, this means that as soon as the course tickets are offered you can know exactly whom you are going to hear and when you are going to hear them. If you are a performer, it means that somewhere along towards September your manager sends you a full tour route showing exactly where you are to appear and when you are to go there. In Australia, it is different. Owing, again, to the comparative isolation of the country and the comparatively smaller number of tours organized there, each artist who comes represents a season in his own right —something like an entire opera season. For example. An artist may enter Melbourne or Sydney with an initial booking of perhaps four concerts each. This does not mean, however, that he will sing only those four concerts. He may find himself preparing three times the number before he leaves. It is always the popular demand which regulates the length of the artist's stay, and no one knows in advance just what that demand will be. If, after the fourth announced concert, the people ask for more, a fifth and a sixth and a seventh will be arranged. This is true in all the Australian cities. At the start I thought this an unusual procedure, but it got to be a real incentive. One always wants to give his best to an audience; but to be asked for a twelfth recital, not because it is booked, but because the public really wants it—well, it gives one a very special feeling of appreciation. My major city tours were announced for five initial concerts, and grew to fourteen. These concerts took place every second or third night. I gave three or four recitals a week, always in the same hall of the same town, but with different programs. I had carried ten programs with me, and had to work out four extra ones between the prearranged events. It is what one might call a repertory season of songs.

In addition to these seasons of visiting soloists, the Australians have much fine symphonic music, provided by an excellent orchestra of their own. There is but the one orchestra. It is under Government sponsorship and consequently belongs to the country as a whole, and not to any one city. It is called the Australian Symphony Orchestra and, in the eight months or more of its official season, it visits all the major cities. Through the years of its existence, this organization has been directed by many distinguished conductors. Henri Verbrugghen, I believe, helped to give it a firm foundation of training and musicianship, before he came here to take charge of the Minneapolis Orchestra which he served so long and so well. Other "guest" conductors have included Sir Hamilton Harty and Maurice de Abravanel, at present of the Metropolitan Opera. The artistry of the Australian Symphony Orchestra is equal to that of the finest symphonic organizations of the world, and the choice of its programs is diversified and interesting. Those of us, who have not been in the habit of looking upon Australia as one of the world's music centers, would do well to ask ourselves how many American orchestras can keep busy eight to nine months of the year?

RICHARD CROOKS

As he lands in Australia with Mrs. Crooks, Richard, Jr., and Patricia Crooks.

The Season on the Air

EVEN WHEN THE CONCERT season is officially done and the conservatories are closed, the Australian public still gets good music. The broadcasting companies send out concerts of electrical transcriptions or phonograph records. To my delighted surprise I found that, even though I had never been there before, my singing was quite familiar to the Australians, through public performance of my records. Thus, at the quiet time of the year the public may hear Toscanini's rendition of Beethoven's "Seventh Symphony," or even the voice of Caruso. I do not suggest that this is quite equal to hearing Toscanini in the flesh; but what a superb substitute! In Australia there are both governmentally and commercially sponsored broadcasts. "A" class stations carry no advertising but are supported by license fees collected by the Postmaster General's Department. "B" class stations carry commercial advertising and depend upon advertisers for their support.

Each of the major cities has a conservatory of music, splendidly equipped, staffed with eminent teachers, and offering courses as complete as those to be found anywhere else in the world. Through personal experience, I am most familiar, perhaps, with those in Sydney and Melbourne; though I have heard reports of and students from other schools. As my assisting artist in several concerts I had an extremely gifted young girl violinist from the Sydney Conservatory, and I counted myself fortunate to have her services. The distribution of serious music students is exactly what you would find in New York or Paris. Many are preparing themselves for public careers, many look forward to teaching, while a goodly proportion study entirely for the sake of becoming familiar with music and carrying it into their own homes.

I must say a word about home music in Australia. I wish we had as great an amateur interest in easy, informal, family singing and playing. Most amusements, as a matter of fact, are of home origin and home participation. Because of the self-dependent character of the people and the absence of fads, a large share of all Australian fun is of the kind one can devise for one's self. There is little night life in the larger cities, but a great deal of home fun—games, outdoor picnics, husband and wife golf matches, and music making. It is by no means uncommon to be entertained, at a family gathering, by songs and instrumental selections offered by the family group. And the performances are splendid. Amateur music, in its real and best sense, is in a thriving state.

By way of supplying new music to the layman, the local publishers bring out inexpensive Albums containing the most popular selections in the repertory of visiting artists. I am very proud of the "Richard

Crooks Album," which includes the following songs from my concert repertory: *Beautiful Isle of Somewhere; All Through The Night; Open The Gates of The Temple; Serenade; The Old Refrain; Have You Seen But A White Lily Grow; Love Song; Then You'll Remember Me; Killarney; Kathleen Mavourneen; Believe Me If All Those Endearing Young Charms; I'll Take You Home Again, Kathleen; Song of The Skylark; Rose of Tralee; Questa O Quella; Love Has Eyes; Come Where My Love Lies Dreaming;* and *Drink To Me Only With Thine Eyes.*

Some Native Characteristics

SINCE MY RETURN, I have been asked a great deal about native music in Australia, and how the contribution of the Maoris is felt. First of all, let me clear up the story of the Maoris. Like Frances Alda, who was so long a mainstay of the Metropolitan Opera Company, they are not in any sense natives of Australia, proper. They belong in New Zealand, some twelve hundred miles away, where they live on as descendants of the aboriginal Polynesian tribes, a kindly, friendly lot, who keep separate from the British New Zealanders. These Maoris have a native music, but evidently they were not excessively musical in the beginning, for their native airs are derived from outside sources and have been simply colored with Maori chants and rhythms. Much of this native music has its roots in the old missionary hymns, which were carried out to New Zealand by the early settlers, took root there, and live on in a queerly hybrid but most interesting form. I have brought back a set of records of these songs, which clearly show their missionary ancestry and their native color.

Most of these Maori airs are songs, used either as songs proper or as accompaniments for native dances. Rarely do you find instrumental music. Occasionally there is accompaniment, on a sort of one-stringed ukulele; but generally one finds pure chanting, the rhythm set by clapping the hands or stamping the feet. The rhythmic effects produced by the Maoris are remarkable. I found their Poi Dance especially interesting. This is done with a Poi, or ball of flax, attached to the hand by a long string. (It is something like the games with rubber balls with rubber strings that little girls play on our pavements as a welcome to spring, but larger.) As they dance, with subtle, swaying motion, the executants bounce the Poi attached to the left hand on the back of the right, and the Poi attached to the right hand, on the back of the left. They never miss aim, and whirl the balls in the swiftest rhythms, imitating the gallop of a horse, the patter of rain, the tramp of marching, and other effects. Curiously enough, these rhythms have never been successfully reproduced by any other people, although many students of music and the dance have tried to analyze them. The Maoris rarely come into the cities, and it is a wonderful experience to see their performances in native setting. An Australian composer, Hill by name, has produced some very fine things which make use of native Maori elements.

By way of illustrating the keen musical interest in Australia (and which roots in musical values rather than in star glamour), let me tell briefly of the contest sponsored by a Sydney newspaper. Subscription funds were raised for the purpose of enabling some worthy native music student to pursue further studies. The contest was won by Mr. Robert Cecil Nicholson, a young man who had at one time worked for his living in the coal mines, and who possesses one of the finest baritone voices I have ever heard. It is my privilege to act as musical counselor to Mr. Nicholson, and I have encouraged him to study under my own teacher, Mr. Frank La Forge. He should be heard from before many more years elapse. We, in New York, have a Metropolitan Opera and a Carnegie Hall; but, to date, no newspaper has offered to provide the funds with which to train talented students for appearance in either. To return to a phrase I have already used, a musical interest of such proportions means something.

On the whole, I should rank the great continent "down under" among the really musical lands of the world. The people have the chance of hearing the best, and they take that opportunity in the form of personal fun. When Australia sends us a Melba and a Grainger, there is nothing in these circumstances that should surprise us—those of us, at least, who have been fortunate enough to observe the musical life of the land at first hand.

Melody Study a Stimulant

By EPHRAIM ERASMUS HONEYMAN

PERHAPS there is no composer whose music is more invigorating than that of Schumann. He had one of the most active and stimulative minds in all the annals of music, and no student can come in contact with it, through the use of even the tiny masterpieces in the "Album for the Young, Op. 68," without being lifted into a new musical world. Of course the services of a good teacher will be needed to direct the study and to guide the student so that he comes in contact with the inner spirit of the music and not merely with its skeletons.

There could be nothing better for the average student than a book containing only *Adagios* and deep lyric slow movements by Beethoven and other composers. These slow movements are but idealized folk songs; and they may be taken for study long before the average pupil is prepared for a fugue or the *Allegro* of a sonata. *Adagios* should be studied for the sake of their emotional messages; *allegros* may be indulged in as sources of technical equipment and at the same time as vigorous spiritual stimulants.

Technic is more easily and effectively mastered when it is used emotionally in the study of the best type of compositions, rather than by a too copious indulgence in *Etudes*. Not that the student is to be allowed to struggle with the virtuoso's repertoire. There is a vast store of music by the masters, which is of but medium technical difficulty but still contains granaries of food for the musical soul.

Bach furnishes an inexhaustible source of materials that will develop technic; but this side of the study of his works may be easily overdone while the rich inner life of his compositions is overlooked. If the student can but come to realize the depth of feeling which underlies almost every phrase the dear old Cantor wrote, and will persistently endeavor to bring out the proper coloration of the pieces studied, there is no more productive study to be done.

"Music is the only sensual gratification mankind may indulge in to excess without injury to their moral or religious feelings."—Samuel Johnson.

RECORDS AND RADIO

By PETER HUGH REED

THE PAST YEAR has been truly a "record" year; for the increase in record sales has been enormous. The manufacturers of Victor records report over 8,000,000 sold. The emphasis on good music is greater than ever before in the history of the business. This news is gratifying, for it conclusively proves that America is a musical nation, a nation interested in the perpetuation of good music rather than its casual dissemination.

Bach—sometimes called the father of modern music—still holds the interest of the public. One of the foremost musicians in America to further interest in Bach's music has been Leopold Stokowski. The purist decries his transcriptions of Bach, but the public endorses them unreservedly. Stokowski was recently acclaimed by one New York critic as the transcriber who "transcends in transcription." It will be admitted that, for sheer splendor of sound his orchestral transcriptions are impressive, whether one agrees with his purposes or not. In his latest Bach album (Victor Set M-401), Stokowski gives us a re-recording of his most noteworthy transcription—the *Passacaglia* which Bach wrote for keyboard instrument. With it will be found chorales from an Easter cantata and the "St. Matthew Passion," a *Sarabande* from a violin partita, a hymn, and a new arrangement of the familiar *Aria* from the "Third Suite," familiarly known as *Air for G string*.

Until Dr. Albert Schweitzer last year played his first series of Bach organ recordings (Columbia set 270), on an instrument conforming in tone to the organ Bach used, organ recordings of the master's music were never admitted to be entirely satisfactory. Dr. Schweitzer's recordings have been distinguished for their clarity of outline. His interpretations of Bach's music are more scholarly than showy, and from this standpoint they have been praised. In Columbia album 310, Dr. Schweitzer continues his series of Bachian recordings with thirteen "Chorale-Preludes."

Some of the finest organ recordings to date are Musicraft's issues of Bach's fifth and sixth "Trio Sonatas" for organ (set No. 6), and the same company's issue of an album of "Early Organ Music" (set No. 8), containing compositions by Froberger, Hofhaimer, Cabezon, Byrd, Sweelinck, Buxtehude and others. These recordings played by Carl Weinrich on the organ of the Westminster Choir School of Princeton are truly treasurable ones. Mr. Weinrich is, perhaps, the most enjoyable organist to make records to date, for he realizes not only the linear clarity of the music but also its vitality.

Next to Bach, Mozart seems to be the most popular composer with the recorders. Seven works, recently issued, include the composer's early flute quartets in D and A (K-285 and 298) in somewhat too straightforward performances by the Oxford Ensemble, of radio fame (Musicraft album set 7); the "Flute Concerto in G major" (K-313) played with fine finesse by M. Moyse, the French flutist and an unnamed orchestra (Victor set 365), the piano "Concerto in B-flat" (K-450) engagingly performed by Elly Ney and chamber orchestra (Victor set M-365), the piano "Concerto in F major" (K-0459) stylistically played by Schnabel and the London Symphony Orchestra (Victor set M-389); the lovely serenade *Eine kleine Nachtmusik* unforgettably rendered by Bruno Walter and the Vienna Philharmonic Orchestra (Victor set M-364); and the "Quartet in E-flat major" (K-428) played with fine polish and sty by the Pro Arte Quartet.

Two works of Beethoven, his "Fi Piano Concerto, Opus 15," and his "Ha merklavier Sonata, Opus 106," representi opposite ends of his career, come to us interesting new recordings. The form played by Walter Gieseking with the Ber State Opera Orchestra (Columbia set 308 is a performance which finds more gratiating qualities in the music than do Schnabel (Victor set M-403), who is just famed for his playing of Beethoven's pia music. Comparison with Kempff's set this work finds Schnabel excelling him many points of the score, while the hon on piano tone in reproduction go to former issue.

Brahms' "Concerto for Violin" is mittedly a difficult work, yet when a vi linist of Fritz Kreisler's stature plays one does not expect to be reminded of difficulties. In the violinist's re-recordi of this work (Victor set M-402), it is d appointing to find Kreisler not too hap in his performance of the protracted fi movement, and most gratifying to find playing of the second movement so rich rewarding. John Barbirolli and the Lond Philharmonic Orchestra assist the violin in his performance which is excellen recorded.

Humperdinck's "Hansel and Gretel" fi saw the light of day forty-four years a Its fresh humor and charming naive m odies seem to be ageless, however, for t opera is just as appealing to-day as ev The overture founded on themes from t opera begins and ends with the childre prayer. A new recording of this overtu made by the British Broadcasting Orch tra, direction Adrian Boult (Victor d 11929), presents an expressive reading. recommend it to our readers.

Berlioz's "Roman Carnival Overtur seems to be popular with recorders. It of course, an old favorite in the conc hall. Mr. Fiedler, conducting the Bost Pops Orchestra (Victor disc 12135), giv us a brilliant reading of this music. realization of the excitement in the *alleg* section, which is founded upon an Itali dance known as the *saltarello*, is particula noteworthy, and conforming to the co poser's wishes.

Oryanguren, the guitarist, continues splendid series of recordings with a "Gra Sonata, Opus 22," by Ferdinand Sor, famous Barcelonian guitarist of the ginning of the nineteenth century. Here music out of the beaten track well wo hearing. Oryanguren is a gifted artist qu on a par with his famous countrym Segovia.

The recording of Bach's *Double Mo* made by the Westminster Choir of Prin ton (Victor discs 1845, 14613), is a p performance of a genuinely beautiful wo One cannot understand Victor releasing recorded performance like this.

Recommended: Marguerite Long's p formances of Fauré's *Nocturne No. 4* a *Barcarolle No. 6* (Columbia disc 69063 Parry Jones' singing of two of the fin of English songs, Warlock's *Sleep* and *Fox* (Columbia disc 318-M); Gerha Hüsch and Margherita Perras singing du from "Don Giovanni" and "The Ma Flute" (in German) (Victor disc 4374 McCormack's fine singing of *The Ke Dance* and *She Is Far From the La* (Victor disc 14611); and the charming t for two flutes and violoncello by Hay known as the "London Trio No. 3" (Mu craft disc 1025).

All About Four Hand Music

By PRESTON WARE OREM

THE PIANOFORTE has been called the "Orchestra of the Home." Quite so! But would that it could be used ore regularly as such. Pianos are to be ayed upon; not to be covered up and piled ith bric-a-brac. One does not need to be virtuoso in order to play the piano, and en to play it well. Besides, a piece of usic, to be good, need not be difficult; d an easy piece is never bad, just beuse it is easy. Our point is that the Orchestra of the Home" should be in use. the "tired business man" sees fit to nuse himself of an evening by "picking" t tunes with one finger, he should not frowned upon; nor, should the son of e house, interested from the High School andpoint, be discouraged if he sees fit to ake a few tentative assaults upon Bach's Well Tempered Clavichord," as we have ard done recently in an enlightened me. Even the family baby might be given miniature pair of boxing gloves and be rned loose on the keyboard. By chance might evolve some modern (?) tone usters. And to what is all this chatter ading? Simply to the fact that, after all, is more fun to make music for one's self an to listen to it; and to the further fact at it is still better to make music in colboration with another. And this leads us one of our own pet hobbies: Four hand usic.

And when may this four hand playing egin? Right away! We have our own eas to the preschool age in piano teachg; but that is an entirely different story. e that as it may, there is no reason why e first actual tone produced by the beinner, young or old, should not, in some anner, be accompanied by the teacher; us music is made at once. In fact somehing of the sort seems to have been in the inds of those older teachers and comosers—Diabelli, Low, Koelling, Sartorio, olck, and others—who instituted the acher and pupil duets, with the student's nds in the five-finger position.

But when did four hand playing actually art; who instituted it; and who first rote for it? We wish we knew, exactly; ut we can work it out, pretty nearly. In e famous picture of Mozart and his ster playing together, we have wondered iten, ourselves, as to what might be the rticular piece engaging their joint efforts. ow Mozart was born in 1756 and he was prodigy when seven years of age. The dest published pieces, originally for four nds, of which we can find any record, re by Johann Christian Bach (1735-1782) ungest son of the great Johann Sebasan; and these are hailed by musicologists the direct precursors of those by Mozart imself. One of these sonatas (especially e one in A) might well be the piece they re playing; unless it is by the young Iozart himself, or some arrangement by is father. At any rate, we have found good starting point.

The Versatile Piano

NOT UNTIL WE COME to the pianoforte self do we find a chance for effective uet playing. Neither of its predecessors, he clavichord nor the harpsichord, could ave been satisfactory for the purpose; oth were unsuited in tone color; both cked the essential sonority. Nevertheless, Iozart is said to have preferred always to use the earlier types of these instruments.

It is pertinent to our subject that we give some consideration to the mechanism of the modern piano. Shortly after the beginning of the eighteenth century, the once abandoned idea of setting the string into vibration by means of a hammer was revived; and from this revival emerged the piano as we now know it. Still it is a far cry from the hammerklavier of Beethoven's time to the squares, grands, uprights and even the miniatures and spinets of the present day. Yet during these two centuries of its own progress the piano has established itself as the chief vehicle for musical expression through the years of the world's greatest growth in original musical creation.

Let us give further attention to the mechanism of the piano; its stringing should engage our particular attention. Strings in musical instruments have been employed, as we know, from the very earliest times. In acoustics, a string is "a perfectly uniform and flexible filament of solid matter stretched between two fixed points." From the instrument known as the monochord, invented by the philosopher Pythagoras, in the 7th century, B. C., has been developed much of our knowledge of the nature and mysteries of the tonal art. But, it may be asked, why all this pother about acoustics? It is just this. If the piano is an "orchestra," then for it we must have an "orchestration"; and here is where we are directly concerned. While practical musicians have had more or less occasion to deride the science of acoustics, nevertheless this science has helped musical instrument makers immeasurably. And, if more attention were paid to this orchestration for the piano, even, in certain cases, by composers highly gifted, there might be less insensate "beating of the box" as the man in the street calls it, and a more sympathetic treatment of the instrument and its resources. Volumes could be written on the subject of strings, alone; although, as a matter of interest, for two thousand years no notable advance was made upon the discoveries of Pythagoras, until the Franciscan friar, Père Mersenne (the "Father of Acoustics"), began his very earnest investigations.

Reader, Meet Your Instrument

DEAR READER, have a good look at the inside of your own piano! Note well the strings and the method of stringing. Some of these metal strings are thick and heavy, some wrapped with fine wire, some are not. All of this is for the purpose of giving balance and homogeneity to the complete scale or compass. As a matter of course, the more acute sounds are produced by short, light and slender strings; the graver tones by strings that are proportionately longer, thicker and heavier. Moreover, to produce tones of certain definite pitch and quality, it requires in some cases but a single string to give the desired result; in other cases, two strings (or unisons); in still other cases, even three strings. The tensile force with which the wires of a modern full concert grand piano are stretched, is amazing. In the aggregate it may amount to a total weight of thirty-six tons; hence, the heavy framework of the modern piano. Now it stands to reason that, with such an extended compass, and with such necessary differences in stringing, the piano must possess certain different registers or contrasts in tone quality; and it is with these registers that we are much concerned in this article: since such constitute the basis for our orchestration. Franz Liszt set great store by this idea; even to the extent of suggesting that orchestral colorings might be imitated successfully. These possibilities have been by no means exhausted.

Historically we have started our exposition of four hand piano music with Bach the youngest. Mozart seems to have been his logical successor; and this in spite of his early disfavor for the piano. His complete published works for four hands comprise four sonatas, two fantasies, a set of variations and a fugue. The sonatas are beautifully made, well-balanced and effective throughout. We prefer the *No. 1, in D major*. The *Fantasia No. 2 in F minor* is masterly; so good that the celebrated English organist, W. J. Best, made of it a fine transcription for his own instrument; not easy to play, however. The *Variations* are pleasing and ingenious; and the *Fugue* (a tonal one), although less effective, is a fine bit of contrapuntal construction. Mozart's contemporary, and sometime rival, Muzio Clementi (1752-1832), seems to have taken to the piano "like a duck to water." Those of us who have struggled with his "Gradus ad Parnassum" (to our technical advantage, we hope) know something about this. Clementi's four duet sonatas are of uniform excellence, showing a fine feeling for color and sonority; and we like particularly the *No. 3* with its fine *Minuet*. Although Clementi's genius was overshadowed ere long by that of Mozart, nevertheless he accomplished much for the piano and for piano playing.

And about that orchestration? Let us make our own start at it, right here. In a certain book on Instrumentation, for the orchestra, we have seen a table of comparisons showing just how the C major chord had been written out for full orchestra by various great composers. Of all of these, we like best the one as set forth by Wagner, for the opening chord of the *Overture to "Die Meistersinger."* The first time we heard that chord, as a boy, we felt the skin of our scalp tighten and our hair stand right up. And, next best, we like the way Beethoven does in the last movement of the "Fifth Symphony." Now how would we score the same chord for piano, four hands, full and rich? Thus:

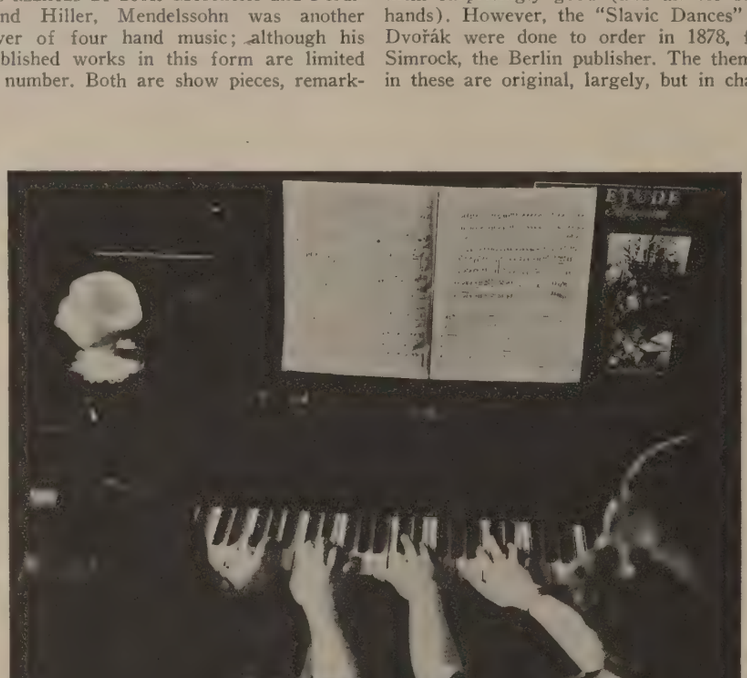
This interesting picture shows how Duet Playing always is a source of Musical Joy

And why? Because we must take into consideration the tonal balance, the coloring and the registers of the piano. Generally speaking, the piano has four distinct registers, although the points of demarcation are not rigidly distinct. Let us discuss these registers, beginning at the top of the keyboard. The topmost register is that "glassy" or brilliant one, dear to the hearts of the finishing school misses of the middle of the nineteenth century; the vehicle for all the music-box imitations from Poldini to Liadoff: and still useful for a variety of purposes, as we shall see. Then comes the melodic or the treble (as you please) register. In spite of Chopin's fondness for tunes in this register, we are inclined to distrust it, it is so likely to be submerged by too heavy accompaniments in other registers. Just try to make the theme of Chopin's *Nocturne in D flat* stand out properly against that spread out accompaniment. We heard it done the other day with the treble part *piano* and the bass *forte*. Not so good! We do not like the so-called "large tone" of the modern *virtuosi;* it is just pounding after all, say what you please. With safety, one cannot force a piano.

The next might be named the baritone register, the one so much preferred by Franz Liszt for the delivery of so many melodies, both original and transcribed; one recalls at once the famous *Love Dream* and Wagner's *Evening Star*. In four hand music, as we shall see, this register is of use in delivering melodies or countermelodies, and in backing upon strengthening melodies assigned to other registers. And now our final register is the bass, the real bass.

Now let us examine our scoring of that C major chord. To get this, we have employed sixteen fingers. Why not eighteen? Let us see. We have used up our complete chord, octave position for the right hand (*Primo*); fifth position for the left hand (*Primo*). This closeness of the parts is desirable in the upper two registers. Had this chord been a Dominant Seventh (or other dissonant combination), we could have used up the remaining finger in either hand for the dissonant member. And now for the *Secondo:* in the lower two registers it is undesirable to bring the members of chords too closely together, even in a full passage. We know that it is done, but it is never good. Moreover, the third of any chord being its most prominent member, it need not be doubled further; whereas, the fifth and the root may be doubled almost at will. In the lowest register, intervals of less than a perfect fifth are apt to sound tubby.

Exploring New Fields



UNFORTUNATELY, in the earlier works on piano music or piano playing, little is said about the matter of four hand pieces, either original or transcribed; consequently, it becomes more interesting for us to delve into this earlier history for ourselves.

Continuing our survey of the classic composers, we find nothing of original four hand music by Haydn, and not a great deal by Beethoven. The latter probably had his head too far up in the clouds to be bothered with it. However, we may make mention of his only "Sonata for Four Hands, Op. 6" (effective in its way, but hardly an improvement upon those of Mozart); his three *Marches, Op. 45* (the real Beethoven, this time) of which No. 3 is the best; and two sets of *Variations*. But Beethoven's very capable, though unfortunately overshadowed contemporary, J. N. Hummel (1778-1837) did write acceptable four hand music. We have in mind, in particular, the beautiful "Sonata in A-flat, Op. 92," with its fine slow movement, delicately embroidered in the classic style.

But the first great genius of four hand music was unquestionably Franz Schubert. It is on record that he was extremely fond of four hand playing; just another one of us enthusiasts. Many seem to have overlooked the fact that his now celebrated *Military March* (in D) was originally for four hands; and, in spite of its many arrangements and derangements, it is still best in this form. Note in this number Schubert's fine feeling for the registers of the piano and the clever twists of his harmonies. All of his marches, in fact, are worth while. And the polonaises; there is a beauty in *Polonaise, Op. 61, No. 1* (D minor), remarkable for its piano orchestration. On hearing the Schubert marches, Chopin is said to have exclaimed: that they made him "see the passing by of the whole Austrian infantry, its bayonets garlanded with strings of sausages!"

And Richer Treasures

AS RELATED BY BOTH Moscheles and Ferdinand Hiller, Mendelssohn was another lover of four hand music; although his published works in this form are limited in number. Both are show pieces, remarkable in construction, the *Variations, Op. 83a* (rearranged from solo form) and the *Allegro Brilliant, Op. 92*. The latter especially requires deft and refined treatment in performance.

Hands are the Keys to many Musical Thrills

And Schumann? Oh! much may be looked for from that genius and prophet of the Romantic School. And we are not to be disappointed. His fine perception for the orchestration of the piano is nowhere more in evidence than in his "Pictures from the Orient, Op. 66." Of these six pieces, Nos. 4 and 6 are the gems. In addition to their richness of coloring, both are noteworthy as examples of modern part writing (free counterpoint) as applied to the several registers of the piano. So intimate are their effects that they have tempted but little the transcribers and arrangers. As to his "Twelve Pianoforte Duets, Op. 85," there is a little joke about the gem of this set, *Evening Song, No. 12*. It is for three hands, not four (the left hand of the Primo player does not participate). But what a piece! It has been arranged for nearly everything under the sun, though very few know whence it actually comes.

But, when we leave the classic transitional and romantic schools and approach the modern writers, we come upon a veritable treasury of four hand excellence.

So now, Brahms! This composer, hailed by Schumann as the legitimate successor of Beethoven and welcomed at once by serious musicians, grew but slowly in public esteem until the publication of his famous "Hungarian Dances" in 1869; dedicated to Mme. Clara Wieck Schumann. The touching lifelong friendship between Brahms and the widow of Robert Schumann is one of the most beautiful in musical history. In these pieces we find the scoring for four hands so admirable that we prefer them as they stand to any and all arrangements even for large orchestra. Only in the case of the shorter dance, in A major, are the themes actually traditional. The themes from the remaining dances are taken from such lesser lights as Keler Bela, Ritzner and others. The very successful advent of the "Hungarian Dances" was followed by a whole series of national dances, most of them surprisingly good (and all for four hands). However, the "Slavic Dances" of Dvořák were done to order in 1878, for Simrock, the Berlin publisher. The themes in these are original, largely, but in characteristic vein. It is seldom that a work written to order is so successful, but these pieces are worthy, giving joy to many.

The Later Composer Is Generous

AND THE SUBJECT of national dances brings us to composers still more modern, right into the midst of the nineteenth century. If the late Moritz Moszkowski (1854-1925) had written nothing else, his "Spanish Dances," for four hands originally, alone would have made him famous. They seem to have been arranged for everything under the sun. When certain of the Spanish cavil at these dances as not being of native timbre, our reply is that it is a pity they did not engage Moszkowski to write their music for them. At any rate, this composer seems to have developed a flair for composing in the styles of various nationalities; witness, for instance, his suite "From Foreign Lands, Op. 23," every number in which is a gem; and his "Hungarian Dance, Op. 11, No. 3," we have heard students call this later a "wow." So far, no composer, great or small, has shown a keener instinct for the tonal requirements of four hand "settings" than did Moszkowski. And, by the way, the occasional cross-hand effects found in the pieces of Brahms, Moszkowski and others are there for a purpose: the better to bring out certain effects, themes, counter-themes, and important passage work. For the origin of this device we must go far back to S latti; but we like it.

We have admired often the photogr of Grieg and his wife seated at the pi two artists in domestic musical felic just another pair of "us fans." Grieg, of the most subtle of all harmonists, m a valuable contribution to our national in his "Norwegian Dances." Fortunat too, he made effective four hand arra ments of some of his other impor works. And, to go back a little, Ru stein's gorgeous *Bal Costume, Op.* makes another famous addition to original four hand repertoire. Num seven of this set, *Toreador et Andalo* is the best known. It is a model of colo construction.

There are certain composers of the tury just passed who have proven spicuous in four hand writing; some them might otherwise have been forgot Adolph Jensen wrote beautiful songs, heard nowadays, but his *Wedding M* has become a standard duet number; likewise his *Evening Music*. Heinrich mann's "Love Story" is a fine group, best movement of which is the *Barcar* There is a *Landler* by Bargiel that we also a *Gavotte* by Scharwenka, an *Rigaudon* by Chaminade. The four h pieces of Robert Volkmann are extren good, *The Russians are Coming*, from " 11," being one of his best. Then there a fine set of pieces by Berthold Tours should be heard more often. This compo a disciple of Gounod, is better known his church music; he was for many ye the critic for Novello in London.

And Americans Also

ALTHOUGH OUR OWN E. A. MacDo gave but little attention to four hand mu his "Three Poems, Op. 20" is a fine wo its second number, *Tale of Chivalry*, b very interesting. In these latter days hear but little of Louis Moreau Gottsch another American, the first of what might call the "multiple pianists," fond leading groups of a dozen or so play the pioneer of all the hippodromists to-day. His *Ojos Criollos—a Cuban Da* is a masterpiece of its kind.

The contemporary "modernists" h pretty well kept their hands off four h music; but we regard very highly "Three Dances" of Cyril Scott. They g on one.

And of four hand arrangements? T name is legion. Practically all of the st ard classics, large and small, have arranged and printed for four hands, ev thing from symphonies down to piano s Some arrangements are very good ind but many are awful. To arrange well, quires both insight and imagination, technical skill. The combination is As a matter of fact, it is possible, altho not always desirable, to arrange any c position for four hands. Some pieces s just to cry for it, while others are tively repellent. In spite of all disad tages, however, it is wonderful to hav many art works brought so close at ha and we can pick out our favorites as go along. The symphonies and overt are particularly useful. Most of Hay symphonies go well, and even Moza but of Beethoven's we like best "Fourth," "Fifth," and "Seventh," in order named; especially the first mentio which sounds almost like a piano p Schumann's "Symphony No. 1, in B- is a good one, and so are Mendelsso "Scotch Symphony" and "Italian S phony." We like best, for four hand p ing, Brahm's "Symphony No. 1, in minor"; and most of Tschaikowsky's w out well, but they are ticklish in s Dvořák's "Symphony 'From the N World,' in E minor" goes rather well. standard overtures are good fun; espec the Italian and French, which are bril

Music Written About Abraham Lincoln

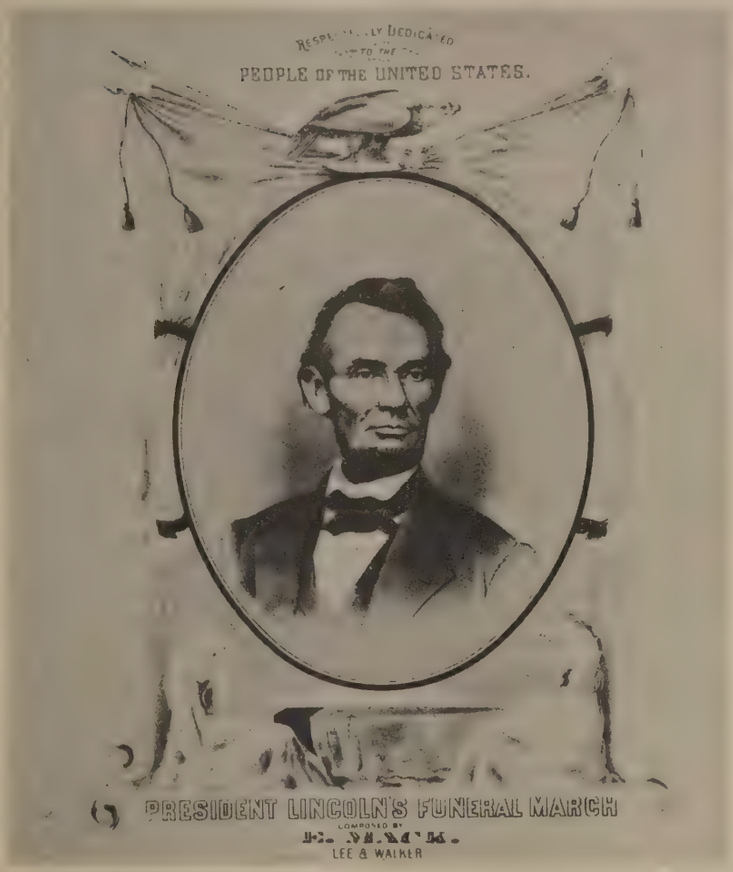
By PEARL BROWN BRANDS

THE FIVE HUNDRED and some compositions that refer to Abraham Lincoln hold a unique place among published music of this country. There no other so large group of popular songs instrumental numbers relating to at national figure. There is no other up of popular music so important to dents of history as well as to students music.

The musical compositions written about ncoln reflect the man and his relationship his times. The songs give a surprisingly nplete story of the most important part Lincoln's life, for they deal with every nificant event influenced by him from time he was nominated for the presicy in 1860 until his assassination five rs later. Lincoln musical pieces consti- e an *obbligato* to the history of the Civil r, because they narrate a great many idents of the Great Conflict between the rth and the South.

Music written about Lincoln by his conporaries reveals the kinds of music ular during the Sixties, the creators of pieces, and the use of songs to influence record the sentiments of the people subjects of national interest. At no other iod in this country have music publish- houses been so important and influential building and reflecting public and politi- opinion.

Songs and instrumental numbers relating Lincoln are of further interest because portraits of the Civil War President d on some of the title covers are among best in existence.



The songs written about Lincoln include nination and campaign pieces, presitial hymns, emancipation songs, min- el and comic selections, war and morial numbers. Lincoln instrumental ces, some of which are arranged for hestra and band as well as for the piano, sist mainly of marches. There are some kas, schottisches and quicksteps for the no and a few preludes for the organ.

The occasion referred to in the largest nber of these musical publications is death of Lincoln. Nearly fifty funeral rches and over thirty memorial songs re written shortly after his assassination.

A Man of the People

ST OF THE MUSICAL PIECES relating to ncoln were published between the years 1860 and 1865. Such a large number of gs and instrumental numbers were writ- about Lincoln by his contemporaries ause he was intimately connected with many events of national significance. d in those days no issue of national portance was decided without there being sical pieces published to influence and ord the opinions of the masses. Thus, ncoln's nomination for the presidency of United States, his campaigns and elec- ns, his part in the Civil War, his ancipation of the slaves and his assassi- ion, all were sheet music headlines dur- the Sixties. The songs written about Civil War President by his contem- aries are the media that express most urately the appraisal of Lincoln by his low countrymen.

Among the earliest pieces relating to ncoln were Rail Splitter polkas and ottisches and Lincoln quicksteps. *The eam Grand March* was composed after

ABRAHAM LINCOLN

One of the best portraits extant of Lincoln is found on the title page of "President Lincoln's Funeral March," which was composed shortly after the Civil War President was assassinated.

Lincoln was nominated for the presidency in the building at Chicago called "The Wigwam." A great many of the political campaign songs written in 1860 referred to Lincoln as "the rail splitter." This was to be expected, because Lincoln was called "the rail candidate for president." Members of the Wide-Awake Clubs, which were helpful in electing Lincoln to the presidency, wore badges picturing Lincoln splitting rails. These organizations owned Lincoln rails which they accorded a place of honor on all public occasions.

"Honest Abe" is the other appellation most frequently used in early political campaign songs referring to Lincoln. One of the best known of the songs which emphasized Lincoln's reputation for square dealing was Edmund Clarence Stedman's *Honest Abe of the West.* This ringing campaign song was sung to the air of *The Star Spangled Banner.* Here is the first stanza:

Then on to the holy Republican strife!
And again, for a future as fair as the morning,
For the sake of that freedom more precious than life,
Ring out the grand anthem of Liberty's warning!
Lift the banner on high, while from mountain and plain,
The cheers of the people are sounded again:
Hurrah! for our cause—of all causes the best!
Hurrah! for Old Abe, Honest Abe of the West.

In several musical pieces published during the Sixties, Abraham Lincoln was spoken of as "father," a term that was popularly applied to him early in the Civil War. The most famous use of this parental term was in the marching song entitled *We Are Coming, Father Abra'am,* the words of which were written by James S. Gibbons of New York, in 1862. One of its several musical settings was composed by Stephen Collins Foster.

Gibbons, who was known as a writer on financial topics, wrote his rallying song after President Lincoln issued a proclamation calling for three hundred thousand more troops. After being published anonymously in *The New York Evening Post,* Gibbons' poem was at first credited to William Cullen Bryant, editor of *The Post* at that time. In fact, Bryant received such widespread credit for the words that he published a note stating that he was not the author of them.

We are coming, Father Abra'am, three hundred thousand more,
From Mississippi's winding stream and from New England's shore;
We leave the plows and workshops, our wives and children dear,
With hearts too full for utterance, without a silent tear.
We dare not look behind us, but steadfastly before—
We are coming, Father Abra'am, three hundred thousand more.

This song was so suited to the times that it soon became famous. By helping to fill the ranks of the Grand Army of the Republic, the song performed a very important service at a most critical period in the history of the country. *We Are Coming, Father Abra'am,* was often sung by the soldiers of the North to keep up their morale.

Other Lincoln pieces evoked by the Civil War included *Our Flag, Our Army and Our President; Rebellion's Weak Back; The Old Union Wagon,* and *Lincoln-Union-Victory.* Campaign songs set to familiar tunes were sung by soldiers of both the North and the South. And so it was only natural that words referring to Lincoln were set to such popular tunes as *Marching Through Georgia* and *Maryland, My Maryland.*

It is a tribute to Abraham Lincoln that very few pieces of Confederate music contained remarks about or references to him. Probably the most popular Confederate song that did mention the Civil War President was one entitled *Abe-ied,* written in the year 1861. The beginning lines indicate the sentiment which existed in the South when the Civil War started:

Abe Lincoln was a citizen of very small renown,
A railing abolitioner, of little Springfield town;
Abe's party said, 'November comes, now Abe, don't let us fail
To meet the other parties all, and beat them with a rail!'
November came, the rogues turned out, and yet 'twas not allow'd
That Abe should come, lest Abram's face should fright away the crowd!

Because minstrel songs were very popular during the Civil War period, it was only natural that ones referring to Lincoln should be written. One of the most popular of these minstrel songs was *Abraham's Daughter* or *Raw Recruits,* which was sung in several versions. *The Black Brigade,* written by Dan Emmett, and *Abraham's Tea Party* were also widely sung. Here is the first stanza of *Abraham's Tea Party,* which was written in 1864:

We're going down to Dixie, boys,
Upon a little ride,
Our knapsacks on behind us, boys,
And sabres by our side;
Our Abraham invited us,
Three hundred thousand strong,
To come to tea, and here we are,
We're coming right along.

Other well known minstrel songs referring to President Lincoln included *We'll Fight for Uncle Abe; The Arms of Abraham; '63 Is the Jubilee; De United States Hotel, How Are You, Green-Backs,* and *A Soldier in De Colored Brigade.* The music of the one last mentioned was composed by Stephen Collins Foster.

Numerous musical numbers referring to

Lincoln were written after he signed the Emancipation Proclamation in 1863. Two of the most popular of these pieces were *Emancipation Quick Step* and *Old Abe Has Gone and Did It, Boys.*

A song entitled *The President's Hymn—Give Thanks, All Ye People* was written after Lincoln issued a proclamation recommending a general Thanksgiving on November 26, 1863. By setting aside that date as a day of thanks, Lincoln established the custom of celebrating a national Thanksgiving Day in the United States, each year on the fourth Thursday in November.

Many songs were written in favor of and a few in opposition to Lincoln during the presidential campaign of 1864. The Nomination song of that year had the dignified title of *Three Offerings to Thee, Goddess of Liberty.*

Other songs written to effect the re-election of Lincoln as president included *Three Cheers for Abe and Andy* and *Abraham the Great and General Grant his Mate.*

Music to a Martyred President

IMMEDIATELY FOLLOWING Lincoln's death there appeared the greatest outburst of musical publications this country has ever seen. Composers and poets of almost every degree of ability tried to express in sheet music the nation's grief for its assassinated leader.

It is no wonder, though, that so many memorial songs and dirges were written in reference to Lincoln, for his death was deeply mourned throughout the nation. Perhaps another reason why a large number of Lincoln mourning pieces were written was because Lincoln had always preferred sad, plaintive music, having for its theme the rapid flight of time, decay or death. Knowing Lincoln's musical preferences, many of his fellow men probably felt that funeral songs and marches would be the media through which they could best express their high appraisal of him.

Some of the musical numbers written just after Lincoln's assassination were *Our Noble Chief Has Passed Away; We Mourn Our Fallen Chieftain; Toll the Bell Mournful; A Nation Mourns Her Chief; A Nation Weeps; A Nation Mourns Her Martyr'd Son;* and *Little Tad.* One of the most expressive of all the memorial songs written in reference to Lincoln was *Farewell Father, Friend and Guardian,* the music of which was composed by George F. Root. Many of the mourning songs and marches were written to be used at the funeral ceremonies and memorial services which were held honoring Lincoln in various cities throughout the United States.

One of the most unusual pieces of music relating to Abraham Lincoln is entitled *President Lincoln's Own Favorite Poem.* It was first set to music by A. Sedgwick. This piece of music, published in 1865, gives the Emancipator's own personal views toward life.

The poem, called *Oh! Why Should the Spirit of Mortal be Proud,* was for many years a great favorite with Lincoln. "The poem was first shown to me when a young man by a friend," Lincoln himself said concerning it, "and which I afterwards saw and cut from a newspaper, and learned by heart. I would give a great deal to know who wrote it, but I have never been able to ascertain." The words of this poem were written down by Mr. Sedgwick as recited to him by Lincoln while he was President. Here are the beginning lines:

Oh why should the spirit of mortal be proud?
Like a swift flitting meteor, a fast flying cloud;
A flash of the lightning, a break of the wave,
He passeth from life to his rest in the grave!
The leaves of the oak and the willow shall fade,
Be scatter'd around and together be laid
And the young and the old, and the low and the high,
Shall moulder to dust, and together shall lie.

It was not till in 1909 that much more music was written about Lincoln. In that year several compositions were written specially to be used at services held to celebrate the centennial of Lincoln's birth. The most famous poem written at this time, Walt Whitman's *O Captain, My Captain,* was set to music by Joshua Phippen. One of the best known marches published in 1909 was the *Lincoln Centennial Grand March,* composed by E. T. Paull, creator of such popular marches as *The Burning of Rome* and *Ben Hur Chariot Race.*

During the World War there were written several patriotic songs which referred to Lincoln as an example and inspiration. Some pieces of Lincoln sheet music published during the World War or since then include *The Name of Abraham; We're Bound to Win with Boys Like You; Lincoln's Log Cabin March; Abe Lincoln; Lincoln Highway March* and *Abraham Lincoln and his First Sweetheart, Ann Rutledge.* One of the best known of modern Lincoln pieces is *Give Us Just Another Lincoln,* by Paul Dresser, of *On the Banks of the Wabash* fame.

The fact that numerous musical compositions written in recent times refer to Lincoln indicates that his influence has continued to grow since his death.

Ephemeral Art

MOST OF THE MUSICAL PIECES written about Lincoln by his contemporaries were popular for only a short time and then dropped. The chief reason for this was that the songs were written on subjects too timely and too localized to become popular throughout the entire country. The very references that made the songs popular at the time they were written caused their favor to be short-lived. Their sentiment exactly suited the particular period at which they were written, but their sentiment was not typical enough of all times for them to be universally popular in later years.

As indication of this characteristic, note two songs which were very popular and influential during the Civil War—James S. Gibbons' *We Are Coming, Father Abraham* and Dan Emmett's *Dixie Land.* Gibbons' rallying song was used only during the War because it referred specifically to Lincoln's call for more troops. The words were very inspirational at the time they were written, but after the war was over people did not continue to sing

We are coming, Father Abra'am, three hundred thousand more,
From Mississippi's winding stream and from New England's shore.

On the other hand, Dan Emmett's *Dixie Land,* the popular song of the South during the Civil War, has continued to be popular during the years, since it was written because it contains sentiment suitable to be sung any time and does not refer to incidents of the Civil War.

The persons whose names stand most prominently and most often as creators of tunes or verses relating to Lincoln are: Henry C. Work, George F. Root, E. Mack, J. W. Turner, Stephen Collins Foster, Mrs. E. A. Parkhurst, Walt Whitman, Sep Winner and Dan Emmett. Whitman is the best known of the poets who wrote the words of pieces of Lincoln sheet music.

By Lesser Lights

THE CREATORS of many of the musical compositions relating to Abraham Lincoln were musicians of little renown, as is the case with the creators of most of the popular music of any period. It is, however, significant to note that a number of Lincoln pieces were written by persons who wrote some of the most famous sentimental and patriotic songs of the day. Well known song writers and composers such as Root, Work, Foster and Emmett wrote sheet music relating to the Civil War President.

George F. Root was America's foremost writer of war songs during the Sixties. Among his sixty compositions were such famous ones as *The Battle Cry of Freedom; Just Before the Battle, Mother; The Vacant Chair* and *Tramp, Tramp, Tramp.* Root's eloquent musical appeals for enlistments became the prevailing sentiment of the American people, influencing thousands to rally around the flag.

Dan Emmett wrote the words and music of *Dixie Land,* the most popular song of the South during the Civil War. Emm was a member of Dan Bryant's fam Minstrel Show which sang the planta songs that were so popular during Sixties.

Henry Clay Work was the compo who won greatest success with his so during the War between the States. wrote numerous popular patriotic homey songs, such as *Marching Thro Georgia* and *Wake Nicodemus.*

Stephen Collins Foster, famous for songs as *Old Folks at Home* and *My Kentucky Home,* is one of the most ular song writers America ever had. Fo composed the music for these five so which refer to the Civil War Presid *Better Times Are Coming; The Song all Songs; Little Mac! Little Mac! Yo the Very Man; A Soldier in De Col Brigade;* and *We Are Coming, Fa Abra'am.*

The portraits and designs used on title covers of Lincoln sheet music are interesting. Some of the portraits of coln that were lithographed on m covers are as fine as any made for fram The pictures shown on many of the co illustrate the incident or event writte in the song. An example is the interes title cover of *The Old Union Wagon.* pictures a wagon that has its soutl wheel hub-deep in secession mud. horses, named for famous Northern erals, are driven by General Linc Uncle Sam is shown trying to pry southern wheel out of secession mud using a rail labelled "Emancipation Pro mation."

The symbolic figures commonly use the covers of sheet music published du Lincoln's lifetime included flags, ea rails, Columbia, stars, greenbacks Negroes. Mourning figures and broken umns and the American flag were use most of the covers of sheet music wr after Lincoln's assassination.

The covers of comic songs show amu political cartoons.

There is no known reference made Lincoln to the musical pieces written a him by his contemporaries. Perhaps to be expected that he would not men them in correspondence or manuscripts, he was not inclined to mention anyt which would bring himself into promine Perhaps Lincoln did not realize just many pieces of music related to him.

The many musical compositions refer to Lincoln are interesting as well as portant sources of material for stud of history and students of music. T pieces give insight into the political musical history of the Civil War per and they contain valuable biographical terial and excellent portraits of one of world's greatest national heroes.

THE THRESHOLD OF MUSIC

Owing to certain editorial commitments, it was found impossible to include the regular installment of Mr. Lawrence Abbott's "The Threshold of Music" in this issue. The series will be continued in March, and regularly thereafter.

Do You Know

THAT ERIK SATIE, the noted French ernist, is of Scotch descent? That a his scores were written in red ink? a noted American critic once said of "Let us hope he will get 'in the b some day?"

That all of the four children of M Pauline Viardot-Garcia (daughter of famous Manuel del Popolo Garcia, sister of Mme. Malibran and of Ma P. R. Garcia the teacher of Jenny L are professional musicians? That three teachers of singing and one is a violi

That a famous musical lexicon con the well known English names in the lowing proportions: Smith 20, Brow Jones 11, Johnson 9, Williams 13, Ha 6, Robinson 5, Baker 5, Davies 6. In same dictionary there are twenty-Bachs?

"Let the love of literature, pain sculpture, architecture and, above all, m enter into your lives."—Theodore Roose

Progressive Steps to Velocity

By W. WARD WRIGHT

EVERY STUDENT of the piano must be sooner or later able to play fast and with ease, if he is to advance beyond the first or intermediate ages of study. And yet neither endless ours of mere repetition nor the practice purely mechanical studies labelled School of Velocity" will actually produce locity itself. Nor will that popular dagogical advice, "practice slowly," enble the earnest seeking student to experice a quickly played and evenly controlled ssage, with ease and certainty. True, w practice, so necessary at first and inrmittently thereafter, has its distinct adntages; for only by this means can we come acquainted with the successive keyard intervals of a passage, correct finrings, and so on. But, because of the ry nature of things, even slow practice no sure panacea for all pianistic ills. For, one uses incorrect muscular touch formaons when practicing slowly, how can he pe to eliminate such misdoings when he tempts velocity?

One must experience velocity produced ith the proper actions and inactions, the cessary exertions and relaxations, and ith that indispensable coördination of mind d muscle that will enable him to know w velocity correctly accomplished actlly feels. For, in the final analysis, veloc- in single note passages (as well as in ery kind of technic), is a sensation. Ined it is a knack. And yet any attempt to scribe such a sensation is quite impossle; but what can be prescribed for the dent is a knowledge of key and limb quirements in successive stages that will able him to know when and how to do e right thing that will result in acquirg this sensation. For, given a correct aying mechanism, fast playing becomes rely quick thinking. Furthermore, one ould be aware of what constitutes wrong nsations, so that he may know what to oid.

Preconditions Important

EP I. FIRST OF ALL one should be able to lax consciously the whole arm from the oulder to the tips of the fingers. So free d complete indeed should be this relaxam that, if someone were to lift the arm rward in this condition and then suddenly it drop, it would swing, much as a susnded plumbline, from the shoulder back d forth until it again would come to rest m sheer inertia. This accomplished, we uld lift the forearm to an approximate rizontal and allow this same suspended ight to hang loosely from the shoulder, ile the hand should "dangle," as it were, m the wrist.

Step II. Now with these three hinges se (arm at shoulder, elbow and wrist), the reader lower the forearm slowly that the hand is caught up by the invening keyboard. Continue this lowering the forearm until the keys only begin give way beneath this resting weight of e hand. If one has a small hand, the forem must be lowered a trifle more than for larger hand (which has more weight), d there consequently will be resulting a lative lower and higher position of the rist. In no case, however, should the rist be set or "fixed" (lower or less so), r an absolutely relaxed wrist is indisnsable at all times. If the reader accomplishes this very important step correctly, there will be a feeling as if the hand were suspended between the keyboard (on the finger tip end at key surface level) and the delicately poised forearm (at the wrist). Only after these preconditions are thoroughly understood and mastered may the player be said to be ready for practice or performance.

Single Key Treatment

STEP III. NOW LET THE READER take hold of any key with, let us say, the second finger and very slowly float (not strike) the key downward so that no tone at all is heard. At once he will perceive that the key does offer some resistance, though it may seem only a very little. (This resistance is of course variable as different instruments have not all the same weight of action.) Again let him float the key a trifle more quickly so that a *pianissimo* tone is produced, and immediately cease this exertion at that place in key descent where tone is realized. A soft *staccato* tone results. Then very quickly float (not jerk) the key and at once cease all such exertion at tone emission. A loud *staccato* tone results. Furthermore there will be a slightly visible upward reaction at the wrist. Thus we learn:

1. That the key does offer some resistance even in the faintest *pianissimo*.
2. That tone is accomplished at a definite point (tone production point) in key descent.
3. That the amount of tone depends upon the quickness with which we use the key.
4. That *staccato* results by ceasing all energy at this point. We can not make *staccato;* we only can permit the key to rise of itself and thus damp the string into silence. Wherefore it not only is useless but also fallacious to jerk the finger up, a wrong and opposite muscular action from that required to produce tone. In all passage work, this simultaneous flexing of the muscles used to lift a finger, with the flexing of those muscles needed to sound tone with another finger, will inevitably result in a muscular tug-of-war across the wrist—in short, in a stiff wrist.

The sensations are these:

1. We must feel the key at key surface level (touch sense) as this tells us that we are ready to use it.
2. We must feel the key's resistance as we are using it, for only thus by estimiating the key's resistance can we hope to estimate either the kind or amount of tone desired. And we must try the while to perceive that we are actually throwing, by means of the key, the felt hammer (which we cannot see) to the string.
3. We must feel the place where tone sounds, realizing that instantly therefore we must relax or cease the tone making impulse.
4. We do feel keybottom, though only very lightly, whether we have floated the key gently for a soft tone or quite vigorously for a loud tone. Be sure therefore never actually to bump keybottom, and thus misfire upon keybeds the tone producing impulse and intention.
5. And we should feel the finger even ride up on the key.

These requirements and sensations, understood and experienced, form the basis of all real agility and velocity. Without this basis no player can hope to succeed pianistically.

THAT ALL MAY SEE THE ARTIST'S HANDS

Because all admirers and students at a piano recital want to sit on the left side of the auditorium, to see the artist's hands, and because the other half are denied this pleasure, Dr. Thomas C. Poulter of Chicago has worked out a solution. By placing a large mirror back of the instrument, and at a proper angle, the hands are visible to the entire audience, as is seen in this portrait which shows the inventor demonstrating his device assisted by Florence Kirsch, local concert pianist.

But what of the sustained tone which is necessary for all *legato* passages? The finger uses the key exactly as for *staccato* but continues only the minutest residue of the muscular finger exertion required to produce tone, to remain at keybed in order that the key might be prevented from rising.

Thus we learn that to produce tone (either staccato or sustained), the muscular requirements are identical; while for staccato we merely cease all such tone producing impulses immediately at sound, and for the sustained tone retain only that very small residue of such tone producing impulses necessary to prevent the key from rising. In fact it takes less muscular exertion to keep a key depressed than to sound a tone at its softest. He who keeps in all kinds of technic this necessary short lived tone producing impulse as something apart from that very light continuing impulse to sustain tone, is well on his way to forming correct muscular habits. Furthermore, this timing of each impulse constitutes a rythmical act without which evenness and control are impossible.

Notes in Succession

STEP IV. OUR NEXT STEP, notes in succession, involves another muscular principle known as forearm rotation adjustment. However like it may seem on the printed page that velocity passages consist of a series of individually played notes, such is not actually the case. Rather indeed must we realize that all music is progression or movement forward and to a definite point, and this is no less so pianistically than musically.

Perhaps there is no part of the mechanics of touch so misunderstood, misrepresented or misused as is that of forearm rotation. Doubtless the reason for this lies in the fact that many have attempted to learn and to teach correct doings at the keyboard solely from the standpoint of movement. And yet, just as we can see the wheels of the locomotive move without in the least understanding their motivating power, so also we might see certain movements in velocity (mainly those of the finger) without really ascertaining the causes, mostly hidden within the sleeve of the performer, that aid and result in such movements.

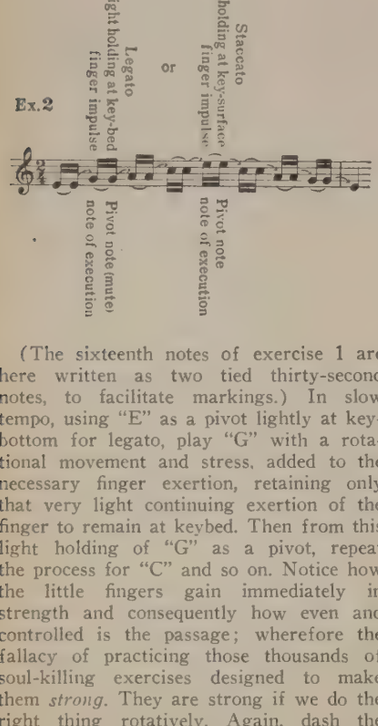
In single note velocity passages there are three ways in which rotation can be and often is misapplied; namely,

1. Rotational "fixation";
2. Substitution of a pure rotation touch in passages demanding a so-called finger touch.

and 3. Wrong rotational impulses by direction.

Rotational "Fixation"

TAKE FOR EXAMPLE the following chordal figure;



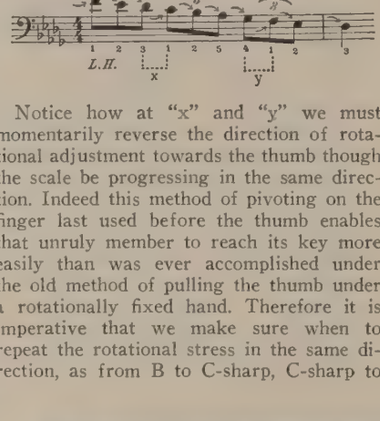
Place the hand over the figure so that it has the feel of grasping the whole chord at one time. Then, maintaining this grasp, play the notes as written, in slow tempo and in fast tempo, either *staccato* or *legato*, breaking the grasped chord, as it were.

Remember however in this experiment to use the correct finger impulses (See Step III). Notice how weak the fourth and fifth fingers seem. This is rotational fixation, and must be avoided at all times; though it may afford the player the very doubtful pleasure and gratification of being able to hold the proverbial penny on the back of his hand.

Now on the other hand, think of the foregoing exercise as a series of two-note intervals such as

Ex.2

(The sixteenth notes of exercise 1 are here written as two tied thirty-second notes, to facilitate markings.) In slow tempo, using "E" as a pivot lightly at key-bottom for legato, play "G" with a rotational movement and stress, added to the necessary finger exertion, retaining only that very light continuing exertion of the finger to remain at keybed. Then from this light holding of "G" as a pivot, repeat the process for "C" and so on. Notice how the little fingers gain immediately in strength and consequently how even and controlled is the passage; wherefore the fallacy of practicing those thousands of soul-killing exercises designed to make them *strong*. They are strong if we do the right thing rotatively. Again, dash the figure off fast, allowing the rotary movements to be overbalanced, as it were, by finger movements only; but maintaining the same feeling of two-note interval progression as in slow tempo. Indeed this hidden rotary adjustment must be forthcoming in all single note velocity passages, though usually not displayed to the onlooker by any movement whatsover.



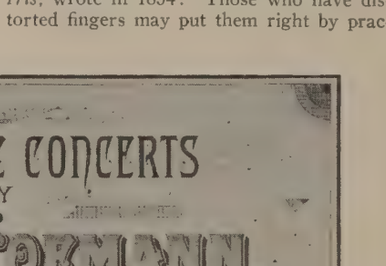
Again, play the exercise *staccato*, both in slow and fast tempos, in this case allowing the pivoting to be accomplished from key surface instead of key bottom as for *legato*. Thus we learn that *legato* has its elements of *staccato;* namely, that we must cease (as for *staccato*) the true tone making impulse of the finger at sound, allowing only a very light continuing exertion to keep the key depressed. Keep, therefore, these two impulses separate and distinct in this "artificial" *legato*. And we learn also that *staccato* has its *legato* elements; namely, that we do connect the key surface of the key just played (from which we pivot) with the next key as we use it. In other words, we must feel the interval though the tones are disconnected.

Incorrect Rotation-Touch Substitution

NOW LET THE READER slowly play the same exercise with rotational movement and stress only, disregarding the correct finger movements and impulses with the key (Step III). At once his playing degenerates into a sort of rotational stamping not unlike a rimless wheel whose spokes bump along on the ground. Therefore the player never must seek to displace the need for the fingers to act "on their own" by such incorrect rotary application. Rotation in all finger velocity passages is a coördinating factor; and it is this combination and coördination of correct finger impulse and free rotary adjustment (usually invisible) that form the secret of all evenness, control, and ease in velocity. It is beneficial, however, in slow practice to use rotary movement, for this makes for rotational freedom; but when playing fast, we are forced to dispense with such movements (there is not time for them) though the hidden in the arm adjustments remain.

Let us for the moment consider the two following scale passages which, being symmetrical keyboard patterns, afford identical problems for the two hands.

Ex.3

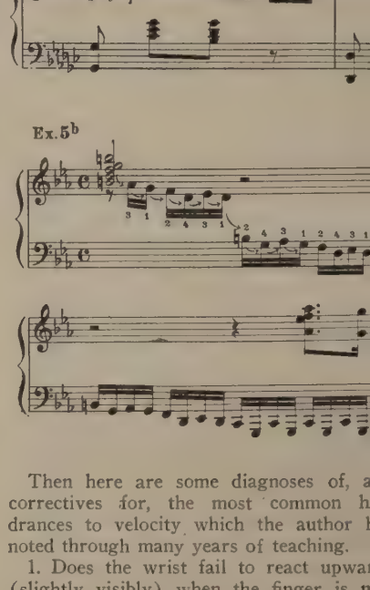


Notice how at "x" and "y" we must momentarily reverse the direction of rotational adjustment towards the thumb though the scale be progressing in the same direction. Indeed this method of pivoting on the finger last used before the thumb enables that unruly member to reach its key more easily than was ever accomplished under the old method of pulling the thumb under a rotationally fixed hand. Therefore it is imperative that we make sure when to repeat the rotational stress in the same direction, as from B to C-sharp, C-sharp to D-sharp, and when to reverse this adjustment momentarily in the direction of the thumb as at "x" and "y." Be sure, however, not to flop rotatively on the thumb; make it act independently.

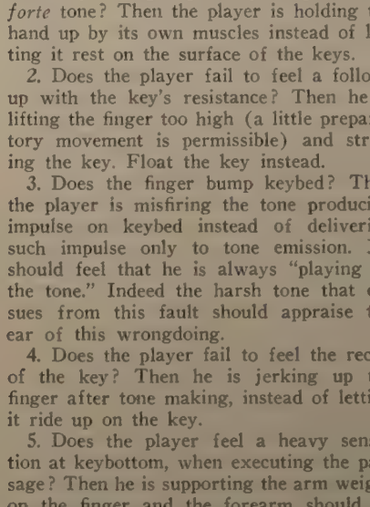
Rotational adjustment therefore, whether visible or invisible, is always from the last finger used towards and with the next finger used, no matter what the nature of the passage.

It matters not, therefore, whether we play a simple five finger exercise in fast tempo in which these rotary movements become entirely hidden and overbalanced by finger movement only, or whether we are forced to exhibit such rotary adjustments as actual movements in passages of widespread intervals, rotary adjustment must be forthcoming at all times.

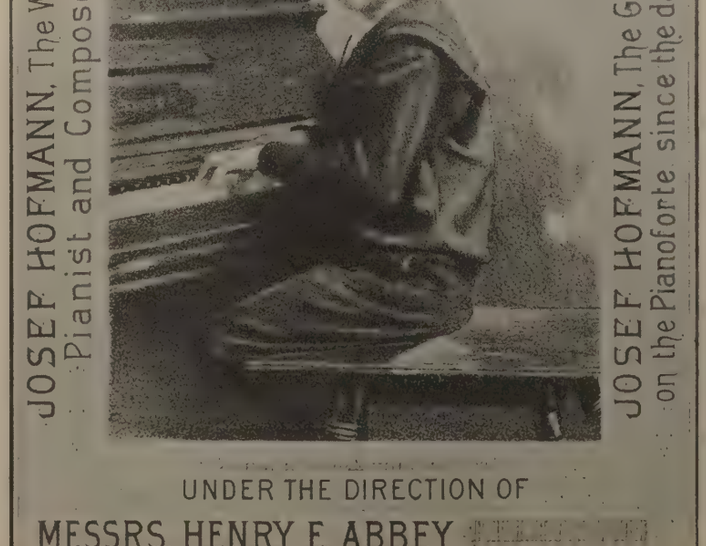
It is little wonder that such a passage of widespread intervals, such as the Chopin *Etude Op. 10, No. 1,*



Ex.4



"excited the wrath and contempt of Rellstab"; for, at the very first attempt to play the passage, away goes the penny from the back of our hand. Indeed the aforementioned gentleman, who was editor of the *Iris*, wrote in 1834: "Those who have distorted fingers may put them right by practicing these studies (the Chopin "Etudes" but those who have not should not p them; at least, not without a surgeon hand." And yet who can forget the ast ishing ease and facility with which t master of the keyboard, Godowsky (wh hand is notedly small), plays this *Etu*



Rotary movement, therefore, must im rotational adjustment, whence the value practicing slowly all passages with s movements; while more often rotary justment in such passages in which notes are not so widespread may exh no such movements at all. It becomes a clear, then, why pianists with quite sm hands will necessarily display rotary mo ments in some passages which become m easily played by pianists with larger ha without such movements. The follow may aid the reader further:

Ex.5a

Ex.5b

Title Page of the first American concert of Josef Hofmann, on November 29, 1887, at the Metropolitan Opera House of New York

Then here are some diagnoses of, a correctives for, the most common h drances to velocity which the author h noted through many years of teaching.

1. Does the wrist fail to react upwar (slightly visibly) when the finger is m mentarily acting vigorously to produce *forte* tone? Then the player is holding hand up by its own muscles instead of l ting it rest on the surface of the keys.

2. Does the player fail to feel a follo up with the key's resistance? Then he lifting the finger too high (a little prepa tory movement is permissible) and str ing the key. Float the key instead.

3. Does the finger bump keybed? Th the player is misfiring the tone produci impulse on keybed instead of deliveri such impulse only to tone emission. should feel that he is always "playing the tone." Indeed the harsh tone that sues from this fault should appraise ear of this wrongdoing.

4. Does the player fail to feel the rec of the key? Then he is jerking up finger after tone making, instead of letti it ride up on the key.

5. Does the player feel a heavy sen tion at keybottom, when executing the p sage? Then he is supporting the arm weig on the finger and the forearm should self-supported and poised—even floated ov and upon the keyboard.

6. Does he feel a sticky sensation *legato* playing? Then he is failing to d tinguish between that exertion required produce tone and that very light contin ing exertion required to sustain tone.

Getting Joy Out of Life

A conference secured expressly for The Etude Music Magazine with the well known industrial leader

RALPH T. SENTER

President of the Philadelphia Rapid Transit Company

By WILLIAM ROBERTS TILFORD

RALPH T. SENTER
President of the Philadelphia Rapid Transit Company

RALPH TOWNSEND SENTER was born in Columbus, Ohio, in 1876. His ther was one of the leading business men the city and also an excellent violon- llist. His mother played the piano and s aunt was harpist in a large Eastern mphony orchestra. He was, therefore, ought up in a decidedly musical atmos- ere and began the study of piano at the e of twelve. Later he took up the violin d still later, in his academic and uni- rsity days, he for some time studied nging. His general education was received the University of Michigan and at the rmour Institute in Chicago. He entered e street railway business in Minneapolis, 1898, and two years later joined the tionally known transportation expert, homas E. Mitten, in Buffalo and in Chi- go. In 1911 he followed Mr. Mitten to iladelphia, where he has become presi- nt of the $200,000,000. Philadelphia apid Transit Company, which employs er ten thousand people.

Mr. Senter has had remarkable musical contacts, and he takes a very practical interest in all artistic matters. When, at the age of fifty-nine, he joined the Sketch Class at the famous Philadelphia Art Club, he commenced to produce oil paintings that have been shown in several exhibitions. As an outstanding business executive, his opinions upon the value of art to business are both inspiring and important.—*Editor's Note.*

* * * * *

"It is surprising how long it takes the average man to discover that life is not an interminable thing, and that if he wants to have any fun he must have it as he goes along. The man, who is so consecrated and restricted to his business that he cannot find any time for the finer things of life, very often turns out to be a poor business man. We must have both relaxation and inspiration to get the best out of every day. This applies to the artisan and the clerk as well as to the leader and to the 'big boss.' I have seen this, time and again, in my contacts with business men. Sports and 'collecting' are fine, but one needs something more; and that additional interest can be filled only with what might be called food for the spiritual and the æsthetic side of the worker. In this, of course, there is nothing to take the place of real faith, real religion, and beautiful music. Music, different from other arts, is like a stream of inspiration that is turned on when the music commences, very much as we turn on an electric current. It fills us with an invisible and irresistible force; and it does something to us spiritually, mentally and physically which I have never heard explained; but I do know that with fine music the results are very beneficial.

A Forty Year Old Tradition

"THERE IS A MUSICAL TRADITION in the Philadelphia Rapid Transit Company that is now forty years old. Back in 1896, when horse cars were being replaced by electric cars, the company opened a summer park at Willow Grove, Pennsylvania, about fifteen miles from the city of Philadelphia. This Park became one of the most famous summer music centers of its time. For thirty years it engaged famous conductors, such as Walter Damrosch, John Philip Sousa, Victor Herbert, Frederick Stock, Wassili Leps, Modest Altschuler, Arthur Pryor, Guiseppe Creatore, and Nahan Franko, to conduct band and orchestra concerts four times daily through a three months' season, in a music pavilion seating nearly four thousand people. The conductors and motormen of the Company, who during the years transported millions of people to and from these concerts, could not fail to be interested in the drawing power of music. It was quite natural, therefore, that a band should be formed, to be known as the PRT Band. This was done in 1919, and in 1926 it won the first prize at the Sesqui-Centennial Exposition.

PHILADELPHIA RAPID TRANSIT COMPANY MUSICAL UNITS

This remarkable photograph was taken especially for The Etude Music Magazine, in front of the magnificent Pennsylvania Art Museum of Philadelphia. The front organization is the P R T Concert Band and Field Music: Back of them from left to right, are the P R T Harmonica Band; the Merrymakers Band; and the Kiltie Band. Standing in front, and from left to right are: Joseph C. Hoy, leader, Harmonica Band; Samuel S. Smith, leader, Merrymakers Band; Lieutenant Albert W. Eckenroth, P R T Bandmaster; Ralph T. Senter, president of the P R T; Peter Farley, leader, Kiltie Band; and Robert J. Whiteley, leader, Field Music.

MEDITATION

This painting, by Mr. Senter, received the highest vote of visitors to the Pastime Painters Exhibition of 1936, in the Art Club Galleries of Philadelphia

It is finely uniformed and equipped and is composed of one hundred and thirty-five marching men under the efficient direction of Lieut. Albert W. Eckenroth, President of the Pennsylvania Bandmasters' Association. John Philip Sousa took a great interest in the band, and spent much time in training it, when he was in Philadelphia.

Musical Altruism

"A FEW YEARS AGO it seemed to me that this band could be of great value through giving concerts in the Public Schools and in the various public buildings of Philadelphia. The concerts have been enormously successful and have been attended by throngs. The band, as well as being a marching band, plays the regular concert band repertoire. Each band of the PRT group rehearses at night on the men's own time, in an auditorium over a car barn of the company. All branches of the company's personnel are represented in the band; and much very decided talent has been uncovered. Unquestionably the band has had a very beneficial influence upon the morale of the company's employees, and it has had an influence upon the public, at least to the extent of taking their minds away from the too general thought that every corporation is a kind of octopus with no objective save that of getting as much from its employees as possible, and giving as little as possible in return. As a matter of fact, fifty cents on every dollar we earn goes for wages; but we feel, however, that our obligation to our employees does not end with the money they earn.

"In addition to the 'big band' we have three other established musical units: the Scotch Kiltie Band of twenty-eight pieces, under Peter Farley; the Harmonica Band of forty pieces, under Joseph C. Hoy; and the Merrymaker's Band, a Negro band of fifty-five pieces, under Samuel Smith; making a total of two hundred and sixty-five men in our musical organizations. On our annual two day picnic at Willow Grove, attended by 50,000 people, the bands play a very important part in our exercises.

"Our bandmaster, Lieut. Albert W. Eckenroth, who is the general director of all of our musical activities, is a splendidly trained man. Brought up in Reading, Pennsylvania, he was a member of the famous Ringgold Band of that city. He served in the army during the Great War and conducted a large band at the Metropolitan Opera House, which was highly praised by President Wilson. He took the conductorship of our band in 1921. The band has been sent three times to Canada, by request. At the American Legion Convention in New York last year, the band had a sensational reception.

Music a Humanizing Medium

"ALL ACTIVITIES of this kind serve to cement the interests of the employees. If the leaders in any enterprise do not have a genuine heart sympathy and understanding with all those engaged, the business becomes a mere shell and inner relations become so strained and artificial that the very existence of the enterprise is sometimes threatened. I could not work in such a business; and I am very certain that I could not have endured forty years of business life in the transportation field, if I had not had the sincere conviction that my first obligation has been the welfare of the workers associated with me.

"In all this, music has always played a considerable part. Music was loved and respected in my family. A frequent visitor to our home was Mme. Schumann-Heink; and in my youth it was a continual delight to hear her magnificent art. Later, at Willow Grove, I came into intimate personal contact with many famous conductors. There were four programs a day and during the intermissions the distinguished conductors went to a little room back of the bandstand, where they met their friends, but more frequently devoted most of their time to composition. Many of the best known things of Sousa and Herbert were written in that little room. These conductors always amazed me, first of all by their generalship and their unusual executive and business ability. They seemed to take on big responsibilities and delegate the unessential details to others, amid a kind of incessant activity which would have paralyzed the ordinary business man. They worked at a speed far greater than the average man, and often were compelled to operate in an atmosphere of apparent confusion. The work called for a kind of clear-headedness and a personal control which is always extraordinary and can be classed only with good generalship. More than that, such conductors all have to be diplomats; and one of the finest diplomats I ever knew was John Philip Sousa. Nothing ever disturbed him; and he knew just the right thing to say at the right time. Independent of his musical side, he was a real 'he man' and was loved by all who knew him.

"Herbert, also, was a man of tremendous personal force; and he was a remarkable executive and business man. Any large corporation would have been fortunate to have a man of his huge energy, quick mentality, and sound judgment, at its head. The idea, that musicians are simply bundles of temperament and incapable in business matters, is one retained only by those who have not come in contact with fine musicians. As a matter of fact, many of them have astonishing executive ability in relation to their employees and to the public as a whole. Their mentalities are often astonishing. Time and again I have noted in business conferences with musicians that they have arrived at the proper conclusion before others, not trained in music, get their wits together to express themselves.

A Business Asset

"THIS CONFIRMS IN MY MIND the fact that a musical training in youth cannot fail to be of advantage. Through the drill in music study, some inexplicable thing is dor the mind which cannot be supplied any other source. It is for this re that, if two men of equal ability, inte and skill were to apply to me for in any branch of our organization, I w give the job to the man who also among his assets a good musical trai for the reason that he is likely to be responsive and quicker. There is no in our organization for the man who cause he plays in the band, has an that he is entitled to "soldier" upor job. It has been my experience, how that those who have played in the b often prove to be of the type to re first attention when promotions are pos

Starting to Paint at Fifty-nin

"IT IS MY STRONG CONVICTION tha avocation is essential in our modern and perhaps even two would be b Three years ago, at the age of fifty- I thought that I would like to see wh could do in oil painting. As a child I painted a little marine water color w pleased my mother so much that she it framed. In my college days my co in engineering naturally included dra and perspective, but I had had no training in painting. I joined the Sk Class of the old Philadelphia Art Club became so much interested that I taken lessons consistently; and I have greatly gratified to have some of my p ings receive favorable attention at ex tions. The business man who is able to an instrument or to paint, possesses on the very finest means of resting his from the strain of the day and of mitting it to be recharged, reinspired those things of a higher nature which not fail to make him more valuable i business life.

"Finally, permit me to say that I that after providing our fellow worke the Philadelphia Rapid Transit Com with every reasonable opportunity to

Flash! Walter Winchell Talks on ASCAP

In the November issue of THE ETUDE, ur leading editorial was devoted to "Jus-e for Genius," giving some of the reasons y ASCAP (American Society of Com-sers, Authors and Publishers) had be-me a great force in the promotion of e broader musical interests of American eators in their important field.

Walter Winchell, popular columnist and dio commentator, in his column "Walter inchell on Broadway" (Trade Mark gistered, Copyright, 1937, Daily Mirror, c.), brings out some additional facts in machine gun style.—*Editor's Note.*

scap was organized in 1914 to otect composers and authors gainst the wide-spread piracy of eir music. In twenty-three years scap has fought thousands of legal ttles in behalf of its members d has won every case.

Ascap was founded by Victor erbert, Gustave Kerker, Glen acDonough, Silvio Hein, George axwell, Louis A. Hirsch, Raymond ubbell, Jay Witmark and Nathan rkan as attorney.

Today over a thousand American mposers, authors and publishers are embers of Ascap, and about forty-e thousand European composers d authors are affiliated with Ascap rough their own performing rights cieties, making available a world servoir of music, from one source.

From 1914 to 1921 none of Ascap's ff took a penny for his services, t even the late Nathan Burkan.

Stephen Foster's purse and the 38 nts in coins and "shin plasters" at it contained, his entire fortune en he died, are preserved in a morial that cost half a million llars.

No American songwriter has been on relief. None will be. Ascap disburses about $600 a day in relief and royalty advances. The money with which to do this comes from the membership dues and a portion of what is collected from radio stations, theatres, dance-halls, and other users of music in public performances for profit.

When you buy a sheet of music you have the right to play or sing the composition to your heart's content in private or in public so long as the performance is not for purposes of profit. When for that purpose, the proprietor of the establishment where the public performance is given is required by law to have a license from the copyright owner, and if the composer or publisher of the music is a member of the Society or any of its affiliates, Ascap issues such license in his behalf. If not, license must be secured from the owner of the copyright or the performance is illegal. It took two years of litigation and a final decision in 1917 by Supreme Court Justice Oliver Wendell Holmes to establish this principle.

Since then users of music in public performances for commercial profit have endeavored to amend the Copyright Law on which the decision was based. In twenty-two states so far, anti-Ascap legislation has been introduced, but in only four states, Washington, Nebraska, Montana and Florida, have such laws actually been passed. Ascap is now challenging the constitutionality of the enacted laws.

Broadcasters used to maintain that their performances were not public because the public was not admitted to their studios, that they were not broadcasting sound but electrically energized waves, that the purpose was not profit. This at the time when radio was doing $412,000,000 worth of business annually, and approximately 75% of radio time was devoted to the performance of music.

Today if every radio listener paid only ten cents a year for all the music performed on the air the composers and authors of America could live in comparative comfort. Listeners, however, pay no direct fee. Radio, which profits from listeners, pays Ascap only about four cents a year for every listener in America.

Motion picture theatres pay Ascap about one cent out of about every $6.83 they collect from their patrons.

Since radio a song writer has to write four times as many hits to earn half as much as he used to before radio.

Song writers are born, not paid.

An army marches ten miles a day without music—with music eighteen miles.

The first public performance for profit probably was when Homer sang for crumbs from the table of some Greek banquet. Lots of song writers are still living off the crumbs of music fees grudgingly paid by people who clean up from its use.

Charles Reade, the novelist, who waged a bitter fight against plagiarism and piracy of literary works in the United States once wrote a book advocating that the Eighth Commandment should be changed to read "Thou Shalt Not Steal—Except from Authors." This sentiment is heartily endorsed by pirates and plagiarists.

Napoleon said, "Music of all the liberal arts, has the greatest influence over the passions, and is that to which the legislator ought to give the greatest encouragement."

A frequently misquoted phrase actually reads: "Let me write the *ballads* of a nation, and I care not who may make its laws."—Fletcher of Saltoun.

ASCAP is a non-profit voluntary membership Society. After expenses are paid all remaining revenue is distributed to its members, including an apportionment to its European affiliates.

In twenty-three years of fighting piracy ASCAP has been awarded thousands of judgments. In no case has ASCAP collected these judgments, but has instead accepted a license contract and mere payment of legal court costs as satisfaction.

ASCAP adds about 40 new members to the Society each year, making available their creations as well as the new works of its older members.

Song writers in ASCAP were born in nearly every state in the Union; they were born on nearly every day of the year. (That for astrology.)

Nearly 90 estates of deceased composer or author members of ASCAP are protected from need by their shares of the Society's income.

ASCAP IS THE SOLE REFUGE AND PROTECTION FOR THE SONG WRITER AGAINST MERCILESS COMMERCIAL EXPLOITATION AND PIRACY OF HIS RIGHTS.

Mrs. G. Waddington Snore Acquires a Classic

A Monologue for Recitation at Musical Gatherings

By LOUIS V. AXTON

WITH HER HEAD TILTED back at an angle which, had she been an Indian maiden born, would e entitled her to the name of "Rain-in-Nostrils," Mrs. G. Waddington Snore e Lulu Senft) dismissed her Swiss uffeur and swung through the revolving r of Porkingham's leading music em-ium (no *stores* for Mrs. G. Wadding-Snore!). The tilt, however, was not genital but acquired through matri-y, or rather after matrimony, when found that, "beyond peradventure" e cliché is Thackery's), one of Snore's cen thousand three hundred and eighty-ancestors had bought, in 1620, passage the "Mayflower." She cared very little, ed, about the sixteen thousand three hundred and eighty-three other possible ancestors; and Snore himself, who was very much bewildered by the discovery, cared less. Why should she investigate his ancestral catacombs, when he paid no attention to hers?

As for Mr. Snore, he did once hear his father-in-law state that the Senfts were "hot stuff"; and that was ample for him. Since the "discovery," Mrs. Snore had wormed her way into the social register, as regular purchase of the volumes for seventeen years attested. Once her social position was secure, she gave much attention to culture, and took the "New Yorker" without fail, to say nothing of subscribing to various publications issued in London, Paris and Berlin, "because they looked so decorative." Not having had a musical education herself, she proceeded to get the social equivalent by subscribing for concerts which proved mercifully soporific for Snore. In fact it was quite common to hear the remark, "I hear the Snores are attending to-night."

Now Mrs. Snore was accustomed to attention, when dealing with "tradespeople," and was a little annoyed when she had to wait several minutes before getting the eye of a music clerk. She tried a few supercilious coughs terminating in sickly smiles denoting her martyrdom, and finally beckoned to a young employe.

"You, You, You'll wait on me, won't you? Yes, I know you are busy, but my time is valuable too. What's that? You'll be right here? Well what did you go away for? Why do you run back and forward to the back of the store, and all over the place like a polo player? But of course you don't know what polo is, do you? Well never mind. Where are you going, now? Cashier's, to make change for that little colored boy? Why doesn't the cashier come to you? Imagine a woman doing business in that way! I always say to Mr. Snore that women could manage his business much better than men. Well it took you a long time to get to the cashier's and back. She must be very pretty! Oh I know you men; it doesn't make any difference whether you are nineteen or ninety. I haven't been married to Mr. Snore for these twenty years for nothing!

"Yes, I want to buy some music. Last week my friend, Mrs. Geldfaust, gave me the names of some lovely pieces and I wrote them down. Here they are. Dear me! Where did I put that list? And I wanted those pieces for Margot's next lesson. O dear! Do you suppose that I could have left it in the car?

"Now isn't that vexing? Suppose you name over some pieces, and perhaps I could remember it? Do I know the name of the composer? No, I never bother with those trifles. I said to Mr. Snore, the other evening, that if I were to be asked right quickly I really don't believe I could say for sure who wrote Shakespeare.

"The composer? Now let me think. I'm sure he was a foreigner—a Pole, an Italian, or, it might have been a German. Which composers are the most popular this season? You know what I mean. No, it wasn't Chopin—in fact I'm sure the name didn't begin with an 'S'.

"Now let's go down the alphabet, and run off the composers. Really, does the composer matter?

"Was it a waltz? It might have been a symphony. But they don't play symphonies as solos, do they? Of course not! How silly of me. The man waves at symphonies —doesn't he?

"Oh I say (as she leans over the counter a little and whispers), is it true that Dr. Bowlovski, the great conductor, wears corsets? Isn't he a dream? You really do think that is his natural shape? How wonderful! I must tell all the girls at the club. I knew that, being a musician, you would know. What? You are not a musician? Then how would you ever know what piece it is I want! No, it wasn't a nocturne. I played the nocturne—*The Fifth*. That was years ago.

"Oh, did you ever hear *The Maiden's Prayer?* You still sell it? That won Mr. Snore. He just couldn't resist it. He told me that he was just "completely in" the first time he ever heard me play it.

"That's a nice looking piece there on the counter—the one with the purple cover. Do you think Daughter would like that? Oh, it's only for children? I see. Well, it wouldn't do; Daughter is only nineteen; and she never did like that shade of purple that is on the cover.

"You 'Give it up?' You have no right to give it up! I'll see the proprietor. Think hard!

"The *Night Song* from "A Day in Venice" by Nevin! Young man! Did you ever see a psychic? No? Well—see one at once. That was marvelous. This is just the piece Mrs. Geldfaust mentioned; and you were reading my mind all the time.

"Would you mind seeing if my car is at the door? I told Gustav to drive round the block till I got what I wanted.

"O, Gustav! Get out my bag. Yes, I want the slip Mrs. Geldfaust gave me. I didn't have it? Well, I said it is *Night Song* from "A Day in Veni didn't I? I didn't? Well, what was it I say?

"Grieg's *Spring Song?* Well, yo man, you're not so much of a clairvoy after all. Dear me, would it not be a g idea to have all music clerks trained clairvoyants? One wouldn't be wor with remembering and asking for thi The clerks would just have the bu already wrapped when one called. Stra no one ever thought of that.

"You have to go all the way back the Cashier's? Have I a charge accou Indeed I haven't; and I don't purp having one in a store where one has waste so much valuable time just to a fifty cent piece of music!" as flounced out of the emporium and chir "To the Twenty-first Century C Gustav. I'll show the world the Snores not to be imposed upon!"

Musicians of February Birth

By W. FRANCIS GATES

FEBRUARY, shortest of all the months of the year, is outdone by none other in the richness of its musical gifts to the world. Its composers include Handel, who lifted choral music to its greatest heights; Mendelssohn, who blended the classic and romantic spirits so that in the "Elijah" he created altogether perhaps the most perfect of oratorios; Rossini, surpassed only by Mozart in the spontaneity and purity of his inspirations; and Chopin, the supreme poet of the piano. Then among interpretative musicians February gave birth to Patti, the supreme vocalist of all time, and Caruso, generally conceded to have had the most glorious of all tenor voices; to the pianists, Essipoff, a crown jewel among her sex, and Gabrilowitsch, unsurpassed in his day for the purity of his art and as an ideal interpreter of Mozart; to Kreisler, who created an era in violinistic history; and to Matthay, unexcelled as an original contributor to pianistic pedagogy.

In their order, a list of some of the most eminent would include:

Musicians of February Birth

1st Dame Clara Butt (1873), Annette Essipoff (1851), Karl Halir (1859), Victor Herbert (1859), Johann Philipp Christian Schulz (1773)

2nd Aristide Cavaillé-Col (1811), Adolph Martin Foerster (1854), Jascha Heifetz (1901), Jaroslav Kócian (1884), Fritz Kreisler (1875), Louis Marchand (1669), Georg Aloys Schmitt (1827)

3rd Johann Georg Albrechtsberger (1736), Giulio Gatti-Casazza (1869), John Fane, Earl of Westmoreland (1784), Marino Vásquez y Gómez (1831), Felix Mendelssohn-Bartholdy (1809), Frederick Niecks (1845)

4th August Böhme (1815), Sir Michael Costa (1808), John Comfort Fillmore (1843), William Lawrence Tomlins (1844)

5th Ferdinand Barré (1843), Ole Bornemann Bull (1810), Rossetter G. Cole (1866), Luigi Mancinelli (1848), Christian Gottlob Neefe (1748)

6th Henry Charles Litolff (1818), Benedetta Rosamond Pisaroni (1793), Vassily Ilyitch Safonov (1852), Otto Urbach (1871)

7th William Boyce (1710), Charles Henshaw Dana (1846), Ossip Gabrilowitsch (1878), Franz F. R. Genée (1823)

8th Élie-Miriam Delaborde (1839), André-Ernest-Modeste Grétry (1741), Charles Fonteyn Manney (1872), Alexander Petschnikoff (1873)

9th Johann Ladislaus Dussek (1761), Karl Ludwig Fischer (1816), Robert Hope-Jones (1859)

10th Alessandro Bonci (1870), Ferdinando Carulli (1770), Cornelius Gurlitt (1820), Sir Walter Parratt (1841), Adelina Patti (1843), Karl Pohlig (1864)

11th Feodor Chaliapin (1873), Ferdinand Karl Fuchs (1811), Paul von Klenau (1883), Johann Heinrich Lübeck (1799), Louis Persinger (1887)

12th Charles-Wilfride de Bériot (1833), Giuseppe Buonamici (1846), Arcangelo Corelli (1653), Herbert Austin Fricker (1868), Victor Kolar (1888)

13th Leopold Godowsky (1870), Kéler-Béla (1820), Vittoria Tesi-Tramontini (1700)

14th Sophie Arnould (1744), Alexander Dargomyzhsky (1813), Louis Diémer (1843), Ignaz Friedmann (1882), Edward Baxter Perry (1855), Eduard Strauss (1835)

15th Modeste Altschuler (1873), Friedrich Ernst Fesca (1789), Robert Fuchs (1847), Michael Praetorius (1571), Marcella Sembrich (1858)

16th Riccardo Gandolfi (1839), David Mannes (1866), Jacques-Pierre-Joseph Rode (1774), Philipp Scharwenka (1847), Herwegh Von Ende (1877)

17th Sir Edward German (1862), Mathilde Mallinger (1847), Giovanni Pacini (1796), Kurt Schindler (1882)

18th Eric Delamarter (1880), Sir George Henschel (1850), Max Hesse (1858), Louis-François-Henri Lefébure (1754), Johann Christian Heinrich Rink (1770), Samuel Prowse Warren (1841)

19th George Baker (1773), Luigi Boccherini (1743), Franz Diener (1849), Adalbert Gyrowetz (1763), Tobias Matthay (1858), Felipe Pedrell (1841)

20th Charles-Auguste de Bériot (1802), Mary Garden (1877), Leonora Jackson (1879), Franz Kohler (1877), Jósef Poniatowski (1816)

21st Karl Czerny (1791), Clement-Philibert-Léo Delibes (1836), Johann Wenzel Kalliwoda (1801)

22nd York Bowen (1884), Frédéric Chopin (1810), Johann Nikolaus Forkel (1749), Niels Wilh Gade (1817), Otto Hegner (19 Arthur Schopenhauer (178 Antoinette Szumowska (18 Charles-Marie Widor (1845), vanni Zenatello (1879)

23rd George Frederick Handel (16 Adolf Kullak (1823), Gert Elisabeth Mara (1749), Ru Procházka (1864)

24th Arrigo Boito (1842), Joh Baptist Cramer (1771), Ar Dolmetsch (1858), Rudolf G (1877), Auguste Götze (18 Samuel Lover (1797), Louis Art Russell (1854), Samuel We (1766), William Wolstenho (1865)

25th Enrico Caruso (1873), Arma Louis Couperin (1725), Joh Gottfried Rode (1797)

26th Leonard Borwick (1868), En Destinn (1878)

27th Joseph-Amédée-Victor Cap (1839), Louis Adolphe Coe (1870), George Henry How (1917), Sir Charles Hubert H ings Parry (1848), Anton Rei (1770), Walter Spry (1868)

28th Joseph-Jean-Baptiste-Laurent Ar (1825), Marie Brema (1856), J Alden Carpenter (1876), Gerald Farrar (1882), Friedrich Ferdin Flemming (1778), Guiomar Nov (1895), Elias Parish-Alvars (18 Sir Charles Santley (1834), Ri ard Heinrich Stein (1882)

29th Adolph Achimon (1820), Pie Blaserna (1836), Hermann Hirs bach (1812), Reed Miller (18 Gioachino Rossini (1792), Rich Heinrich Stein (1882)

A Missed Lesson Cure

By ESTHER VALCK GEORGNS

THE MAJORITY of music teachers no doubt spend a great deal of time wondering just what to do about the missed lesson—that bugbear which is such a decided annoyance to the teacher and so undoubtedly harmful to the pupil. Not all teachers are in a position or a locality where it is possible to demand that missed lessons be paid for, which is bad enough; but the teacher in the country or in a small town is often worse off, as many of the students may not have even telephones, and so do not notify in advance that they intend to skip a lesson. The result is that teacher waits in vain for little Johnny, who does not come.

After wasting hours uncounted in this fashion I decided there was only one thing to do—make the pupil pay for the time which he had engaged.

Demanding that lessons be paid for in advance was useless in my case as the families of most of my pupils are people in very moderate circumstances, depending mainly on one small, town industry, and they would have been outraged and insulted if I had asked them to pay for a lesson which they had not received. But what cannot be done one way may be accomplished another, and finally I hit upon a plan which has worked very well.

The price of lessons was increased by one third, and if a pupil takes four lessons without missing he is entitled to a free lesson. This has practically eliminated the missed lesson from my class, and when they do occasionally occur, it is usually possible to predict them, as they are nearly always the lesson following the free one, and just before the pupil starts the new series of four. The parents did not object to the plan in the least, and not one pupil has been lost as a result of it. In fact think the parents like the idea, as anyth in the form of a bargain appeals to m humans. And the progress of the child has improved wonderfully because of steady, week by week, inching ahead. I not a perfect plan by any means, but, circumstances being similar or nearly any teacher would probably find it improvement over the usual hit or m come or not come, procedure.

* * *

The object of music is to strengthen ennoble the soul.—Morales.

How to Break Into Print

Practical Suggestions for Young Composers

N THE ETUDE for January, 1936, there appeared an article, "What Makes a Successful Piano Piece?" by bert Stearns. This aroused much inter- among young composers, who have d many practical questions that are wered in the following article.

To Whom Shall I Send My Manuscript?

s VERY DESIRABLE for the inexperienced poser to understand the difference be- n a music publisher and a music ter. The Theodore Presser Company, instance, is a publishing house, not a ting house. It has no printing plant confines its work solely to selecting uscripts desirable for publication, to ng the purchased manuscripts into ted form, and then to marketing these ne customary way.

music printer will give you an esti- , including title design, plates, paper printing for 100, 500 or 1000 copies. this case the composer pays the bill attends to the sales himself.

he music publisher accepts a publica- pays the composer for it and assumes ntire expense and work of publication marketing thereafter. A composition, has been rejected by a number of pub- rs acquainted with the needs of the , rarely stands a chance of bringing a t to the composer who attempts to pub- it himself. Consequently, under most itions, we do not advise composers to g out their own compositions, unless can afford to stand an almost certain owing to their lack of business organi- n to promote a sufficient sale.

not submit to the dignified standard sher any manuscripts of the so-called ular" order. (See paragraph concern- Publishers' Specialties.)

Song Poems Not Wanted

ABLE PUBLISHERS, as a rule, will not der verses of song poems unaccom- d by a musical setting. They must have the music and the words for considera- The success of a song depends upon usic, not the words. Good musicians r to select their own words for mu- settings.

not ask a publisher to suggest a com- for your song poem. They positively e to attempt to do this, as it is a r entirely outside of their sphere of . The words have very little to do with uccess of a song. Many famous song s have been set again and again by ent composers who have hoped to the success some other composer has with that particular poem; but the has shown that one setting which s it stands out far above the others. *Art Like Unto a Flower* is reported ve had about a thousand musical set- : but the one by Rubinstein is the one to attain very great popularity. same applies to Nevin's *Rosary* and s settings of the Rubaiyat of Omar yam, of which the one by Liza Leh- is by far the most popular. Conse- ly the publisher's only concern is in usic. The words must be good, but are of secondary importance.

Beware of Fraudulent Publishers!

IN RECENT YEARS a huge fraud has been practiced upon inexperienced composers and writers of song poems. Swindling concerns have advertised for compositions, and after receiving them have encouraged the flattered composers to issue them and at the same time to defray the cost of printing. The cost set is often a figure that represents enormous profits to the swindler. Tons of trash and doggerel, coming from the uninformed, have been foisted on the public, and actually hundreds of thousands of dollars have been pilfered from unsuspecting victims. If your composition has any salable qualities a reputable publisher will accept it and pay you for it. Do not, therefore, consider any proposition coming from any firm asking you to defray all or any part of the expense of publication. If you wish to publish your composition yourself, apply to any one of the following firms of music printers and get estimates:

MUSIC LITHOGRAPHERS

Otto A. C. Nulsen, Box 774, Cincinnati, Ohio

Rayner, Dalheim and Co., 2054 West Lake Street, Chicago, Illinois

Teller Sons and Dorner, 311 West 43rd Street, New York City

John Worley Company, 166 Terrace Street, Roxbury, Boston, Massachusetts

Zabel Brothers, 5th Street and Columbia Avenue, Philadelphia, Pennsylvania

Otto Zimmerman and Son, P. O. Box 1470, Cincinnati, Ohio

Scholz-Erickson Company, 5th and Howard Streets, San Francisco, California

MUSIC TYPOGRAPHERS

Anderson Brothers, 633 Plymouth Place, Chicago, Illinois

I. Casper, Steele Building, Philadelphia, Pennsylvania.

F. H. Gilson Company, 40 Winchester Street, Boston, Massachusetts

Haddon Craftsmen Inc., Camden, New Jersey

Anything in the nature of sheet music should be handled by a music lithographer. Small song collections, gospel hymns, and so on, usually are cared for by music typographers.

If you publish your music personally and desire to know about the copyright law, full information as to how to copyright a musical composition may be secured by addressing the Register of Copyrights, Library of Congress, Washington, D. C.

It is never necessary or desirable, when submitting a manuscript to a reliable publisher, to seek copyright protection. The publisher attends to this when the composition is published.

Publishing houses, throughout the world, are distinguished for their specialties. Disappointment may be avoided by studying the class of music issued by each house and then by refraining from sending manuscripts obviously "impossible."

Send the Manuscript Itself

NEVER WRITE a publisher in advance and ask him if he can accept your manuscript. Send the manuscript itself, with a brief explanatory letter attached; and enclose return postage. Never fail to put your full name and correct address on the manuscript itself This is for your protection, should your letter become detached from the manuscript. While all manuscripts sent to a publisher are at the composer's risk, publishers take a pride in doing everything possible to care for the manuscript while in their possession. At least a rough copy should be always retained by the composer.

When the manuscript reaches the publisher, an acknowledgement is generally sent to the composer stating that the manuscript has arrived. This, however, does not imply that the publisher is legally responsible for the possible loss or destruction of the manuscript through fire, and other providential causes. It is simply a courtesy to the composer. An immediate and careful record is made of each manuscript received.

Judging the Manuscript

IN THE LARGER HOUSES a corps of experts decides upon the manuscripts. In the smaller houses the proprietor, if he is a musician, may determine their desirability for his particular catalog himself. Often a doubtful manuscript is laid aside for future examination. It should be remembered that these judges go through endless manuscripts with the one hope of finding some piece suitable for publication. Nothing is neglected.

Do not expect an immediate decision and answer. All worth while manuscripts demand deliberation and special thought.

The manuscript remains the property of the composer until he accepts the proposition made to him by the publisher. Unavailable manuscripts are returned to the composer.

The composition may be acquired by a publisher, either by outright purchase or upon a royalty basis. Royalty is generally paid only to composers of established reputation. Most composers prefer to sell their compositions outright. Only a very few strikingly original works can earn royalties of any considerable amount. Even with the most promising manuscripts, success is a gamble. Only about one composition in a thousand makes a noticeable impression on the buying public. An outright purchase is in most cases better for the author, as he cannot afford to wait years for royalty returns, which, indeed, may never come.

All legitimate publishers are glad to pay reasonable prices for acceptable manuscripts, based upon the commercial possibilities of the piece.

Rejection does not necessarily mean lack of merit. No publisher will accept a manuscript for which he may have great difficulty in finding a market. Some other publisher may have just that market and may be glad to get the work. Many manuscripts are submitted before the composer's training justifies him in attempting composition. No one would submit a literary manuscript without first studying spelling and grammar. Do not be disheartened if your manuscript is returned, particularly if you are at the beginning of your career. In some cases rejection is more fortunate than acceptance, where the latter might have meant that your piece would have been tied up with a publisher with no market for that particular kind of a piece.

Practical Suggestions

DO NOT "FLOOD" the publisher with a number of manuscripts at one time. He is not nearly so likely to give careful attention to a dozen of your pieces as he is to one or two.

Do not mix up in some general letter your remarks referring to a composition. Write one brief letter devoted entirely to the submission of composition, and send that with the manuscript.

Do not fail to use regular ruled music paper. Home ruled paper may prejudice the publisher. Take a pride in making your manuscript, above all things, clear. There is no objection to writing on both sides of the page in making musical manuscripts. Use either pen or pencil in preparing manuscripts.

Do not blame the publisher if your manuscript is lost. The best possible care will be taken of it, but the law does not hold the publisher responsible in case of loss.

SPECIAL ANNOUNCEMENT

An Eminent Band Authority

William D. Revelli

William D. Revelli, Director of the famous University of Michigan Bands, and one of the most widely acclaimed conductors of clinics upon School Band and Orchestra Music, will, in response to a pronounced demand for expert opinion on School Bands, take charge of the Band and Orchestra Department of The Etude, in this way succeeding to the very able editorship for some years in the hands of Victor J. Grabel, whose experience has been more in the field of Military and Concert Bands.

Mr. Revelli's first department will appear next month. In lieu of a Band Department for this month, we are presenting on another page of this issue a most remarkable interview upon bands, with Mr. Ralph T. Senter, President of the Philadelphia Rapid Transit Company.

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano M appearing in the Music Sectio of this Issue

BALLOONS IN THE AIR
By BERTHA R. FRICK

To be kept in character—light and airy—this number must be phrased exactly as marked. The phrases in the first section should be tossed off sharply as indicated by the *staccato* dot at the end of each curved line. See that the pedal is released at the same instant the left hand throws off its final chord. Do not overlook the extended *legato* phrase in measures 13, 14 and 15.

The second section is in G major, subdominant key, and is played at somewhat slower tempo-*meno mosso.*

It is important to emphasize the accents appearing on the second beat in measures 38, 40, and so on.

Try to achieve throughout a "floating" effect.

DANCING MARIONETTE
By STANFORD KING

In this number, as in all dance music, rhythm is uppermost; but in this instance careful consideration must be given to tonal values as well.

The mood of the composition is established in the opening four measure introduction. Markings are to be regarded here, slurs, *staccati, sostenuto,* as all these have direct bearing on the rhythm.

The first theme is announced in the fifth measure and lies in the lower or alto voice of the right hand. Make the most of this theme and such other sustained notes as appear in the first section. Pedal sparingly.

The second section in B-flat major, the dominant key, shows the theme in the soprano voice. Here again we find sustained notes alternating with active little figurations in eighths. Picture in your imagination the action of clever little figures in a Tony Sarg show and try to capture the atmosphere generated by the clowning antics of these tiny wooden people.

The chords in the Trio call for nice forearm *staccato,* with fingers held close to the keys.

NONE BUT THE LONELY HEART
By TSCHAIKOWSKY-SAAR

The music of Tschaikowsky continues to be the subject of much debate, *pro* and *con.* Certain *poseurs* of the world of music have made the bald statement that to enjoy Tschaikowsky is to betray a musically immature mind. Great numbers of famous musicians on the other hand proclaim this Russian a towering genius in the fields of composition and orchestration. Whichever side of the controversy one espouses it is an undeniable fact that Tschaikowsky in his music bequeathed to the world an astounding number of beautiful melodies—and of such there is an obvious dearth among modern composers. As Deems Taylor so aptly put it in a recent broadcast, we moderns not only wonder where Tschaikowsky found so many beautiful tunes but are preoccupied with speculation as to where more like them can be found!

This song has been a great favorite with contraltos for many years but it remained for Louis Victor Saar to make a fine piano solo arrangement which brings this haunting melody within the province of the keyboard.

After a most ingenious introduction of eight measures Mr. Saar presents the melody in the left hand against the syncopated chord accompaniment of the right.

For obvious reasons, give to the melody the best possible singing tone.

Try to hear this immortal song sung on radio or phonograph by a great artist. So best will one preserve the vocal traditions, particularly while playing the somewhat intricate accompaniment figures introduced by Mr. Saar.

This music should be a distinct addition to the piano solo repertoire. The arrangement is pianistic and playable, as is to be expected when one considers that Mr. Saar is a master in this particular field.

OLD FIDDLER'S CONTEST
By LUCIANA JEWELL

Here is a number with homely atmosphere in the style of a humoresque. It has real pianistic value in that it demands precision and evenness of both hands in the matter of finger *legato.*

Let the contrast be well marked between *staccato* and *legato;* keep the rhythm, and preserve a steady even *tempo.*

There are several passages in this composition which will benefit decidedly from separate hand practice.

TEMPLE DANCE
By HOMER GRUNN

Homer Grunn is a talented American composer who has contributed many interesting things to piano literature.

This temple dance, as the name suggests, is semisacred in character. The dance as a form of worship is still performed in many parts of the world besides the Orient.

Mr. Grunn has imparted to this music a certain oriental flavor which will be entirely lost if the piece is improperly played.

Set a moderate pace and preserve it throughout. The music should breathe that air of serenity and mystery which is part and parcel of all oriental ceremonials of worship. The antiquity of the dance as a form of worship is a fascinating study. The picture comes to mind of David singing to the music of his harp and dancing before the tabernacle. The reference to David, incidentally reminds one of the fate meted out to the first music critic mentioned in Bible chronicles. According to the old story David slew him with a javelin. A precedent which, fortunately or not depending upon the point of view, modern civilization has discarded.

Note the occasional drum beats or tom-tom effects which Mr. Grunn introduces in the left hand. Play these in a monotonous manner against the more colorful passages in the right hand.

In the second section—measure 41—the theme lies in the lower voice, sometimes played by the right hand, sometimes by the left. Pedal strictly as marked.

MORNING REVERIE
By LILY STRICKLAND

A reverie is fundamentally lyric in style and introspective in character. The first theme of this music lies in the right hand and demands several changes of pace, for example the *accelerando* at measure 9 and the *ritardando* in measure 12.

In the second section the *tempo* is somewhat accelerated—*piu mosso*—and the left hand part is played *marcato* but with perfectly even *legato.*

Tonally this section builds to considerable proportions, the *crescendo* beginning in measure 26 growing to *fortissimo* in measure 28.

A *ritard, diminuendo* and a *Dal Segno* mark bring us to a repetition of the first theme which terminates at *Fine.*

AVE MARIA
By FRANZ LISZT

Liszt's ecclesiastical trend of mind asserted itself early in his career as indicated by this music which was composed some twenty years before he attained the title of Abbe.

This hymn should be played with recollections of the sonority of organ music in mind. Use the pedal freely for sustaining purposes. In playing the broken chords be careful to give full value and intensity to the notes forming the melodic line.

The Latin text should prove a valuable guide both to the spirit and melodic content of the work. Innumerable have been the settings of this ancient prayer, none of which is of more lasting interest than the one under consideration, made by Liszt who knew and loved his instrument and was so perfectly aware of its possibilities and its limitations. And we have in this number, by the way, an excellent example of Liszt, the musician, transcending Liszt, the incomparable technician.

PRELUDE, OP. 28, No. 18
By F. CHOPIN

Someone—was it Huneker?—once said that if he were to be bereft of all piano works save one, he would choose to keep the Chopin "Preludes."

In his Opus 28, Chopin gave to the world twenty-four "Preludes"—one in each major and one in each minor key. Each is a gem, and quite obviously a work of sheer inspiration. Never does there obtrude the least suggestion that this work was done under pressure as is so often the case when a composer sets out systematically to write on a given schedule. This fact is particularly remarkable in the case of Chopin, a person with an innate abhorrence for form and restriction. Chopin's sonatas for example, where one naturally conceives the composer writing in accordance with well established form, are not actually sonatas at all! One can find the exact spot in the development of each where he flings off the restraint imposed by the sonata form and thereafter composition proceeds somewhat after the fashion of a ballad. In spite of this fact—or shall we say because of it—these works remain imperishably beautiful and artistic contributions to piano literature.

The *Prelude in F minor* is one of the most dramatic in the set. To be performed effectively, however, it assumes perfect finger and octave control and demands an understanding of the Chopin style. Therefore the study of this prelude should by all means be preceded by many of Chopin's simpler compositions.

HURDY-GURDY MAN
By ELVA CHITTENDEN

Observe that in the *Hurdy-Gurdy Man,* both hands remain in five-finger position throughout. Miss Chittenden has given us here a short tune for Juniors in which the melody is played by the right hand while the left supplies the single note accompaniment. The piece lies in singable range and may be used both as a song and as a piano solo.

THE DEEP SEA DIVER
By WALTER ROLFE

The Deep Sea Diver, as is to be expected, sings his song in the bas melody taken by the left hand. If for reasons of practice or novelty this ber can be performed as a cross hand in which case the right hand plays th melody, while the left crosses over accompanying chords.

Many dynamic changes are indica this little number which should prove ful in teaching the young pupil

A LINNET SINGS IN THE LILAC TREE
By BERNIECE R. COPELAND

Miss Copeland's little piece, built bird calls provides a novelty for the pianist. Incidentally it offers excellent in playing three note slurs, trills, and

Play in sprightly manner—the tossed off smoothly and gracefully.

THE SWING IN THE ORCH
By ELLA KETTERER

Practice in left hand melody playi crossing the hands are features of thi work by Ella Ketterer. Opening wi melody in the tenor section—upper v the left hand—the right hand supp accompaniment a series of two not in which this hand is required to d double notes and roll or toss off thumb.

The second section is in the key relative minor and calls for nice dist between *legato* and *staccato.* Use the sparingly—only at the points indic

CABIN SONG
By FLORENCE B. PRICE

Here is an interesting melody whic Price presents as a Negro *Cabin Son* the most part the melody is divided b the hands and will be found very pla Except for the final chords the entir lies in the five finger position. Beca obvious "patterns" this makes an ex rote piece—, or it might be used pro as an example in reading.

GATHERING OF THE PIXI
By LOUISE E. STAIRS

This number with its broken cho quarter notes, divided between the makes a good study in elementary analysis. It also develops *staccat legato* playing.

It is intended to be played at s *tempo* and care should be exercis observe the marks of dynamics.

Words are provided to help the player to catch the proper atmosphe

Jazz Before the Jury

"Now why should there be all th about jazz? It is not worse than the of twenty or thirty years ago; it many ways, a much richer produc equally ephemeral. No one troubled the status of the polka or barn da music. They were, for the most par stuff, but jolly enough to dance to, an were quite as appropriate to the then in vogue as jazz rhythms are dances of to-day. But whereas the dances were confined to the ballroom grammes of jazz numbers are com broadcast to a great audience of lis and the question inevitably arises: does jazz stand as music to be listene —William Walton.

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Piano Music Racks for Children

In a recent copy of THE ETUDE you mentioned a pedal extension for children which I already possess and find very helpful. My one worry now, especially with small children, is how to make them comfortable while reading music. The music racks on almost all pianos are so high that the little tots must strain their eyes and necks to see the music. Is not this harmful?—M. M. B., Rhode Island.

t is not only harmful but positively iming; and this goes for adults as well children. No one will ever know how y thousands of us have acquired perma- t stiff cricks in our necks—not to speak spinal curvatures—as a result of the ful angles to which we have been ed in order to read music.

o be sure some of the new uprights, iet grands, and other modern styles e remedied this; yet the well known kers of grand pianos have not found way to make a comfortably located o rack. Is it any wonder that children, se legs cannot reach the floor and who e to strain and struggle to read the plicated musical notation, not only tire kly but cannot concentrate? And when r, insufficient lighting is added to this, result is disastrous; the child quickly s to hate the piano. I am sure, too, that discomfort causes much of the poor ling with which we have to contend. A lent simply cannot take the trouble to l correctly when he is so uncomfortable! uckily, some good corrective devices now procurable at very reasonable cost, help both children and adults. A re- vable, adjustable piano rack can be had bring the music downward and forward the level of their eyes; adjustable foot s may be set to five or six heights; cushions may be procured which can changed in a moment to any desired ght. There is no longer any excuse for ined legs, back, neck and eyes. The lishers of THE ETUDE will gladly assist lers in securing any of the articles men- ed here.

Two Piano Ensemble

I am a member of a two piano team; my partner is a girl. Both of us have had considerable experience in classical and popular music. We have studied much and have a pretty big technic. Our problem is: How can we develop style in two piano work? What is a satisfactory procedure to follow in working up a two piano number? How should I go about learning to arrange for this combination?—R. L. S., Indiana.

his is too large an order for me to fill . I can only give you a few general, but pe, helpful suggestions, on two piano mble. First, you must always remember the addition of an extra piano and ist doubles your mechanical resources, ng you four arms, twenty fingers, two per pedals, one hundred and seventy- piano keys. And here is where duo ists, composers and arrangers make r first mistake—they employ all these urces too prodigally, resulting in hard, mered quality, and opaque, muddy ure. The composers who have written for the two piano medium—Mozart and t Saëns—evidently sensed this danger, their own works are models of re- int. If teachers and players would fol- these examples of note economy, two piano playing would be even more popular than it is. When the tones of a percussive instrument (with its pitch already inexact) are doubled, as often occurs in two piano playing, the resulting out-of-tuneness adds to the thick, dull sound. An arranger should constantly try to shear off all such doublings—and indeed, as many other nonessential tones as possible in order to attain a texture of sufficient thinness and transparence.

Each pianist must halve his solo dynamics if the resulting amount of tone is to be satisfactory. This is very hard to do; for instance, if *piano* is called for, each pianist must play *pianissimo,* if *forte,* each must play *mezzoforte,* and so on. This is almost impossible to achieve unless the performers play by memory, with the piano racks down, listening every instant to the quantity of their tone. To be made acutely conscious of this exaggerated dynamic scale is of the greatest value to the pianist, not only in ensemble but also in solo playing. If, to produce a *pianissimo,* he must play so lightly as to be practically inaudible, he will gradually double his dynamic range.

The difficulty of playing softly enough is illustrated in the following story. My colleague and I (years ago!) were practicing a passage of that favorite old war horse, the Arensky *Waltz,* in which he had the tune, accompanied by my piano in soft scale passages. We repeated it several times—each time with my partner's emphatic request that I play the embroidering passages softer. Evidently, I failed miserably, for the air in the practice room soon became blue! His exasperation finally gave way to the sad realization that it was impossible for me to play *pianissimo* enough. But, since hope springs eternally, he patiently said, "Well, let's try it just once more." This was so successful that he burst out—"There! that was perfect! Why can't you always play it that way?" Meekly (but triumphantly) I answered, "You see, I didn't play my passage at all that time, I just 'made believe' by playing on the tops of the keys!" From which you will deduce that in two piano playing it is always the other fellow who plays too loudly; often it is annoying if you can hear him at all.

On the other hand, the team must be wary about its *fortes* and *fortissimos.* Only one or two *fortes* should be permitted in each piece, and certainly not more than one *fortissimo.* When (and if) this is required, it should burst forth brilliantly like a shooting rocket, and subside as quickly. But (I say it with a resigned sigh) duo pianists will probably still continue to disregard this advice, and we shall be everlastingly irritated by those players whose sole color is a hard, rusty-wired forte. Heaven preserve us from the clan!

Other points worth watching are: in rapid pieces with scale, arpeggio or finger passage work, the pedal is employed much less than in solo playing, in fact the best advice I can give you at such times is to use no pedal at all, and to play lightly nonlegato or semistaccato. On the other hand, in slow sustained pieces like the *Coronation Scene* from "Boris," or Debussy's *Afternoon of a Faun,* even more pedal can be used than is possible in solo playing. In fact, one of the fascinations of two piano playing is the pedal experimentation made possible with the two sounding boards and dampers.

Which brings me to a very important point. One of the marked differences between ensemble and solo playing is in the extra amount of bass tone required of the pianist's left hand; in other words, he is often the only "bottom" for the other two or three hands; so, in order to make this bass rich and powerful enough, it must be played exaggeratedly loudly. Without such solid foundation, the whole structure wobbles insecurely. Amateur ensemble players do not watch this enough.

Above all, never try to bring out two themes at the same time. The percussive nature of the piano precludes the success of any such plan unless the melodies are widely separated on the keyboard. Only one important melodic line should be well outlined—and all else relegated to a soft, but live background.

Ensemble players should work long at the easier, lighter repertoire before they tackle the Brahms-Haydn or Saint-Saëns Variations; and they should, of course, memorize all their pieces. They must strive for an impeccable, alluring rhythm, since this is the most important attribute of good two piano playing. . . .

Starting signals are given by one pianist who raises his head slightly, like a conductor's upbeat, and then lowers it for the "attack." For one of the pianists to wink his eyes at the other for a starting signal—as actually happened in a case I know—is too risky.

On a stage the pianos should be fitted together like this,

AUDIENCE

with the top of Piano II removed, the raised cover of Piano I acting as sound reflector for both instruments.

A word as to arrangements; I see no earthly reason why pieces written and *thought* for solo piano should be transcribed for two pianos, when there is such a wealth of orchestral and chamber music, songs, violin sonatas, and so on, hopefully awaiting a good arranger to make it available in this attractive medium.

It is well to remember that of all branches of ensemble, two piano playing is the most difficult for the performers themselves to hear; therefore a coach or an experienced teacher is absolutely indispensable in order to achieve a well balanced result.

Duo pianists should have conspicuous signs before them in their practice rooms to admonish them incessantly to play, "More Pianissimo," "Semistaccato," "One climax only," "Softer," "Dryly," "Less Tone," "Less Pedal," and to "Restrain Yourself," "Hold Back" and "Keep Down." I am afraid, however, that it would take huge, glaring neon signs to make them really heed these warnings!

Two Boys

I am fifteen years of age and have studied piano for approximately six years. At present, along with my studying I am trying to educate two small boys, one of seven and one of eight. One boy has done well. He had had previous training in school and grasped the fundamentals rapidly. The other boy does not seem to be interested and is coming along very slowly. However, his mother and father insist upon his studying piano. What do you suggest?—R. J. R., Michigan.

At your age, unless you are an example of that rare species, a "born teacher," you ought not to undertake the musical education of anyone. For, unfortunately, most teachers are not "born"—it takes years of training to produce even an ordinary one.

If the parents cannot engage a musician of wide musical experience for both boys, could they afford to send the slow chap to a more mature teacher? Then, if you must continue to teach the bright boy (which I do not approve of, even if you need the money), couldn't you take him once a month to your own teacher for a check-up?

Rack Down

Often photographs of pianists seated at the piano are taken with the music rack folded down. Is this a true way for the pianist to judge the tone reaching his hearers, whether it be loud or soft, as the case may be. I notice a decided difference in tone when the rack is down, louder, even harsher sounds being produced. Do you advise practicing with the rack down?—H. B., Canada.

I am very glad you brought up this very important point. If all concert pianists play with racks down—as they do—does it not seem advisable for students and teachers to follow suit? The rack is a wall which prevents the pianist from properly hearing the quality and quantity of his tone. It is one of the chief reasons for the student's surprised remark, "Oh, I thought I was playing *very* softly," when to the teacher's ears he actually sounded *mezzoforte.* The difference between rack up and rack down is really astounding. Luckily you found this out yourself.

Also, practice as much as possible with the rack down, and insist that all your students with grand pianos do the same as soon as their pieces are memorized. It is often possible to practice with the music laid flat on top of the rack.

Rotation

In Mr. Matthay's alleged remarks contained in the recent ETUDE article, "Is there a Last Word in Piano Technic?", he says that one cannot even place his hand in playing position without a slight forearm rotation toward the thumb, to keep the hand from falling over on its side. Is this the principle embodied in "Rotation of the Wrist"? Any enlightenment given will be heartily welcomed.—H. B., Canada.

Mr. Matthay is right. Have you ever tried to rotate your wrist? Impossible, isn't it? But the rotation of the forearm is one of the most important pianistic principles. Upon it depends much of the articulative freedom of arms, hands and fingers. Matthay's pamphlet, "The Forearm Rotation Principle and its Mastery," gives an excellent exposition of it, and will answer all your questions.

Always remember that the wrist has nothing at all to do with relaxation. Let teachers put that statement in their pipes and smoke it hard, even if it "knocks 'em out for awhile!" The true seat of "relaxation" is that floating elbow tip with its free swinging, rotating forearm.

Harry Adjip, in Berber costume

From Jungle to Symphony Hall

An Extraordinary Musical Life

The tale of a man with four names; who was born in Hawaii, of American Indian parents; was brought up by a Malay in Singapore, as a Mohammedan; is now a Presbyterian and an active musician in Philadelphia; and whose story was secured expressly for The Etude

By RALPH G. RUTLEDGE

Harry Adjip, as he is to-day

NO MORE REMARKABLE STORY has ever come into the office of THE ETUDE than this one. Harry Adjip is known to us personally, and we are convinced that his narrative is accurate to the best of his recollection. The fact that in the United States of America of 1938 he is still convinced that he has seen a Tigerman shows the power of superstition in the deep and mystic East. We have seen some of the amazingly fine copies of the scores of classics which he has made while employed by Mr. Edwin A. Fleisher in copying parts of the magnificent Fleisher Collection at the Free Library of Philadelphia, one of the greatest collections of orchestral and chamber music in America. Mr. Fleisher assures us that he is one of the most exacting and painstaking workers he has ever known. Mr. Adjip lives in Philadelphia, with his wife, who is a native of Porto Rico. None of his compositions have been published.—*Editorial Note.*

* * * * *

A Colorful Childhood

"MY NAME is Harry Adjip, and I purpose telling first, the following facts just as they have been revealed to me by those who knew the circumstances surrounding my birth, and later the varied experiences I have had in contact with music in different parts of the world. I say that my name is Harry Adjip, because it is one of the names by which I have been known; but, as I shall later explain, I am entitled to four names, Kalow, Mohammed Ali, Hadji Mohammed Ali, and Harry Adjip. In so far as I know, I am racially an American Indian, my father having been a Cherokee born in North Dakota. His name was Maro Kalow. My mother was part Mexican Indian and Spanish. I was born in Honolulu, Hawaii, January 15, 1888, where my father had a small sugar plantation.

"When I was three years old my mother died and my father was so despondent that he decided to leave Hawaii. He sold out and moved on with my sister and myself to the Orient. For a time he was in Manila, then in Hongkong, and at various places where he worked on rubber plantations. In one of these places he encountered an English circus, and this led him to Kuala Lumpur (in the state of Selangor) which, after Singapore, is the second largest city of the Malay Peninsula. It is one of the most beautiful cities of the British Empire in the Far East, with numerous fine modern buildings, excellent paving and all municipal improvements. The circus opened with my father as the director of the Wild West Show. Even then the romances of our Western plains and mountains were very thrilling to the Oriental. They liked the swift riding and the gunfire of the cowboys and the Indians, and father's show made a very great hit.

"At that time I was about five years old. One night father went out to the jungle on a hunt with a group of men from the circus. A black leopard, which no one had seen, stealthily leaped from a tree on my father's back, and in a few minutes, father was no more. All that he left to me was a small amount of money and an envelope with passports and papers giving my ancestry. These were handed over to a man who became my godfather. He was a Malay named Hadji Abdul Karim. He was a kind of priest, in that he was a teacher of the Koran and the Mohammedan Bible. It should be understood that the Mohammedan religion is monotheistic. That is, it believes in one god and not in the trinity as expressed in Christianity. It does, however, accept a large part of the Christian Bible and it reveres Christ like Mohammed, as gods, but as great prophets. Ever Mecca the name of Christ,

عيشا روح الله

appears at the sacred Ka'ba, the most spot in the Mussulman's world.

"All of my early education was Mob medan in the strictest sense. My godfa was a man of extraordinarily high ic and human sympathies. I know from residence in America that many pe look upon the Malays as semicivilize their thought. I heard from my godfa only the loftiest and noblest conceptio life relations. He spoke Malay, which my first tongue. He also spoke Arabic

"Life in the Malay Peninsula is very ferent from life in the West. Once c rubber plantation I was working wit group, burning up trees to make a clea on the edge of the jungle. I started a and ran a few yards away, when I hea call from my companions. I jumped looked back of me, and there dang about a foot above the place where I been standing, was a twenty-five python, with a head as big as my own I had delayed my jump only a few seco this story would never have been told. companions attacked the snake with knives, known as parangs, and soon reptile was no more.

Harry Adjip, as a Mohammedan

Music Study Begins

"NEXT TO OUR ONE STORY BUNGALOW t lived a musician who had formerly pla in a band in Manila. Music attracted enormously and my godfather arrange have this neighbor to give me lessons the violin. No one ever had to encou me to practice, for I wanted to do not else. The real Mohammedan has many hibitions regarding art, music and sport. In art, designs are permitted drawings of animate objects are prohib The strict Mohammedan is not permitte take part in football, dancing with the o sex, nor is he expected to be seen in m ing picture shows. Music is supposed t purely celestial, and therefore the Mohammedan does not participate in it in religious festivals, or unless he is dra to play in a military band as a sol Consequently it seemed very queer for godfather to let me take music lessons I believed he was my real father and I was his own son. Later I learned the son for his attitude. I was not his son not racially a Mohammedan.

PRELUDE

The Preludes of the great Polish master, while written in miniature form, are in no sense easy of execution. The student should possess a w rounded technique before attempting the study of the Preludes, as they range from the lyric to the bravura in style. This Prelude is rather vi ous in character and calls for a clear and articulate touch, especially in the dramatic unison passages.

From Jungle to Symphony Hall

(*Continued from Page* 88)

hen I was seven years of age my god- took me on the long pilgrimage to in Arabia. We went on a ship from ore to Jidah. There we mounted and went over the sands until we to the teeming throngs at the holy The camels almost invariably travel ht, because travel in the heat of the vith the thermometer from one hun- nd twenty to one hundred and thirty- grees Fahrenheit, is unthinkable. The ins, who manage the camel trains, nd shout all night long. When asked hey did this, they said that it was to the camels awake and going. If a goes to sleep, he calmly dumps off his passengers and this is dangerous. ght the songs of the cameleers on trips to Mecca and thereafter made the opening theme of my orchestral sition "A Night in Arphah"

Mecca, as a good Mohammedan child, s permitted to kiss the sacred black of the Ka'ba.* After six months in Mecca, we went on to Arphah. we donned the white ceremonial . After a blood sacrifice of a living ox, riest, or Eman, came in and asked name I would like to take. In my case at was needed was to add Hadji, so fter I was known as Hadji Mo- ed Ali. All who have been to Mecca he name Hadji to their names. The life ambition of every Mohammedan make the pilgrimage to Mecca at least before he dies.

hen I was twenty-seven I returned to a to kiss again the sacred stone of Ka'ba; but this time my first interest was music, as I was collecting melodies in the East wherever I could find them.

A Land of Curious Interests

"MEANWHILE, WHEN I WAS NINETEEN years old my godfather came to me one day with a bundle of papers which gave an account of my own father; and I was greatly shocked to learn that my godfather, who had been so devoted to me, was not my parent. Shortly thereafter I got a position as a valet for the manager of the rubber plantation, Mr. H. Skinner, with whom I eventually went to Sumatra. He returned to Singapore after a month, but I stayed two years, during which time I made many trips to the deep jungles. Sumatra, to me, was a land of mystery. The first thing I found out was that the natives had a poison so deadly that one drop on the end of a spear was sufficient to infect a wound and cause almost instantaneous death. It is a land of interminable superstitions. There are many varieties of animals, including tigers and the large anthropoid apes, orang-utans (in Malay this merely means man of the jungle) and the rarer siamang or large gibbon, elephants, tapirs, bears, rhinoceros, wild oxen and the famous Sumatra tiger. Gibbons have long arms and legs, are not ordinarily dangerous, but they are very mischievous. They swing from tree to tree, sometimes distances of forty feet and appear to be flying. To see a group of five or six flying monkeys, all hooting at the top of their voices, is a thrilling experience.

"It is hard to believe, but I have seen tigers which seemed to be friendly to the people of the jungle and never to attack them. The natives believe that for hundreds of years have these tigers been friends of their ancestors; and therefore they think that they have been protected by them. One twilight a friend of mine took me to the edge of the jungle with a bowl of food. He called and a tiger came up and ate rice and chicken out of the bowl I held in my hands. I know that this story will be discredited, but it is true.

Aboriginal Music

"IN SUMATRA I felt instinctively that there was a vast treasure house of aboriginal melody and folks themes which had never been made known to the world. I therefore determined to take my violin and go into the heart of Sumatra, to see if I could not write down any melodies that I heard. Here was a land of mystery and absolutely incredible superstitions. More than this, these superstitious beliefs are so mixed up with happenings and seem so altogether miraculous that soon one finds oneself not knowing what to believe, but so amazed that one is afraid not to give credence to the wonderful reports that are heard. At that time I had gone through the seventh position on the violin and could play many of the classics. What would this mean to the people who lived in these almost impenetrable jungles? Brought up as a Malay, speaking the same language and having a short stature and the dark skin of the American Red Man, I found no difficulty in being admitted to all kinds of secret rites.

"I left Padang on the coast, with the determination to make my way by boat to the interior. My first objective was Mt. Korinchi. Going up one stream, on the way in a native boat, we passed a river so choked with huge alligators and crocodiles that they had to be pushed aside. Then, the midnight depths of the jungle! At

(*Continued on Page* 124)

Encyclopedia Britannica says: "The black is a small dark mass with an aspect suggest- ldcause or meteoric origin, fixed at such a that it can be conveniently kissed. The y of this heavenly stone, given by Gabriel raham, does not conceal the fact that it was ally the most venerated of a multitude of nd sacred stones which stood all round the bary in the time of Mohammed."

The "Magic" Finger Exerciser and Developer

is considered to be the best invention for pianists and others whose work demands manual dexterity and strength. It has been said that it will revolutionize pianoforte technique. Teachers and piano students are enthusiastic about it, and say that it is wonderful.

The use of the "Magic" a few minutes daily has such an invigorating and tonic effect upon the muscles of the hand and forearm that one can practise for hours without the usual weariness. Its continued use will open up new possibilities in technique, by developing the muscles in a way possible only with the "Magic."

The appliance consists of an ingenious arrangement of rings and fine silk covered elastics which create "resistance" on the downward, and "assistance" on the upward movement of the fingers.

Speed, brilliancy and effortless ease are acquired in a few days by the advanced student, and in the primary grades much time is saved by its correct formative habits.

Important features of the "Magic" are:

Exercises and trains the fingers "entirely at the keyboard" playing in the usual way, from the music.

Is *interchangeable;* can be worn on either hand, thus saving expense of buying two.

Finest material only used—made to last—only one grade.

We guarantee the "Magic." We want you to prove what we claim and we return your money if you are not more than satisfied. Students show great interest in this and enjoy using it. There is nothing better, nor anything just as good.

We will gladly send our booklet of testimonials and instructions upon request. May we contribute to your happiness this coming year by sending you a "Magic Developer."

"Though the organ is one of the oldest instruments on which effective solo performance is possible, and though it was one of the first instruments on which purely instrumental music was played, and though its general features and tonal structure have been stabilized for many centuries, the advances in its mechanism and tonal components evolved during the last fifty years have been monumental and epoch-making in effect."—Earl V. Moore.

THE SINGER'S ETUDE

Edited for February by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

Voice Training in Our Schools

By REVEREND JOSEPH KELLY, Mus. Doc.

THE SPEAKING and the singing voice of children in some of our schools is treated with such absolute disregard that it constitutes one of the great educational sins of the present day. Whatever of quality or beauty the fresh young voice may have had, all is lost for want of care and skill in training. Listen to a class reading in concert, and in almost every case you will hear a disagreeable, tiresome monotone. W. Warren Shaw in "The Lost Vocal Art and its Restoration," says: "The human voice is the audible manifestation of the soul and mind of the material world. Voice training is the cultivation of the mind and ear, aided by favorable physical activities which consequently develop the physical parts involved. The science of psychology is shown to be the real science on which the old Italian school of singing actually stood and on which all really successful schools must stand. Imitation is at the root of all voice production. We witness this in the animal world, for as the tiny birds are taught to sing by imitating their elders, so children are taught the same way, by imitation."

Therefore it depends entirely upon the teacher at this period of the child's efforts to produce beautiful tones in speaking or singing. What care then should the teacher exercise in pronouncing words clearly and distinctly, avoiding all tendency to throatiness in tone. Singing should be built on the foundation of correct speech, the word being mother to the tone. All tendency to shouting or screaming should be frowned upon from the very beginning. There is one admonition that every teacher should keep in mind in teaching singing to children, and that is, always insist on the children singing softly, for then they can do no harm to their tender vocal apparatus. By allowing children to use their voices to the limit of their power, we not only do positive harm to their vocal cords, but destroy all sense of real music or any ideal of true artistic singing they may have had. Singing, to the child, should be as natural as speaking and no more effort should be exerted in the one than in the other. The one is governed by the same laws as the other. Witness the child singing little ditties to itself in its play. It makes no effort and strains no nerves to produce the tones. It sings softly and with the natural beautiful head tones of childhood. Why change its manner of producing tone on entering school? The teacher should take the tones as she finds them and with that as a foundation proceed with the correct development of those tones by right methods. It is not necessary that the teacher be a great vocalist or a great musician, but she should have a true ear and a true voice; she should understand what she is to impart and how to impart it. The sweet, soft, natural singing of the child should be carried through the grades until the voice begins to show signs of mutation or change. We can sum up the matter so far treated by simply stating that the teacher should not interfere with nature in the child's production of tone in singing or speaking, but, by imitation, should lead the child on in developing nature's work.

Song an Educational Servant

THERE IS A TWOFOLD PURPOSE served in the courses of singing in our schools: the training of the taste and imagination of the child, and the training of his mind and the powers of concentration. There is a training of the taste of the child; for, to the ordinary child, singing is a new form of expression, even if it is natural for the child to sing, which interests and delight it, if patience and ingenuity are used by the teacher. Then the imagination is called into play and new sorts of mental pictures are created in the child's mind. His mind and powers of concentration are exercised; for, like speech and movement, song can be used for the manifestation of ideas that belong to the most varied departments of knowledge; and it thus can serve the purposes of the teacher in any and every grade. Singing is not extra curriculum, but should be considered as part and parcel of the regular school work and given the same care and attention as any other branch of knowledge. Its function is to strengthen the growth of thought, feeling and volition. Experience shows that where the child is trained to a mere formalism in music, the result is the same as when words are made to take the place of content. Unless thought and feeling be first developed and united with a view to expression, not much can be gained through the medium of song.

When it comes to the selection of a singing method in the training of the child voice, this question should be uppermost in the mind of the teacher. Is nature assisted in the treatment and development of the child voice by the particular method before me, according to the fundamental rules governing voice production? Songs should not form the primary work in the treatment of the child voice, unless those songs are of the very simplest kind and are used for the purpose of rhythmic exercise. The several vowel sounds common to songs should be used for practice first, so that each sound can be vocalized with ease. Rhythm should also form a part of the instruction in this primary period, by the use of very decided but simple rhythmic exercises. Unless a singing method proceeds along these general lines, the common laws governing the teaching of singing when dealing with the child voice are not followed. Children's voices, especially at the beginning, should not be put through the mechanics and gymnastics adapted to the adult voice. If it is done, it spells ruin to the delicate apparatus of the child and does a very great injustice to him.

A Plan of Study

THE CHILD'S TASTES, imagination, and mind together with his powers of concentration should all be taken into consideration by a correct singing method. As already noted, the training and development of the child voice should be an educative process. Therefore the treatment of the children's voices should have for its primary purpose to strengthen the growth of thought, volition and feeling, and not merely the simple exercising of the vocal organs, or affording pleasure arising from tone or rhythm. This is the form to which every method of singing for children should measure up. Unless it accomplishes just this, it should not be considered at all. Since music is an expression of what has been assimilated by the mind of the child, any method worthy of the name should always keep in view the training of the taste and imagination of the child, the training of his mind and his powers of concentration, together with a development of a desire for the good, the beautiful and the true so manifestly exemplified by the vibrating tones of the angelic art. Less than this should satisfy no teacher of singing in our schools; and it should be realized in full by all who have the training of children's voices at heart.

An appropriate expression of thought must be the aim, if singing in our schools is to have any educative value. Ideas must always be given expression to by music, otherwise it has no place in the curriculum of studies. Teaching singing for singing's sake is not the office of any true method, but it should develop in the child the power to see in music real, tangible ideas, thus appreciating musical expression in its many forms. A pleasing melody is one thing; and the idea or feeling it adequately represents another. When a child is able to discriminate between these two, then music is beginning to assert its cultural value. Singing is preëminent among the departments of music and therefore its cultural value must be foremost in the education of the child. Definite standards are required in every domain of art and music is no exception. Correct musical expression in the training of the child voice will help to create these definite standards, so that the child may be able to distinguish between what is true music and what is "trash" in so-called musical compositions.

A Sane Method

THE IDEAL TO BE MAINTAINED in the training of the child voice is the character of the tone. As we already know, there is but one quality of tone that is absolutely physically safe and beautiful in timbre, and that is the head tone. All voice trainers worthy of the name agree in this. It is physically safe, for in vocalizing on the head tones the child sings on what is known as the thin register, using only the inner edges of the vocal organ. By so doing he does not strain or overwork his undeveloped vocal apparatus and run the risk of ruining his singing and speaking voice beyond repair. This register is sweet and beautiful in quality, and the tones thus produced promote the growth of musical sensibility in the child and an application of beauty in tone. The practice of forcing children's voices upward on tones other than the head tones is all too common these days, with inexperienced teachers. They aim at power and sacrifice sweetness and beauty of tone. Moreover this forcing, especially on the higher tones, is most injurious to the child, causing in the larynx redness, inflammation and fatigue. After some time it becomes impossible for the child to control the production of tone sufficiently to sing in tune.

The subject of registers, when applied to the voice, is a puzzling one to many teachers. Therefore the question arises, how are children to be taught to sing on the thin register? The thin register is the natural quality of tone that a child will take unconsciously, if the child is not tone deaf and does not sing on tones that are very low in pitch. The subject of thin and thick register should not be mentioned to the child. He should be given to understand that his natural way of singing is the correct way. The secret of teaching children to sing on the thin register is to have them vocalize on high tones, that is, on those tones within the compass of their voice which will not allow them to drop on their thick register.

High tones cannot be produced naturally on the thick register of the voice. In order to establish this thin register permanently always have the children to vocalize on a tone of high pitch, that is a tone that it would be impossible for them to take with their thick register. Taking this tone as a starting point, move down the scale insisting that each tone he sung very softly; for by doing so the pupils will refrain from breaking into the thick register on their low tones. Loud singing and shouting invariably will cause the children to drop to their thick register. If there is an tendency on their part to use the thick register in the descending scale, they should be asked to begin the scale anew from the high tone from which they started. The the teacher should take particular care that they do not change register on the same tone again. If they do so, then they should be shown the difference in quality between the two tones where the break occurs. If the break persists, they should be asked to sing that particular tone very softly. This they cannot do on the thick register. Singing very softly compels them to use their thin register. By persisting in this manner one, two, and finally a whole octave of tones on the thin register can be added below the point where they showed the tendency to break into the thick register. In order to establish this thin register, so that the child uses it naturally throughout the scale, on high and low tones, always start the vocalization on a high tone and sing the descending scale. If the opposite course is taken, that is, starting on a low

and ascending to a higher, the child most probably begin on his thick or register and force those tones up as as possible, thereby utterly ruining ical mechanism, and sing in a coarse harsh manner.

The Proper Songs

CHILDREN SING NATURALLY on high , it is a great mistake at the beginning e music written in low keys. When the child has been accustomed to the ng of low tones on his thin register, should be selected that have a limited ass and that on moderately high tones. also the other extreme should be ed, namely compelling the child to on extremely high tones without some tion. There is a happy medium. Many written in low keys can be transposed higher key more suited to the chil- s voices; but here again one must keep ind the compass of the song. If the ner finds the song cannot be transposed, ould be dispensed with entirely, rather risk the children singing on their register. Songs and exercises whose range are between G and A above the staff, with the limit F first space as low tone, are considered proper material for the training of the child voice.

There is no better way of habituating children to the use of their thin register at all times than by exercising them on their high tones and allowing them to sing very seldom on tones that would have a tendency to lead them into their thick register. The compass of their thin register will increase with time and practice. By following this course no harm can be done to their vocal apparatus; they never will complain of fatigue in singing; and their thick or chest register will become more and more unnatural to them. Finally they will never think of singing on that register at all. If there is one admonition that all teachers should heed it is this: Always insist upon the children singing softly. Then, in case they are not singing in the right manner they are not harming their little throats, as they would do by exerting themselves to the utmost. Singing should be as natural as speaking and with no more exertion.

(*Continued in* THE ETUDE *for March*)

The Vibrato or No

THIS EXCELLENT book, "Voice Building Tone Placing," H. Holbrook Curtis es this very interesting statement r the discussion of "Tone Placing": t is difficult to express in language that h is very easy by vocal example. Many ers have a superbly placed high reg- , as instanced in the singing of Tetraz- but when they sing in the middle e, a blatant quality is introduced which ffensive to the educated American ear. nge to say, this manner of singing is ptable in Italy, and the *vibrato* quality h frequently accompanies it, as evi- ed in the singing of that admirable st, Signor Stracciari, is considered an ence of temperament.

The difference between *vibrato* and *olo* is, that one is voluntary and pro- d by the respiratory act, while the r is caused by a lack of tonicity of cords and their mechanism. The *vibrato* opular among the Latin races, while Anglo-Saxons will not tolerate it. No t singer has ever succeeded in securing gnition in the United States as of the first rank, who has attempted to secure his effects with a *vibrato* quality. This was clearly evidenced when the late Signor Tamagno sang in New York, at the time Jean de Reszké was in the zenith of his fame. To the latter we owe much, for it was he, more than anyone else, who educated the people of this country to a proper appreciation of homogeneous tone coloring in the phrase, or, as it is popularly called, singing on the line. Plançon's success may be said in great measure to be due to his delightful *legato* work, which is truly unsurpassed. The 'marriage of the registers' is an all-important work in teaching. No voice can be injured by carrying the head quality too low, but almost every voice may be ruined by forcing the lower registers into the upper. The stumbling block of baritones is *d"*; they particularly enjoy roaring an open *d"*, and it generally is the cause of their ruin. Perfection in singing is arrived at when you are able to sing your entire compass without making your audience aware that there is any change in the quality of the register."

FIFTY YEARS AGO THIS MONTH

ir Morell Mackenzie, one of the great- authorities of his time, on the use and iene of the voice, wrote thus in a thesis a question vital to the student of sing- : "Should a Singing Teacher be Able Sing?":

The question has often been discussed, ether a singing teacher should neces- ily be able to sing. Teachers regard this stion from the standpoint of their per- al qualification. At a first view, it would ear as though a singing teacher who ld not sing must resemble Swift's danc- master, who possessed all possible re- sites for his profession except that he s lame. This opinion, however, is as orrect as it would be to think that all se who would drive fat oxen must, nec- arily, be stout themselves. The vocal cher must, it is true, be able to sing fficiently well that he may illustrate his truction by example, and demonstrate w one should sing and how one should *not* sing. It is not essential, though, that he be a brilliant singer; for, according to my experience, many of those who have developed the most admirable voices, have themselves possessed little or nothing of the divine gift of song. Yet though it may be permitted a vocal teacher that he possess but a mediocre voice, he must, on the other hand, have a thoroughly fine musical hearing. He must be governed by an exclusive taste, developed by the best that the world has sung and written, and his artistic cultivation must not be restricted to his own branch of the art but must extend over the whole wide domain of music and its fundamental laws. He must, furthermore, be endowed with unbounded patience, in order that he may be able to endure the boundlessness that is ever associated with genius, and to obtain an exact knowledge of his pupil's capacities, so that he may further the progress of all good qualities and nip the bad in the bud."

* * *

"Control your breath energy, and you can do what you want to do with your voice, provided you know what you want to do."—Francesco Lamperti.

HARMONY

Is Your Next Step

Towards Pre-eminence in Music

A practical knowledge of Harmony—the Grammar of Music—will immeasurably widen your musical horizon. It will open up many new and bigger opportunities to you—*a higher standing and recognition, and greatly increased financial returns from your work.*

Musical authorities and representative musical publications emphasize the necessity of a knowledge of Harmony in an adequate musical education.

Thousands of musicians and teachers have found the University Extension Conservatory Course in Harmony to be a real and highly profitable investment. The course has been prepared by authorities of world-wide recognition—Mr. Adolph Rosenbecker and Dr. Daniel Protheroe—and is given under the personal direction of highly qualified experts.

Each lesson is clear, thorough and correct; not the mere mechanical application of rules, but an interesting, intelligent and thoroughly practical method. A written examination on each lesson, in addition to ample original work throughout the course, will develop your knowledge and firmly fix the important principles in your mind.

Qualify for Higher Positions in Music

If you feel that you have gone as far as your present musical training will take you; if you are ambitious to make further progress, enjoy greater recognition, and increasing financial returns, then you owe it to yourself to find out what this great Musical Organization has to offer you. At a very small cost and with no interference with your regular work, you can quickly and easily qualify for higher and more profitable positions in the musical world. Our amazingly simple and easy Extension Method of teaching the higher branches of music has stood the test of 25 successful years and has made enthusiastic friends all over the world.

Send for Free Sample Lessons

We want you to know how interesting and valuable the training of the University Extension Conservatory will be to you. We want you to be the judge—without any risk or obligation whatever on your part.

Return the Coupon and we will send you a number of sample assignments of any of the Conservatory Courses in which you are interested, for your examination—ABSOLUTELY FREE.

These Sample Assignments will prove to you why University Extension Conservatory Courses have gained and held such a high place in the Musical world, and have meant so much in real money and recognition to so many ambitious musicians. Send for them today.

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Church Music Before Palestrina

By TOD B. GALLOWAY

WHEREVER WE MAY SEARCH in history, mythology or even tradition, from the maze of it all we gain the indisputable fact that in the beginning of all time, in every epoch, mankind worshipped his diety, gods, or even devils, with music. However uncouth and wild in its nature, it was to them an effort to add to the solemnity of their religious purpose and intent. It was through this inaccountable manner that the untutored aborigine tried to add an unexpressed but natural effort to that great mystery of the human soul—to do something to differentiate the longing to do something which would add awe and mystery to his efforts towards a religious worship.

Anthropology is a curious study of the endeavors of human individuals to clothe their rites of worship, reverence or wild idolatry and superstitution with some exercises or efforts which, to their undeveloped minds, might accomplish this result. There is nothing in the history of mankind more fascinating than the study of the primitive and unexpected relations by which these various results were attained.

It was in this way that, as we study history, mythology and human relationship, we arrive at the knowledge that it was largely through the desire and yearning of the human soul to give an expression in sound to those inherent feelings, of a knowledge or feeling for powers over and beyond the human, that various musical instruments—though at first they could hardly be called musical—came into existence. It was the inherent urge of man to try to give utterance or expression for or towards something higher and nobler than his imperfect efforts of human utterance could voice or indicate. How the drum was evolved from a hollow log, the pipes from hollow reeds, or the evolution of stringed instruments, all make the story of the human effort towards something higher, better and certainly new and different in religion. It was this consecration of music to the service of religion which largely led to its being developed and cultivated with great zest and earnestness.

For ages past, countless thousands have accepted and believed in the legend that is related in Genesis, of the creation of heaven and earth as the beginning of all history. As a matter of fact, if one reads the first two chapters of the first book of Moses one finds therein nothing that destroys his belief in it or the history of the earth.

Whether, as we know through modern science, it relates to millions or hundreds of millions of years ago does not interfere with our concept of the creation. Whether after that we follow Moses' account, literally or not, really makes but little difference. We however do know that, long before the Ark episode is reached music was in existence; and we can only regret that Moses and his scribes, who described quite graphically the entrance of the animals "two by two," failed to enumerate the various musical instruments which went aboard to keep the animals company and to amuse, cheer and distract the humans who voyaged for forty days and nights.

What they had we do not know; but we do know that the Hebrew nation never has made claim to the invention of music but has assigned it to the antedeluvian days of Jubal, who "was the first father of all who handle the harp and organ."

Whether, as is asserted, Moses learned arithmetic from the Egyptians, and his followers acquired music and dancing from the same source—which are quite probable—we do know from the Bible that, after the Deluge, the first mention of music was in the narrative of Laban's interview with Jacob. Then we certainly know that one of the proudest and most sacred moments in Hebrew history is their exodus from Egypt, which marked their birthday as a nation—an event ever since celebrated in song and poetry; and that on the banks of the Red Sea they celebrated their miraculous deliverance from slavery, with Miriam and her chorus of women chanting *Sing ye to Jehovah,* while they hail Moses as their great leader and liberator.

The Hebrew people have never claimed to have originated or discovered music, which they undoubtedly acquired from neighboring nations; but we do know what as a people they have added to the world's wealth of music individually and collectively; and one of our inestimable debts to that people is the whole church service, its liturgy and its music, which were handed down to us from the Temple, and were adopted with such suitable changes as the Christian Church needed and demanded in its primitive days.

The world's great debt to the Hebrew people is that, despite untold opposition through the ages, they were the first to develop and to follow consistently their belief in the monotheistic idea; and to them we owe the Christian Church to-day.

We cannot gain, from the Talmud or the Bible, much real knowledge of the origin and development of the liturgy of the Hebrew religion. Its sacred music, as liturgical references show, was the most important application of that art that the Hebrews made.

We realize that there were two distinct eras in the development of Hebrew music; the Golden Age associated with Saul, David and Solomon; and the Silver Age, that of the captivity and the final restoration of the children of Zion to Jerusalem, and the rebuilding of the Temple. In fact we learn from the Bible that through the labors of Ezra an elaborate service was instituted in the New Temple, and that from that time to the present the service, as the Talmud clearly defines, has been followed in the Synagogues except where tradition has been modified by extraneous circumstances and surroundings.

What was more natural than that, in the primitive Christian worship, the new worshippers—mostly of Hebrew birth, education, training and environment—should, largely if not wholly, adopt the liturgy with which they were familiar as part of their birthright. Grotius maintains that, in "The Acts," when Peter and John been arrested for preaching to the pe in the Temple, after the release of Apostles and their reporting to the pe about what they had replied to the H Priest and his kindred, those verses stitute the epitome of an early Chris Hymn.

"When they heard that they lifted their voice with one accord to God said 'Lord thou art God who has m heaven and earth and the sea and all in them is.'"

"Who by the mouth of thy servant D hath said 'Why do the heathen rage imagine vain things?'"

It would appear from other writers the New Testament that even Christ h self, in his final interview before his Cr fixion, sang with his disciples in customary paschal songs; for Matt XXVI:30 says, "And when they had s a hymn, they went out on to the Mo of Olives." The New Testament is ful such references.

The Hebrews worshipped God by sa fices and songs in their homes. So in New Testament the early Christians, social gatherings and around housel altars likewise worshipped God. Paul Silas, after being lacerated by cruel scou ing and being in close confinement in inner prison, are recorded, "And at m night Paul and Silas prayed and s praises unto God, and the prisoners he them." The Early Church persisted in devotional exercises, whether in the obs catacombs or when prisoners in cells mines. They not only used the fami psalms but also made their own sa songs, as Paul said when writing to Corinthians (1 Corinth. 14:26)—"How it then brethren when ye come toge everyone of ye hath a song, hath a doctr hath a tongue, hath a revelation, hath interpretation. Let all things be done u edifying."

In the Apostolic Age we have the fam letter of Pliny to the Emperor Trajan which he speaks of the Christians sing "morning songs to Christ." In the e church they sang only simple airs repe and learned by all. Always they rejo in these songs, as St. Jerome said, " ploughman at his plow sings his songs joyful hallelujah; and the busy mower s passages from the psalms and the v dresser sings his songs of David."

From the fourth century on we find g changes taking place, for we note resp sive singing taken from the Hebrews in their services the appointment of sing as a superclass, while the rest of the w shippers remain simple spectators. The troduction of Latin in the use of litu as more fitting and solemn, was of co a great bar to the unknowing. Not u the Reformation do we find this inestim right returned to the congregation.

Little by little, as the church grew o and more sophisticated, we find abuses cr ing into the music until when the fam Council of Trent convened it was obli to issue a decree on the use of sec

A NEW BROADCASTING ORGAN

Radio Station WFIL, of Philadelphia, has just installed a new organ with three thousand pipes, which differs from the usual church or theater instrument in that it is installed in two scientifically constructed tone chambers, each completely "under expression" and designed to meet all the requirements of a broadcasting studio. The organ, which is said to have cost $22,700.00, was designed by George Kilgen & Sons, Inc., with the collaboration of Dr. Charles M. Courboin and Irene Harding.

and asked Palestrina to produce the and highly devotional music in use . He was the greatest composer who d himself exclusively to sacred The Church of Rome, as it became organized, began to display that pro- veneration for choral service which ways been a characteristic feature of vice.

Hebrew music, like that of ori- countries, consisted of melody which rgely monotonous or unisonal; and it ot much changed until in the New nent times when it began to adopt of the characteristics of the Greeks'. As far as the use of music in their y was concerned, no other nation made xtensive use of it. We learn from the Psalm that even the Levite sentries d their songs to Zion as they paced emple at night:

Behold bless ye the Lord, all ye vants of the Lord which by night d in the house of the Lord."

what are termed the dark ages it was like St. Ambrose and Gregory the that directed their attention particu- in the Church to harmony and its uses ve find counterpoint finding its way he service. It was Gregory the Great, cordance with his many innovations, was the father of the Gregorian chant whose broad foundation the music of hurch rested for several centuries.

en the Reformation came we find a on among the Protestants. The Luth- accepted largely the Roman ritual; rom that fact we owe an inestimable o Bach and Handel, and to their fol- s, Haydn, Mozart, Beethoven, Spohr Mendelssohn. Of them all we may say Bach was the most vividly religious. rt and Beethoven composed their d music like operas.

en the separation between the Roman blic and Church of England finally red, Henry VIII, who was himself a ian of ability and accomplishment, ed his interest in the regulation of the ch of England choral service, which he continued. From that time until the nt it has been but little changed. In this they avoided the current psalmody to the followers of Calvin and the Geneva ism have always been identified.

the Renaissance the spirit of man- kind, as the result of the long and strenuous groping from the death of Christ onward, finally recovered consciousness and the power of self-determination, recognizing not only the beauty of the outer world but also what was greater, the beauty of the soul. As a great Frenchman has said, its great achievements were the discovery of the world and the discovery of man. The dark ages gave birth to Chivalry, of which one of the finest results was the great poetic glorification of woman as exemplified in the worship of the mother. It was a great poetic achievement of the masculine soul sending up to heaven that longing of his soul for something detached from and higher than the brute senses. It represented the highest purest note of the inner music of his soul. By it he attempted to show his understanding of the high destiny of woman and the mystery of human life, when he elevated the mother and the Child to a place above the Altar, the highest and most sacred place his mind could imagine. When he transfigured the companion of his existence into a sacred being, and showed the Child stretching forth its little arms towards the heart of every man, he sanctified woman in her function as a mother; and when he had done that he ennobled himself and brought himself a degree nearer to the Divine Image in which he had been fashioned.

No word in the Bible, nor in the creed of the Apostolic Church, nor even in the writings of the fathers of the first five centuries, allots to the Virgin the dogma which has become a fundamental part of Faith. Early we discover the steadfast belief which grew steadily until by decree of Pope Pius IX it was incorporated into the Roman Church. What a difference it made in the music of the church. When we think of the wealth of beautiful and touching harmonies it has added to the glorious memories of the past and present. Think of the numerous rich and glorious settings of the beautiful *Ave Maria,* the touching "Stabat Mater," the inspiring *Hymns of the Nativity,* the exulting *Salve Regina,* and the heart expanding *Magnificat,* and then one may begin to realize that perhaps the most appealing music which has been added to the Christian Service is that which was inspired and created as a result of the chivalry of the Dark Ages.

"Mister Lincoln's Choir Experience"

By KAY MANNERS

ves of Illinois are proud to recount xperiences of Abraham Lincoln as he visiting their settlements as a circuit- g lawyer through the virgin country, before he became president. It was g this period of his life that he ex- nced one of the many humorous in- ts about which he never ceased to and joke. He thought it such a huge that he told and retold it.

wyer Lincoln attended Sunday meet- wherever he chanced to be, but it was e especial county seat meeting house he was most frequently seen. His lule of itinerant appearances in the ty seat settlements was the reason for Though nothing of a vocalist him- he usually sang along with the others eeting, although he preferred to listen ne particular group of girls in the ng of hymns. They sat in the first n of benches on the women's side of meeting house—what we now know choir section.

e day he remarked that those young h voices reminded him of what he often read of the angel host or choir; hinking that was a direct hint, the kindly parson asked these young women to tarry after meeting. At his request, Mr. Lincoln endeavored to train them to sing some of the older hymns, after the fashion of what is now known as anthems. But, quickly sensing he was a failure at the task, he promptly turned the job over to one of the women of the congregation—a mother who sang much in her own home and who had learned her job by singing a dozen of her own babies to sleep.

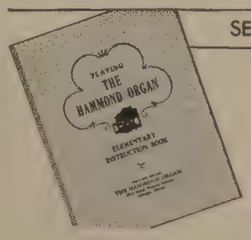
The next time he visited the settlement and remained over for the Sunday meeting, he was again called upon to officiate as a sort of guest-conductor of that "angel host."

Again he was the pained listener. The result of his untutored training was terrible, even to his musically untrained ears. He had one stormy session with the parson and the choir's leader after that meeting, making them finally understand that no angel band could ever sound that bad. From that day on he altered his law itinerary so he found himself in another settlement on Sunday and that one particular choir returned to the old fashioned method of lining out the hymns.

There is an increasing demand for lessons on the

HAMMOND ORGAN

Many piano teachers are preparing now to extend their activities into this rapidly growing and profitable field.



● The Hammond Organ has made fine organ music available, for the first time, to many families of moderate means. Thousands have been installed in homes, schools, churches, etc. in this country and abroad.

As a natural result, the demand for lessons on the Hammond has been steadily growing. Many schools of music, including the Cincinnati Conservatory and the Chicago Musical College, have inaugurated regular courses on the Hammond.

Learning to play the Hammond Organ, as you may know, is remarkably easy for those who play the piano. The Hammond has no pipes or reeds. Instead, it creates familiar organ voices through electrical impulses . . . is ready to play when connected to an ordinary electric outlet.

The Hammond dealer in your community will gladly demonstrate the Hammond Organ for you. Like thousands of other pianists, you will find it a fascinating instrument, with virtually unlimited tonal possibilities. Within a very short time you can become sufficiently familiar with the Hammond to teach it yourself. Your dealer will gladly make available to you a practice organ at a very nominal charge. Get in touch with him today.

SEND FOR THIS FASCINATING INSTRUCTION BOOK!

This interesting instruction book will prove a valuable aid to you in learning to play the Hammond Organ yourself, or in teaching others to play it. The book is not intended to be a complete organ course; its purpose is to show the piano player how to adapt his technique to the Hammond. Send the coupon today for your copy.

THE HAMMOND ORGAN

The Hammond Organ, 2929 N. Western Avenue, Chicago, Ill.

Please send me, postpaid, a copy of your instruction book "Playing the Hammond Organ." I enclose $1.00.

Appropriate Music for

The Choir's Contribution to the Easter Program

Any of These Publications May Be Had for Examination

EASTER CANTATAS

For Mixed Voices unless otherwise mentioned

MESSIAH VICTORIOUS
By William G. Hammond

A stimulating and uplifting musical presentation of the Resurrection and Ascension. There always is predominating a musical fervor in its decided melodic and rhythmic construction. Time, 30 minutes. Price, 75c.

THE RISEN KING
By Alfred Wooler

Just the kind of a cantata to make a genuine appeal to volunteer choirs. It is always interesting to the choir and the solo assignments are very satisfying. Time, 30 minutes. Price, 60c.

IMMORTALITY
By R. M. Stults

A well planned cantata with texts taken chiefly from the Scriptures. Time, 35 minutes. Price, 60c.
Also published in an edition for Treble Voices—Two Part. Price, 60c.

EVERLASTING LIFE
By Mrs. R. R. Forman

This cantata presents the story of the Resurrection in a most beautiful and effective manner. Ten musical numbers. Time, 45 minutes. Price, 60c.

THE GLORY OF THE RESURRECTION
By Charles Gilbert Spross

Frederick H. Martens made the compilation around which the composer wove his melodies and musical effects to enhance the beauties of these Easter thoughts. Time, 35 minutes. Price, 75c.

VICTORY DIVINE
By J. Christopher Marks

One of the best of all cantatas for Lenten or Eastertide use, satisfying to the lover of good music as well as to non-musical folk, small choirs of volunteer singers with fair soloists or splendidly trained choirs numbering several hundred voices. Time, 1 hour. Price, $1.00.

THE GREATEST LOVE
By H. W. Petrie

A brilliant cantata of moderate difficulty for Easter or general use. The twelve melodic and interesting musical numbers are divided between soloists and the chorus. Time, 40 minutes. Price, 75c.

HE LIVES, THE KING OF KINGS
By Anna Priscilla Risher

Texts by Juanita E. Roos. Its nine numbers impressively bring out the story of the Cross, the Tomb, and the Resurrection. Time, 20 minutes. Price, 50c.

Other Easter Cantatas

The Rainbow of Promise (*Baines*)	$0.60
The Wondrous Cross (*Bergé*)	.60

ORGAN AND CHOIR QUESTIONS

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. What registration would you suggest for the Largo *from "The New World Symphony" by Dvořák-Clough-Leighter, on a two manual organ including stops named on enclosed list? Do you know of any church organists who would donate old or second hand pipe organ music for use in a small country church, where the organist serves without salary and furnishes all the music for preludes, offertories and so forth?*—R. M. H.

A. Your specification indicates a duplex organ of perhaps three sets of pipes and a Pedal Bourdon. The instrument is very limited in scope, and it would be difficult to adapt the Dvořák *Largo* with much variety. We suggest that you experiment with the number, using, perhaps Salicional and Flute 4′ for the solo passages, with Dulciana on another manual as an accompanying stop. For the opening measures you might try the Stopped Diapason, or, if not too loud, the Open Diapason. For your general information: Dulciana is soft organ tone; Open Diapason is louder organ tone; the Stopped Diapason and the Flute 4′ suggest the Flute family; while the Salicional is rather reedy in tone character and would be classed in the string family. While we are not familiar with organists who would be willing to donate music, we have no doubt such music is available from some source, and this reference to the subject may result in some offer along such lines.

Q. When my choir members sing pp *they gradually become flat, and have finished as much as two full tones below the correct pitch (accompanied on the Aeolene). I would like eventually to have them sing unaccompanied, but now have to use the Viol de Gamba, Stopped Diapason and Pedal Bourdon to keep them on pitch. They sing well in* mp, mf, f, *and so forth.*—W. Y.

A. The flattening you mention may be caused by a "lazy" soft tone, that is, a tone that is soft but not intensive. A soft tone should have color and intensity. Impress this on the choir members, and ask them to "think up." For a physcological effect you might suggest their lifting their eyebrows. Flatting might be caused by physical conditions—close, stuffy atmosphere and so forth. If it is necessary to accompany the choir in these soft passages, we feel that your second combination will be more satisfactory than Aeolene, which is not enough support for the voices, and its use only serves to emphasize the fact that they have dropped from pitch.

Q. I have been considering the building of a residence organ of two or three manuals. Could the entire instrument be enclosed in two swell boxes of moderate size, so designed that it will be possible to move them to another residence? Would you advise the addition of a third manual, or will the extra cost be excessive? Would it be feasible to spread the cost of the instrument over several years, by starting with the console, blower and a few sets of pipes, and adding stops from time to time? Can you outline a specification for such an organ, and quote approximate cost if purchased all assembled, and also the cost of the console and the separate sets of pipes if assembled by myself? Will you give me the names of firms supplying the material needed? Does duplexing and unifying entail many complications? Are there any books that give information on the building of an organ of this type? Would you think it preferable to give up the idea of building a residence organ, and purchase one of the electric instruments instead? —W. B. A.

A. You have not indicated the space available for an instrument, and since organs may contain few or many pipes it is difficult to suggest a specification. Assembled instruments can be purchased for from less than a thousand dollars up. You might obtain materials from some organ builder or from some of the following firms: Dennison Organ Pipe Company, Reading, Massachusetts; Durst and Company, Incorporated, Erie, Pennsylvania; The W. H. Reisner Manufacturing Company, Incorporated, Hagerstown, Maryland; The A. Gottfried Company, Erie, Pennsylvania. We presume there will not be any undue complications in wiring for unified and duplex action, if the matter is planned in advance. The size of the Swell boxes will depend on the specification of the instrument. They could undoubtedly be removed to another residence, if so planned, but the space available in the new location would have to be considered. There naturally would be some additional expense for including a third manual, and its installation will be dependent on your wishes. A third manual is, of course, an additional convenience for registration. The plan to spread the cost of the instrument seems feasible, but we suggest that chests, console, blower and so forth necessary for complete instrument be installed, with pipes to be added as desired. Organ builders will also grant time for payment of instrument if you wish it. You might consult the following books for information:

"The Electric Organ" ..... Whitworth
"Cinema and Theatre Organs" . Whitworth
"How to build a Chamber Organ" . Milne
"The Contemporary American Organ" Barnes

We suggest your investigation of the pipe organs supplied by the leading builders, as well as the electric instrument, and make your decision on whichever best suits your wis

Q. Will you give me the address of publishers of The Diapason? *Will you name book for information on unification, duplex and so forth? We have heard of a book organ playing by Lemmens, but do not remember the title. Do you know the name of book?* —E. L. N

A. The address of "The Diapason" is 1 Kimball Building, Wabash Avenue and Jack Boulevard, Chicago, Illinois. You will information on unification and so forth "The Contemporary American Organ" Barnes under the heading "Transferance Stops." The book you have in mind is prob Lemmen's "Organ School," which is publis in two parts. The information you seek is p ably included in Part 1. It can be supplied the publisher of THE ETUDE.

Q. Enclosed you will find the specifica of a small unit organ in our church. In pla Bach we sometimes feel the need of volume and have thought of adding a sto the intrument. Would the addition of an O Diapason prove beneficial, or would some o stop be preferable? —T. I

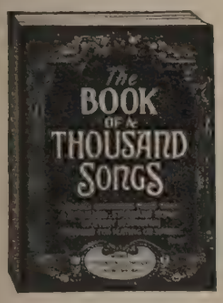
A. The addition (if possible) of an O (or Geigen) Diapason certainly would beneficial. We think it a mistake to insta church organ without the Diapason. Under circumstances, if the addition can be mad stop of 73 pipes would enable you to have Octave 4′ in the Great as an extension of 8′ stop. If the addition cannot be made, suggest that the builder might be willing replace the instrument with a larger one, u ing an allowance for the present organ.

Q. I am enclosing a list of the stops of organ in our church. It seems so unsatisfact to use the 4′ and 16′ couplers. Either the or shrieks, or the tone is thick and muddy. you suggest combinations of the stops with couplers so as to keep the organ colorful seldom use the Swell Bourdon 16′ or the O Diapason 16′ on the Great, as they seem overbalance everything.—E. F. H.

A. The 16′ couplers should be very spar ly used, except for individual tone effects, the 4′ couplers only for individual color eff and for brilliance in ensemble combinati when necessary. You are acting wisely in making frequent use of the 16′ couplers the 16′ manual stops, especially the Great Open Diapason. If your ensemble is brilliant enough without 4′ couplers, try us Swell to Great 4′ (omitting Great to Great If this effect is too brilliant, try omitting Quinte 2⅔′ and the Piccolo 2′ as their use w the 4′ coupler may result in too much l liancy. We suggest your experimenting w the stops, omitting the 16′ and 4′ coupler possible, especially the Great to Great 4′ the 16′ couplers, as well as the Great O Diapason, 16′.

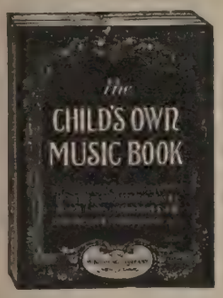
Q. I am enclosing a list of stops on one manual organ in our church. For the s ing I use Dulciana, Bourdon and Diapas Anything added to this combination make too loud. For the postlude I have used pedal great, but there is a vibration in the pipes there anything I can do to remedy this? Tremolo stop does not produce any effect. W can I do for it? How may I use the differ stops, in pleasing combinations, especi Fifteenth, Principal and Melodia?—M. B. F

A. If, as you say, anything added to combination you name makes too much volu use it without addition. For variation of t quality you might try Dulciana, Melodia Flute 4′. The Bourdon 16′ we presume to h pedal stop. We know of no reason for vib tion when coupler is used unless it is pres in either Pedal Bourdon or one of the man stops. A practical organ repair man mi advise you of cause and be able to remedy trouble. The tremolo acts on other stops dra and if it is not effective the practical m might discover the cause of the trouble. Fifteenth and Principal are useful more p ticularly in ensemble combinations, but Melodia can be used either in combination w other stops or alone.



Q. Are ——— ——— *and* ——— *ho organs what an organ should be for ho with average sized living room? Is the* ——— *equal to other pipe organs? Do other c panies such as* ——— *and* ——— *m this type organ? How would you class* ——— *electric compared with the p organs? Would you prefer good reed organ the small pipe organs or pipeless electri* —J. G. M.

A. We, of course cannot give an opin in these columns on any particular make type of organ (See note at head). Our rec mendation is that you investigate the differ types and make your decision on the make style that seem best fitted to your needs. suggest that if you decide on the small p organ the specification should include not than three sets of unified pipes, and a Pedal Bourdon. This, of course, includes ne sary space and slightly increased cost o smaller instruments.



OR MUSIC LOVERS

COMPREHENSIVE collection of e than two hundred well known sic, modern, light operatic and sacred positions. NO MUSIC LIBRARY MPLETE WITHOUT THIS VOL-IE.

N outstanding collection of standard orite songs. Words and music. In-ded are many home, sentimental, eratic, sacred, children's, southern, lege, sea, rounds, hymns, patriotic, na-nal and folk songs, popular in Radio oadcasts.

A MOST complete child's book, con-ining nursery rhymes, songs and a ies of piano pieces and duets suitable r the young folks. A REFRESHING OLIO OF HAPPY REMINDERS OF OUR OWN EARLY EFFORTS.

Each volume contains 536 pages.

PIANO ACCORDION DEPARTMENT

The Accordion As a Suitable Instrument for Adult Beginners

By PIETRO DEIRO

As told to E. Vera Collins

MANY ADULTS have not had the advantage of musical instruction during their childhood. As the years advance, they are heard to lament that they have no means of expressing their emotions musically. They realize that they have been deprived of one of the greatest pleasures in life; for how, we ask, is it possible to live a full and complete life without music?

Within the inner self of each of us desires and ambitions lie dormant. If it happens that you are one who has a subconscious desire for music, there will be times when the urge will come to you to express yourself as you listen to the rendition of some particularly fine music. In fact, you will never be completely satisfied by merely listening to others. Entertainment can be rated only by the exact ratio of pleasure it brings to the individual and many adults experience a greater thrill by playing some simple little tune than by listening to a wonderful concert.

This article is devoted to adults who are pondering the question of beginning the study of music. It also contains suggestions for teachers who may be called upon to teach these adults.

The question naturally arises, when is one too old to begin the study of music? The answer is short and decisive for it is the single word, "never." It seems a fallacy that an adult should think of music with wistful longing and regret, simply because he did not study it as a child. Life would be monotonous indeed if one had to deprive himself of music and other arts and pleasures merely because he did not have early opportunities. The mere fact that one loves music shows that he needs it in his life.

The accordion has proven a most encouraging instrument for the adult beginner as his progress will be rapid. The nature of the accordion, with its mechanical combinations, gives the impression that difficult music is being played when only a simple selection is being rendered. A single tone melody would have no particular appeal if rendered upon a piano but when such a melody is played upon an accordion, although only a single key is struck, the responding tone is deep and vibrant for the reason that, due to the combination within the instrument, four individual reeds respond. If difficult technical feats were required to make the accordion sound effective, it would not be so suitable for the adult beginner. Fortunately, the player may express his music artistically and with good musicianship without having to do the technical impossible. A systematic training of the muscles of the adult will make it possible for him to develop sufficient technic.

This statement usually brings forth the query as to whether an adult beginner can ever expect to develop the speed and dexterity that is possible for a child. Of course there are always exceptions but the law of averages would require the reply that adults who begin to play later in life seldom acquire as rapid technic as children who have trained their muscles early in life. But surely there is more to music than rapid technic. If that is the only issue which would deter adults from beginning the study of music, it should be promptly forgotten for it is in reality a minor detail. The solution would be for the adult to develop as much technic as possible and then select his repertoire so that it does not include selections which will tax his technical capability.

Material in Abundance

THERE IS NO LIMIT to the scope of the accordion libraries of to-day. One may find the works of the greatest masters of old, as well as the compositions of our contemporary artists, all expertly arranged for the accordion. These arrangements do not suffer in their adaptation but in many instances are enhanced on account of the organ effects obtainable. There is a close alliance between the organ and the accordion and applied study will enable the student to produce a close semblance to the former instrument. Even though the adult beginner avoids selections which require technic beyond his skill, he still has a great number of arrangements from which to make his selection.

Another feature which aids in rapid progress on the accordion is the fact that the work for the left hand has been reduced to a minimum. The pianist must develop a left hand technic to be on a par with his right hand and must acquire particular skill in playing chords. The mere act of pushing a single button upon the bass keyboard of the accordion produces a complete chord such as would require the playing of three or four individual keys upon the piano. True enough, a glance at the accordion keyboard with its many buttons may seem a bit confusing until it is explained that a very orderly system has been arranged which is not nearly so complicated as it appears. Taking any given major chord button as an example and considering it as a tonic chord, its subdominant chord will be found in the row adjoining it on one side while its dominant seventh chord will be found in the row adjoining it on the other side. How very convenient to have always the three principal chords of any key in such close proximity for they form the nucleus of all accompaniments.

The piano student would find it necessary to study quite a time before his lesson assignment would embody a selection with melody and complete bass and chord accompaniment. The accordion student plays basses and chords during his first or second lesson. This explains the statement previously made that although simple music is often being played, the accordion gives the impression that it is more difficult, as the mechanical combinations within the instrument are a constant aid, doing their share of the work and thereby dispensing with a part of the effort of the player.

The accordion has an advantage over some other instruments in that it is not necessary for the student to "produce" or make the tone. This factor is doubly appreciated by the adult student who feels that time is valuable and wishes to learn to play as soon as possible. When learning a stringed instrument much time must be devoted to the art of making a good tone and then there is the tuning also to be considered. A fine set of accordion reeds will produce a fine tone whether the instrument is being played by a novice or a professional artist. The finer degrees of

Some Faults in Fiddles

By ALFRED ALBERT STAGG

IT IS ESTIMATED that seventy-five per cent of persons buying violins get fooled, and that ninety-nine out of every one hundred labels pasted on the inside of violins are wrong, or, at best, very misleading. If you do happen to have a genuine "Strad" hanging in the back of your clothes closet, get it out quick. It will no doubt bring you several thousand dollars.

Buying a violin is a most precarious business, unless the prospective purchaser seeks the advice of a reliable expert. It is positively amazing to consider the number of people who have the idea that the old fiddle they have is undoubtedly a very good one, perhaps, a "Strad." These have been handed down through generations, have been kept tucked carefully away in cupboards, hidden behind pianos, guarded with treasures in the trunk in the attic, or locked securely in the dark recesses of a vault.

Who of us has not met someone who was under the impression that the old violin at home was a creation of the famous old master Antonio Stradivarius—people who go about their daily work pondering that some day they will have the violin valued, as it is undoubtedly worth a lot of money. People in all walks of life labor under this delusion; rich man, poor man, beggar man, thief, all are gullible to the mystic ancestry of violins; and many a good violinist has been "taken in" by paying a lot more than an instrument was worth. Of the three thousand violins made by Stradivarius, only about four hundred and fifty are now catalogued and known to be in existence. And, from Alabama to Afghanistan, the world has been fine tooth combed for them!

The Unwary Purchaser

THE REASON so many people get stung when buying a violin is that so many of these deals are made privately between friends. Buying a violin from a friend, or from a second hand store, is bad business; because the friend or second hand store proprietor usually knows nothing about violins and, being misled by the label inside the fiddle, they concoct some fantastic story regarding its tonal qualities and its ancient history, as part of the sales talk.

There are to-day thousands of factory made violins in every country, all bearing the label, "Antonio Stradivari, 1715," or dated any year from 1675 to 1737, which was the period in which the most famous "Strads" were made. This really means that these instruments are copies of an original "Strad"; but so many people take the date seriously.

Nearly as famous as Antonio Stradivarios was Giuseppe Guarnerius (del Jesu) whose instruments, if less carefully finished than those of Stradivarius are remarkable for the boldness of their design and their powerful tone; so that the finest of them have been preferred by some of the great players even before those of Stradivarius himself. Paganini habitually played on one.

The writer was recently chatting with Mr. George Heinl, violin maker of Toronto, who is recognized as one of Canada's outstanding authorities on violins. He has been all his life in the business and hails from a family of violin makers and experts of Fleissen, Austria.

"When I was fourteen years of age," smiled Heinl, as he reminisced, "I had my first job. It was in the shop of my uncle, Johann Heinl, in Austria. I was told to paste labels inside violins and to fill in the year 1730 beside the name of Stradivarius. I wondered at the time, why I was filling in seventeenth century dates in the nineteenth century; but I was told this was the usual practice and that it helped to sell the instruments."

"There are many copies of the work of Stainer," continued Mr. Heinl, "who was a great master and lived in the Tyrol. It is not hard to tell that these are factory made violins, because they all have the name of Stainer burned in the back of the instrument. All original Stainer violins had hand written labels, and were not burned on the back. The idea of burning in the name makes people think it is genuine; and it is funny how many people really believe it."

"You must have lots of people bring cheap violins to you, which they themselves think valuable," I suggested.

Mr. Heinl laughed.

"Oh, yes," he replied, "every day. Why, just a short time ago a man came to me, took a violin out of a case, carefully unwound layers of silk from it, and gave me explicit instructions to be exceptionally careful with it, as it was a very good violin for which he had paid $350.00. He left it with me for some minor repairs, and after I had taken the back off the instrument, I found that the violin for which he had paid $350.00 was worth about $10.00."

I can understand the general public's lack of knowledge regarding the fine points of violins, but is there any excuse for the profound stupidity of the lady who recently sought advice from Mr. Heinl.

"Just what is a Cremona violin?" she queried.

"It is a good Italian violin," replied Mr. Heinl.

"And does it play Italian music?" was the next staggering question.

George looked at her in a dazed sort of way and before he could answer, the lady was asking if there were any Canadian made violins, and could they play Canadian music?

That is a tall one, but it is vouched for by Mr. Heinl.

"Some people seem to think," I resumed, "that the dirtier the appearance of a violin, the better the tone. Is that true?"

"Certainly not," said George emphatically, "but there are a lot of good violinists who never clean the resin dust from their instrument. They think it helps, but it does not. It is harmful. The cleaner the wood, the better the instrument vibrates."

(Was my face red? I had not cleaned the resin from mine in years.)

A Labor of Love

SOME YEARS AGO, I was staying at a hotel in Fredericton, New Brunswick. One evening I was amusing myself in the pa by playing a violin, the property of hotel proprietor. A fine, white haired gentleman, who had been hostler there years, came into the room and told m had made a violin, and asked me to at it. I told him I should be glad t so, and away he went to the stable fetch it. He soon returned with a full violin, unvarnished, which had been from maple. It represented the work years. Hours and hours of tedious la for he had whittled every bit of it nothing but a jack-knife. It never had strung up, as, not being able to play, maker did not know what strings sh be put on. He asked me to string it and I shall never forget the look of citement and pleasure on that old ge man's face, as he heard melody co from the instrument which he had whi from rough wood.

A Dwindling Trade

SINCE THE ADVENT of "talkies," and exit of orchestras from moving pic theaters, the sales of violins have dro off considerably. Many musicians use play at a theater in the evenings and during the day somewhere else. They a great deal of their evening profit instruments and many bought five and hundred dollar violins. This trade has g and to-day it is only radio soloists symphony orchestra players who keep good violin trade alive.

It has been reported that if a violin be proven to be one hundred years it travels duty free in any country of world. Imagine what an exasperating one would have trying to convince scientious customs officials on such a p

Treasures of the Forest

VIOLIN MAKING of course requires sp wood. The best of this comes from spruce and maples which are growing a half way up the mountainside of the It Alps. The cutting of this wood is qui trick, as it must be always "quarter which means it is cut from the outsid the tree to the center in straight per dicular strips. This is because the g must run up and down. If cut sideway wood is no good for violin making, is too spongy and has no resonance. S ing from the center of the tree, the g goes round in circles. A new ridge or c appears each year of the tree's gro and by the number of these circles the of the tree can be learned.

Much speculation has been advance to the superiority in tone of the old It instruments over those of modern cons tion. After taking into account the prac identity in dimensions and constructio the classical and many of the best mo models, there seems to be but the one clusion that the difference must be at uted in part to the nature of the mate used and in part to the method of employment. The argument that the makers of Italy had special local so of supply can hardly be sustained.

Three views of a fine specimen of the Stradivarius Violin, made in 1698, at the very zenith of the master's powers, when he was creating instruments which, in beauty of workmanship and tone, never have been equaled by another.

they exercised great care in the se-
n of sound and handsome wood; but
is evidence that some of the finest
they used was imported from across
Adriatic; and it is reasonable to sup-
that a far larger choice of equally
material is accessible to modern
rs.
ere remains the varnish with which the completed instrument was coated. This was an item in the manufacture which received most careful attention at the hands of the old masters, and much importance has been attached to the superiority of their varnish to that used in more recent times, so much so that its composition has been attributed to secret processes, known only to themselves, and now a lost art.

Two Masterpieces for the Violin

By PAUL STOEVING

Part IV

THERE ARE EXCEPTIONS to this very common experience. A serious rival in popularity to the Mendelssohn ncerto" has been from its first introduc- the "Concerto in G minor," by Max h, a work thoroughly violinistic in form technic for the solo instrument, warm ed all through, and very effective. t favorites are also the "Concerto in inor," by Saint-Saëns and Lalo's nphonie Espagnole,'" both very effec- orchestrated and brilliant for the st. Although the latter work has a ounced national musical complexion, both happily fill the imperative need ditions and variety to the limited con- repertoire of the violinist. But who d affirm that they, or other violin con- s which come to ones mind—such as by Elgar, Goldmark, Glazounoff, ing, and Sibelius, to mention only a contemporary and dead—are the un- hable creations of genius equal to that h produced the Mendelssohn concerto? has been urged that the technical ciency of violinists in general and cular, has increased since the Mendels- concerto was written, and that this ter proficiency must seek new outlets gger, more difficult works. Most violin- will themselves contradict such an argu- . The easy overcoming of technical ulties is not the major objective of nterpreter of a musical work, just as nere piling up of these difficulties by omposer is not a measure of the merit at work. Our younger famous fiddlers not one whit superior to the older ; perhaps the contrary is true, because of the older ones were more indi- al. The choice of a repertoire for con- use or private study is entirely a er of disposition and predilection. ieniawski had died before the concertos rahms and Tschaikowsky were written ublished, but he was content to shine he "easy" Mendelssohn "E minor," ti's "Twenty-Second" and his own ncerto."

rasate played everything worth while, cated and not dedicated to him, and he ed them to perfection from Bruch's inor" and "D minor" concertos and tch Fantasie" to Saint-Saëns's "B r" and Lalo's "Symphonie Espagnole," gh he declared his predilection for nn Sebastian Bach.

nile Sauret—one of the most eminent n virtuosos I had the good fortune earing in my youth and who, sub- ently, I came to know personally like sate, played everything worth playing, including the concertos by Ernst, Paganini and Vieuxtemps.

Eugene Ysaÿe, on the other hand, could play almost everything but would never play the Brahms and Tschaikowsky concertos, at least in public. Why? Because he did not like the solo parts. They did not appeal to him. They were not the true fiddle music he loved and which inspired him, and which he found in the easy Mendelssohn and Beethoven works and the still easier concertos of Bach, Mozart and Viotti. To have heard him render any of these was a revelation of unthought of charms and beauty.

I sat beside him in the Queen's Hall in London when Fritz Kreisler rehearsed Sir Edward Elgar's freshly composed "Concerto for Violin," not much short of an hour in length. Ysaÿe seemed keenly interested in listening; but I never heard that he studied, much less performed it in public, although he was then not too old by any means to seek new musical pastures. A few months before he had toured the United States, evoking the greatest enthusiasm wherever he appeared.

Of course violinists cannot repeat a few works *ad infinitum* and let them get stale and their art with them. Audiences demand new programs, and violinists, whether for concert purposes or for study, must seek new works of merit on which to kindle their enthusiasm, and composers must and will supply them; but that is not the point we have desired to stress in the foregoing, namely the hitherto unchallenged superiority of the Mendelssohn "Concerto for Violin" over all subsequent works of the kind, as the most perfect prototype of what a violin concerto should be and as the one most worthy to be preserved for posterity.

We may admire the symphonic works of Brahms, César Frank, Tschaikowsky, Sibelius and other modern masters; we may love them in their entirety or only portions in them; we may revel in some exquisite tonal utterances of even less illustrious composers; yet Beethoven's "Fifth" and "Eroica" and Mozart's "G minor" symphonies and other popular favorites will continue their undisputed hold on human hearts the world over. So it is in its own modest way with the "Concerto in E minor" by Mendelssohn. As long as simplicity and spontaneity are counted two unmistakable essential marks of genius, Mendelssohn's concerto will yet please, thrill and uplift, and send listeners away happy and spiritually benefited when other, more pretentious works have sunk into oblivion.

The Pump Handle Violinist

By ADA E. CAMPBELL

PLAY slurred arpeggios at the point of bow is not always easy, but if the pupil iven the idea that the arm is like the dle of a pump, almost immediate un- tanding and also results will be ob- ed.

he elbow and wrist must not bend. Absolute freedom must be felt at the shoulder. Using the entire arm as you would the handle of a pump, swing it up and down. With careful practice of this sort the notes will soon begin to come out evenly and clearly, in a way that will add much to the student's style.

Every Lesson a Tune - Every Tune a Lesson

Melody-First Band Book

30c Each Book — A *Unisonal* Instructor for ALL BAND INSTRUMENTS — **Piano Acc. and Teacher's Guide 60 Cents**

by Fortunato Sordillo, Assistant Director of Music, Boston Public Schools.

Mr. BAND INSTRUCTOR:

WITH MELODY-FIRST BAND BOOK, there are no uninterested players, because (with two exceptions, and these players can be assigned alternative books) *every book is a melody book.* You can send the student home with something that *he will practise* because he will *enjoy* practising it; whether he play Alto, Oboe, Bassoon, or Baritone—it makes no difference! Especially if, with a pianist available, advantage is taken of the *cleverly-harmonized* Piano Accompaniment, which makes even the playing of the *scales* a truly musical experience.

Violin Instruction for the Blind

By J. W. HULFF

A woeful ignorance of violin literature is shown in any statement which infers that great composers have treated the fiddle with contemptuous disdain. Why, the great Bach was himself an excellent fiddler; and he considered the instrument worthy of writing for it six of the finest sonatas in all violin literature. The famous *Chaconne* reaches the very heights of intellectual and emotional expression. And these sonatas are for violin alone. Not for these the tintinnabulation of a piano accompaniment. It is very much of an error to say that Beethoven, Brahms and Schumann were the only composers worthy of note for the fiddle; apparently forgetting the master violin works of Mendelssohn, Bruch, Vieuxtemps, Wieniawski, Sain-Saëns, Glazonoff, Debussy, Tschaikowsky—but why go on?

Chopin, the great writer of piano music, completely ignored the violin. But do you know why? He couldn't play it. One day, George Sand, whose apron strings were beginning to wear thin, brought Chopin a fiddle and said, "Here Freddie, take this and amuse yourself while I'm busy. Learn something useful." So for a whole week, for hours a day, he struggled and scraped; but he could make neither head nor tail of it. You see he was a romanticist, not an intellectual. Finally, in desperation, he threw it into the blackest corner of the room and sobbed, "I can't play the dam' thing. I'm going to write a *Rain-drop Prelude*." And that is the true story of Chopin and the fiddle!

Almost every violinist worthy of the name can play the piano just as a matter of course. But the average pianist does not know the first thing about a fiddle and regards it as an instrument of mystery, often remarking plaintively, "I cannot understand how you know where to place your fingers." Even the writer who has never had a piano lesson, can play accompaniments, even to concertos. Of course, we use a sort of hunt and peck method, but its efficacy cannot be questioned, and its difficulty is simply nil.

Cantatas and Anthems

for

LENT, HOLY WEEK and GOOD FRIDAY

THE LAST WORDS OF CHRIST
By Charles Gilbert Spross

A masterly setting, by one of America's foremost composers, of the "seven last words." The choruses are solid and impressive and the solos for tenor and baritone are exceptionally fine. Time, 45 minutes. Price, 75c.

THE MESSAGE FROM THE CROSS
By Will C. Macfarlane

A sacred cantata of unusual excellence for tenor (or soprano) solo, baritone solo, chorus and organ. Supplying the central themes are the "seven last words." 22 musical numbers. Time, 45 minutes. Price, 75c.

THE MAN OF SORROWS
By Leroy M. Rile

An oratorio of goodly proportions, in 5 Parts and Prologue, recalling the last scenes in the life of Christ. Requires a well trained chorus. Time, 1 hour. Price, 75c.

THE STORY OF THE CROSS
By A. Lacey-Baker

An easy cantata especially suitable for use as part of the Good Friday services. Time, 15 minutes. Price, 12c.

CHRIST'S WORDS FROM THE CROSS
By Mrs. R. R. Forman

With the effectiveness of sincere simplicity, this musical work provides soul-stirring meditation on Christ's "last words." The chorus numbers are easy to sing and there are short solos. Time, 20 minutes. Price, 40c.

CALVARY
By Ernest H. Sheppard

In this excellent church cantata there are solos for tenor, baritone and bass and an abundance of chorus work for the choir. Time, 20 minutes. Price, 60c.

Progressive Steps to Velocity

(*Continued from Page* 80)

7. Does the player feel that he is "stretching" or reaching stiffly for the next key, and do the little fingers seem weak? Then he is failing to adjust rotarily. Each finger should be brought over and onto its key before using it.

8. Do the thumb notes blurt out? Then the player is flopping rotatively on the thumb instead of making it act on its own. Remember that in velocity passages rotary adjustment must not displace the need for the fingers to act on their own, but it must aid them chiefly by not impeding them with wrong rotational (by direction) impulses, or with any form of fixation.

On the other hand, does the player feel the whole arm and hand as a part of the key mechanism as he is using the key? Does the hand seem to float along because of the reaction ensuing from the actively engaged finger? Then he may be sure that he is doing the right thing muscularly, and therefore all should seem easy and unrestrained.

Some Final Precepts

WHAT THE PLAYER DOES pianistically, and therefore musically, must be accomplished within the shortlived impulse of the finger in its downward float of the key. Nothing that he does thereafter can alter the kind or amount of tone desired, though by wrong continuing processes he may impede the next finger in its work.

Never lift the next finger more than is necessary to get across to its key easily. Such unnecessary lifting not only restricts perfect freedom at the wrist but also becomes only so much lost motion; and lost motion is as detrimental to the mechanics of touch as to the mechanics of the motor car engine.

The key is a tool which we should use to throw, not bump, the hammer to the string. Never forget that. Play not upon keys with fingers, but instead play upon the string with the key.

Always allow the hand to lie, rest, relaxed on the keys in between the sounding of the notes, no matter what added energy is needed to aid the finger as it uses the key.

Never raise the hand by its own muscles from the keys. It may cause a wrong sensation to become fixed in mind. Lift the forearm instead; the hand will be sure to follow.

Reach keybed lightly, equally for a soft or loud tone.

Analyze every rotary need, which is always from the last finger used towards and with the next finger used. Remember that the keyboard is a fixed quantity. You cannot alter it or force it to yield to incorrect touch formations, but you must adapt yourself at all times to it positionally and rotationally.

Feel the music as you feel the key. Never divorce touch mechanism from tone making. Make each suggest the other, in fact make them coalesce. Velocity, of itself, is nothing. Only as it serves the purpose of real music making has it any value. You cannot move the listener to appreciation and enthusiasm by a mere display of keyboard calisthenics; but you can receive his approbation and gratitude by presenting to him the beauties of the music at hand, which you have experienced and wish to share with him.

VIOLIN QUESTIONS
Answered
By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Choosing a Profession

M. R.—Without hearing you play, I cannot possibly advise you as to whether you should choose a musical career. Your best course would be to go to a first class violin teacher and have him examine you. In half a dozen lessons he could estimate your talent, and advise you whether it would be worth while to study for the profession, or simply study for your own pleasure. Be careful to choose a really eminent violin teacher as your advisor in this matter. 2. A first class violinist could, no doubt command a good income in New York, but an inferior player could make only a bare living, if any. 3. As you say your finances are rather low at present, and you cannot invest much in a violin, maybe you could borrow or rent one from a friend, until you decide on your future course. 4. The great love you say you have for music is, of course, an asset.

The Question of Appraisement

H. H. A.—There are a great many imitation Jacobus Stainer violins on the market, and I am afraid there is not more than one chance in a hundred thousand that yours is genuine. Most of the dealers in old violins have experts in their employ, who can solve the problem whether a supposed rare violin is genuine or spurious. The fee for this examination is usually five dollars or more. In a great number of cases the owner of such a violin is disappointed, for he finds that his violin, which he hoped was worth in the thousands, turns out to be a cheap imitation, worth perhaps ten or fifteen dollars. The information has cost him the expert's fee, the trouble of packing, and the express charges for shipping. If he feels certain that his violin is genuine, he also will insure it, in transit, for a large sum; and the premium for this adds another item of expense. Finding out if your violin is a real Stradivarius, Guarnerius, Stainer, or Amati is like investing in a lottery. You are a large winner if you win, but a substantial loser if you lose. 2. If you decide to send your violin to an expert in a large city for examination, be careful to pack it carefully for shipment. Place the violin in its case, and then pack the case in a stout wooden box, made of tongue and grooved lumber, to keep it dry if water should be spilled on it.

A Supposed Stradivarius

A. G.—I cannot tell you the value of your violin without examining it. If (according to its label) it is a real Stradivarius, it would be worth a large sum; but it is only an imitation, which is proved by the statement printed on its label that it was "Made in France." Genuine Strads were made in Cremona, Italy, by Antonius Stradivarius. The statement on the label in your violin that it was "Made in France," gives no clue as to what maker made it, and this is all important. The only way you could get an idea of its value would be to submit it to an expert, who could tell you its approximate value; but he probably would not be able to tell who made it. Really skillful makers of imitation Strads usually put labels in their violins, bearing their own names, as well as the name of the master.

Unknown Maker.

L. C.—I do not know the violin maker you write about. As you have his name and address, why do you not write to him?

To Secure Good Vibrato.

W. W. H.—The method of producing the vibrato as you describe it, to "Press the fingers on the string and then release the pressure instantly" is not generally used. I think the method described by Baillot, the famous French violinist, is the best and most generally used. Baillot writes, "One finger is to be put on the string, the other three to be held up high, and the hand, as a whole, is to be set trembling, more or less rapidly to and fro, so as to impart the motion to the stopping finger." The finger, although remaining on the same note, should, to a certain extent, move slightly forward and backward. The resulting alternate shortening and restoration of the string length, gives the note a quavering, trembling effect somewhat in the style of a trill, the upper note being about a sixteenth of a tone higher in pitch than the lower.

If you are interested in learning to perform the vibrato in the best possible manner, the best way would be to take one or two lessons from a first class teacher on the vibrato alone. If no teacher is available, and you have no opportunity of seeing and hearing good violin playing, you could learn much by watching the solo and orchestra violinists as shown on the screen in the movie theaters. Note that they hold the finger firmly to the fingerboard, and impart the trembling effect by swinging the hand to and fro from the wrist. Some perform it by swinging the forearm, but this is not so good.

Violin Study Books.

Y. T.—You will find nothing better for completely mastering the technical part of v playing than the "School of Violin Techn by Henry Schradieck, and the "School of V Technics," by O. Sevčik. Each of these w comes in four parts. They are very difficult cover the entire field of violin playing.

Berton or Breton.

S. L.—I do not know of any violin mak note, named Berton. You have probably the name mixed up with the French v maker named F. Breton, who is listed an the Mirecourt makers of the nineteenth tury. He made violins covered with light lowish, or brownish varnish, and of a b dark, sympathetic tone. They are excellen chestra instruments. I have not seen any quotations as to price of these violins. W to a dealer in old violins. Breton's labels a follows:

F. Breton breveté de S. A. R.
Mme. La Duchesse D'Angouléme
A. Mirecourt, 18——, Breton

An American dealer quotes these violin $125 each. Choice specimens might sell s what higher.

Artist, "On His Own."

U. A. D.—The ubiquitous talent scout the movies, who are continually searchin genius as a basis for new movies, recently ceived the idea that the famous young violi Yehudi Menuhin would make a suitable for a new musical picture. To their sur they found, when they broached the proje the young virtuoso, and his parents, that scheme received a very cold reception, no ter how much money was offered. Their was that young Menuhin is an artist, an pects to remain such, doing concert violin ing exclusively, and that they considered pearing as an actor and music performe the movies as beneath his dignity.

The Left Handed Violinist.

J. S. O.—There has been much contro as to whether a left handed violin pupil sh be trained to bow with the left hand or right. If the left hand is used for bowing violin must be changed so that the sound occupies a position at the left and the bas at the right. The position of the strings is changed, the strings reading from left to r E, A, D, G, instead of G, D, A, E. Many au ities claim that if the pupil is not too str left handed, it is better for him to bow the right hand in the usual manner. O contend that the violin should be change described above, and the bowing done wit left hand. The best way is to experiment. I pupil finds it impossible, or practically im sible, to bow with the right hand, but ea bow with the left, it is better to have violin changed, and allow him to use the hand for bowing. If, however he is only sli left handed, and finds little difficulty in bo with the right hand, it is better to have use the right hand for bowing. This sh only be done, however, in the case of young pupils. It becomes increasingly dif to train the left hand for right hand wo the pupil grows older. There is a vast nu of left handed violin players in the world. of whom achieve considerable skill. I once a young girl as a pupil who was left ha but who had considerable ability in accomp ing right handed tasks. She could write with the right hand, and I soon found tha could bow the violin nearly as well with right as with the left hand. I decided th was best to have her learn the violin right handed player, and this proved the rect course, as she became a master of bow. As she was naturally left handed left hand work was marvelous. She beca concert violinist, and mastered difficult certos and other compositions with ease. problem should be left to an experienced teacher.

A Four Year Old Pupil.

V. L.—You cannot expect much progre the case of a four year old child. Only i case of a genius can we look for the pro which you seem to expect from your little Heifetz, Elman, Spohr, Paganini, all fa violinists, commenced to study the viol four or five years of age, and made phenom progress, so that they were good violi and even appeared in public at the age o At the age of four a child is little more t baby, and his progress must naturally be appointingly slow. Not more than one ch four in a million shows really brilliant ress. I should have to hear the child, examine him, before I could judge of his t and whether he has made the proper pro to be expected from so young a child. Abo you can do is to continue instructing him way you have been doing, and see how h velops. You might get the book, "The Violinist," by E. L. Winn, the well known lin teacher. This work contains many hin teaching very young pupils. It may be pro through the publishers of THE ETUDE.

Improved CONNQUEROR

World's largest manufacturer announces sensational improvement in Band Instruments. New patented VOCABELL revolutionizes tone effects. Easier to play. You'll develop talent fast with these new Conns. Etude Readers! Look Out for Magazine Swindlers

We are constantly receiving complaints from music lovers who have paid out good money for subscriptions to THE ETUDE, later learn that neither money nor subscription ever been forwarded to us. These orders are placed with glib crooks who tell a plausible story, almost invariably offering THE ETUDE at a ridiculous reduction in price. Pay no money to strangers unless you are convinced of their responsibility and are willing to take the risk of loss.

Canadian music lovers are especially warned against a gang of swindlers working the Provinces who sell two or more yearly subscriptions to THE ETUDE at a price which would not cover the cost.

Help us to protect you. We cannot be responsible for the work of crooks.

Magazine Combinations At Reduced Prices

THE ETUDE has been fortunate in being able to arrange with other publishers to supply many high class magazines when ordered with THE ETUDE, at a very substantial saving.

Why not choose a combination of THE ETUDE and your favorite publication. It may be that we can save you a substantial sum. A post card will bring a complete list of combinations of THE ETUDE with the best current magazines.

Bands and Orchestras

Getting Joy Out of Life

(*Continued from Page* 82)

as good a living as the business permits, there has been nothing that we have done that equals music as a means of promoting a spirit of coöperation. With fifty-two different locations, office buildings, car houses and power houses, and these manned by ten thousand workers, music has made an invaluable bond. If the heads of corporations in America knew, as do I, about the usefulness of our bands, a thousand new bands would be organized and equipped tomorrow. Why? Because the employment of music is productive of much genuine good will, and much inner contentment leading to fine human industrial relations.

LIEUT. ALBERT W. ECHENROTH
Bandmaster of the Philadelphia Rapid Transit Concert Band and Director of Field Music

* * *

The Ineffable Mozart

"Mozart's celebrated quartet was criticized at the time he wrote it for being dissonant and disharmonious. Beethoven wrote dissonant passages for effect in many of his works and foolish people tried to correct what they thought were his mistakes. When, however, their music became general, the clashes of sound were seen to provide welcome elements of change and criticism died away."—Sir Thomas Beecham.

Piano Accordion Department

(*Continued from Page* 119)

expression are naturally developed when skill has been attained.

Let us consider the other requirements for accordionists and compare the adult student with the child. If we were to take them in the order of their importance, the reading of notes would probably come first. An adult would certainly excel in this as his mind is more developed and his power of concentration would be greater. Next in importance would be the manipulation of the instrument. Here again an adult would have an advantage because of his muscular strength which would be an aid in holding the weight of the instrument and controlling the bellows.

Adult Interpretation

WHEN WE ARRIVE at the comparison between an adult and a child for interpretation and expression, there is no doubt but what an adult would have the advantage. A child may obey expression marks and may imitate his teacher but an adult can express the very emotions of his soul through his song.

While on the subject of expression and interpretation, the nature of the accordion is such that it seems to become a very part of the player. The instrument is in such close proximity with the player that it responds to his every mood. In this respect the violin is also akin for it also reflects the mood of the player but it is limited to melody only while the accompaniment must be supplied. This close proximity between player and instrument cannot exist on the piano or organ which supply both melody and accompaniment as does the accordion.

Switzerland Will Have An Interesting Music Season

SWITZERLAND has a distinct fondness for concerts, and Zurich, the largest city in the country, tops the list with thirty-eight such events for the winter season 1937-38. Ten subscription concerts will be directed by the noted Dr. Volkmar Andreae; and Hans Hofman, Ernest Ansermet and Hans Münch have been secured as guest conductors. Guest artists include Alfred Cortot, Walter Gieseking, Alexander Brailowsky, Yehudi and Hephzibah Menuhin, and other internationally known personalities.

St. Gall, an intellectual center in Eastern Switzerland, will have a series of Symphony concerts, directed by Dr. Othmar Schoeck, and Berne, the Federal Capital, will listen to a symphony concert series under the leadership of Dr. Fritz Brun.

Geneva and Lausanne have their excellent Orchestra Romand, and a number of eminent soloists have been engaged by both cities for these occasions. America's own Marion Anderson appeared in a Song Recital at Geneva on December 2. Basle, the music loving city on the Swiss Rhine, also features a brilliant concert season, with "Missa Solemnis" of Beethoven, the "German Requiem" of Brahms, and the "Creation" by Haydn included in the program. On May 12 Basle will listen to the première of Arthur Honegger's "Jeanne d'Arc au Bûcher," with text by Paul Claudel. On May 15 a Singing Festival of Catholic Church Choirs of Switzerland will be held at Lausanne.

* * * * *

"With the greatest music one can never be too closely acquainted; its meaning is as infinite and unfathomable as that of Sophocles or Shakespeare; but at each repetition we may understand more of it if we will, and the first step in understanding is to learn the actual elements of which it is composed."
—Sir Henry Hadow.

QUEEN ANNE MARIMBA

PIANO TEACHERS, ATTENTION

Within the past year, J. C. Deagan, Inc., has helped hundreds of piano teachers to increase their earning power by extending their teaching facilities.

The marimba, never more popular than today, is a natural companion instrument to the piano from a teaching standpoint. Both are percussion instruments with a remarkable keyboard similarity. Regular piano music and studies may be used in teaching the marimba, and piano teachers make excellent coaches.

To offer marimba instruction is to add to your prestige, step up earnings and render a real service to pupils who seek musical expression in a portable instrument that is *easy* to play and always popular.

May we tell you more?

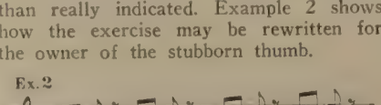
Holding Over the Tied Notes

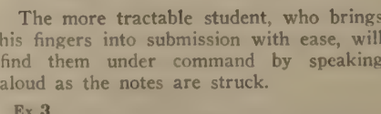
By STELLA WHITSON-HOLMES

Most young students run into difficulty when attempting to play figures such as these,



Ex.1

The usual bad performance, as every teacher of the young knows, is for the thumb to leave the key simultaneously with the striking of the fourth finger. Seeing the rest ahead makes the pupil think of getting off the keys after the fourth finger note is played, and, because of this thought, his thumb acts in unison with the fourth finger.



Now in order to give the tied notes their full value the teacher must impress upon the student the need of making the thumb to "stay down there." To do this it may be necessary to exaggerate the exercise, in the interest of discipline and ear training, by making the thumb to stay down longer than really indicated. Example 2 shows how the exercise may be rewritten for the owner of the stubborn thumb.

Ex.2

The more tractable student, who brings his fingers into submission with ease, will find them under command by speaking aloud as the notes are struck.

Ex.3

Have him to say "Both" when the first and second fingers start the passage; "three," for the third finger stroke; "hold," as a reminder on the tied note; and "up," to indicate that the job is done.

From Jungle to Symphony Hall

(*Continued from Page* 113)

every step one must look up, then down, then to the right and then to the left, because death may be anywhere.

"Whenever we came to a settlement I played the fiddle, and the people seemed enchanted with music which had originated on the banks of the Rhine, the Danube and the Seine. I also noted down native themes. They had a primitive kind of telegraphy which was operated with gongs, as is done with hollow trees by the natives of Africa. It seems strange from an anthropological standpoint that the same basic idea of communication should be used in Sumatra and also in Africa, thousands of miles away. These odd people, by means of rhythm and pitch, can hold conversations with another tribe a score of miles away; and I have lain awake many nights listening to the gongs and drums of one tribe conversing with those of another.

"It should not be inferred that these people are savages. The Dutch settlement of Padang is a very modern city; but in the settlements in the hills are people, for instance, who still believe in Tiger-Men. They distinguish a tiger-man by the fact that he has no indentation in the flesh of his upper lip, under the nose. Such an individual is known as Remow Jaden. The natives firmly believe that he is not a man but a tiger and that this thing has hypnotized or "changed the eyes" of the individual so that he sees a two-legged animal like a man and not the yellow and black striped beast of the jungle. When the tiger-man dies, one does not find a man, but a tiger. You do not believe in ghosts. I do, because I have lived and talked with tiger-men. Only the spirit doctors (dukun) of the jungle can deal with them.

"Once, in Korenchi, the spirit priest who was also a medicine man, introduced me to a young lady. I called upon her and sang Malay songs. As we were one evening talking on the closed porch of her home, about half past eight, a handsome young man came up the steps. The moon was waning and I could not make out very clearly what he looked like, as the only light we had came from a lamp made from half a coconut filled with rosin. Every time I looked at the visitor he turned his eyes down. He could not look me in the eyes. I noted that he was watching every movement the girl made. He offered me a kind of leaf known as serih. I did not take any because I was afraid of poison. Then, after an hour or so, I suddenly looked at his lip and saw that it was straight across and had no indentation. I pulled my gun and he jumped away so quickly that I did not have time to fire. The girl immediately fainted with fright as she realized that here had been Remow Jaden, a tiger-man.*

A Purloined Treasure

"I found the music of the natives of Sumatra full of interest, and I prized my collected notes very greatly. Unfortunately they, with other valuable papers, were stolen from me later, in Calcutta. My violin was only a cheap instrument, but it was the open sesame to many places I could not otherwise have reached. It made me very popular and the Malays back in Singapore and the adjoining state of Nagary Sambilan welcomed me and provided for me. I had learned many of the Malay songs and they would listen to me sing them without end.

"My next step was to Madras in India where the blood of my father evidently showed itself, as I too, joined a circus, in which I took the part of an American Indian in the "Wild West" show. I stayed with this group for one year. The amusing thing about it was that I was the only American Indian in the "Wild West" show and the others did not know that I was an American Indian. The circus was known as Phillips Circus, and, although entirely English, it flew the American flag, such is the reputation of the American circus in the Orient. The band was composed of Hindustani and was unbearably monotonous. Its chief piece was *The Blue Danube Waltz.* This was played for all trapeze acts, but when the Wild West came on we for some reason always had *La Paloma.*

"Then I settled in Calcutta, where I remained for a time as a teacher of the Koran, which is the Mohammedan Bible. Because I had been robbed of all my possessions, it was necessary for me, as a Mohammedan that I was at that time, to make the journey to Mecca again. Then I was again officially given my name. I was then twenty-seven, was beginning to get a man's aspect of things, and decided to devote myself to music exclusively. In various ways and with various teachers in India, England and America, I studied the laws of music and instrumentation. In Mecca I wrote my suite, "A Night in Arphah," which has been played many times by American symphony orchestras.

"In order to make a living, I shipped repeatedly on vessels, as a part of the crew. In this way I made two voyages to England, and in 1920 I found my way to the United States, landing in New York City. At last I was in the land of my fathers and I decided that I should become a Christian and joined the Presbyterian church. An injury to my arm put an end to my violin playing. I have devoted a large part of my time in America to copying music manuscripts, and I have thus copied thousands of works of the masters.

"The name, Harry Adjip, I assumed when I came to America. I know not why I took it. I never saw it anywhere. The sound appealed to me. I had never heard the name, and I probably am the only Adjip in the world. I have borne it for eighteen years. Although my ancestors lived in this country, centuries before the visit of Columbus, my name has no ancestral significance of any kind. Perhaps some descendant of an American Indian, somewhere, by the name of Kalow, may read this article and help me trace some of my family. Letters sent in care of The Etude Music Magazine will reach me."

* * * * *

"Where is the youth of today going to end that knows so little of beauty? I mean the youth who claims that ultra-modernism is the be-all and the end-all in music, painting, sculpture, poetry, architecture and all the other things in which the restless spirit can be expressed, even in behavior?

"It seems to me that its only salvation lies in holding on to what is fine in the past, while accepting the present and the future."—Jose Iturbi.

*Laugh at the Orientals' "Tiger-man" if you will, but in remote parts of Europe in this day, a similiar superstition regarding the werewolf still persists. The werewolf is a person changed into a wolf by an evil spell but retaining human intelligence. It is reported that in the Balkans and even in parts of France, the peasants believe in werewolves.

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS
Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

dal Signs.

Q. 1. In the Litolff Edition of the Ballade G minor, Op. 118, No. 3, *by Brahms, pedal- is indicated by two different marks, thus, and Pw. Pw. What is the difference in the erpretation of these pedal marks? 2. In "French Suite V" by J. S. Bach, in Loure, how is the* appoggiatura *preceding dotted note (Measures 1, 2, 5, and 7), cuted?*—Miss M. M. L.

A. 1. Pw. is an abbreviation for the Ger- n *pedalwechsel,* meaning that the pedal is anged. The difference is this: Pw. means a lal release followed immediately by a pedal pression; in other words, it is a pure legato lal. When you see the asterisk you release t do not depress again until you come to P. Ped.

2. This little note *(appoggiatura)* in each se is given the value of an eighth note. It struck on the beat. Count 1 *and* 2 *and* 3 *and and* 5 *and* 6 *and,* giving this little note a lf count, and you will have no trouble.

ading Piano Music.

Q. Will you please give me the grade of se piano pieces? 1. (a) Rondo for two pianos, Chopin, (b) Impromtu in A-flat, by *Chopin,* Ballade in F minor, by *Chopin. 2.* Girl th the Flaxen Hair, by *Debussy. 3.* Sonata . 31, No. 2, by *Beethoven. 4.* Chromatic ntasy and Fugue, by *Bach. 5.* Invitation to Waltz, by *Weber. 6. (a)* Paganini Etude No. by *Liszt, (b)* Etude in D-flat, by *Liszt. 7. uite in D minor,"* by *D'Albert.*—Miss R. W.

A. Grading pieces scientifically is quite im- ssible, for what is easy for one might be ite difficult for another. Using ten grades, I uld say that your compositions grade about follows:

Grade 10—1a, 1c, and 6a; Grade 9—4 and ; Grade 8—1b and 3; Grade 7—5 and 7; ade 5—2.

I would consider those in Grade 10 as very ficult; those in grade 9 as quite difficult; se in grade 7 and 8 as moderately difficult; dle those 5 as about medium.

mistaccato.

Q. Will you please explain to me how the lowing is played? I am an Etude *subscriber.*
—J. B. G.

A. The effect indicated in your example is metimes called *semistaccato* and sometimes *tamento.* The former term is better than the ter because *portamento* is used especially in nection with a certain effect secured by gers. But whatever name you may apply, effect is that of separating the tones with- using the sharp *staccato* that is indicated the dot alone. Sometimes what is wanted is kind of "pressing accent" but in any case re is always separation of the tones from another.

alyses of Haydn and Mozart Sonatas.

Q. No doubt you have studied Donald ancis Tovey's complete analysis book to Bee- ven's piano sonatas. Could you please tell where I might be able to purchase a similar k to the Haydn and also the Mozart piano natas? I shall appreciate very much any in- mation regarding an analysis of the Haydn the Mozart piano sonatas.—L. A. E.

A. I have searched in several bibliographies I have also consulted Dr. Edward Dickinson l various other musical scholars, but I can d no trace of any complete analyses of either ydn or Mozart. I suggest that you consult book by Oscar Bie, entitled "The History the Pianoforte." You will find an excellent pter on the predecessors of Beethoven. You ll find a certain amount of material in the ume by Hamilton entitled, "Piano Music— Composers and Characteristics," and Grove's ictionary of Music and Musicians" also con- ns a wealth of information as well as ex- lent bibliographies. I advise you to consult s first.

hich Keys Are Most Common?

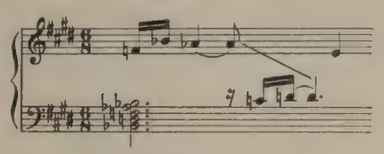
Q. 1. Is it true that there is comparatively le music composed in B major, or G-sharp nor? Why is this? 2. Is a scherzo *always written in two-four e? Would it not be just as well in four-four e? 3. In writing for publication, do composers ays submit photostatic copies of their mu- al compositions?*—Mrs. A. A. K.

A. 1. I do not think this statement is true. an think of more pieces in B major than I in F-sharp, or C-sharp major. Your ques- n interested me, so I examined the fifty-three zurkas of Chopin. You will be surprised to w that, excepting the keys of C major and inor, there were more mazurkas in B major n any other key; also, there were none in sharp major, nor C-sharp major.

2. Scherzos are almost invariably written in ple rhythms; however, Beethoven has writ- one in two-four rhythm (Op. 31, No. 3). ny that are written three-four could be anged to six-eight. All of the scherzos of opin are in three quarter measure. The herzo evolved from the minuet.

3. They do not always do so; but they often do. Orchestral writers do, I think, more than writers of smaller works. Sometimes they keep the photostatic copy and send the manuscript.

Tempo of Tschaikowsky's Humoresque.



Q. One of my pupils has been studying the Humoresque, *by Tschaikowsky. She has been playing it about (M.M.♩=108). Recently this composition was played at the Toledo Museum of Art, as I understand, about (M.M.♩=108). Will you tell us which of the two tempos is correct?*—Miss L. M. M.

A. Metronome markings are elastic, but to change a *tempo* from M.M.♩=108 to M.M.♩=108 is going a little too far. *Allegretto scherzando* would indicate that Tschaikowsky meant that the piece should move along at a fair pace. Your *tempo* is twice as fast as the other, but I think you are safe in using it. It certainly is not too fast.

Debussy's Afternoon of a Faun.

Q. I should very much appreciate it if you would answer the following questions about Claude Debussy's Prelude to the Afternoon of a Faun:

1. The excerpt shown is an exact copy of the particular measure of the piece as it appears in my album. Is this a misprint and should not the two notes which I have connected with a line form the fourth beat?

2. Several passages of sextuplets appear throughout the piece. Should these be accented on the first, third and fifth notes or should they be played as triplets and accented on the first and fourth notes?

3. In the movements marked nine-eight, six-eight and twelve-eight, is it not correct to play them slowly and expressively giving the eighth note one beat, the quarter note two beats, and so on.—W. S.

A. 1. Yes, and the two D's should be tied together.

2. Some of the sextuplets should be accented on 1, others on 1 and 4, still others on 1, 3, and 5. It depends on their position in the phrase; your musical feeling must dictate the rendition at each point.

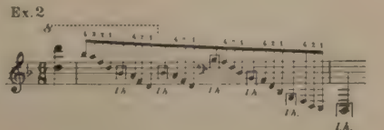
3. In principle, yes.

How to Play a Chopin Prelude.

Q. 1. Will you kindly explain the "vibrato" in measure three of the Prelude, Op. 28, No. 24, *of Chopin?*

2. How is the descending run in the right hand to be played smoothly with the left hand figures in measures 66 and 70? Also, can you give me a fingering different from that in my copy (Edition Wood)?—W. R. C.

A. 1. I do not have access to a Wood Edition and none of my copies have "vibrato" marked in the third measure. According to Hugh H. Clarke's Musical Dictionary, "vibrato" is defined as follows: "To play with a strong intense tone." This definition certainly fits the way this wonderful Prelude of Chopin is played.



2. In measure 66 play five notes to beat 3, 4, and 5; and 7 notes on count six, as follows:

Ex. 1

If the fingering in measure 70 crowds your hand, try taking the B-flats with the left hand, like this:

Ex. 2

Repeats in Mozart.

Q. Is it customary to observe all the repeats in the "Sonata in A major," by Mozart, in the first movement (Theme and Variations)? *If not, which ones should be observed?*—Miss L. B.

A. Some players observe all; some none. Personally, I think that, beautiful as the theme is, it has not variety enough to warrant repeats. It might have been all right in Mozart's day but the modern ear cannot stand too much repetition in music—or anything else. If you play the theme without repeats, it would be better to play all variations the same way. There is no rule governing this so I can only say how I personally would like it.

AMERICAN CONSERVATORY OF MUSIC
CHICAGO 52nd SEASON
Offers Accredited Courses in piano, vocal, violin, organ and all other branches of Music and Dramatic Art leading to
DEGREES—BACHELOR OF MUSIC, BACHELOR OF MUSIC EDUCATION, MASTER OF MUSIC and MASTER OF MUSIC EDUCATION; TEACHER'S CERTIFICATES.
Under Authority State of Illinois
Unsurpassed faculty of artist instructors, many of national and international reputation.
Thorough preparation for concert, radio, opera and teaching positions. Many special features, weekly recitals, concerts with full orchestra, lectures, school of opera, training in students' symphony orchestra, bureau for securing positions.
SUMMER MASTER SCHOOL
Three Summer Sessions—May 13 to June 23, June 24 to August 4 and August 5 to September 15
Special Summer Courses in Public School Music, School of Opera, School of Acting, Children's Musical Training (Robyn System), Class Piano Method (Oxford), Theatre Organ Playing

"Hey, you!"

VOICE QUESTIONS

Answered

By FREDERICK W. WODELL

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Care of the Young Voice

Q.—My little girl, fourteen years old, has had much praise for her voice, which is very sweet, and for her natural way of singing. I am giving her lessons with a soprano teacher, a good singer, but several persons have warned me that if she keeps on imitating the notable singers she hears on the talking machine and the radio, she will lose her voice. She loves to sing, and wants to be a professional singer. What in your opinion is best to be done for her? Sometimes she sings up very high, but I think her voice sounds best below the top G.—Mrs. E. H.

A.—Above all things, preserve the natural "sweetness" of this young girl's voice. There is always a risk when so young and inexperienced a singer tries to sing the pieces chosen by great artists for recording. She may now be able to reach very high pitches, but in the natural course of things her voice will probably be changing more or less in range and breadth for a few years, and the safe thing for her is to study how to sing with ease and expression within the long middle compass. If she is a true soprano, the "top G" first space above, G clef, will in time be her "best" note; most sonorous and beautiful; if a mezzo-soprano, then the F next below. Let power wait upon good quality.

The Baritone's Low Notes

Q.—I am a young baritone, with considerable experience as a public singer. Have just been learning to sing my upper voice, including the high F, with an easy sort of "big tenor" quality, but my lower compass is not so satisfactory. I want to sing pieces like The Horn *by Flegier. Please advise what to do to strengthen my lower notes.*—College Student.

A.—If you are able now to sing your high F with ease and good quality, go right on singing in that way as you go down the scale; that is, with throat ease, and musical quality of tone. Avoid trying to *do something* at the throat to compel more force of sound on the lower pitches. As you are a young man, if you continue to sing upon a right basis, you may naturally expect your voice to develop to some extent, in power throughout its compass, as the years go by. When you breathe out very slowly, steadily and freely, and absolutely silently, a *silent Ah*, you will have the sensation of what is known as "open" throat. Continue to breathe in the same controlled manner, willing the same "open throat" sensation, and keeping the upper chest well up, without strain, when you sing, and whatever is your gift for producing low tones of good quality and force will exhibit itself. To develop these lower pitches, it is helpful to will a sensation as of tonal vibration against the center upper front teeth, and lightly against the bridge of the nose. The mouth vibration sensation upon the vowel will predominate in the low range.

The High School Voice

Q.—I am a girl of sixteen. I sang at a very early age, and was easily the best singer in school all through the grades; but my voice has never exhibited any remarkable quality. I also play the violin and piano. On entering high school, my voice became weaker, and I find my range (just below Middle C to F or G) is not as great as it was upward by several tones. Have been singing regularly, but do not believe I have strained my voice. It is true—not harsh or rough—and has been gaining in volume steadily for the past eight months. I very much desire to sing. Do you think my voice will develop in quality to the extent that it will be worth while to train it?—I. S.

A.—Very high, very low, very loud tones astonish for the moment. Beautiful, expressive tones touch the heart, and cause the listener to say: "I wish she would sing again." In many cases too early, unsupervised singing has had a bad influence upon the later, more mature voice quality. We suggest that you arrange to see the best teacher in the largest city of your state, to which you have access, and take his or her advice as to the possibilities of your voice. THE ETUDE carries the announcements of a number of leading vocal teachers.

The Tonsil Problem

Q.—I am a girl of eighteen years of age. Since my singing teacher is away, I have come to you for advice. About two years ago I had my tonsils removed. Since then I have not sung one note, as I am afraid of straining the vocal cords. My voice is now mezzosoprano. My teacher tells me it is developing into a lyric soprano.

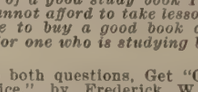
1. Do you think that my tonsils being out will have any effect on my range?

2. How long should I stop singing? I suppose talking too much is as bad as singing, so I will have to refrain as much as possible from talking. I have practiced breathing from the diaphragm for one year, and still find it difficult to breathe like that regularly. I have not much volume and am still a bit self-conscious.—M. A. H.

A.—1. Your range may go up or down a trifle. It is impossible to say definitely in advance.

2. Rest the singing voice completely for a short time, but not for too long, as the parts need to be carefully exercised somewhat, in order to secure good adjustment and action under the new conditions. Begin practicing not louder than *mf*, within a limited middle range, and for short periods. Talk little fo while—this is good for the voice and for m of us, generally speaking. Do not worry ab "diaphragmatic" breathing. See the writ book, "Choir and Chorus Conducting," pa 173 to 176, inclusive, for a practical se breathing exercises for your use.

The Youthful Voice



Q.—I am thirteen years old and very m interested in being a singer. Am I too youn start vocal lessons?—M. V.

A.—Few girls of your age should begin serious study of singing. However, if you find as a teacher a lady with a sweet sopr voice, who understands children's voices, will undertake to lead you along carefully conservatively, you will then probably la good foundation for future serious study, also will gain much enjoyment from your w There are undoubtedly some good teacher the cities of your state. It might be well you to have an interview with one of then

Helping the Baritone

Q.—I am a baritone, nineteen years of a have a fairly good voice; took lessons for t months last winter; always noticed that high notes seemed strained. When I told teacher this he replied that my voice prob was not yet settled. Gave up lessons for fi cial reasons and since have been doing qui bit of singing, but I notice my high notes still a little strained, and after I sing fifteen or twenty minutes my voice begin get tired and hoarse—even an E-flat or D comes difficult for me to sing. Would apprec it if you would tell me how to overcome straining of high notes. 1. Would you give the name of a good study book I could us Since I cannot afford to take lessons would advise me to buy a good book on the ar singing, for one who is studying by himself R. K.

A.—To both questions, Get "Guide for Male Voice," by Frederick W. Root; "Common Sense and Singing," by J. B. F nedy. Sing, with loose tongue and jaw, e cises on the various vowels, on pitches betw

Try short scale passages and *arpeggi*, sha in the manner indicated. When your pro tion has improved upon these middle pitc if you keep the same freedom of the parts will find later that the top notes will come to the fold. Work for good quality rather power, for the present. It is extremely diffi for a young student to get satisfactory res without the aid of a teacher.

The Girl's Voice

Q.—1. I am thirteen years old; very m interested in singing, but cannot as yet lessons. Lately I strained my voice by tr to sing too high. I know I should not done it. Do you think this will hurt my vo

2. I can sing two octaves from Middl without straining, but on going farther I to force my voice. Do you think as my develops I may reach higher notes? Now voice does not seem full on the higher n between the two octaves.

3. Do girls' voices ever change; if so bet what ages?

4. I sang over the radio lately, and the said I had good possibilities. One thing he me was that when I reached the lower n I should sing from my stomach to get tones. I heard from teachers that singin supposed to come from the head and not the stomach. Which is right?

5. Where can I obtain "Polychrome Les for Singers"?—L. H.

A.—1. Certainly; if you keep on for your voice you will injure it.

2. You may. Nothing definite on this p can be stated at this stage of your experie Be sure not to try to compel bigger tone your upper range. Learn to *let* your voice upward, as of itself.

3. Yes; but usually not so markedly a the case of boy singers. The age differs the individual. Evidence of change may looked for between the tenth and fifte years. In some cases the change is very g ual; in others it comes with comparative denness. Do not worry about this point. with as little effort as possible, and keep tone *sweet* and clear at all pitches, placing more importance upon musical quality upon force of voice.

4. All tones are generated in the throa the larynx. Most singers come to asso vibratory sensations in mouth, face, head sounds of different pitch; also in the ches the lowest range. At your age the thing need least to worry about is getting po especially upon low pitches. We do not say "radio man" was wrong; we think that are not ready yet to undertake to work that point for yourself. If you are intendi keep on singing the best thing you can d to get hold of a good teacher, even if you take but a few lessons at present.

5. "Polychrome Lessons," is a small b packed with good things, by Frederic W. I It can be had from the publishers of ETUDE.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

The Mandolin

...iuseppe Pettine

ITALY THE LAND of sunshine and romance has given to the world this instrument, that has made friends and admirers of all those within its hearing. According to reliable records it was in 1879, when a group of about twenty musicians calling themselves "Figaro Spanish Students" under the leadership of Denis Granada arrived in America and created quite a furore wherever they appeared. The instrumentation of this orchestra consisted of twelve mandurrias, six guitars, one violin and one violoncello. Their triumphant success artistically and financially induced a prominent violinist of New York city to gather together an orchestra of somewhat smaller dimensions, made up of players of Neapolitan mandolins; and, adopting the name of "Spanish Students" they toured the country quite successfully for several years. Later they disbanded and the leading mandolinists of this group settled in various cities. During these concert tours the Italian mandolin captured the heart of the American public and in a short space of time became the fashionable instrument of the day. At this period Italy had to supply all the better grade of mandolins. Before long, however, American manufacturers caught up with the demand, and instruments of exquisite workmanship and superior tone quality appeared.

To credit for development of the mandolin into a high class concert instrument must be given to one Pasquale Vinaccia of Naples (1806-1882). Before his time the mandolin was smaller and strung with gut strings. This outstanding lutenist enlarged and extended the fingerboard, gave it steel strings, improved the tone quality, and added to its carrying power. Since then the Italian mandolin makers have followed in his footsteps, until to-day the Neapolitan mandolin is a thing of beauty, and throughout the European countries this classic type of mandolin seems to have remained the favorite with the players. The American manufacturers some years ago cut loose from these classic traditions and began to experiment with a flat model instrument and again with one constructed similar to the violin, with carved top and back, requiring a higher bridge. This latter type has proved such a success that most mandolins now follow its lines.

Abundant Literature

TURNING TO THE MUSIC composed for the mandolin, we are compelled once more to look to Italy as its fountain head. Contrary to the belief of many, the system using the plectrum on the mandolin is quite different from that of the down and up bow of the violin. Many violinists, finding the left hand technic for the mandolin corresponding to that of the violin, have in the past applied the same rule for the right hand, which, to say the least, is a poor substitute. The mechanism of the plectrum is so intricate that several years of study are required to understand and to master it. Giuseppe Branzoli, of Rome, Italy, was one of the first to give, in his method, many examples of attacking the strings in different ways to get certain effects. This method might be considered as containing the fundamental principles of the art. A number of books have been published since then, having to do primarily with the mechanism of the plectrum. Other Italian composers who have contributed to the advancement of original mandolin literature are, Pietrapertosa, Christofaro, Bellenghi, Matini, Graziani-Walter, Arienzo, Marucelli, La Scala, Bertucci, and Mezzacapo. The man recognized as the greatest composer and virtuoso of that period, was Carlo Munier. Born in Naples in 1859 he died in Florence in 1911 and his passing was quite a loss to the mandolin fraternity. Munier's compositions number over three hundred, including a complete Method in two volumes, numerous etudes, duets, trios, mandolin solos with piano accompaniment, a "Mandolin Concerto in G Major," three plectrum quartets in the style of the classic string quartets, mandolin solos duo style unaccompanied, and so on. His music shows him to have been a highly gifted musician.

Another composer of great merit, who is still living in Naples, is Raffaele Calace, author of a beautiful "Concerto for Mandolin and Piano" of which the opus number is 113, showing that he is quite a prolific composer.

The Italian virtuoso Silvio Ramieri now residing in Brussels has to his credit a number of short compositions together with a "Concerto for Mandolin and Piano," in three movements. The writer had the pleasure, several years ago, of hearing it performed by the author, and it was an excellent performance of a beautiful work.

American Writers

WE HAVE ALREADY MENTIONED the conditions under which the mandolin made its appearance in this country. Since then many highly talented and cultured American musicians have realized the artistic value of the instrument and have devoted their lives to its advancement and its music. TO THESE AMERICAN VIRTUOSOS and composers we are indebted for the development of one of the most characteristic features of mandolin technic, the duo, trio and quartette form—playing the melody and accompaniment at the same time. Eugene Page, Aubrey Stauffer, Samuel Siegel, Valentine Abt, proved themselves as virtuosos of high rank and fine composers as well.

The man who undoubtedly has contributed more than anyone else to the American literature of the mandolin, is Giuseppe Pettine. Coming to his adopted country in his 'teens, Pettine brought with him an all consuming love for his instrument and a highly developed musical culture. Well known as a band and orchestra leader, it is as a mandolin virtuoso and composer for this instrument that the name of Giuseppe Pettine is treasured amongst the serious mandolinists. His concert repertoire includes many of the great violin concertos and original compositions and his concert tours have taken him from Maine to California. Amongst his numerous compositions the "Concerto Patetico," for mandolin and piano, is his greatest contribution to mandolin literature. It is in three movements, melodious, and it calls for all the characteristic resources of the instrument. The *Fantasia Romantica* and many other original works of smaller dimensions, arrangements in duo form, and a "Mandolin Method," in four volumes, are the fruits of a lifetime devoted to his favorite instrument.

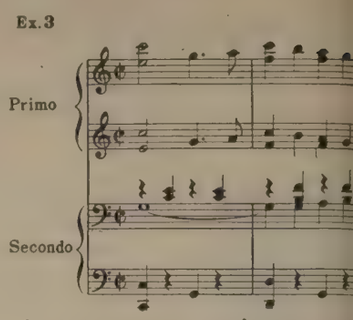
All About Four Hand Music

(*Continued from Page* 76)

and not overly difficult. More advanced players will enjoy Beethoven's *Egmont Overture;* Weber's *Overture to "Der Freischütz"* and *Overture to "Oberon";* and Mendelssohn's *"Ruy Blas" Overture.* We have not yet seen a satisfactory arrangement of Mendelssohn's *Overture to "A Midsummer Night's Dream."*

So far as arranging for four hands is concerned, practically all of the foregoing is of direct application. However, there are certain simple principles to be offered, which should prove helpful. In the first instance, there are many pieces for piano solo that are in demand as duets. Suppose we have one of these for arrangement; what shall we do first? Study analytically the piece to be arranged; pick out the themes; the counterthemes (if any); dissect the harmonies; condense all passage work to a harmonic basis; and finally decide upon a proper balance for all parts, which latter is the most difficult. Our arrangement must be neither top-heavy nor tubby, nor must there be any holes in the middle register. The general idea is one of expansion; we have the use of twenty fingers instead of ten, and with these we can cover the whole range of the keyboard. Now, just for example, suppose we have a commonplace little piece, starting off:



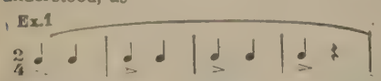
Ex.2

Without in the least adding to its difficulty, we could dignify this little bit in a four hand arrangement as in Ex. 3.

What have we done? Just doubled the melody in the octave; but relieved this by doubling also some prominent harmony tones, for sonority. Moreover, in the accompaniment we have covered up that "umpah" bass, that bugbear of the modern music supervisor, by a suspicion of a counter melody. It goes without saying that, in

Ex.3

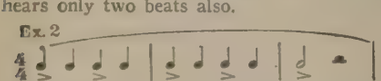
order to arrange any music, one must not only a harmonist but a contrapun as well. Besides, there must be alway seeking for balance, color, and contr We could go on indefinitely about this of our subject, did not lack of space for



In all humility we must confess to ing perpetrated over one thousand publis four hand arrangements of our own; we are still an enthusiast. Perhaps should add a few words as to our t scription of the *Bourrée* by Bach, in issue of THE ETUDE. This piece originally for violoncello solo. When writes for a solo instrument (unacc panied), it is up to the contrapuntist discern the true implied harmonies. A rule we do not approve of transcript to other keys, except where absolu necessary; so in this case we stick t major, nor do we quite agree with s of the harmonies found in various t scriptions. Since the violoncello, of instruments, is one of the richest in o tones (upper partials), we enrich natur the melodic "leads" by allowing them be heard in as many octaves as possi Moreover, since heavy chords, ac three or four strings, are characteristi the instrument, we use as many open f in our bass part as possible. So, with overdoing it, we have endeavored to sug the essential coloring. As it is one of favorites, the arranging of this number proven a real labor of love.

The Ear May be Deceived

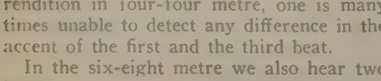
By AUGUSTA WIXTED



THE TIME VALUE of every musical motive can be indicated by either two or three beats. If the metre is two-four, this is easily understood, as

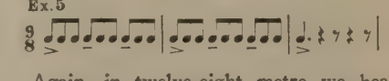
Ex.1

but, when the metre is four-four, the ear hears only two beats also.



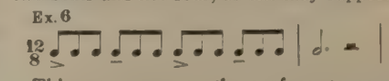
Ex.2

Of course we learn about primary and secondary accents, and that the third beat should be accented slightly less than the first; but, in listening to ever so perfect a rendition in four-four metre, one is many times unable to detect any difference in the accent of the first and the third beat.



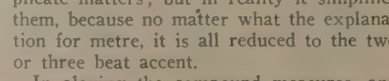
In the six-eight metre we also hear two beats,

Ex.3



If the metre is three-four, we quite naturally hear the three beats,

Ex.4



but three beats are just as evident in nine-eight metre done slowly.

Ex.5

Again, in twelve-eight metre we hear two beats and not four, as one may suppose,

Ex.6

This may seem, on the surface, to complicate matters; but in reality it simplifies them, because no matter what the explanation for metre, it is all reduced to the two or three beat accent.

In playing the compound measures, and especially the nine-eight and twelve-eight, there must be much care that each measure begins with a very definite accent, else the measure rhythms will be lost, though they should be full of charm.

Fretted Instrument Department

(*Continued from Page* 127)

This article would be incomplete without mentioning the names of a few of the great masters who showed interest in the mandolin. Mozart evidently appreciated its delicate and charming voice, and the *Serenade* with mandolin accompaniment in his immortal opera, "Don Giovanni," was the result. He also composed two songs, *Come, dearest Mandolin, Come,* and *Contentment,* with mandolin *obbligato.*

Beethoven wrote an *adagio* and a short "Sonatina for Mandolin and Cembalo," undoubtedly influenced by his intimate friend the mandolin virtuoso, Krumpholz. Nicola Spinelli, an Italian operatic composer, makes frequent use of the mandolin and guitar in his opera, "A Basso Porto," and preceding the last act, there occurs a beautiful *intermezzo* for mandolin and orchestra. In his opera, "The Jewels of the Madonna," Wolf-Ferrari introduces a *Serenade* for mandolin and guitar, which is quite effective.

On account of its fretted fingerboard the fundamental technic of the mandolin offers no particular difficulty to the average student; and for this reason it is often misjudged as to its artistic possibilities. Frequent recitals by capable concert mandolinists would soon convert the most skeptical. To be able to interpret the concertos and other high grade original compositions by the masters requires an intense study for a number of years. There is lack of material, as to the student to-day; numerous methods and other w are available that contain every phase mandolin technic. To those with lim time, the plectrum quartette—first and ond mandolin, mandola and mandocel or the mandolin orchestra offers many portunities for musical enjoyment.

Fretted Instrument Departme

Questions and Answers

Q. After taking lessons on the g for a year I still have trouble in tu the instrument. My mind seems to be intent on tone quality than the pitch.—W. K.

A. Every guitarist should strive to tain a beautiful tone from his instrum But, if the instrument is not tuned prope you will not be able to produce cor melody or harmony. Get a good gu tuner, having a corresponding note each string, and keep at it until you tune the instrument correctly.

Q. Could I get orchestrations fo group of twelve players, mandolins, Spa and Hawaiian guitars, tenor banjos, violins?—A. T.

A. Ask your music dealer for cata If he does not have what you want, w direct to the publishers. Most of t carry a large stock for fretted orche

She PAYS Them to STOP Practicing

● Here is a brand-new angle on the practice problem. Mrs. Frank J. McManus of Detroit writes us "Our whole family enjoys reading THE ETUDE from cover to cover, and my girls, 11 and 13, enjoy reading the pieces and playing the duets. I used to have to pay them to practice, but now I have to pay them to stop."

Herein lies the great secret of musical progress, "enthusiasm." Emerson was certainly right when he wrote "nothing succeeds without enthusiasm."

By taking THE ETUDE regularly and keeping continually in touch with the latest publications, many a teacher has kept up *enthusiasm* in a class which otherwise might long ago have vanished in the mists of indifference and depression.

No wonder that thousands of teachers have told us that THE ETUDE and our *Presser Service* have been indispensable business assets.

The Cover for This Month

In May 1937, when Dr. Walter Damrosch was past 75, the world premiere of his third opera *The Man Without a Country* was given in the Metropolitan Opera House, New York City. Two years before, in the same great opera house, this celebrated and oved musician stood in the pit before a acity audience conducting a Golden ilee performance because it was 50 years pre, when his father, Dr. Leopold Damh, was mortally ill with pneumonia, that scheduled operatic performances were ried through when the 23-year-old Walter rnosch took up the baton. Thus great ponsibilities were thrust on the young . He not only fulfilled the New York formances but he also continued directing company organized by his father, playing scheduled engagements in Chicago.

his man, who in the last 50 years, or re, has done more than perhaps any other ividual in bringing the American people a love of musical masterpieces, was born Breslau, January 30, 1862. He was 9 rs of age when his father brought the mrosch family to the United States. The kground of musical harmony he secured der the direction of his father and also chbieter and Draeseke in Dresden, piano dy with von Inten, Boekelman, and Max ner, and conducting under his father and Bulow.

He was making his way as a capable prosional musician while only in his 'teens. was only 18 when he was engaged as a nductor of a choral society in Newark, w Jersey. He also played second violin in father's orchestra. His accomplishments a young man were remarkable due to his lity and energy.

Before the turn of the century he had ny seasons to his credit in which he had ured the United States with his own Damch Opera Company and with the New rk Symphony Society. He also was conctor of the New York Oratorio Society beginning in 1895 and terminating in 1898.

His musical mission in life won for him the friendship of Andrew Carnegie who built the big concert hall for New York City. While enjoying a visit with Carnegie in Scotland, he became acquainted with James G. Blaine, the Pennsylvania-born American political leader who, through his services in the House of Representatives and the U. S. Senate, had become one of the most conspicuous national figures of the time. Not long afterward, in the year 1890, Blaine's daughter Margaret became his wife. Four daughters blessed this marriage.

A long list of things for which the United States is indebted to Dr. Damrosch might be given. On this list would be such things as his initiative in being the first to bring to this country such artists as Katharina Klafsky, Johanna Gadski, and Milka Ternina, who were among the greatest dramatic sopranos. Also included would be his sponsoring of the first serious composing efforts of George Gershwin.

It is estimated that as an educator, Dr. Damrosch has taught music to millions, this record being possible due to the years in which the National Broadcasting Company has presented his *Appreciation Hour*. Although this *Appreciation Hour* has developed to a point where it has become a required part of the education of nearly seven million students in seventy thousand radio equipped schools, it has been estimated that over three million adult listeners also have developed the habit of tuning in on this period.

As a composer, Dr. Damrosch has written two other operas besides the one mentioned —*The Scarlet Letter* and *Cyrano de Bergerac*. Other works include his *Manila Te Deum;* a Sonata for violin and piano; a number of songs; and incidental music to *Iphigenia in Aulis, Medea,* and *Electra.*

THE ETUDE MUSIC MAGAZINE is greatly indebted to Mr. Soss Melik for his generous permission to utilize as our cover for this issue of THE ETUDE the excellent portrait sketch of Dr. Damrosch. Mr. Melik is one of the most celebrated portrait artists of to-day. A visitor to the Melik Academy of the Fine Arts, in Kingston, New York, would be amazed to see the number of noted personages whose portraits have been strikingly rendered by Mr. Melik. Hon. Herbert Hoover, Hon. Judge Charles Evans Hughes, Dr. Nicholas Murray Butler, Adolph S. Ochs, and others, are among those whose portraits have been executed in the strong, verile manner in which the likeness of Dr. Damrosch is portrayed on the cover of this issue.

The excellent pencil and charcoal portraits drawn by Soss Melik, reveal a grandeur in their simplicity, a remarkable living vibrancy in the modelling brought out by every delicate nuance of the shadings and highlights by which this artist presents, not only the physical likeness, but also the character personality of those who have posed for him.

Manual of Fugue

By Preston Ware Orem

To thousands of music students and teachers, the name of Preston Ware Orem is familiar as the author of popular books which make clear for the amateur the mysteries of harmony, theory, and kindred subjects pertaining to music. Dr. Orem's *Harmony Book for Beginners* and *Theory and Composition of Music* have been eminently successful and the reception already accorded his new counterpoint method, *The Art of Interweaving Melodies,* augurs well for its usefulness.

To this galaxy of exceptional text books, we are pleased to add a *Manual of Fugue* by the same author. In this new work, Dr. Orem explains, in his lucid and entertaining manner, all the problems of fugue writing, including Canon, Imitation, and Double Counterpoint. Naturally, as a preliminary to the study of this book, a practical working knowledge of harmony and counterpoint is assumed. The author treats the writing of fugues as a making of real music, not as an exercise in musical mathematics. He feels that, after proper preparation, fugue writing is "just about as good fun as anything in musical creation."

Ten lessons and an Epilogue comprise the chapters of the book. Lesson One presents a general discussion of the resources of fugue construction. Imitation in two, three, and four parts comprises Lessons Two and Three. Then follow lessons in Double Counterpoint; Pedal Point, Sequence, and Stretto; Fugue Form; Tonal Fugue; Four-part Fugue; Five-part Fugue; and How to Analyze a Fugue. Not the least important are the original and musicianly examples of writing which are a valuable feature of the book.

In advance of publication, a single copy of this important work may be ordered at the special cash price of 40 cents, postpaid.

Easter Music

Easter Sunday falls this year on April 17th, in every way an ideal date for this well-marked event in the Church calendar. Perhaps even to a greater degree than at Christmas, music is an important feature of the day's activities. Each year shows an increased interest in and a wider use of well-chosen musical numbers in various forms. Naturally the "Easter Anthem" takes the most prominent place in the musical portion of the service, while vocal solos and duets follow almost as a matter of course.

Variety is always desirable and we find that there is a growing demand for effective two and three-part (treble voice) numbers, also for compositions and arrangements for men's voices. Then, of course, there is the Easter Cantata that often so overshadows the shorter numbers that perhaps we should have mentioned it first. No organist or choir director need be apprehensive of a scarcity of suitable material, or be in doubt as to a dependable source of supply, if only the facilities of Theodore Presser Company are drawn upon. Everyone directly interested in the selection of Easter Music is invited to write to us for examination copies.

As a help in meeting requests for Easter Music we should like to have information with each order as to the number and make-up of the groups for which music is to be provided. Incidentally, some valuable suggestions are given in the advertising pages of this issue.

Music for Spring Concerts and the Commencement Program

With the final semester of the teaching season now well under way, many educators, and those having in charge the selection of music, are giving thought to choosing appropriate material for Spring Concerts and the Commencement Programs.

Cantatas, operettas and choruses for grade or high school groups, or women's club choruses, should be selected now and put in rehearsal at once. Solos and ensembles for piano and other instruments should be assigned in order to allow sufficient time for memorizing.

Presser Service, for many years, has been of much assistance in the building of such programs. Liberal examination privileges, the service of expert music clerks, the largest stock of music in the world from which to choose, and generous professional discounts, are a convenience and an economy to music buyers.

Write today, outlining your needs and asking for a selection to look over. Give the number and tell something of the capabilities of the performers. If you prefer to make your own selection for examination, catalogs and descriptive lists may be had FREE for the asking.

Bind Your Etudes At Little Expense

Those subscribers who have a complete 1937 volume of THE ETUDE may bind it in a handsome blue silk buckram binder stamped in gold "THE ETUDE". The price of the binder at retail is $2.25. When renewing for the year 1938, instead of sending $2.00 for your subscription, send $3.25 and we will extend your subscription and forward one of these binders immediately.

We are sure you will like the binder as it is very handy and keeps copies of THE ETUDE clean and in order.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

***By* Ella Ketterer**

The successful piano teacher always seeks to have on hand, in the studio, educational and recreational material that may be assigned to supplement the regular course of studies. The necessity for emphasizing some particular point in piano technic may arise at any lesson. Sometimes a piece containing that technical figure may answer the purpose; with some pupils it is advisable to give an entire book of special studies.

Miss Ella Ketterer is a most successful teacher of the piano, but she also has a flair for composition; her tuneful piano pieces are known to thousands. Equally popular with her fellow piano teachers are her study books, *Adventures in Music Land ($1.00)* and *Adventures in Piano Technic (75c)* which so well take care of supplementary material needs in the first two grades.

We now have in preparation the new Ketterer *opus*, designed for use with pupils during the third year of piano study. Naturally, with the composer's melodic gifts, the twenty-eight studies that make up the contents are tuneful. Their practical value is evident in the technical points they cover: arpeggios, chords, hand crossing, chromatics, fingered thirds, wrist development, repeated notes, rapid passages divided between the hands, fourth and fifth finger development, trills and turns, suspensions and left hand technic. Each study is one page long and all have been given attractive titles.

Teachers who wish to become acquainted with this work will find the special advance of publication cash price 30 cents, postpaid, a real economy.

Little Pieces from the Classic Masters

For Violin and Piano
Compiled and Arranged by
Leopold J. Beer

In the works of Bach, Handel, and their contemporaries there are hundreds of priceless gems of musical inspiration, many of which are practically unknown to the present generation of music lovers.

The author has gathered together a group of such numbers for this album and arranged them for playing by violinists well along in the first position. Special fingering makes possible the playing of these pieces also in the third position.

As material for inculcating in young students a genuine love for the best in music such compositions are unsurpassed. Particularly valuable are they for use with students who eventually hope to play in orchestras and string ensembles.

In advance of publication a single copy of this book may be ordered at the special cash price 35 cents, postpaid.

Play with Pleasure

An Album for the Grown-Up Piano Student

Material for those whose music education began after childhood's days were past must necessarily be interesting; grown-ups haven't the time, nor the inclination, to spend hours practising something technical (and dull) so that eventually they may be able to play something pleasing.

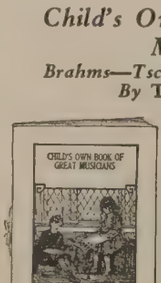
Bearing in mind that tunefulness and variety are prime requisites in an album of recreation pieces intended for adult piano students who are advancing a bit in proficiency, and are able to play what for younger students would be called third and fourth grade compositions, the editors have selected, and are arranging for this volume, many fine numbers never hitherto available in such fine early medium grade editions.

There are lilting waltz tunes—one by Lecocq, the *España* by Waldteufel and the celebrated *Kiss Waltz* by Arditi. A fine arrangement of Schubert's *Military March* and an excerpt from the *Light Cavalry Overture* by von Suppe will please those who like military marches. Mendelssohn's beautiful *On Wings of Song* has been specially arranged for this book, and a real novelty is offered in a piano version of a violin solo *Mazurka* by Wieniawski. Of course, there are some "old timers" and folk songs, but these are in brand-new arrangements. *Fair Maid of Sorrento* has been borrowed from Italian folk lore, *Two Guitars* from the Russian Gipsy, and Marks' ever popular ballad *Sailing* appears in the form of a not-too-difficult piano solo.

A few more surprises will be found when the covers of this volume are opened. Space forbids our mentioning them in these brief notes. The special advance of publication cash price 40 cents, postpaid, will remain in force this month for all who wish to take advantage of the opportunity to secure a fine collection at a real bargain price. Distribution of copies will be limited to the U. S. A. and Its Possessions.

One String Solos For Violin Beginners

By Kate La Rue Harper



Attractive melodies in the easiest grade, coupled with story-texts and charming illustrations, prove a strong influence in stimulating a child's ambition to become a good performer. Such a book is *One String Solos* for violin beginners by Kate La Rue Harper.

This work may be used as supplementary material with any elementary method of violin study. As the title indicates, each little piece is confined to the tones of one string. Only three fingers and the open strings are used, as the small player finds difficulty in placing the fourth finger correctly in the beginning. While various keys are introduced throughout the book, there are no accidentals in the violin part. The A and D strings are given first because they have the same pattern of fingering; then follow the E and G strings. The texts not only create interest but assist in establishing the correct rhythm.

As this work probably will be used in class teaching, too, it will be published in two separate books, the violin part for students, the piano part for the teacher, or accompanist. These books will be printed in the convenient oblong size. The special advance of publication cash price on the violin book is 15 cents, on the piano book 20 cents, postpaid.

Child's Own Book of Great Musicians

Brahms—Tschaikowsky—MacDowell
***By* Thomas Tapper**

Most books on music and musicians that seek to promote the cultural development of young people find favor with educators. But this series not only enjoys the endorsement of teachers, it invariably is received most enthusiastically by the young students themselves.

For several years, thirteen books of the *Child's Own Book of Great Musicians* series have been available—Bach, Beethoven, Chopin, Grieg, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Verdi and Wagner. These are priced at 20 cents each. A folder describing them will be sent gratis upon request.

We now have in preparation three new books—Brahms, Tschaikowsky and MacDowell. In advance of publication single copies of any of these three may be ordered at the special cash postpaid price, 10 cents; the set of three for only 25 cents.

Since the initial announcement of the forthcoming publication of these three booklets, hundreds of orders have been received from *Child's Own Book* enthusiasts, young and old, who are now awaiting delivery of their copies. Of course, the "cut-out" pictures, and the needle and cord for binding the book, are included in the copies ordered on this special offer.

Fourth Year at the Piano

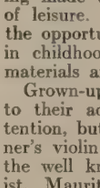
By John M. Williams

The author of this new instruction book is well known everywhere as a teacher and lecturer who, by his advanced ideas in pedagogy, has done much to revolutionize methods of teaching music. The increasing popularity of his progressing series, *First Year at the Piano* (1.00), *Second Year at the Piano* (1.00), *and Third Year at the Piano* (1.00), has resulted in the preparation of *Fourth Year at the Piano*, the final book of the series. As with the former books, the new one will be replete with interesting and valuable material, all of it attractive, not only to the student, but to musicians in general.

Single copies of *Fourth Year at the Piano* may be ordered now at the pre-publication price of 50 cents, postpaid.

A Child's Journey

Rote Songs for Primary School Activities
***By* Ada Richter**



In the music materials used for kindergarten and primary school classes, nothing is more important than an interesting presentation. Rote songs for primary school activities must immediately attract the attention of the youngsters. And nothing will do this quite so effectively as songs that relate incidents, or that tell of things with which the child is familiar.

Mrs. Richter's practical experience in teaching juvenile classes has particularly qualified her for undertaking a work of this kind. Here she presents sixteen short, simple little numbers, each relating some incident that might happen on a child's holiday. In addition, the melodies are all so rhythmic that they can be sung without accompaniment should no piano be available.

A single copy of *A Child's Journey* may be ordered now at the special cash price of 35 cents, postpaid; the books will be delivered when published.

Grown-Up Beginner's Violin Book

By Maurits Kesnar

Educators in all fields of academic subjects and cultural arts are making wonderful strides in satisfying the desires of young people and grown-ups who wish to make profitable use of time placed at their disposal in these days when so much effort is being made to provide all with an adequacy of leisure. For the many who were denied the opportunity to begin the study of music in childhood new and practical instruction materials are required.

Grown-ups seeking to add piano playing to their accomplishments received first attention, but the need for a grown-up beginner's violin book has been so insistent that the well known teacher and concert violinist, Maurits Kesnar, has evolved an instructor which has introductory steps and types of study material particularly suited to the grown-up violin beginner. This book makes a Key of C approach, and gives careful directions as to details of fingering, bowing, etc., frequently simplified by illustrations and charts which carry the student into the playing of a fair sized repertoire of attractive numbers, including arrangements of folk songs and dances, as well as some choice original numbers by contemporary composers.

While this instructor is intended primarily for use under the guidance of a teacher, it also will prove of service to the musician proficient on another instrument but who, in meeting the breadth of demands in this day and age, wants to do some self-study in order to have the added musical advantage of a working knowledge of the fundamentals of violin playing.

A single copy of this *Grown-Up Beginner's Violin Book* may be ordered prior to publication at the special cash price of 40 cents, postpaid.

Master Pieces with Master Lessons

For the Piano

Just what does this title mean? To some musicians, a masterpiece of music printed on fine, glossy paper seems sufficient evidence that this is the most reliable copy for study, without stopping to think that the piece may contain wrong notes, incorrect fingering (or none at all), misplaced phrase marks, and other tokens of incorrect editing. Another edition of the master piece may have none of these faults, but aside from good editing there is little to aid the student as to those fine artistic shadings impossible to indicate by mere marks and signs.

To supply this want we have assembled into one volume fifteen master pieces with scholarly analyses by some of the leading musical authorities, with which read
THE ETUDE are doubtless familiar. E

volume may be ordered at the specia
price, 50 cents, postpaid.

Ten Studies in Style

For the Piano
***By* Carl Wilhelm Kern**

This probably is the last month during which this new work will be available to advance subscribers. The manuscript is now in the hands of our engravers and copies soon will be ready.

The work will be published in the *Music Mastery Series* which already includes a successful v
of Mr. Kerns' *Twelve Melodious S
Featuring Scale and Chord Formations*
The author's piano compositions are k
to teachers, everywhere, not only for
melodious qualities, but for their pra
educational value. The numbers in this
really are piano solos introducing tec
problems met in the second year of
at the piano.

Of course, the special advance of pu
tion price 20 cents, postpaid, will rema
effect until the book is issued.

Advance of Publication Offers Withdrawn

From the number of advance order
ceived for the work that is to be pub
this month, it is quite evident that
teachers are not content with devel
merely their pupils' finger dexterity, but
also are diligently striving to inculca
them a real appreciation for the be
music. After the selection of the co
had been made the utmost care was t
both by the Editorial Staff and the Me
ical Department, to make the book a
cinating as possible, the Publishers rea
that an attractive presentation is nece
with any type of music book for youn
pils, and that it is vitally essential in
ume of classics.

This work now is placed upon the m
at a fair retail price and the special ad
of publication offer is withdrawn. G
your music dealer and ask to see a co
send direct to the Publisher. Copies ma
had for examination if desired.

Musical Visits with the Masters, a
of piano solos arranged from the cla
contains excerpts from representative
positions of the great masters so easy
pupils well along in the first year of
can essay them. Each is accompanie
biographical notes on the composer a
page in the book shows pictures of the
ters (in pen-graph style) which are
cut out and pasted in the spaces pro
for them. Of course, only melodic and r
mically attractive selections have bee
cluded. Price, 75 cents.

Delayed Etudes

During the holiday season just p
there are some lost copies owing to last
ute orders and rush of mail in the
office. We entered subscriptions as qu
and forwarded copies as promptly as it
possible to do, under the circumstances
if a copy intended for you has gone as
do not hesitate to write us. We wish
subscribers to be pleased with our se
and extend our sincere thanks for the
tience of those who were disappointe
delayed deliveries.

Changes of Address

Where a subscriber changes an addres
should be advised at least four wee
advance of the date of publication,
is the first of the month. Please give
Old and New addresses when reque
changes. Do not depend on the Post
but advise us directly.

(*Continued on Page* 131)

The Etude Historical Musical Portrait Series

Do you know who created the role of Tristan? of Isolde? Do you know what composer, who, because of his gift for melody, often called the "Swiss Schubert"? Do you know who was one of the first American composers to use Indian themes? What publisher specialized in publishing music by American composers? Who is Artur Schnabel? Arnold Schönberg? Germaine Schnitzer? You'll find the answers to all these questions, together with pictures and much additional information about a total of 44 well-known composers, conductors, teachers, artists and musical personalities, on page 68.

This, the 61st instalment in *The Etude Historical Musical Portrait Series*, carries on the work, begun in February 1932, of covering with picture and brief biography, the entire history of music. Growing appreciation of the value of this unique collection for reference as well as scrap book purposes has created a demand for separate copies of each instalment. To meet this demand we have made reprints of each instalment to date. These we will be glad to supply at the rate of 5 cents each.

Knowing Where To Seek Is To Find

The most used reference items undoubtedly are timepieces and calendars. They guide us in allocating our time for the purpose of fulfilling important engagements, and for making various arrangements. Perhaps weeks before this, many concerned with the spending of the February holidays celebrating the birth anniversaries of Lincoln and Washington already have looked to see on what days of the week these holidays fall.

Progressive music workers, particularly those in the teaching profession, well know the value of using reference guides to make their arrangements for teaching materials and teaching activities well in advance. One valuable help, to which many users of music refer in their constant search for dependable materials to meet their particular needs, is a list of music publications given regularly in these columns showing the most noteworthy items represented in the publisher's printing orders during the past month.

Very often there are several hundred or more copies of these items in stock when the printing order is made, but because of the daily demand for such numbers, a few hundred copies are needed to take care of sales during the several weeks between the time of ordering and the actual delivery of copies from the printers or binders. Acquaintance with any of these numbers may be made through the liberal examination privileges extended by the Theodore Presser Co.

SHEET MUSIC—PIANO SOLOS

No.	Title and Composer	Grade	Price
2	March of the Gnomes—*DeReef*	1	$0.25
6	Ring-Around-a-Rosy—*Scott*	1	.30

OCTAVO—WOMEN'S VOICES, SACRED

5	Incline Thine Ear to Me—*Himmel-Peery (Three-part)*		$0.10

A Favorite Composer . . .

Each month we propose in the Publisher's Monthly Letter to give mention of a composer who, by reason of the marked favor in which music buyers of today hold his compositions, is entitled to designation as a favorite composer of piano music.

EVANGELINE LEHMAN

In the last half dozen years, there has been a considerable growth in the recognition of the merits of compositions which have come from the pen of Miss Evangeline Lehman.

Miss Lehman was born in Detroit, Michigan, of German-Scandinavian parentage. She started the study of piano playing at the age of 7. Because she early showed promise of developing into a fine singer, she began the study of voice at the age of 15. With an unusually good contralto voice she soon was filling recital engagements and holding a regular church soloist position. Before she was out of her 'teens, she was enjoying success as a teacher of piano and voice students, teaching in Port Huron and Detroit.

Gifted in creating original melodies, she felt the need of developing her musicianship along theoretical lines, and went to Oberlin College of Music where she came under the instruction of the noted theorist, Arthur E. Heacox. Further study in composition, piano, and voice was pursued at the Fontainebleau Conservatory. Miss Lehman remained in France for most of ten years. During this time she not only studied and developed herself as a composer, but she also for a period was the contralto soloist of the American cathedral in Paris.

Her musical life in Paris was enriched by the friendship and encouragement of such famous French composers as Isidor Philipp, Camille Decreus, Maurice Dumesnil, Marcel Dupre, and others. She created a sensation in France with her oratorio *Sainte Thérèse of the Child Jesus*. This oratorio was rendered in cathedrals in Paris, Caen, and Rouen, and elsewhere with large choruses and complete orchestral accompaniment.

Subsequently this oratorio enjoyed notable performances in the United States, its premiere in this country being given in Indianapolis by combined Catholic choirs of several hundred voices, with orchestra and organ accompaniment, under the direction of Elmer Andrew Steffen.

Miss Lehman has been awarded the Silver Medal of the Ministre d'Affaires Estrangeres by the French Government, which also has given her the palm of an Officer d'Academie in honor of her work.

Miss Lehman's most successful songs are included in the group entitled *The Children's Festival*, which she designates as songs being suitable for children "from eight to eighty." She has numerous successful piano compositions, outstanding among which are *Water Lillies*, a beautiful barcarolle; the humorous novelty *A Juggler in Normandy*; the appealing *Scandinavian Mother's Lullaby*; the lively *March of the Cookie Soldiers*; and the interesting *Morning Canter*. A selected list giving details on these and other interesting numbers from her inspired pen are named below.

Compositions of Evangeline Lehman

PIANO SOLOS

Cat. No.	Title	Grade	Price
25752	The Angkor Pagoda	4	$0.30
26324	Armistice Day	4	.35

Premium Workers, Attention!

Hundreds of music teachers and others secure fine gifts through The Etude Music Magazine Premium Department.

For each subscription sent to us, at the full price of $2.00, one point credit is given toward any gift selected from the catalog. The following is a list of a few taken at random:

THERMOMETER AND CALENDAR: This leather-covered plaque contains a perpetual calendar, an accurate thermometer, has an easel back and comes in brown, green, blue and black. Your reward for securing one subscription, not your own.

WEBSTER DICTIONARY: This up-to-date Dictionary has a flexible, gold stamped, cardinal, art binding, and is semi-indexed. Your reward for securing two subscriptions.

FIVE-YEAR DIARY: Bound in gold-tooled, long-grain linen and complete with a gold-edged lock and key, 6½" high by 5" wide. Your reward for securing one subscription, not your own.

KROME-KRAFT SERVER: Here is a Server for cake or sandwiches that also may be used as a center piece for fruit, etc. It is 10½" in diameter and has a bright chromium finish. Awarded for securing three subscriptions.

ADDRESS BOOK: This gold-stamped, long-grain linen Address Book has a gilt edge, ruled pages, and is alphabetically indexed. Size 6¾" x 5¼". Your reward for securing one subscription, not your own.

DESK SET: Here is a splendid Desk Set—6 pieces covered with genuine leather; your choice of red, green, brown or blue. Pad size 12" x 19". Your reward for securing four subscriptions.

BONBONIERE WITH TONG: An attractive combination of fluted crystal glass and gleaming chromium that is both useful and decorative. Size 4½" square. Your reward for securing one subscription, not your own.

ELECTRIC TOASTER: With this trim Electric Toaster you now can have crisp, brown toast whenever you want it—two pieces at a time! Plug and 4 feet of strong cord attached. Your reward for securing two subscriptions.

Send post card for catalog illustrating all premiums offered.

World of Music

(Continued from Page 70)

THE PRO ARTE STRING QUARTET, under the patronage of the Belgian Court, has given five concerts to students of the University of Geneva, Switzerland, through the generosity of our American musical patroness, Mrs. Elizabeth Sprague Coolidge.

WILHELM VON WYMETAL, stage director of the Staatsoper of Vienna, and for some years in a similar position with the Metropolitan Opera Company, died on November 9th, in Vienna. Two of his greatest successes at the Metropolitan were "Der Rosenkavalier," on November 17, 1922, with Maria Jeritza in the title rôle for her first time; and Spontini's "La Vestale," in 1925, with Ponselle in the leading part.

"L'AIGLON," a new opera based on the popular Rostand drama, and with music by Arthur Honegger and Jacques Ibert in collaboration, was the work chosen for the opening night of the new season at the Opéra of Paris.

JOHN ALDEN CARPENTER'S new "Concerto for Violin and Orchestra" had its first public performance anywhere, when given on the program of the Chicago Symphony Orchestra, on November eighteenth, with Zlatko Balokovic as soloist.

THE MANITOBA MUSIC TEACHERS ASSOCIATION held its eighteenth annual convention at Portage la Prairie, on October 25th and 26th, with more than two hundred in attendance.

DANIELE AMFITHEATROF, a Russian born conductor from Turin, Italy, made his début on November 20th, as associate conductor of the Minneapolis Symphony Orchestra, to share the duties of the Greek conductor, Dmitri Mitropoulos. With two such names as daily hurdles, Minneapolis musical circles should take high rank among the nimble tongued.

COMPETITIONS

THE AMERICAN SOCIETY OF THE ANCIENT INSTRUMENTS is offering a Prize of Five Hundred Dollars for a composition to require not less than fifteen minutes nor more than twenty-five minutes in its performance, and to be suitable for interpretation by this ensemble. The competition closes August 31, 1938; and full information may be had from Mr. Ben Stad, founder and director of the organization, 4331 Chestnut Street, Philadelphia, Pennsylvania.

A PRIZE OF ONE THOUSAND DOLLARS is offered by the Cincinnati May Festival Association, for a composition for a children's chorus of six hundred voices (to which an adult chorus may be added), with orchestra, or organ, or both. The work will be performed at the May Festival of 1939; entries close August 31, 1938; and full information may be had from the May Festival Association, 142 West Fourth Street, Cincinnati, Ohio.

THE SALZBURG OPERA GUILD is offering a prize for an Opera on an American subject, by an American composer. The winning work will be performed by the Guild, and the composer will receive a trip to Salzburg with two months of entertainment at the Guild Headquarters in the Schloss Mondsee, during the summer Salzburg Festival. Manuscripts must be sent not later than May 1st, to Mr. Paul Csonka, Mondsee, Austria, from whom further details may be learned.

THE W. W. KIMBALL PRIZE of One Hundred Dollars is offered again by the Chicago Council of Teachers of Singing, this time for a setting of the poem, *Longing*, by Matthew Arnold. The contest closes June 1, 1938, and full particulars may be had from D. A. Clippinger, 617 Kimball Hall, 306 South Wabash Avenue, Chicago, Illinois.

Trips In Scale Land

By **Gladys Hutchinson**

Wherever you may journey the most intelligent preparation is to map out your trip to its destination so that you may travel directly and comfortably. For instance, if you were a stranger in the eastern part of the United States and wished to travel from Boston to Chicago, stopping over to visit the important centers en route, you would first want to study your map carefully and then perhaps get the detailed information from the person in charge of the local travel bureau.

It is exactly the same in Scale Land. If you have never been there, you will most certainly become confused and perhaps totally lost unless you map out your journey step by step.

If you will be methodical about your trip through Scale Land and travel as this map suggests, you will acquire a sense of freedom in your journey so that eventually you will be able to get about instinctively, just as though you had inhabited it all your life.

When you reach your destination, it will be well to plan your return trip with equal care. It is surprising how many people seem to be able to get to where they want to go with perfect ease but get lost on their way back. Be sure to consult your map and your teacher, who is in charge, and the Scale Land Travel Bureau.

Your Music Portfolio

By **Anna Meloni**

Are you one of those boys and girls who force your music into your brief case with your school books and lunch box? Then, in what condition is your music after a few weeks? Everybody has seen music after such treatment, and it certainly does not look nice.

Your teacher is not apt to form a very good impression of a pupil who does not take care of his music. If you are untidy about your music she may think you are going to be untidy about the preparation of your music lessons, and other things.

Why not have a separate portfolio for your music? You can get an ordinary manilla one for only a few cents. Paste a picture of your favorite composer on the front, and keep your music in it.

Sometime you may chance to meet the composer of one of your little pieces (that is, of your modern pieces, of course) and you might want to get the composer's autograph on the music. Some people collect autographs, you know, and you would not want the composer to see the music all torn and dirty.

So, boys and girls, try to keep your music neat and clean and in its own portfolio. Then it will always be ready for practice and you will not have to waste any precious time hunting it.

THE OLD PIANO'S STORY

By **MONICA TYLER BROWN**

I am an old piano, very much worn, and because of my "blue blood" as it were, I am spending my last days in the museum. I come from an illustrious family, for my immediate relatives were among the first to be perfected by Christofori.

Several of my forefathers were quite famous in their day. My great grandfather harpsichord belonged to George Frederic Handel, and great uncle clavichord was in the Bach family all of his life. There has been perhaps, no other family with as many musical members as the famous Bachs. Yes, and my cousin spinet and virginal both lived in luxury in the palace of the king.

Oh! for the good old days when I was singing the beautiful songs of my dear master. Alas, I can live only in memory now. I spent almost all of my active life in the home of Frédéric Chopin, who is called the poet of the piano.

To-day, among the many visitors at the museum, there was a wide-eyed, pale little boy who came and stood beside me for a long time. There was a look of longing and hunger for the beautiful in his face, that reminded me of the little boy of long ago who loved me dearly.

How well I remember when little Frédéric was born. It was on the twenty-second day of February in 1810. The Chopin family lived in Poland, and the baby seemed like a little flower coming to brighten the bleak windy northern night.

From his infancy, Frédéric loved music, and he was given lessons when he was very young. He made such rapid progress by the time he was eight years old, that he was considered a second Mozart.

How I loved the touch of his baby hands caressing me. He never thumped and pounded the keys like some children, and he composed little pieces, so lovely, they were like poems.

Frédéric was never a robust child, but he was always good natured. He was a clever mimic and he loved to act, and he wrote several very entertaining little plays.

I will never forget that beautiful time in the refined home of the Chopins when Frédéric and his three adoring sisters were growing up, in the environment of flowers and sunshine, and charming friendships.

Frédéric had a pleasant little nook in his father's house, where many of the talented young musicians and poets would meet. After he graduated from his father's school, he went to Vienna where he stayed for eight months. He was very homesick for Poland and he wrote to one of his friends, "I am sad, and I feel lonely and neglected here. I cannot live as I would like. I must dress and must appear in the salons with a cheerful face, but when I am in my room again I have a confidential talk with my piano, and I tell it all my woes as to my best friend in Vienna."

Later he went to Germany and from there to Paris, which became his home. In Paris he was always surrounded by the nobility and he made friends with the many famous musicians who lived there. Liszt, Schumann, and Mendelssohn came often to hear him play.

My master disliked public performances, but he loved to play for three or four friends, by the firelight of his drawing room. His playing was so delicate and refined that he was often called the "Ariel of the Pianoforte." His exquisite tones reminded some one of the warbling of linnets, and he was often called "velvet fingers."

It makes me happy to think about all the beautiful pieces that my beloved poet composed, just for the piano. There are nocturnes, waltzes, preludes, scherzos, ballads, impromptus, and etudes. He expressed his great love for his country in the stirring polonaises, and the *Fantasie on Polish Airs*.

Gradually his frail health failed and on the seventeenth of October, 1849, he breathed his last. Mozart's "Requiem" was sung at his funeral and his own *Funeral March* accompanied him to the grave, where he was laid to rest among the gre musicians of his adopted land.

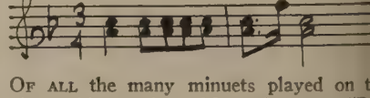
One of his pupils bought me at a pub auction, and upon her death, I was sent Mme. Chopin. Later I became the proper of the museum.

Sometimes at dusk, when I am thinki of the past, I start—and vibrate with e citement when I fancy that I hear my ma ter's footsteps outside in the corridor. Al when the door opens, it is only the gua on his hourly round.

Yes, I am old and silent now, but I ha lived!

CHOPIN PLAYING TO HIS FRIENDS

Orchestral Overture



By **Mary Damrosch**

The house is dark, the baton raised, a hu
Creeps o'er the crowd, defies the blata
cough.
Each bow is raised, then gently falls;
sound
More calm than quiet waters, fills the
And ever grows, until at last it becom
O'erpowering in its awful majesty!

Listening Lessons

By **E. A. G.**

The Famous Minuet from "Don Giovann
By Mozart

Of all the many minuets played on t piano, this one from Mozart's opera, "D Giovanni," is one of the most charmi and delightful. One never gets tired of t minuet, although one hears it badly play often enough!

The next time you hear it, *listen* to and see if you like the way it is bei played (even though you are playing yourself).

The theme is simple—almost monotono in fact—in its repeated F major chord, it has distinction and charm in its m notony.

One fault very often heard in this pie is the matter of the left hand. Several tim the left hand has quarter notes to pla while the right hand has nothing to do b rest, and these quarter notes often played faster than the other quarter no in the piece. What is the reason for thi See if you notice it some time, and do n ever be guilty of this fault yourself. The is really no reason for making this m take, as it is such a very easy thing play it correctly, so it must be due carelessness, and because the player do not *listen* to the rhythm.

This minuet comes in the opera in a ba room scene in a palace, and it is a ve colorful stage picture with the ladies their beautiful gowns and the men w their powdered wigs and satin knee-breech When you play it, make it sound hap and cheerful, but do not let it lose its sta liness. *Listen*, and make it so lovely y will want to repeat it at once.

If you hear this called the *Minuet fr "Don Juan,"* it is the same thing. "D Juan" (pronounce wan) and "Don G vanni" are the Spanish and Italian for of the name Sir John.

A MUSICAL PARTY

By GERTRUDE GREENHALGH WALKER

YOU EVER play Musical Bingo? (Some it Beano, or Keeno.)

e arranged a long table (made by ing two long boards on horses and ring them with white paper) in the r of the studio. The pupils sat around d were given a handful of beans and rd with letters on it. We did not have Bingo cards, so we cut them out of cardboard that comes from the laundry. first game was a Bingo of Keys. In a rate dish on small cards I had the es of all the keys, major and minor, bered, as three sharps, major, one flat, r. The pupils' cards had the letter name, and the first one who found the called out key on his card and said Bingo received a small prize.

The Abbreviation game was next. Each player received a card that had one musical abbreviation on it. This time letters were drawn at random from a dish and the first one completing or, rather, placing a bean on the letters called that made the abbreviation and giving the word in full with its interpretation was winner.

Then, composers' names, the winner telling the nationality or some interesting thing about the composer. Everybody had lots of fun and all had to sharpen their wits.

LETTER BOX

E JUNIOR ETUDE:
like the stories, poems and letters in the or Etude very much and thought I would e to the Letter Box, because I like music,

play the piano and Hawaiian guitar pretty . I have taken piano lessons about eight ths and I can harmonize by ear.

From your friend,
M. ELLEN JANE ROBINSON,
Florida.

Letter Box List

tters have also been received from: Myrtle kstock; Jean Bass; James Bass; Junior ert; Mavis Weaver; Frances Gretton; e Larson; Muriel Manners; Estelle ens.

? ? ? Who Knows ? ? ?

If a measure is in three-four time, and the first note is a dotted eighth note, and the last one a quarter note, how many thirty-second notes will be required to fill the measure?

Who wrote the opera "Aida"?

When did MacDowell die?

Is the bassoon a wood-wind or brass instrument?

If a certain major scale has five flats in its signature, what is the seventh tone of its relative minor?

What are the names of the degrees of the scale?

In what opera is the *Torcador's Song?* Who wrote it?

What was Brahms' first name?

For what instrument did Chopin chiefly write?

What is the Italian term for "as fast as possible?"

(*Answers on this page.*)

Musical Diagonal

By E. Mendes

E DIAGONAL, reading down from left to ht, will give the name of a musical rument. Answers must give words, as l as instrument.

The MUSIC CORNER, *Chestnut Hill, Pennsylvania*

DEAR JUNIOR ETUDE:

I enjoy reading THE JUNIOR ETUDE very much. My mother has taken THE ETUDE many years and has some numbers of 1904, nearly thirty-five years ago!

My sister is a music teacher and my brother is in the University and is a violinist in the orchestra. He also plays clarinet in the R.O.T.C. band. He has taken also singing lessons. I play piano and sing second soprano in our high school chorus.

From your friend,
RITA BATKA (Age 15), Kansas.

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether a subscriber or not and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "Piano Music." Must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by February eighteenth. Names of prize winners and their contributions will appear in the May issue. The thirty next best contributors will receive honorable mention.

Rules

Put your name, age and class in which you enter on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet. Write on one side of paper only. Do not use a typewriter and do not have anyone copy your work for you.

When clubs or schools compete please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules and conditions will not be considered.

My Repertoire
(Prize winner)

I ENJOY my repertoire very much. I get a new piece every month, which I memorize. When I have memorized a group of pieces I play them for my friends, school affairs and other entertainments.

I learn a hymn each week and play at Sunday School when the pianist is absent. I play songs in school for the pupils to sing. I enjoy playing a few Christmas Carols at Christmas time.

Thus, I have a repertoire of many types of pieces for many occasions, which gives pleasure to myself and my friends.

MARION HARMON (Age 13), Class B,
Massachusetts.

Honorable Mention for November Puzzles:

Verna Elder; Grace Larson; Sarah Louvenia Byrd; Fred Chasan; Helen Erday; Thomas Petrick; Kathryn Shinholser; Ramona Regan; Margaret Yeates; Irma Pederson; Betty Krueger; Betty Johnson; Julia Johnson; Mary Jean Hill; Martha Whitesell; Mary Hyatt; Elizabeth Jones; Rubie Jo Kressman; Leonie Dangoisse; Betty Jean Cooper; Lola Wallace Howell; Bette Jo Bailey; Mary Pappas; June Marie Hines; Betty Lanius; Marie Paule Beaudry; Isabelle Poirier; Carolyn Holmes; Reta Elaine Scogna.

My Repertoire
(Prize winner)

I KEEP UP a repertoire for two reasons, first, it enables me to play on short notice; second, if in the mood to play at ease alone, I can readily do so and give myself a concert.

Before placing a piece in my repertoire I try to learn it as nearly perfectly as possible. If I have learned an old piece which is pretty, but rather easy for me to play now, I do not discard it; instead, each time I play it I make an effort to improve the expression.

My repertoire is quite large now and consists of compositions by Haydn, Beethoven, Chopin, Mozart, Bach, Saint-Saëns and others.

I love my repertoire and have always derived great pleasure from playing it, either alone or for my friends.

FREDA BEREZOW (Age 14), Class A,
New York.

My Repertoire
(Prize winner)

ONE DAY while I was playing the piano an idea came into my mind. I said, "I am going to make a box for my musical repertoire and am going to call it my warehouse."

First of all, I had to ask my father for some money to make it, and he gave me three dollars. The wood cost one dollar and a half; the paint, twenty cents; nails, ten cents; then I had one dollar and twenty cents left over.

The next day I started building my warehouse. When I was nailing the floor to it I mashed my finger and had to stop working on it, but I was soon at it again and this time I finished it.

One day when father and mother went for a ride I put my sheet music, Etudes and all other music into the warehouse and arranged it. Everybody that saw it thought that it was a playhouse, but I soon told them it was a warehouse to store my musical repertoire.

LILLIAN BERNICE MURPHY (Age 10), Class C,
West Virginia.

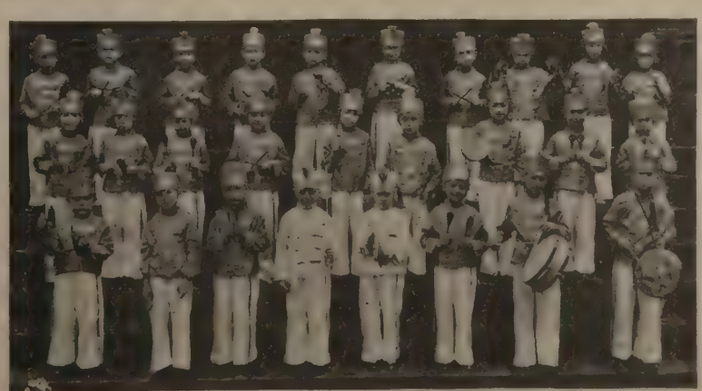
Honorable Mention for November Essays:

Lorena Lieser; Harry Hinkle; Virginia Speer; Virginia McLucas; Alice Bauer; Betty Gibb; Marie Knupp; James Wright; Nancy Delaney; Rita Elaine Scogna; Betty Jean Cooper; Leonie Dangoisse; Jean Walker Buddy; Blanche Oertli; Hilda Anderson; Muriel Cookman; Arleen George; Beatrice Connaught; Beryl Andrews; Phyllis McDowall; Betty Bruce; Percival Robb; Cecelia Drewman; Hillis Howells; Irene Bailey; George Jergens; Sydney Muller; Anderson Crews; Nancy Gotlieb; Edwina Carson.

OUR RHYTHM ORCHESTRA

By J. LILIAN VANDEVERE

These are the *instruments,* clear and strong,
That make our Rhythm Orchestra.



These are the *children,* an eager throng,
Who play the instruments, clear and strong,
That make our Rhythm Orchestra.

This is the *piano,* whose lovely tone
Will guide the children, an eager throng,
Who play the instruments, clear and strong,
That make our Rhythm Orchestra.

This is the *score,* for each child alone,
Played with the piano, whose lovely tone
Will guide the children, an eager throng,
Who play the instruments, clear and strong,
That make our Rhythm Orchestra.

This is the *uniform,* trim and neat,
Worn when playing the score for each child alone,
Played with the piano, whose lovely tone
Will guide the children, an eager throng,
Who play the instruments, clear and strong,
That make our Rhythm Orchestra.

This is the *Orchestra,* all complete,
And dressed in uniforms, trim and neat,
Worn when playing the score for each child alone,
Played with the piano, whose lovely tone
Will guide the children, an eager throng,
Who play the instruments, clear and strong,
That make our Rhythm Orchestra.

First Grade RHYTHM BAND, *Franklin, Pa.*

Answer to Puzzling Puzzle

1. Chaminade; 2. Rubinstein; 3. Elgar; 4. Schumann; 5. Cramer; 6. Engelmann; 7. Nevin; 8. Donizetti; 9. Offenbach. First letters give term, *crescendo.*

Prize Winners for November Puzzling Puzzle:

Class A, Sara Flanders (Age 15), Colorado
Class B, Ruth Osborn (Age 12), Ohio
Class C, Curtis Derrick (Age 10), South Carolina

LETTERS FROM ETUDE FRIENDS

Piano "Coming Back" in New Zealand

TO THE ETUDE:

Although the Dominion of New Zealand, British Colony in the Pacific, distant about twelve hundred miles from Australia, has a population of only about one and a half million, it has already begun to share in the revival of the piano.

The combined effects of "canned" music, radio and the world depression had in New Zealand, as in England and the United States, a drastic effect on the sale of pianos. For a time there was virtually an elimination of the instrument, so far as new sales was concerned; and old established firms went into liquidation.

For some considerable time, as evidence of recovery in the trade, piano agents have been frantically buying up second hand pianos; and, despite a "pegged" exchange of twenty-five percent, have been importing again. Recently there have been held exhibitions of the new pianos, embracing the flat surface and streamlined designs of the modern trend. As a consequence music teachers are finding more inquiries for pupils, and teaching work is definitely on the upward grade.

Piano importations speak for themselves, as shown by this table.

IMPORTATIONS OF PIANOS INTO NEW ZEALAND

Year	Pianos Imported
1928	1610
1929 (PEAK YEAR)	1850
1930	589
1931	81
1932	24
1933 (ROCK BOTTOM)	14
1934	79
1935	261
1936	604

So we are looking forward to better days for both teachers and dealers in musical instruments.

—ARTHUR O'HALLORAN
(New Zealand)

A Studio Help

By **Ruby Bassett**

IT ALWAYS has been a great help to have on the studio table reading matter that is especially interesting to children. This table is in the hall adjoining my studio proper, and on that table I keep several children's magazines.

Children often have to wait when someone is unavoidably late, and they are easily annoyed and become troublesome if they do not have some entertainment. This is not an expensive custom, and it does make the waits shorter and save the nerves of the pupils.

Playmate is a small magazine all children enjoy. *St. Nicholas* and *The American Boy* are two good magazines for little men. I do not subscribe regularly for these, but I buy them occasionally and keep them till the books look soiled and worn.

For younger children, who cannot read, the comic sections from the Sunday papers are very amusing, and these, of course, are changed every week.

During the past year many "comics" have introduced music into their fun; and what could be more interesting to children than to collect these and make scrapbooks of "Musical Funnies"?

Getting More Practice Done

By **GEORGIANA THUM**

IT WAS after trying many, many ways of inducing my pupils to practice that I finally found a plan that has been working very successfully for the past two years.

My pupils have a Federated Club, and the meetings, once a month, are very enthusiastic. The club is divided into sides, one and two, each side having a name and a leader. In order that no partiality be shown, I write the numbers "One" and "Two" on squares of paper, fold and place them in a basket, and allow each member to draw a number. The names are then put on a large cardboard, under their respective sides, and the board is kept in the studio where it can be seen and points counted at any time.

To inspire interest, two contests a year are held, and at the close of each contest the losing side must give the winning side a party.

Points are given as follows: One for a lesson that averages ninety percent or better; one for coming to the lesson on time; one for practicing an hour or more each day of the week; one for attendance at the Music Club; and one for performing from memory at the Club.

As teachers well know, children are very strict in keeping tab on each other; and so I have no trouble in urging them to get points, because each side watches carefully for a lagging competitor.

The system of giving points may be adapted to the correction of any delinquencies of the particular class to which it is being applied.

Next Month

HIGHLIGHTS OF THE ETUDE FOR MARCH, 1938

"Anticipation is the herald of realization," runs the French proverb. Readers of THE ETUDE will find much that will interest and delight in our March issue.

LUCILLE MANNERS

A CAREER IN RADIO

Few people have seen Lucille Manners, but millions weekly hear her charming voice, on the famous Cities Service programs. This very gifted and attractive young artist writes helpfully upon "A Career in Radio".

BUGLES OVER THE HUDSON

Harry V. Millner tells the history of music at West Point, and it is filled with that interest which always attaches itself to our famous United States Military Academy.

THE THRESHOLD OF MUSIC

Lawrence Abbott's new series of lessons in the fundamentals of harmony, told in a new and particularly clear manner, continues in March with a lesson upon the Major Triad.

NEW YORK'S AMAZING AMATEUR SYMPHONY ORCHESTRA

The official Amateur Symphony Orchestra of New York, as recognized by the Mayor and the City Fathers, is not conducted by a professional musician, but by one of the leading members of the municipal bench, the Hon. Leopold Prince. In the March issue he tells how this unusual orchestra has acquired international fame.

ANOTHER MARK HAMBOURG MASTER LESSON

The great Russian born Mark Hambourg—long a naturalized British subject—who has been long recognized as one of the most powerful and brilliant of the Leschetizky group, has shown his fine scholarship in the incomparable master lessons he has written for THE ETUDE, but never to better advantage than in the "Italian Concerto" of Bach, which will appear for the first time in our March number.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

Queen Victoria and Wagner

QUEEN VICTORIA was all her life deeply interested in music. Many years ago, at Kensington Palace in London, the writer saw a music copybook filled by the Queen, in her own handwriting. Her very thrifty parents had her do this to save the cost of new music.

When Wagner went to England as a refugee, the Queen was among the first to champion his cause. Wagner wrote, "You probably have heard how charmingly Queen Victoria behaved toward me. I really seem to have pleased Her Majesty; and, in a conversation I had with her, by her desire, after the first part of the concert she was so kind that I was really quite touched. These two, the Queen and Prince Albert, were the first people in England who dared to speak openly and undisguisedly in my favor; and if you consider that they were dealing with a political outlaw, charged with high treason and wanted by the police, you will think it natural that I am most grateful to both."

MUSICAL BOOKS REVIEWED

Scoring for the Modern D Band

By CLAUDE LAPHAM

Since the beginning of the centur whole world has been overwhelmed whirlpool of the dance. When people life at its most difficult moment, they transient relief in the dance. Dancf many of its forms, is a wholesom natural diversion. With objectionabl roundings the dance may be one most vicious elements in our moder The revenue from making music fc dance and from dance orchestras run millions of dollars monthly and natural resulted in the production of vast ar of dance music and books about modern orchestration. The craze has produced odd groupings of brass, woodwind and s and this has unquestionably resulted most endless new tonal effects, some original and refreshing and others banal and irritating. The better orchestration, however, is often deligi clever and will certainly have an upon all modern music. One of th books upon this subject is that of Lapham, graduate of the Juilliard In of Musical Art of New York City, nationally known, and experienced field. He has had much experience with in New York, Hollywood, Shanghai Tokio. Some of the book is necessarily mentary, but it contains many ideas pre in a very new and novel fashion whic mean much to the interested reader.

Science and Music

By SIR JAMES JEANS, M. A., D. Sc., Sc L. L. D., F. R. S.

Sir James Jeans, world famed astro and one of the outstanding British scient the age, has written a book designed to p the scientific side of music, to musicians than to scientists.

The scientific side of music is, of acoustics. The subject, however, is natur technical in its nature that, even in th plified form, it requires a preliminary ground at least equal to that of a high student or graduate. We may safely say is the least technical of any work upon tics we have ever seen. Added to this writer's well known charm of expression makes the book doubly valuable to the

The Etude Music Magazine

THEODORE PRESSER CO., Publishers, 1712 Chestnut St., Philadelphia, Pa.

The D. Appleton-Century Company announce the publication of a new volume in the "Whole World" Series

PIANO PIECES FOR EVERYONE

This volume represents an outstanding addition to the piano group of the "Whole World Music Series." The large quarto size pages, all newly engraved, authoritatively edited with exactitude as to clarity and correctness of interpretation, bring to the musician a text of uniformly unsurpassed quality. The selection of contents represents the accumulated favorites of many generations of discerning music-lovers, including those moderns which are most generally accorded place on the programs of foremost recitalists and on the curricula of leading teachers. The result is a degree of versatility that is an outstanding and distinguishing feature of this valuable volume. The augmented interest today in the works of the modern school of composition, not alone in concert programs, but also in the home and studio repertory of the average pianist and student of the piano is here fully recognized. The classics that are already available in a multitude of collections have been held to a minimum in favor of a wider and more representative appeal. It is also important to note that the selections do not appear in any of the other piano volumes in our "Whole World" Series. A graded and classified index have been included for the assistance of teachers and students.

Michel Sciapiro—B. Russia. Comp., violinist, teacher. Pupil of Hugo Heermann and Ševčik. Became Ševčik's assoc. teacher in New York. His violin pieces have been used by leading artists.

Silvio Scionti—B. Acireale, Sicily. Pianist, teacher. Long a leading artist and teacher in Chicago. Has appeared with Chicago and Minneapolis Symphony Orchestras.

Charles Kennedy Scott—B. Romsey, Eng., Nov. 16, 1876. Comp., cond. Fdr., Oriana Madrigal Soc., 1904; Philh. Choir, 1919; Euterpe Str. Players, 1922, all of London. A leader in English chl. mus.

Cyril Meir Scott—B. Oxton, Cheshire, Eng., Sept. 27, 1879. Comp., poet. Pupil of I. Knorr. One of England's best known writers, whose works tend toward modernism. Writes in all forms.

Henri Scott—B. Coatesville, Pa., Apr. 8, 1876. Dram. bass, teacher. Pupil of Oscar Saenger, New York. From 1911-1914 with Chicago Op. Co. For many years with Metro. Opera. Res. Phila.

John Prindle Scott—B. Norwich, N. Y., Aug. 6, 1877; d. Syracuse, N. Y., Dec. 2, 1932. Comp., chl. dir. Studied at Oberlin Cons. Wrote many songs, incl. *The Secret* and *The Wind's in the South.*

Antonio Scotti—B. Jan. 25, 1866; d. the 26, 1936. Famous dra tone. Debut, Malta. Had a career of 3 with Metro. Opera 1899). A notable

Appropriate Music for

The Choir's Contribution to the Easter Program

Any of These Publications May Be Had for Examination

EASTER CANTATAS

For Mixed Voices unless otherwise mentioned

MESSIAH VICTORIOUS
By William G. Hammond

A stimulating and uplifting musical presentation of the Resurrection and Ascension. There always is predominating a musical fervor in its decided melodic and rhythmic construction. Time, 30 minutes. Price, 75c.

THE RISEN KING
By Alfred Wooler

Just the kind of a cantata to make a genuine appeal to volunteer choirs. It is always interesting to the choir and the solo assignments are very satisfying. Time, 30 minutes. Price, 60c.

IMMORTALITY
By R. M. Stults

A well planned cantata with texts taken chiefly from the Scriptures. Time, 35 minutes. Price, 60c.
Also published in an edition for Treble Voices—Two Part. Price, 60c.

EVERLASTING LIFE
By Mrs. R. R. Forman

This cantata presents the story of the Resurrection in a most beautiful and effective manner. Ten musical numbers. Time, 45 minutes. Price, 60c.

THE GLORY OF THE RESURRECTION
By Charles Gilbert Spross

Frederick H. Martens made the compilation around which the composer wove his melodies and musical effects to enhance the beauties of these Easter thoughts. Time, 35 minutes. Price, 75c.

VICTORY DIVINE
By J. Christopher Marks

One of the best of all cantatas for Lenten or Eastertide use, satisfying to the lover of good music as well as to non-musical folk, small choirs of volunteer singers with fair soloists or splendidly trained choirs numbering several hundred voices. Time, 1 hour. Price, $1.00.

THE GREATEST LOVE
By H. W. Petrie

A brilliant cantata of moderate difficulty for Easter or general use. The twelve melodic and interesting musical numbers are divided between soloists and the chorus. Time, 40 minutes. Price, 75c.

HE LIVES, THE KING OF KINGS
By Anna Priscilla Risher

Texts by Juanita E. Roos. Its nine numbers impressively bring out the story of the Cross, the Tomb, and the Resurrection. Time, 20 minutes. Price, 50c.

Other Easter Cantatas

The Rainbow of Promise (*Baines*)	$0.60
The Wondrous Cross (*Bergé*)	.60

The World of Music

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

DR. HOWARD HANSON

DR. HOWARD HANSON, director of the Eastman School of Music of Rochester, New York, was reëlected president of the National Association of Schools of Music, at its session at Pittsburgh on December 27th and 28th, last. Dr. Hanson has done a notable work in the way of recognition of the American composer, by giving performance to their works, on the programs of the Rochester Symphony Orchestra, under his personal direction.

SOFIA, BULGARIA, with a population of three hundred and fifty thousand, has its Grand Opera with one hundred and fifty-seven artist singers, choristers, dancers and instrumentalists, and at the same time supports two symphony orchestras.

THE APOLLO CLUB of Chicago gave, on December 27th, its ninety-first performance of Handel's "Messiah," a work which has been the especial treasure of this fine organization through its many, many years of existence. Edgar Nelson was the inspiring conductor, with Robert Birch presiding at the organ.

DON LORENZO PEROSI is reported to have accepted an invitation to compose a Mass in honor of San Carlo (St. Charles) and to direct its performance at the Duomo (Cathedral) of Milan.

THE ROYAL PHILHARMONIC SOCIETY of London began its season by inviting the Leeds Festival Choir to London to give a repeat performance of the "Mass in D" of Beethoven and the "Dettingen Te Deum" of Handel, which were leading works in the then recent Leeds Festival.

THE CHICAGO CITY OPERA reports "sold out houses" as the rule of its now closed season, with patrons loyal to opera when produced "on a scale comparable only to the palmy days of the Campanini and Insull regimes." The "Norma" of Bellini and "Otello" of Verdi had revivals; and the polish opera, "Halka," with incidental dances by Loda Halama, was a novelty.

ADELE AUS DER OHE

ADELE AUS DER OHE, once among the most eminent women pianists of the world, died on December 8th in Berlin. Born about 1865 in Germany, she first studied the piano with Kullak, and then at eleven began seven years of instruction from Liszt, of whose pupils she was one of the very few surviving. She played with all the leading orchestras in existence in her day, toured the United States for seventeen consecutive years beginning in 1887, when she thrilled the public with the "dazzling brilliancy" of her technic.

THE "CANTOR OF LEIPZIG" had his day in the Parisian sun, when within a fortnight his monumental "Mass in B minor" and the "Passion according to St. John" each had two performances by the Bach Society of Paris.

LILIAN MARY BAYLIS, moving spirit of the phenomenal Old Vic and Sadler's Wells enterprises, through which the world had its most successful ventures in high class opera and drama at prices within the reach of the humblest, died on last November 25th, at the age of sixty-three. In her teaching us how to bring a fine art of the stage to the masses, Miss Baylis made one of the most significant pioneer cultural contributions of the present generation.

RICHARD STRAUSS, who, the musical world is pleased to know, has recovered from a recent serious illness, announces that his new opera, "Daphne," is completed and that it is to have its world première at the Dresden Opera with Dr. Karl Bohm conducting.

NEW MUSICAL RESTRICTIONS have been decreed by the Chamber of Music of the German State, by which foreign musicians may accept a position or engagement in Germany only on the authorization of this Chamber; and music teachers—unless by exceptional permission—may not instruct non-Aryan pupils.

THE CIVIC GRAND OPERA COMPANY of Philadelphia drew on January 19th a capacity audience to the famous old Academy of Music, for a performance of those gory musical twins of the stage, "Cavalleria Rusticana" and "I Pagliacci." The evening was made memorable in our musical annals by the brilliant American début of Fidelia Campigna, from La Scala of Milan, in the rôle of *Santuzza*, and by the effective introduction of a richly robed religious procession during the playing of the celebrated *Intermezzo*.

THE PASDELOUP ORCHESTRA of Paris presented Alexander Brailowsky as soloist for its program of October 31st, when he won stupendous applause for his interpretation of the "Concerto in E minor" of Chopin and the "Concerto in G minor" of Mendelssohn, with "absolute perfection of technic and sparkling life."

WALLACE A. SABIN, one of the most distinguished organists and composers of the Pacific Coast, passed away on December 9th, at Berkeley, California. He created the musical score for two of the most popular of the famous Bohemian Grove Plays, "St. Patrick at Tara" and "The Twilight of the Kings."

DR. VAUGHAN WILLIAMS has been awarded the Shakespeare Prize recently founded by an anonymous Hamburg merchant. It is one of three (the others being the Rembrandt and the Steffans prizes) to be given annually for outstanding work in music, literature, painting, sculpture, and architecture.

THE KOCHEL CATALOG of Mozart's compositions, revised and annotated by Alfred Einstein, has been recently issued in a third edition of this work of such meticulous research and incalculable value in identifying and authenticating the compositions of this incomparable master. It is to be hoped that before too long we shall have an English translation of this volume.

THE MUSIC AND ART DEPARTMENT of the Central Library of Los Angeles is reported to contain "5,500 books and 22,102 music stores." Probably a compositor's imp craftily scrambled the c's and t's for the librarian's records.

A STRADIVARIUS MEMORIAL CONCERT was presented in Carnegie Hall, New York, on December 20th, last, for the Stradivarius Memorial Association, of which the purposes are the development of young talent by making fine instruments available for use in study and concert. Dr. Walter Damrosch, Efrem Zimbalist and the Musical Art Quartet were sponsors of this event; and contributing movements are being organized throughout the country.

A WORLD MUSIC FESTIVAL, as a feature of the New York World's Fair of 1939, is being planned by a committee of which Dr. Walter Damrosch is chairman, with Edward Johnson, general manager of the Metropolitan Opera Company, Mrs. Vincent Astor, Marshall Field, and others prominent in the musical world coöperating.

THE ROYAL OPERA of Stockholm opened its new season with the "La Bohême" of Puccini, followed by the "Orpheus" of Gluck.

YEHUDI MENUHIN gave especial importance to his concert in Carnegie Hall of New York, on December 6th, last, by giving the first concert performance in America of the recently exhumed "Violin Concerto in D minor" by Schumann, with piano accompaniment as was its original form. He was to have had the honor of giving to this work its world première; but the Reich interfered with a decree that this honor should fall to the land of Schumann's birth.

THE "SONATA IN E-FLAT, OP. 122," of Schubert, was on a recent New York program of Webster Aitken; which recalls that Schubert wrote the *Andante* of this sonata on the back of the original manuscript of Beethoven's song, *Ich Liebe Dich,* thus producing one of the rarest musical relics in all the world, now in possession of the Society of the Friends of Music of Vienna.

MLLE. NADIA BOULANGER, the eminent French composer, theoretician and conductor, led the conservative Philharmonic Society of London in its concert of last November 4th, one of the very few occasions on which this honor has fallen to a woman musician. The audience had a surprise when it opened a program which listed works of the early centuries and closed with the "Requiem" of Fauré.

EDWIN HUGHES

MR. EDWIN HUGHES, well known to readers of THE ETUDE, was elected president of the Music Teachers National Association, at its convention in Pittsburgh from December twenty-eigh thirtieth. Mr. Hughes has held long a le place among piano teachers of America aside from his maintaining a prominent in the professional life of musical New he is director of the Piano Departme the Washington Conservatory of Musi

SIR LANDON RONALD, after a s of twenty-seven years as principal o Guildhall School of Music of Londor retired from that post. Many American recall him as conductor for Melba wh her several tours.

A BACH FESTIVAL is announce March 3rd and 4th, by the Bach Fe Committee of Winter Park, Florida. Christopher O. Honaas, choirmaster at F College, and director of the Bach Ch Orlando-Winter Park, as conductor chorus will be a coöperating body inc the A Cappella Choir of Rollins C (sixty voices), The Orlando-Winter Bach Choir (fifty-seven voices), and from Jacksonville, Daytona Beach, T Gainesville and Leesburg. The "St. Ma Passion" and a number of motets fami Bach lovers are announced, with s mostly from the Bach Festival shri Bethlehem, Pennsylvania.

ONE OF OUR MOST DISTINGUIS of American radio commentators re made the repeated statement that the popular *I'm Always Chasing Rainbow* a melodic "steal" from the *Prelude in C minor* of Chopin; though, of course poaching had been practiced on the *Fa Impromptu* of the famous Polish-F composer.

MARTINE as *Otel*

VERDI'S "OTELLO," after a rest of twenty-four years, was revived on December 22nd, at the Metropolitan Opera House, with Giovanni Martinelli in the title rôle, Elizabeth Rethberg as *Desdemona,* and Lawrence Tibbett as *Iago;* when there were innumerable curtain calls, with outbursts of applause that frequently interrupted the performance next to last and perhaps most tragic of V operas was first heard in America. Academy of Music of New York, on Ap 1888, with Marconi as *Otello,* Galassi as Eva Tetrazzini (sister of Luisa, the e coloratura soprano) as *Desdemona,* Scalchi (glorious among all contralt *Emilia.*

(*Continued on page 201*)

Hacks Who Became Masters

ONLY yesterday the gentlemen of Grub Street, the diggers after golden nuggets which were to make the jewelry of figureheads, were held in ignominy. Wagner, for instance, had a large number of coworkers, many of whom were masters who, as helpers in the orchestration of his works, made it possible for the greater master's mind to produce what it did. It so happens that the Editor of THE ETUDE studied with one man in Germany upon whom Wagner placed great responsibility in the carrying out of suggestions in his scores. This was Professor Herman Ritter, one of the foremost musical savants of his day. One composer alone, with a single pen in his hand, never could have written and copied the millions of notes found in a Wagner score and its parts. But remember that, without the great original creative genius of Wagner, the work of most of the men who gladly helped him never would have been possible.

In the days of Bach, Handel, Mozart and Haydn, these workers, by enormous diligence, might have written all of the works for the comparatively simple orchestrations of the day. Handel, for instance, would write a composition with a figured bass. That is, the harmony would be suggested by figures rather than by notes written out. This was the reason why Mozart made additions to the score of Handel's "Messiah" so as to make it better to a more modern orchestra. Even the orchestra of Mozart seems a very simple, almost childlike, group, when compared with the modern symphony orchestra. If Mozart could wake up at this moment in a modern home and hear the orchestrations of several of the popular radio orchestras, such as those of Frank Black, Ferde Grofé and André Kostelanetz, he would be astounded by their skill, brilliancy and color. Mr. Maurice Dumesnil, who was a protégé of Debussy and probably knows more about him than any other living man, states that Debussy in the latter part of his life depended quite a bit upon one "hack." In other words, after the master had created a great work he was liable to hand an orchestral sketch, on four staves, to his confrère. André Caplet, a really very distinguished musician and winner of the *Prix de Rome*, who would carry out the full realization of the high score, on which Debussy would thereafter work and finally give approval. Meanwhile, Debussy would stroll leisurely out to the *Bois de Boulogne* or go to contemplate the knicknacks in the *de luxe* shops of the Victor Hugo Avenue. Mme. Debussy, shorty before her death, admitted that among the scores on which Caplet worked were "La Mer (The Sea)" and "The Martyrdom of St. Sebastian." Caplet, by the way, was himself a very able composer. His "Miroir de Jésus" is a masterwork. For a time he liked Baston as an opera conductor. Under his own name he has published a very lovely orchestration of the *Golliwogg's Cake Walk* of Debussy. All publishers have editors to whom even the greatest composers are glad to express their gratitude for suggestions and technical help.

ANDRÉ CAPLET

The situation to-day, however, has changed very greatly. The men who were put down merely as orchestral arrangers have come to a different station in life, owing to the enormous demand for music for the radio and the moving pictures. These men take a good popular song and dress it up in silks and satins, diamonds and pearls, so that in a way it becomes a work of art. Listen in to the finesse of some of the works that come from the fabulously busy pen of Frank Black, Musical Director of Radio City. When we first saw the name of Ferde Grofé, he was orchestrating very light musical scores for other musicians. The next we heard of him came with the orchestration of Gershwin's *Rhapsody in Blue*. Then he blossomed out before the public with the "Grand Canyon Suite," the "Mississippi Suite," and other original works, showing that he has melodic and musicianly gifts as well as great technical skill, and giving him a high position among musicians.

The gifted and brilliant orchestral arrangers are the high salaried musical moguls of Hollywood and Radio City; but they cannot take the place of the original creative composers. Moreover, these misnamed hacks of filmdom often have incomes which are spectacular. Frank Black admitted to us, some months ago, that he was nevertheless in despair at the time for really good song themes upon which to work.

It never should be forgotten that Wagner himself was for nearly a year a hack for a Parisian publisher, making arrangements of the lighter pieces for pianoforte, and that Debussy in his early years made a meager living by arranging for four hands or two pianos the compositions of the older master, Camille Saint-Saëns. Perhaps one of the best roads to becoming a master is, first of all, to be a very good hack.

Many masters have spent years in the reworking of the orchestral scores of their predecessors. Rimsky-Korsakoff did Moussorgsky a very great service by making an entirely new score for "Boris Godounoff," and Erich Korngold's revision of the score of "Die Fledermaus," by Johann Strauss, which he did for the incomparable Max Reinhardt performance at the *Deutsches Theater* in Berlin, made of it one of the most delightful things of its kind. These men considered laborious work of this sort to be an honor and an opportunity.

Hollywood now has a score of musicians with the technic and ability of real masters, who are applying their skill, not to works for a *Kaiserliche* and a *Koenigliche Hofoper*, where they might be heard by only a handful of listeners, but to the radio and to moving pictures, where their efforts are a delight to millions. There is an obvious disadvantage to this, in that these men of magnificent talents and ability may cease to write for great and permanent aims and permit their precious gifts to be devoted to trifling pot

boilers or less enduring productions of a popular nature.

Query:—"If Wagner had written 'Die Meistersinger' for the cinema only, what might have happened to it after it had been the round of the movie palaces?"

In Memoriam

OVER a year ago one of the foremost of American singers and teachers of singing, Horatio Connell, passed to a higher existence.

In every finer sense he was a most intense and patriotic American. He was trained musically in Europe, coming under the instruction of the famous Stockhausen. He became one of the best known oratorio singers abroad and was renowned for his singing of Bach. Returning to America, he had many distinguished appearances and then settled down as a teacher, becoming remarkably successful in his private work, at the Curtis Institute in Philadelphia, and the Juilliard School of Music in New York, where he succeeded Mme. Sembrich. He was the author of Connell's "Master Vocal Exercises." Among the very successful singers who studied with him are Helen Jepson, Rose Bampton, Nelson Eddy and Wilbur Evans. He was a man of strong character, with a blithe and happy soul, and with a beautiful outlook on life which was an inspiration to all who knew him. A few months before his passing he wrote the following impressive and prophetic poem:

The Boatman Nears His Goal

Strong blows the wind from out the east,
  Dashing the sea foam on the shore,
Where winging gulls alight and feast,
  Flying from inland moor.

The brown thrush and the martin blue
  In tree top green and azure air,
Whistle and sing the whole day through,
  While pass the June days fair.

Alone, I row my one man boat
  Against the swift and rising tide,
Watching the graceful sea birds float
  Across the marshes wide.

The dreams of youth pass, mile by mile,
  Joy wakes anew a slumbering soul,
Life seems so fair and all worth while,
  As the Boatman nears his goal.

Real friends are never forgotten; and Horatio Connell was claimed as a friend by many whom he had richly helped.

The Ubiquitous Sucker

WHICH MEANS that you need hardly to step a few feet away from home without meeting someone who seems destined by the gods to be caught by a scheme which, to any thinking person, is a flagrant fraud.

When we, the Editor, were a boy, we used to tramp the Catskill Creek, not far from where Rip Van Winkle played at nine pins with his little old men of the mountain. The creek was teeming with suckers, a peculiar fish with a mouth turned down so that it fed upon the growths on the rocky bottom. These fish were never to be caught with a hook, but with a wire snare on the end of a pole, operating like a lasso. The sport was exciting and at the same time stupid. The fish rested, statue-like, in the clear mountain water; and the trick was to pass the noose up over the fish's tail without touching him and then to jerk it at the right time. Usually it required from twenty to thirty failures to get one fish. We were so overcome with the thrill of the adventure, however, that we embalmed our experiences in a poem which, to our youthful great delight, was published in "Judge." Since then, however, we have spent much of our time in explaining to human suckers how they can avoid being caught if they are not absolutely set upon putting themselves into a noose.

Really, friends, the situation often becomes highly farcical. So many people resent learning the truth, especially when the truth punctures their vanity. One good lady recently became very indignant when we tried to explain to her that the New York firm of alleged publishers, who were willing to print her manuscript for a sum of about eighty-five dollars, were making a profit of at least sixty-five dollars, upon a masterpiece which would certainly die still-born.

Yes, the fake publisher is abroad again, looking for suckers. Do not forget that one in Washington, some years ago, is said to have cleaned up some two million dollars in the racket, before he was put out of business by the Government postal authorities. Thousands of wholly incompetent would be poets and composers were induced to put their brain children into print, with the idea that a fortune was assured. It was, but only to the fake publisher who made an enormous percent of profit on every sucker he landed.

One of the latest musical sucker rackets is the "Radio Training School." Fake schools have arisen, sometimes with fraudulent apparatus, purporting to give auditions for radio work, and pretending that, with but a few lessons, they can turn out radio stars. Exorbitant prices are charged for so called "intensive" tuition; and the student stands no better chance than any of a thousand other music students, of becoming a radio star.

Because of this, we have drafted the following:

Rules for Suckers

1. Before patronizing any publisher who has not a well established name, write to the Better Business Bureau in the nearest large city and find whether the publisher is legitimate.
2. If you receive any offers from publishers who will, for a consideration, print your manuscript and offer it for sale, let a Better Business Bureau advise you as to the reliability of the firm. Send the offer to the Postal Department in Washington, which is always glad to coöperate in the suppression of frauds.
3. Remember that no legitimate publisher solicits manuscripts that he does not expect to make a part of the catalog of the firm. This means that he examines each manuscript with a view to listing it as one of the firm's assets; and that, if he believes in it, he is willing to invest money in it and does not ask the composer or the poet to contribute one penny. If the publisher cannot accept the manuscript, he sends it back and the composer has an opportunity to dispose of it elsewhere. It may just fit into the catalog of some other house. Getting a manuscript back by no means implies that it is doomed.
4. Patronize schools and teachers of known reliability. Beware of those which promise miracles! Of course, millions have been made by many in the musical field—from Verdi to George Cohan—but it has not been done by proprietary schools which make outrageously extravagant claims. Before you believe any high powered advertising, which assures you that all you need is a few lessons to make you a Lawrence Tibbett or a Grace Moore, consult some worth while musicians and get their advice. We know of one youthful sucker who was taken in by a fake radio school which assured him that he was already almost a Bing Crosby, but which quickly changed its opinion when the student's money was gone.
5. If you want to throw away money, there are far more pleasurable and less humiliating means of doing so, than in being a musical sucker. Try collecting discarded ink bottles or Pullman Car stubs.

A Career in Radio

By LUCILLE MANNERS

Soprano Soloist of The Cities Service Radio Hour of The National Broadcasting Company

A Conference Secured Expressly for The Etude *Music Magazine*

By ROSE HEYLBUT

LUCILLE MANNERS

TO A GREAT EXTENT, the artists who appear on the important radio hours are musicians who have proven themselves in the public field of concert or opera, and who are invited to perform before the microphones as a result of their already established musical reputations. This circumstance often gives rise to such questions from aspiring young beginners as: "Is it possible to build up a radio career without a stellar reputation?" "Can an unknown singer hope to develop a standing by means of radio alone?" "Are the networks willing to listen to anyone who is not already made?"

I am glad to discuss these problems, because my own career has been thus far in radio exclusively. My case is one of a singer who has been built up entirely in radio, and who still dreams of a chance in concert and opera. In telling of my own experiences, my sole purpose is to show to other young singers (who to-day are in the same position as myself five years ago) that radio is by no means a sealed world, closed to those who are not stars.

I come from the small town of Irvington, New Jersey; I have always loved to sing (quite apart from the professional aspects of vocal art); and I had no advantages by way of "boosting". In order to have better opportunities for better singing, I joined a small opera club, which was forced to disband during the depression. There I met my teachers, Mr. Louis Dornay and his wife, Mme. Betsy Culp. Mme. Culp is a near relative of Mme. Julia Culp, the eminent *Lieder* singer, and she has had the same musical background and traditions. From the very start my teachers offered me the dual advantages of careful vocal technic and interpretative training. In order to continue having the benefit of this excellent musical schooling, I took a position as stenographer, supplementing my family's small rational allowance by my own earnings, and finishing my academic work at night school.

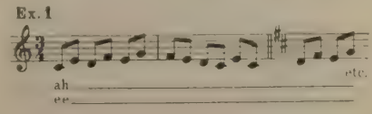
Opportunity Knocks

WHILE I WAS THUS OCCUPIED, the National Broadcasting Company invited my teachers to sing over the air on one of their programs, and they spoke to officials there, suggesting me for an audition. The audition was granted. By way of a parenthesis, I suggest that it is always a wise thing to reinforce one's application for a radio audition by credentials and recommendations from teachers whose musical opinions may be considered authoritative. In order to go to the broadcasting headquarters and sing, I asked my employers for extra time off at the lunch hour. The regular board for auditions heard me; and during the time there came a telephoned request for me to repeat the song, for one of the company's executives who wished to listen to me from his own office.

The audition ended; I heard no decision either for or against my work; and I went back to my typewriter wondering what might be in store. At the office, next day, I received a telephone call from NBC, asking me to present myself on the following afternoon for a radio appearance. That is the story of my entrance into radio. It will prove, I believe, that the door is always open.

Once I had officially entered the magic world of song, I expected to be hailed as a star at once. But nothing of the kind happened. I was given routine work to do; which led to my use as soloist on some of the sustaining hours (unsponsored programs); and still later, I was chosen for certain guest appearances on larger, sponsored hours. But when those guest appearances were over I went back to my small work. Even when I appeared, for four weeks, as substitute on the Cities Service program I returned to my humble typewriter afterwards; and I was glad to have it as a refuge. It would be pleasant, of course, to have the big things to come at once; but, since this is not usually possible, it is better to be satisfied with the smaller things, and to keep on working. After five years of faithful working and waiting, I was selected as soloist of one of the network's largest sponsored programs.

So much for the inside secrets of breaking into radio. Now, what shall the young singer do once he, or she, gets there? My best and most earnest advice is: "Do not listen to people who talk to you about special radio technic." There is no such thing. There is but one kind of radio technic, and that is the correct technic of singing. The only thing that is the least bit *special* about radio singing is the very mechanical point of not standing too near to the microphone. This brings with it the dangerous habit of saving the voice and putting less than one's best into the performance. I stand about two-and-a-half feet from the microphone, and then forget about its being radio. I sing exactly as though I were on a public concert platform, using the same vocal technic and striving at all times to keep my tones as pure and free, and my production as relaxed and natural as is possible. Anything less is not good singing, and it is a grave mistake to suppose that radio requires less than good singing.



An Exacting Art

IF THERE WERE any possible difference to be made between radio singing and regular singing, I should say that radio makes even more exacting demands upon vocal expertness. The reason for this is that, to assert himself over the air, the singer must depend upon voice alone. There is nothing glamorous at which the audience may look or by which it may be captured.

Radio listeners welcome you only for the sake of your voice and the expertness with which you project it to them.

One of the most important problems for the young singer to master is the art of singing on the breath. This means the conservation and use of the breath supply so that each note will be sung full "in the middle," with as little breath as possible employed, and so that the entire supply can be utilized easily and freely for long interpretative passages. It is one of the most difficult phases of the vocal art to be mastered. The danger, of course, is in permitting any of the breath to creep into the tone, thus causing the tone to sound breathy at the same time that the breath supply is used up by this wasteful escape. The remedy is to try to get as much vocal value out of each breath as can be done before releasing any more. I have a very helpful exercise for this, which aids in utilizing the breath supply, at the same time that it gives a more polished *fioritura* technic. Here it is:

Ex. 1

The exercise is to be sung as it is written, ascending the scale by half step transpositions. The intervals are reversed when descending the scale. Sing as many of these units as can be done comfortably on one breath; and gradually make use of all the vowels sounds, such as *ah, awe, aye, ee,* e (as in *met*), *oh, oo,* with the easier ones only at first; then the more difficult; and with a fresh vowel for each breath. Try the exercise first in your middle range, and then progress gradually to the higher notes.

The question of range is also an interesting one. Though I now sing *coloratura* arias, I began as a mezzosoprano. The questions arise: "When is it legitimate to increase the range, and when is it dangerous?" It is legitimate to develop those higher tones which already lie naturally in the voice and need only to be perfected. It is dangerous to try to sing notes which are not natural and need to be pushed or forced. Always begin to sing in the middle register. Perfect one note at a time. Never attempt to sing a tone that is higher than what you have been practicing. Instead, feel it out and discover whether it comes naturally or whether you have to force it. Only your own sensations can guide you on this point, and one should be consistently and constantly alert for the feeling of the thing.

For any voice of any range, one should strive to sing only with head tones; that is to say, with tones resonated in the cavities of the head, behind the nose. Never under any circumstances should one push on the tone from the throat. In feeling out new tones, in the legitimate development of range, try to keep these resonance chambers as open and free as is possible. I have found it helpful to master a special position of mouth, for high notes. I do not like to advise other singers what to do, but I am glad to tell of my own habits. I hesitate to call this mouth position a "smiling" one, because of the danger of having this misinterpreted as a fixed and unrelaxed grin. So I shall say that I place my mouth as though I were going to pronounce the letter *e*. I realize that *e* is a difficult vowel to sing, and I seldom vocalize on it; but I find it helpful to keep *e* in mind in preparing for a high note. I prefer this position rather than a simple dropping of the jaw, because such a position tends to throw the tones back into the throat.

No matter how eager you are to progress to the difficult passages of songs or arias, always warm up the voice with an introductory few minutes of pure scales and *vocalises*.

A Sound Foundation

SO MUCH FOR ACTUAL vocal points. Another most important matter is the general

musicianship of the aspiring radio artist. Singing is not enough. Even aside from wanting to develop into a thorough, well rounded artist, there are very practical reasons for studying as hard for a radio career as one would for the opera. The aspirant who cannot read notes fluently is lost on the air, where program emergencies so often arise which make the consideration of new music imperative. Further, because ear-values are intensified in radio work, perfect pronunciation of foreign languages becomes another "must." On the concert stage, where light, flowers, a beautiful gown, and the aspect of an enthusiastic audience can absorb some of the listeners' attention, it is bad enough to hear "ick" for "ich," or "hooroose" for "heureuse"; on the air, where nothing but the sound can make an impression, it is fatal! It will be found that even those radio singers of to-day, who make no pretension to art music but confine themselves to popular songs and crooning, are taking more earnest steps to develop their general musicianship than was the case not so far in the past.

Repertoire is another immensely vital consideration. Let us suppose that our young candidate has secured an audition, has passed it with success, and has actually secured a contract for radio work. The first thing he needs, upon which he may call, is a solid and varied repertoire, from which he can choose selections of all types for immediate use. Radio songs cannot stand too frequent repetition. Where a concert singer can prepare a single program of twenty songs, and carry it all over the country in visiting the different cities, the radio singer must prepare each concert from entirely new material. And this material must admit of infinite variety. There must be operatic arias, *Lieder*, French music, English songs, plantation melodies, ballads, operetta "hits," and dignified popular numbers. All must be there, in the mind and in the throat, ready for use at a moment's notice; and new songs must be constantly added.

The radio audience, after all, is different from that of any other musical entity. Opera and concerts command their own types of listeners. People know in advance what to expect. If they like it they come, and one can be assured of their interest by the very fact that they do come. If they do not like it, they stay away; and one can be sure that only the smallest minority of the audience has still to be converted to the cause of good music. On the air, however, there is no one type of audience to aim at. Everybody listens, potentially at least. Even if they do not turn on your program, their dials may be set from the last one, and you will come over to them purely by accident. And that sheerly accidental introduction may be your chance of making new friends.

The All in All

THUS, THE GREATEST PROBLEM of the radio singer is the preparation of a program which, again potentially at least, will include something that everybody likes. In reaching such an audience, it is a great mistake to guide one's self exclusively by the distinction between classical and popular songs. The audience is not interested in the source or history of your music. It wants pleasing melody. This melodic pleasure may proceed from a Schubert *Lied*, an arrangement of Liszt's *Liebestraum* (which was not written as a song at all), a ballad by Stephen Foster, a Strauss waltz, or the theme song of a new motion picture. All, in their respective fields, are good music. Perhaps television may one day create a different audience appeal, when the listeners can see the singer and watch the dramatic interpretation of the song. But, for the present, the aural pleasure of smooth, lovely melody is the best yardstick by which to measure the value of one's radio programs. Thus, it is a wise thing to open one's mind to all the different kinds and types of songs which will provide the melodies one needs. Do not be either highbrow or lowbrow; do not shun this or that type of music. All good music is wel on the air.

Above all, do not act the *prima don* radio contract is not a synonym for perfection. There is always much learned and improved, and a whole humility in the face of all one doe know can help to smooth the way to learning.

By way of summing up such counse I can give to ambitious singers who their eyes upon the goal of radio, yourself as fine a musician and as re sible an artist as you can. Find a te who will impart to you the only c method of singing, and follow his a regardless of any talk you may he "special radio technic." Do not try to the big things along. Begin in a small and let your development (both voca professional) come gradually. If you the chance to an audition by one o major networks, consider that opport as just so much extra good fortune do not expect it as your due. Try, in to fit in with the plans of your local tion, and get some experience there all times make yourself vocally sure go to your work with a reserve-fu repertoire that will make for a sen security. Then never for a moment yourself to feel that radio work de less than any other field of musical

Let Us Have More Piano Duets

By OLIVE C. ENEVOLD

YES, FOUR HANDS on two instruments are considered quite correct, indeed fashionable: but four hands on one instrument seem not so popular as formerly. And yet some of the finest music of the great masters was written for four hands on one piano. Mozart, Schubert, Liszt, Brahms, and Grieg, all excelled in this form of composition.

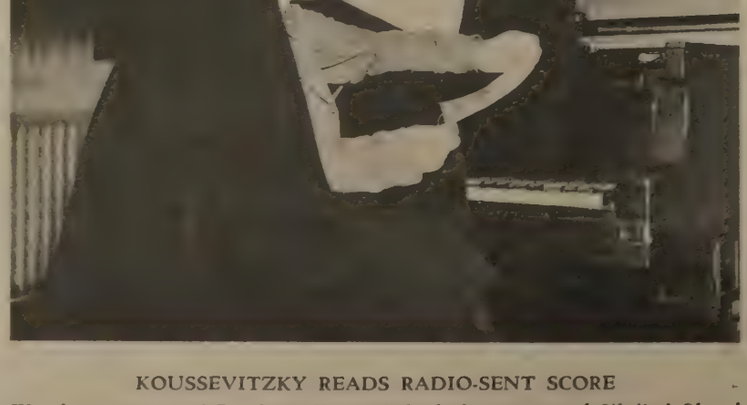
Interpretation of these fine duets calls for one's (or "two's") best efforts; and this should not be an excuse for our neglect of this medium for permanent culture, for which it is so excellently suited. Interpretation of a duet involves adjusting the pedals for certain passages, as well as graciously acknowledging the other player's fine points in technic. There is nothing else so fine in life as such mutual recognition in any art, and music lovers should find pleasure in this pursuit.

Schubert showed a marked predilection for writing for four hands. The "Hungarian Dances" of Brahms were originally written for four hands. Grieg exhibited a special gift for this four hand writing, so neglected by many composers. He and his wife, Fru Nina, were skillful duetists; and they found great joy in performing together. His four "Norwegian Dances" and the two "Symphonic Pieces," all for four hands on one piano, are gems no pianists dare belittle. In fact, quoting Henry T. Finck, in his book, "Edvard Grieg"; "To get the piece *Norwegian Dances, Op. 35* at its best for a piano solo you must first get the original version for four hands." Sound advice to students, from a sound musician.

Grieg's clever four hand transcriptions of his own works are beautiful tone pictures. The four hand arrangement of Schubert's *Divertissiment à la Hongroise*, with its delightful Hungarian airs, and its rich tonal combinations in the *secondo*, is a treat for modern ears.

On Making Transcriptions

THERE ARE STILL the original duets to be had, without the arranging in some unauthorized shape. A good transcription as a duet should retain the original key and not a single note should be changed, further than to spread the harmonies for the four hands. A good example is the *Liebestraume, No. 3* of Liszt in duet arrangement. It is richer in tone than the solo, with the showy *cadenzas* discarded; which should please many sincere musicians who care not for Liszt's sometimes frivolous flourishes. It was published in THE ETUDE for August, 1931. Brahms' *Hungarian Dance, No. 7*, in the original duet form, was in THE ETUDE for October, 1930; and the *No. 5* in the issue of April, 1933.



Musicians are aware that the deep tones in the bass of the modern grand piano travel farther than the high ones. Also, sound travels faster in warm, damp weather. This may be one reason that the duet is considered impracticable for the large concert hall. Nevertheless, two intelligent players must alternately tone down the volume of sound according to the interpretation, even in a small auditorium. discoveries now being made in the d of acoustics, we cannot ignore the la sound in their relation to music.

Suit the Music to the Occasi

WE HEAR COUNTLESS CONCERTS of cha music, but never any such programs taining the charming piano duets. may have been rare occasions, such a Schumann Centenary Celebration o Classical Concert Society in Lond 1910, which program admitted one duet. In an article in *The London T* at the time of the celebration, the a could not recall any other example first class public occasion in London a piano duet had been included. No the number was a credit to the com for otherwise the editor would not expressed the wish to hear the "Mi Marches" of Schubert in their or four hand version, virtually unknown i lic to-day except in Tausig's solo p sions or as too often flared by a bra

It is a pity that all this literature i demned unheard in its original for may be that the apparent associati the piano duet with the amateur has thing to do with the seeming boycott the fact that the opportunities fo proper development are, for some re lacking. The piano duet is an exc form of chamber music and should b tivated as such. May the day soon when we shall hear fine interpretati original duets of the masters, by a of the first rank!

Very few piano duets were originally for four hands. Most of th duets are arrangements, some of the interesting being transcriptions of o overtures. Among the duets originally ten in this form, those of Antonio D (1781-1858) are among the most in ing. For the most part they are fourth grade. Diabelli was a priest later became a professional musicia then a music publisher. He published of the works of Schubert; but he und this so spontaneous and original co and complained that he wrote too

KOUSSEVITZKY READS RADIO-SENT SCORE

Wonders never cease! Dr. Serge Koussevitzky had programmed Sibelius' Choral Symphony "The Origin of Fire" for a late December concert of the Boston Symphony Orchestra. Part of the score, sent from Berlin, was lost in the mail. The Radio Corporation of America came to his aid, and the missing parts were photographed from the originals in Berlin, put in a transmitting machine, and sent through the air to New York, where a receiving machine made a copy of which four music sheets made a page 8½ x 11 inches. It required but seventy-two minutes to send each of these sheets. The transmission of the several parts took several hours. If it had come by aeroplane, it could not have taken less than two days. By fast steamer it might have been delivered in New York in from four to five days. This is the first time that a musical score has been sent photographically over such a distance through the air. If this method had not been available, the performance of this work might have had to be postponed for a week or fortnight.

A Romance of Easter Carols

Music of the Great Festival of the Resurrection

By KATHERINE D. HEMMING

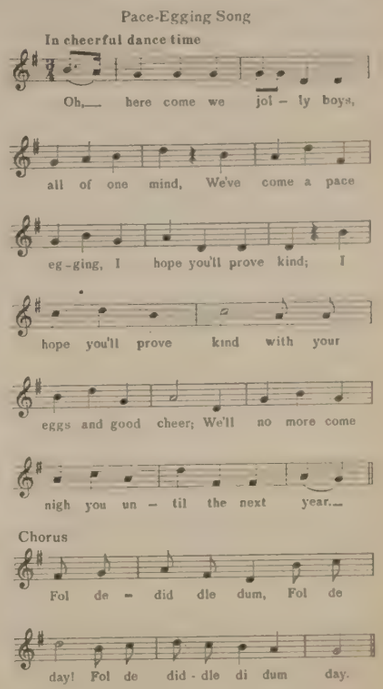
JST AS OUR CHRISTMAS CAROLS are built on a celebration of the ancients, those for Easter have same Pagan origin. However, while wo species are similar in musical treat-:, that is, built on dance rhythms, they rally differ widely in sentiment, one rding the nativity, the other the resur-on, of Christ. Also, in the secular ls we find the former concerned with ing and jollity, whereas those for er are "rejoicings in nature's rebirth" odes to spring. Ancient races were .ys sincere, and our Indo-European stors, who believed that the sun was born each morning and that after rid-across the world it lay buried at night, ld naturally welcome the spring.

bleak northern climes these Aryan worshippers greatly feared the long ths of partial and days of total dark-; so when days began to lengthen they a great festival called *Hwcolar-tid,* or ning Tide, that was joyously celebrated dancing and singing odes to their the Sun. Each nation and tribe had imilar festival at the beginning of g. Early Christians naturally used e spring songs, with which they were amiliar, in building those of their new f; for Easter, their greatest festival he year, coincided with the Feast of ng of the pagans.

A Handmaid of Religion

AND MUSIC always have been given rence, not only by the Hebrews but by all nationalities; and early Greeks, 1000 to 400 B.C., even thought it e of superhuman origin. At a much date the Romans also rated music highly in their worship. So we find corded that, at a religious celebration in ne, during the reign of Julius Cæsar -44 B.C.), twelve thousand singers and cians participated. In Christian Rome always has formed an important part eir services, especially at Easter. After silence of bells and the use of minor ts during Holy Week, at midnight on er Eve during the reading of a cer-passage of scripture in the Sistine el, the bells of Saint Peter's, joined ll the bells in the city, ring jubilantly; guns of Castle Saint Angelo are fired; people crowd in and around the ches to join in the singing of special val settings of the *Gloria* and *Alleluia, se Ye the Lord.* This famous Sistine el is closely associated with song, ng been instituted by Pope Sylvester, in 314 A.D. also founded singing ols in Rome, for boys and men.

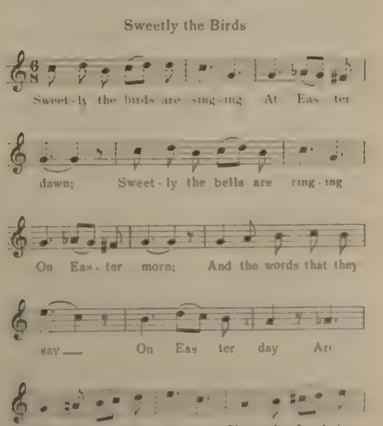
e Greek Church, in all parts of the d, has elaborate music and ritual at ervices, but special music for Easter when the theme is *Alleluia,* that is many times in various modes, by the companied choir, first by the Decani, are trained singing monks, on the right e altar, then echoed by the Cantori, or rs, on the left, after which it is again ated by the Decani and then by the e choir. On Easter Eve, at the Cathe-of Saint Sophia in Constantinople—is in darkness except for one window ny thousands of worshipers, bearing ed candles and led by the Patriarch, h around the building, chanting. At ght the Patriarch strikes the west with his foot; the Decani, around loudly chant, "Lift up your heads, O tes, and the King of Glory shall come in." The Cantori, inside the church, answer, "Who is the King of Glory"? The Decani again chant, "The Lord of Hosts: He is the King of Glory." Immediately the doors swing open; suddenly the Church blazes with lights; and the people crowd in and around the church, listening to the joyful music and carrying eggs and other foods from which they have abstained during the lean days of Lent and now have brought to be blessed. Eggs, symbolizing rebirth, always have played an important part in spring celebrations as well as in song, the egg ceremonial dance being oldest known dance. Each communicant greets the other with, "Christ is Risen!"; which receives the universal response, "He is indeed Risen," accompanied by a kiss among high and low.



We shall mention musical examples of both branches of the Christian Church, Greek and Roman, which have persisted throughout the ages, each period adding some beauty to hymn and anthem. Pope Gregory, about 590 A. D., gave the world a dignified mode of church music that clearly evinces the sonorous solemnity of Hebraic psalmody and Druidic chant.

Among Easter hymns in Gregorian mode, with which all are familiar, the most perfect specimens are those translated from the Latin, such as *Alleluia, the strife is o'er* — music by Palestrina (1526-1594): *The Lamb's High Banquet,* set to a 7th century Sarum plain song; *Alleluia! O sons and daughters, let us sing* is a 17th century French melody. Other classical favorites include, *Christ the Lord is risen again,* by Johann Rosenblum (1615); *Christ the Lord is Risen to-day,* by Charles Wesley (1789), sung to *Lyrica Davidica;* and *Hail the festal Day,* by Rev. James Baden-Powell (1842). Through the years we find many splendid Easter hymns have been written by such masters as Sir Henry Smart, Sir George Elvey, Sir Arthur Sullivan, Martin Luther and other composers of every country, each displaying his individuality in the product of his inspiration. Among those written in true carol or dance form is *Rejoice, To-day earth tells abroad with holy veneration.*

The word *paschal,* frequently occurring in Easter hymns, is from *pascha,* the Jewish passover. Most countries use variants of this word, for Easter—to the French it is *paque;* Italians, *pasqua;* Dutch, *paschen;* Swedish and Norwegians, *paaske;* and Welsh, *paag.* Germans alone call it *ostern,* from the old Saxon word *oster* meaning *rising.* Only English speaking people call it *Easter,* so named after the old pagan goddess of the Saxons, *spring, estre.*



Of all beautiful Easter songs, Handel's *I know that my Redeemer liveth* stands first; also among Easter choral music his immortal and majestic *Hallelujah Chorus* from the "Messiah." This and Bach's Easter music are stupendously inspiring. In the "Passions" and other Easter music by Bach, a fine effect is gained from the fact that for the character of Jesus the words are always accompanied by strings in contrast to the other recitatives that are accompanied by the clavichord.

Among the many Easter hymns in true carol form are *Easter flowers are blooming bright,* written in lilting six-eight rhythm; the *In the Star of Morning, Rising in the Sky,* in twelve-eight measure; also this delightful carol for children, *Sweetly the birds are singing,* by Remington Fairland.

Secular Easter carols, although always spring songs, vary in different countries according to the temperament of the people. In the Tyrol, men with hats gaily decorated with flowers and ribbons, go from house to house during the Easter season, serenading with bright and gay songs, telling of spring and love. A vivid contrast is displayed by the Welsh, who also serenade but with a heavier type of song that is always in four part harmony. Each is beautiful in its own character. France has a greater collection of Easter songs than any other country.

A typical traditional old English Easter carol is the *Pace-Egging Song,* sung to a traditional air from West England.

THE FAMOUS "ST. CAECILIA" OF RUBENS

(*Continued on Page* 194)

A Personal Memory of Ippolitoff-Ivanoff

By DR. VLADIMIR KARAPETOFF

THE ETUDE is indebted to Professor Vladimir Karapetoff, one of the most distinguished of electrical engineers, and Professor of Electrical Engineering at Cornell University, for the following letter dealing with his own very thorough training in music under Ippolitoff-Ivanoff (1859-1935). The composer's real name was Ivanoff; but, to distinguish himself from an older musician of the same name, he prefixed his mother's name, Ippolitoff. He was a pupil of Rimsky-Korsakoff. For some time he taught in the Caucasus; and this led to the writing of his best known orchestral work, "Sketches from the Caucasus," played by orchestras everywhere. In 1906, when Vassily Safanoff came to America to lead the New York Philharmonic Orchestra, Ippolitoff-Ivanoff succeeded him as Director of the Moscow Conservatory.—EDITOR'S NOTE.

TO THE ETUDE:

Apropos of the passing of M. M. Ippolitoff-Ivanoff, January 29, 1935, may I relate some personal reminiscences of this remarkable man, as material for his future biographers? I was born in January, 1876, in Leningrad. During the years of 1885-89 I was living with my father and sisters in Baku, on the Caspian Sea. In addition to being a pupil in a grade school, I was taking piano lessons of a remarkable and original man, Christopher M. Kara-Murza. This man noticed that I was not particularly interested in acquiring piano technic but was intensely interested in theory, harmony, composition, orchestra, biographies of great composers, and so on. He therefore befriended me as though I were a grown up man, and encouraged my childish attempts in everything musical. The piano was considered to be merely a means to an end, and systematic practicing was not insisted upon. In the summer of 1889 our family moved to Tiflis, the capital of Trans-Caucasia and the residence of the Governor-General. The city had much better schools than Baku, and there were also a government opera house and a conservatory of music. The conductor of the opera and the director of the conservatory was M. M. Ippolitoff-Ivanoff. His young wife was Madame Zarudnaya, one of the leading sopranos in the opera and a vocal teacher at the conservatory. That fall a new piano teacher was engaged from Moscow, a pupil of Pabst, by the name of I. M. Matkovsky.

I was admitted to the high-school; and then my father took me to the conservatory, to be examined upon my skill in piano playing, by Matkovsky, in the presence of Ippolitoff-Ivanoff. I played a few scales and then began a concert study by Moscheles, for which I did not have an adequate technic, and which I did not know, anyway. Then, quite abruptly, the Director interrupted me, and, turning to my father, said, "This boy has not the first conception about piano playing; and, since he does not seem to possess any appreciable talent, I would not advise you to enroll him."

"But I want to study the piano, and I want to learn to play," I said vividly, before my father could open his mouth.

"You would have to start from the beginning, and that is hardly worth while," warned the Director.

"I am willing," said I. "When may I come for the first lesson?"

My father good-naturedly consented, and so I began my technical studies on the piano. Apparently father did not believe that a full high-school course, the piano, and private French lessons, were sufficient to keep his boy out of mischief; and so for some, to me unknown, reason, the violoncello was added, and I had to go to the conservatory four afternoons a week, twice for the piano lessons and twice for the violoncello lessons.

The Director's disparaging remarks only aroused a mad ambition in me to acquire a wonderful technic; and, with a good foundation in theory and harmony, this did not prove to be very difficult. In a few months I got over my inferiority complex and apparently Matkovsky reported to the Director my facility in reading new music, facility due to an early training in harmony and musical form. As a result, Ippolitoff-Ivanoff appointed me to be the official accompanist at student recitals, which usually took place on Sunday forenoons. Through these recitals I met his wife, whose vocal pupils I accompanied.

At last I was allowed to appear as piano soloist, and I played Schubert's *Impromptu in E-flat major,* at such a terrific tempo that the faculty members held their breath for fear something would happen. I did this simply to show Ippolitoff-Ivanoff how mistaken he was in his first disparaging remarks. After this, the Director took a particular liking to me and endeavored to encourage me all he could. Among other things he invited me to be the accompanist in a club at which selections of grand operas were staged under his supervision. In this manner it was my privilege to study operating scenes and their proper interpretation under this remarkable conductor. I am sure that I have carried the inspiration of this association to the present day. He patiently explained to me how to help a singer to get in, which notes to omit in difficult parts, and how to lead the singer in tempos without thwarting his self-expression.

The next year Ippolitoff-Ivanoff organized an orchestra among the conservatory students. He had the poor judgment to choose Beethoven's "Pastoral Symphony" for the first piece to be studied, and naturally he was continuously angry at us for our inability even to read the notes. In those days properly fitted glasses for a school boy were a rarity, and I really could not see half of the notes from the distance at which I had to sit. He finally rapped on his stand and pointing his baton at me said, "You fat boy out there, why don't you become a shoemaker? You will never become a musician anyway." It seems that my figure bent forward to read the music, and periodically drawing the bow reminded him of a shoemaker pulling on waxed ends. I do not remember my further career in this orchestra, but by 1892 I played one of Goltermann's violoncello concertos, in the Director's presence, at one of the Sunday morning recitals. This was one of those concertos about which Joachim once said, "Ja, das is beinahe Musik."

About that time the conservatory engaged another vocal teacher, Mr. Usatiy, who had been a well known operatic tenor but lost his voice. It seems that differences arose almost at once between him and Ippolitoff-Ivanoff's wife, and finally Usatiy established himself as an independent vocal teacher and operatic coach, having his apartment with a suitable stag that time I became known as an acce accompanist and Mr. Usatiy invite to accompany scenes from grand which he periodically staged for his This was a double delemma for a sixteen. I continued my studies at th servatory and did not wish to offen and Mrs. Ippolitoff-Ivanoff by help man with whom they had quarreled. the rules of the high-school forbad pupils from going out after six, a the rehearsals and performances we the evening. My father told me that I do as I pleased. My piano teacher Matkovsky, thought that accompa operas would be a fine experience fo and so I finally accepted Mr. Usatiy' posal. I hasten to state that no pay was attached to my duties. My offici was Mr. Orchestras and everyone me that, even later when I had noth do with the enterprise. Since high-s pupils in those days wore military forms and special traunt officers were vided to spot "civies," I went out al season two or three times a week, dark, wearing my father's gray ov and hat, and with a black mustache over my youthful lips.

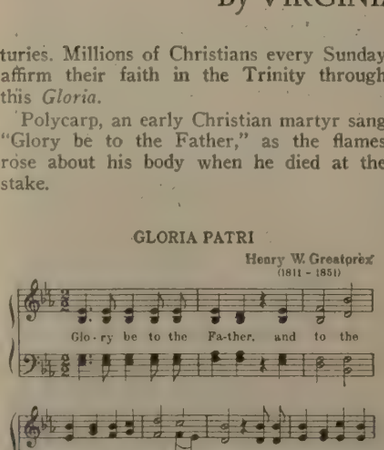
In the fall of 1892 I went to Leni to enter a College of Civil Engineerin in the summer of 1893, when back I called on Mr. Usatiy. A tall young was also calling and Mr. Usatiy duced him to me saying, "His na Chaliapin; he has a fine bass voice some day you will hear about him was Usatiy who discovered Chaliapi who was his first teacher.

I never met Mr. Ippolitoff-Ivanoff 1892, having lived in this country 1902. Some two or three years ago I him, reminding him of the "Pa Symphony" incident and assuring hi he was perfectly correct in his pro that I should never become a musicia music has been my solace and the s of many joys all these years, and my tact with Ippolitoff-Ivanoff was a factor in broadening my interest to i vocal music and leadership, and in a great happiness to my life.

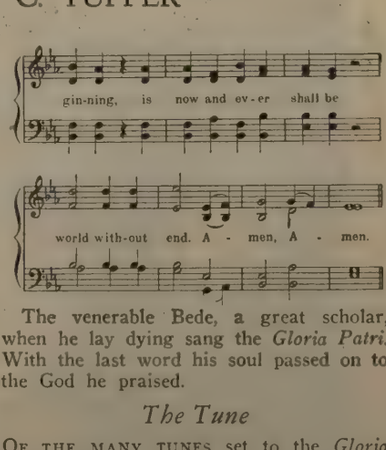
The Story of the Gloria Patri "Glory Be to the Father"

By VIRGINIA C. TUPPER

THE *Gloria Patri* is called the "Lesser Doxology," to distinguish it from the *Gloria in Excelsis* (Glory be to God on High), known as the "Greater Doxology."



The *Gloria Patri* is a most ancient chant of praise. Possibly the Apostles themselves sang the first two lines in their meetings. It is certainly traced back to the second century.



Philo, a learned Jew of Alexandria, writes of the joyful hymn singing of the early Christians. "Beautiful hymns to God they sang," he writes, "in unison, and with harmonies, their singing transported with divine enthusiasm."

The last two lines of the *Gloria* were added later, before 529 A.D. The *Gloria* was sung by martyrs in the Colosseum at Rome.

It has been used constantly in all Christian churches, and in every nation for centuries. Millions of Christians every Sunday affirm their faith in the Trinity through this *Gloria.*

Polycarp, an early Christian martyr sang "Glory be to the Father," as the flames rose about his body when he died at the stake.

The venerable Bede, a great scholar, when he lay dying sang the *Gloria Patri.* With the last word his soul passed on to the God he praised.

The Tune

OF THE MANY TUNES set to the *Gloria Patri* a favorite one used to-day in many churches is by Henry W. Greatorex. Henry was the son of Thomas Greatorex, an organist at Westminster Abbey. Henry G orex was himself a fine organist. In he came to the United States and organist at the Center Congrega Church in Hartford, Connecticut. La went to New York City where he wa ganist in several Episcopal churches. ly he drifted to South Carolina, sett Charleston, and in the last year of h there, in 1851, he published his coll of sacred music. The *Gloria Patri* best known contribution, and has through the years; it is sung in v churches every Sunday.

Judge Leopold Prince

The Civic Value of A Music Hobby

By The Honorable LEOPOLD PRINCE

Justice of The Municipal Court of The City of New York
Founder and Conductor of the City Amateur Symphony Orchestra

A Conference Secured Expressly for The Etude Music Magazine

By ROSE HEYLBUT

Judge Leopold Prince is distinguished not alone for the broad humanity of his judicial rulings but also for the unique success with which he has incorporated his private hobby of music making into the civic life of New York City. Along with the demands of a crowded court calendar and its attendant legal research, he has for more than ten years managed to devote a number of hours each week to music making. The development of his hobby and the significant rôle it has come to assume in civic affairs, is the theme of Judge Prince's illuminating talk to readers of The Etude.—Editorial Note.

MPORTANT AS IT IS that our civic communities should enjoy the cultural advantages of hearing great professional mphony orchestras, I believe it to be even re important that these municipal groups ovide their citizens with facilities for king music *themselves*. In my opinion, re is no finer means of building char- er than that of participating personally great music. Aside from its æsthetic ue and its spiritual "lift," music brings th it a certain discipline in accuracy, pre- ion, and group coöperation, that can rcely be equalled in any other field of asurable endeavor. And the value of such cipline is all the greater just because comes in the form of fun. Attending re- arsals regularly and punctually, reading correct notes from the parts, counting rhythm, watching for the conductor's at, coming in on time, and making pro- rtioned *crescendi* and *decrescendi*, in uni- n with a hundred other players, all tend train the mind to clear, precise, and perative habits of thought. And if that es not form character, I don't know what l do so!

There are, of course, a number of other vantages to be derived from group music king; and for that reason I most heartily ite the attention of other civic com- nities to this hobby of mine. For more n a decade, now, I have had the pleasure conducting my own amateur orchestra. cently this orchestra became incorpo- ed, by Mayor LaGuardia, into the munic- l life of New York City, and received name of The City Amateur Symphony Orchestra. We are in every sense an amateur organization. Our players include a doctor, a dentist, a barber, a butcher, clerks, salesmen, and store employes. One of our group is employed by a great five and ten cent chain store—and I have to pay that giant company two dollars for a substitute, whenever our rehearsals or performances conflict with the girl's hours of duty.

Oaks from Acorns Grow

OUR ORCHESTRA GREW from the simplest beginnings. I love music, I play the violin and have kept up my playing all through my study and professional years, purely as personal recreation. As soon as my son could handle a bow, he, too, was given musical instruction. When he was about fourteen I thought that his interest would be further stimulated by opening to him the riches of ensemble playing. Accordingly we played duets. Presently we grew more ambitious and invited two friends in, to expand our duets into quartets. Every Friday night my boy, his two friends, and I shut ourselves in our front room at home and let loose our ardors. When we needed piano accompaniment, my wife joined us, and then we were a quintet. We had such good times, playing and talking it all over afterwards (with the added attractions of sandwiches and ginger ale), that other friends asked to join our little party. They were admitted, but only on condition that they bring their instruments with them. And so our original duets grew into a small orchestra. Our living room accommodated only twenty-two players (with elbow-room left for bowing), and so the orchestra became automatically limited to that number. We continued in that way for more than a year; plenty of sounds came out of our windows; and the neighborhood grew to know about us.

That is how we were invited to perform at a neighboring Public School, when a campaign was under way to raise funds for hungry children. That was altogether an event! Here we were, performing as an orchestra, for a public audience; and, in the course of the evening, I was called upon to speak. Among other things I said that I deplored the fact that sheer lack of space limited our group. The next morning I had a most gracious letter from the principal of one of the city's high schools, kindly inviting us to use the auditorium of her school for practice purposes. That was, indeed, a windfall. In no time at all our group expanded from twenty-two to fifty players, then to seventy-five, and, ultimately, to our present roster of one hundred and ten.

The Spirit Lives

WE STILL HAVE the same enthusiastic, hearty, informal good time. We meet every Friday evening, and spend a busy three hours in practicing and getting ready for our public concerts, of which we give a limited number during the winter months and a more extended program in July, in the city's municipal parks (Central Park in New York, and Prospect Park in Brooklyn). During the years of our existence, we have grown tremendously in knowledge, learning, by degrees, to play full symphonic programs. My summer vacation is regularly spent in unearthing new, interesting music, and in studying the scores, so that, when I conduct my players, I may conscientiously know what I am about. Having progressed from the easiest, "catchiest" music, we now perform the first three symphonies of Beethoven, the "Fourth Symphony" of Tschaikowsky, the "Unfinished" of Schubert, various symphonies of Haydn and Mozart, and a great deal of modern music—all of which I feel it my duty to put before my young performers, even if I do not always find it "beautiful" myself. It is my privilege to conduct all rehearsals and performances. I have had no formal training as a conductor; but, building upon a naturally sound sense of rhythm, I have studied all available books on conducting, as well as the working methods of the ranking conductors of our day.

That, as concisely as possible, is the story of our organization's development. It was begun sheerly in a spirit of fun, and it still yields us plenty of pleasure. But it does more. It has taken one hundred and ten young people (my original players were no more than fifteen years of age when they came to us) and has given them a personal sense of contact with the loftiest minds and the most ennobling thoughts in the world. It has shown them that first rate fun is to be had away from street corners and questionable saloons. It has given them a wholesome sense of pride in their own accomplishments. It has taught

NEW YORK'S "CITY AMATEUR SYMPHONY ORCHESTRA"

them, always in the spirit of fun, the value of precision, idealistic thinking, and pulling together. For such reasons, I believe myself qualified to talk at first hand of the benefits of amateur community music making—and I cannot sufficiently urge that other communities, all the way from Portland, Maine, to Portland, Oregon, also try their hands at it.

Labor Has Sure Reward

THERE ARE, OF COURSE, certain difficulties to be overcome. The chief of these is the matter of ways and means. In assembling performers for an organization of this kind, one will often find that some of the most gifted are too poor to provide themselves with instruments, or even with strings and repairs. Frequently white dresses or flannel trousers have to be furnished, for concerts. Also, there is the question of an adequate practice hall, the cost of new music, music stands, lights, and so on. That is why I urge that amateur orchestras be placed on a strictly community basis. I have, until recently, assumed the full financial burden of our group; but I do not advise others to do it. Try to get local authorities to grant a small appropriation; and, as a starter, a very small one will suffice. Get your local school authorities to give the use of their premises, rent free, for practice. Interest your local editor in giving space to a straight "news" reporting of your activities. And, when you are ready for public performances, give a concert for the benefit of your own organization. After that, play your best and watch what happens.

As to the choice of music that a new amateur group should play, I can offer only the results of my own experience. Begin with the simplest, most melodic airs. Do not try to make too ambitious a showing at the start. Progress, by healthy degrees, to the easier symphonies of Haydn and Mozart. Get some good orchestral arrangements of spirited marches. That is how we began; and even to-day I spend much time in the libraries, searching for new and unusual compositions. Each year I try to have two or three novelties on our program—music that is new, even, to the professional orchestras. It was my great pleasure thus to rediscover Haydn's "'Bear' Symphony." It gave me even greater pleasure, the following season, to find that same score used by some of the great orchestras, who had been made aware of it through the efforts of our strictly amateur group. Our program for the coming year will include works by Moussorgsky, Glazounow, Ivanow, Massenet, Grieg, and Tschaikowsky.

The Community Profits

A COMMUNITY, that will give an amateur orchestra even half a chance, will find itself more than amply repaid. Here again I speak from experience. Apart from the facilities which such a group creates for putting the best in music into the hands (and souls) of its citizens, apart even from the incalculable good it does in providing clean, wholesome entertainment for the young people of the town, the municipality itself reaps a harvest of glory from possessing a civic amateur orchestra. People come to hear it, and take pride in it. Our own audiences of twenty thousand a night attest to that. The vitality of any local "occasion" is immeasurably increased by the inclusion of good music. Mothers and fathers build up a very special sort of civic pride in seeing their children performing at a dignified public concert. And the young performers themselves are imbued with an unequalled sense of public and civic responsibility.

It is my firm conviction that pistols never find their way into hands that are busy with strings and bows. In my thirty years on the Municipal Court bench, I have never had a musician appear before me as litigant in any major case. And once the music habit is firmly rooted into people's souls, it never quite wears away. During the ten years of my orchestra's existence I have had a change of personnel of no more than twenty per cent. Some of our original group have had to drop out, of course, through pressure of business and lack of time; but they always come back to our concerts, and all of them tell me that, in the scanty leisure they do have, they still keep up their playing.

Indeed one of our present players, an excellent cornetist who works as a barber during the day, prefers his music even to his ease. This young man is not released from his shop before nine o'clock at night. He reached his city apartment around ten, and spent the hours from then until midnight in practice. The neighbors complained, and his landlord finally told him that he would have to give up either his cornet or his rooms. Without hesitation our cornetist removed himself and his family to the country, where he has plenty of space and no near neighbors. It is infinitely easier, he tells me, for him to commute to his work (and his rehearsals) than to give up his music.

The Harvest is Plenty

AS A DIRECT RESULT of the activities of our amateur group, several of our players have graduated to distinguished posts in professional organizations. Avram Weiss, our recent concertmaster, twenty-one years of age, entered a competitive audition last spring, with more than a hundred professional violinists, and won the coveted post of Assistant Concertmaster in the Indianapolis Symphony Orchestra. He is the third concertmaster we have lost in that way. Others of our performers have gone on to scholarships in noted conservatories and to promising careers. Thus, a civic amateur orchestra is valuable for the things to which it may lead.

Another interesting experience came to us, in this case a touching one. A noted musicologist, who possessed a valuable music library, heard some of our concerts and came to like us. I never had the pleasure of meeting the gentleman, but I heard that he expressed interest and enthusiasm in our work. He was in poor health, a trip abroad, and remarked to his that, if it should turn out to be a "one trip," he wished his entire library of m to be given to me, for the use of our chestra. He died abroad, and his collection of scores and arrangements presented to us.

Often at the end of a winter of work, we invite distinguished guest ductors to lead one of our performan and then our players experience a *thrill*, in leaving their desks and counters to follow the baton of a "pr sional" conductor. Among those who thus led our group are Mischa Pia Leon Barzin, and Eugene Plotnikoff. T are great occasions for me, when I fi seat at the back of the hall and listen, not quite disinterested spectator, to magic that comes from beneath the fin of these amateur youngsters.

Whatever the difficulties of gettir civic amateur orchestra under way, I say from experience that one of the more than worth the effort required. (your souls to great music. Give your y people the lift of personal contact wi force that builds fun at the same time it builds character. Permit your commu to enjoy the distinction of maintainin instrument for the general good! Take cultural development of the community your own hands; and aim always at hi goals and greater opportunities. My pr dream, just now, is to extend the rôl the City Amateur Symphony Orch to a proving-ground for gifted y American artists. I should like each to invite a number of conductors and ists to perform with us, who might otherwise have the chance of a digi public début. And if other commur will do the same, we shall soon have broader channel in which American ar may launch their own careers and the velopment of their national art. Ama orchestras thus offer our country one o finest art opportunities.

Student Repertoires

By ALICE THORNBURG SMITH

PARENTS of young students become discouraged when the child is not prepared to play a piece away from home, or even on short notice in his own home. It is well enough to say that the student should constantly review old pieces in order to keep up his repertoire, but there must be some incentive for the young child to do this.

The following method has proved successful.

Whenever a child plays for guests in his home, or as a guest in another home, he is credited with two points. If he plays at school, Sunday School, or at a party he gets five points. He tells the teacher at each lesson how many points he has earned the previous week. When one hundred points are reached, he is allowed to select a prize from a list prepared by the teacher. These prizes never exceed ten cents in cost, but the list includes the things in a dime store that children love and value. Some students earn several prizes a year in this manner. When parties occur, those planning to attend often mention to the teacher that they are counting on earning five points by playing at the party. Sunday School and public school teachers find ready and willing helpers in building programs. Mothers have said that if guests do not ask to hear a piece, the youngster will angle for an invitation to play. Coaxing is never necessary.

Among the older students this problem is solved by means of a repertoire club. We call it the "Triad Club," because each student *tries* to *add* one piece to his repertoire at each club meeting (once a month). To be eligible for membership in this club, the student must have five third grade pieces memorized. For initiation the members put the names of these pieces in a hat and draw out one which the initiate is then required to play.

The program for each meeting is arranged by the vice-president, who is program chairman. Previous to each meeting the teacher gives him a list of those n bers who are prepared to play at that m ing, together with the names of selections. All playing must be done memory.

Officers of the Triad Club are el semiannually, in order that a larger nu may have the opportunity of serving. T are no fees or dues. Each member, or year, acts as host or hostess, receivin club in his or her own home. Musical g are played after the program, and ref ments are served. The teacher attend an honorary member, taking no active only making suggestions occasionally this is a student organization. A bus session is held at each meeting. The s tary prepares the minutes, listing the gram in full. It is surprising how much helps the students to remember the n of compositions and composers. Club m bers are always on the lookout for p for their own repertoires. Requests often made for each other's pieces. younger students look forward to the when they will be eligible to membe in this club.

IS MUSIC TEACHING COMING TO THIS?

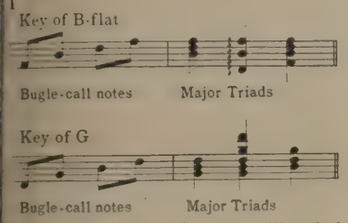
Here is a new scientific gadget from Berlin. Dr. Kurt Johnen and his wife are demonstrating his new invention for showing the faults of the piano student, by recording upon a cylinder the breathing and change of tension.

* * * * *

"If music teachers in the public sc are not educated to the highest stan and are not capable of teaching childre science of music, then the value obt from the musical appreciation hours the radio is almost obliterated."

—Dr. Walter Damros

The Threshold of Music



The Simplest Chord in Music—The Major Triad

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

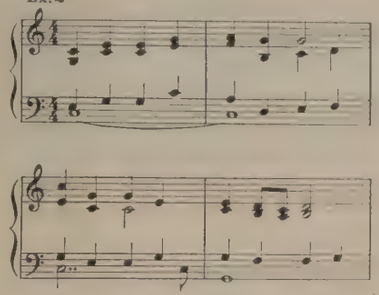
This article is the second in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter*

WE RETURN to the four notes used in ugle calls and play them simulta- eously, we sound a chord—the sim- and most common chord in all music. chord is known as the *Major Triad.* e word "triad" means "three-note ." This word may at first confuse because the bugle call notes which it, according to the foregoing para- , are four in number. Analysis, how- will show that only three of the four are actually different from each other, ourth being an octave, or duplicate, of irst. On a B-flat bugle, for instance, our notes are F, B-flat, D and F. In one F is the same as another, so we liscard the lower F as a repetition— the chord, reduced to its simplest , consists of the three notes, B-flat, d F.

Ex. 1

tice that the triads are still triads e-note chords) even when you add notes, so long as the additional are merely octaves of notes already original triad; also, that it makes no ence which of the three notes is on which is in the middle, and which be- it is still the same triad. You may a chord C-E-G or E-G-C or G-C-E; t is always the major triad of C.

ce the major triad is simply a group- of certain overtones, a major triad s for every tone in the octave. You ick out for yourself the major triad , from the overtones of C given on 7 of THE ETUDE for January, and ise the major triad on F from the ones of F, given on page 50 of the issue.



e word "major," as used in "major ," means merely the greater of the chief kinds of triads. The other kind, u have probably guessed, is the minor . Major and minor triads, we shall later, take their names from their guishing features: the intervals of a r third and a minor third, respectively, major third being greater than the r.

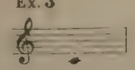
ery major triad contains the correct for playing *Taps, Reveille,* or any bugle call. Its notes are the same as of the 2nd, 3d, 4th, 5th, 6th and 8th of the harmonic series—so it can be l the most natural chord in the world. ld the scientific explanation why most le prefer simple major tunes and har- es to the discordant music of ultra- rn composers.

e literature of music, from the dance to the symphony, is filled with mel- which rely for their beauty almost ly on the major triad. To name a few ndom, there are Irving Berlin's *Alex- r's Ragtime Band;* Jerome Kern's *Till Clouds Roll By;* the Negro convict *Water Boy;* the *Sapphic Ode* of ms; the first theme of Beethoven's ica Symphony," and the prayer from Humperdinck's opera, "Hansel and Gretel."

Here are the first few measures of the prayer, as they appear in the prelude to the opera.

Ex. 2

In the first and third measures, not only does the harmony limit itself exclusively to the triad of C, but the melody, too, outlines the same triad. In the other measures we find somewhat more variety: triads on F, G and C.



Related Triads

EVEN THE SIMPLEST of tunes requires a little freedom of melody and variety of harmony. So unless we are content to listen to bugle calls all our lives, we must look further for our source of tunes and chords than the lone major triad which has so far occupied our attention. Fortunately, we have not far to look. Every major triad has its quota of family connections—other triads to which it is related.

In all, of course, there are as many major triads as there are notes in the piano. But since the various octaves are mere duplications of each other we had better say that there are as many different major triads as there are notes (both black and white) within an octave—which are twelve. Each of these twelve triads has a relationship to every other one—in some cases, an exceedingly close relationship; in other cases, so distant as to seem almost like no relationship. For instance, the triads on C and F-sharp do not appear to be on speaking terms at all. It is as if they were at opposite ends of the earth. Every major triad, however, does have two immediate neighbors—two other closely related major triads. The three of them together form a relationship so strongly knit that they have become an overwhelmingly important feature of almost every page of music ever written.

Let us track down these three triads. Suppose we start with a single tone — C.

Ex. 3

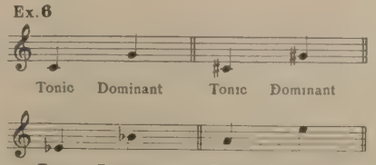
We are going to make this tone the starting point and finishing point of our present exploration. It will remain the keynote of our discussion. Therefore we shall call C the tonic, or principal tone (keeping in mind that the word *tonic* in music does not refer at all to medicinal or invigorating properties, but is simply the term used to describe the "queen bee" of a set of tones, around which the other tones swarm).

The overtones of C — the ones which form the notes of the bugle calls—produce the chord known as the C major triad. When C is tonic, we can speak of this triad as the tonic triad because it is directly based on the tonic note.

Ex. 4

Among the overtones of C, we find that one note in particular stands out as being second in importance to C itself. It occurs three separate times among the first eleven overtones. That note is G (four white notes above C on the piano). This second most important note is called the dominant note.

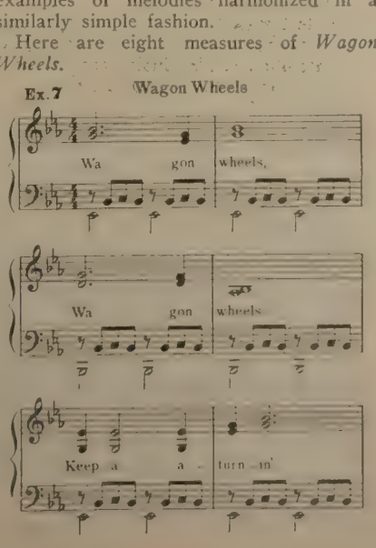
We can form a chord from G exactly as we have done from C; for G can also be considered as a fundamental tone, with its own series of overtones. It, too, has its bugle call notes—4, 5 and 6 in its harmonic series—and when we put them together we have the triad G-B-D.



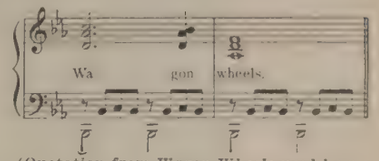
Ex. 5

This triad is called the dominant triad of the key of C. The dominant is like a brother to the tonic, so close is its relationship. No doubt you have already guessed that it is one of the family trio to which we have referred.

Every note that exists has its dominant, which, we shall discover later, is the fifth note in the scale which starts with the tonic as its first note. C-sharp has its G-sharp; E-flat has its B-flat; A has its E; and so on.



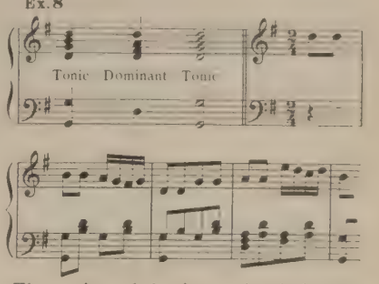
Ex. 6



Many a tune has gotten along perfectly well on tonic and dominant harmonies alone. For example, *Hail, Hail, the Gang's All Here.* Among the popular songs of recent years, *Wagon Wheels* and *Happy Days Are Here Again* run almost their entire length on the impetus of these two chords; while the classic music of the eighteenth century provides innumerable examples of melodies harmonized in a similarly simple fashion.

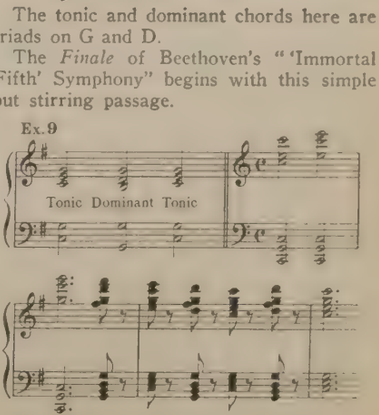
Here are eight measures of *Wagon Wheels.*

Ex. 7 Wagon Wheels



(Quotation from *Wagon Wheels* used by permission of the publishers, Shapiro, Bernstein & Co., Inc., New York.)

Then in the "Symphony, No. 88" of Haydn, the *Allegro* (last movement) has this passage:

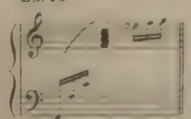


Ex. 8

The tonic and dominant chords here are triads on G and D.

The *Finale* of Beethoven's "'Immortal Fifth' Symphony" begins with this simple but stirring passage.

Ex. 9

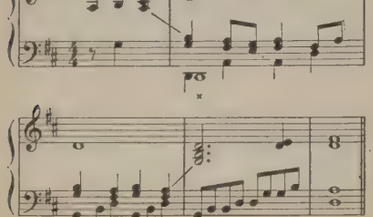


By the insistent use of the two simplest and most natural chords in the vocabulary of music, Beethoven imparts to this passage an elemental simplicity and strength.

It has been already stated that every note has a dominant. Since this is so, it stands to reason that every note must also be the dominant of some other tonic, and that a note which is the dominant of its neighbor on one side is at the very same time the tonic of its neighbor on the other side. Thus every note can be visualized as forming part of an endless chain. Looking at C in this light, we regard it as one link in a chain of dominant-tonic relationships. On its right stands its dominant, G. On its left is the note which holds the same relation to C as C does to G, and which therefore considers C its dominant. This note is C's second most important neighbor—and it is F, to be found as many notes below C as G is above C.

The overtones of F contain these bugle-call notes—the notes of the F Major Triad:

Ex. 10

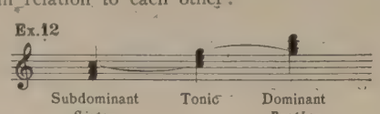


The note C, we discover, holds the same dominating position in the F triad which

G held in the chord of C. If C, as dominant, is a brother to F, what is F's relation to C? Surely that of a sister! As a matter of fact, there is something feminine about F (and F harmonies) in relation to C and G. The sister tone happens to be called the Subdominant. And the sister chord is called the Subdominant Triad.

We already have seen that the brotherly dominant triad can be used with the tonic, to provide music of a rugged, masculine character. In the same way the feminine qualities of the sisterly subdominant triad impart a soft, gentle quality to the music it touches. Peacefulness is implicit in the "A-men" sung at the close of hymns (subdominant triad followed by tonic triad). The *Lullaby* of Brahms soothes with its repeated subdominant chords. The *Prayer* of "Hansel and Gretel," of which the opening has already been quoted, closes with gentle subdominant triads. Here is the passage as it occurs in the forest scene, when *Hansel* and *Gretel* sink down on the moss and go to sleep with their arms twined round each other:

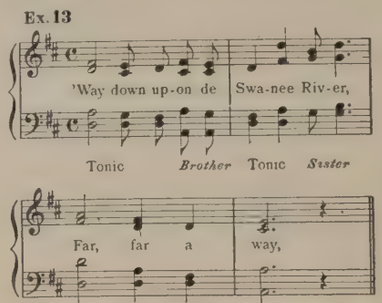
Ex. 11



(Quotations from "Hansel and Gretel" used in this article are by permission of the publishers, B. Schott's Söhne, Mainz. American sole agents, Associated Music Publishers, Inc., New York.)

The subdominant chords are marked with x's. In each case the subdominant chord is followed by a tonic.

Even Al Jolson's famous song, *Mammy*, proves to be no exception to the rule. The second time the word *Mammy* appears in the chorus it is harmonized with subdominant and tonic chords.



With the subdominant, our family trio is now complete. Here are all three chords, in relation to each other:

Ex. 12

These three chords form a triumvirate which rules the great majority of musical compositions with an iron hand. If you do not believe it, listen to the famous old Stephen Foster song, *Old Folks at Home*. Its entire twenty-four measures are harmonized with these three chords. You will find them in the opening phrase:

Ex. 13

Another familiar song which uses only tonic, dominant and subdominant chords is the old Spanish air *Juanita*, for which the so popular words were written by The Honorable Mrs. Norton, granddaughter of Richard Brinsley Sheridan, the famous Irish wit and playwright.

Fifty Years Ago This Month

Felix Le Couppey, one of the most eminent teachers of the piano which France has produced, and especially successful in the development of artists with an exquisitely finished technic, had this to say in our columns:

"However gifted the pupil may be, however rich the talent nature has bestowed upon him, if practice has not made his fingers flexible, if by persevering work he has not overcome all the difficulties of execution, not only will there be a height of perfection to which he never will attain, but sooner or later his progress will be arrested by unforseen obstacles. The study of technic, therefore, must enter largely into the plans of every student who aspires to brilliant results; a quarter or, better still, a third of the time devoted to the piano should be given to it.

"On this point the teacher will sometimes meet with resistance, for it must certainly be acknowledged that the practice of exercises is dry and unattractive, and the pupil, in his ignorance, will often dispute the usefulness of it. If this opposition cannot be overcome by persuasive means, if the pupil is not yet old enough to listen to the teachings of experience and reason, the instructor should adopt a more decided course of action and insist on the mechanical parts being practiced in his presence. The teacher who seldom asks for scales and exercises may be certain that his pupils, left to themselves, play them more rarely still; but, on the other hand, the teacher who adheres to the excellent method of opening each lesson by spending some minutes on gymnastics for the fingers will obtain good results in the very cases where simple advice would be unheeded. Success will nearly always justify his expectations, and pupils unwittingly induced by the force of habit, will, little by little, and of their own accord, be led to reproduce the order of work adopted at the lessons, in their regular practice, and thus a good cause is gained.

"For the development of technic the exercises should be practiced in a very moderate tempo, the only way of acquiring a good articulation and perfect equality. A close attention is also indispensable, for it is a grave error to believe that the end is accomplished because the fingers are moved during a stated time. Kalkbrenner, in his method, advises pupils to read while practicing exercises, but I cannot agree with the opinion of this illustrious master. I think that too much care and reflection cannot be brought to the work. If the attention is relaxed, if the mind is distracted, the fingers act mechanically, and will only acquire, in a very imperfect manner, the essential qualities of good touch."

* * * * *

"In my opinion music should be taught in every school and college in the land. I do not think there is anything more helpful than good sweet music; and in my judgment more people have been brought to order and more souls saved through sweet music in the churches than have been saved by the whooping and howling of evangelists and preachers."—Cole L. Blease.

Records and Radio

By PETER HUGH REED

THE FORMATION of the NBC Symphony Orchestra and Toscanini's return to America to conduct it has been the big news of radio this winter. America, which to-day owns the several finest symphony orchestras in the world, has never had a radio orchestra, prior to this past fall, to compete with the British Broadcasting Symphony Orchestra. Those who know the recordings of this organization have long been aware of its excellence. It is one of the two leading orchestras of Great Britain.

Perhaps no newly formed orchestra, prior to the NBC Symphony Orchestra, ever had such a famous director as Toscanini to mold it into shape. We who hear the results attained by this great musician recognize his extraordinary genius, yet to realize fully the scope of his artistry, one should be permitted to hear a rehearsal or to talk to the men in the orchestra. He not only awakens greater appreciation of music, those who have played under his direction tell us, but he makes us comprehend more fully the significance of each score he conducts.

The first series of concerts of Toscanini are completed, but not forgotten. His artistry, so cherishable, has not entirely dispensed itself into air, for recordings of some of his most notable achievements, we are told, have been made.

More than a souvenir of Toscanini's association with the B.B.C. Symphony Orchestra is his performance of Beethoven's "Sixth Symphony," which was recorded in London and released here by Victor. It is the definitive reading of this work on records. The bucolic charm, the whole hearted ingenuousness of Beethoven's pastoral holiday is played with a rare sense of proportion, nothing is overstressed nor left to the imagination, but all is precisely, nay, preciously, outlined to live memorably in those rare moments of retrospect after the last bar of the music has died away. What Toscanini does with music is not to be explained but heard. An overture to Rossini's "Semiramide" (Victor set M-408), is given a glowing and brilliant reading, for example, that not only incites admiration but enhances seemingly the music's worth.

It has been impossible, because of space limitations, to review here all of the fine recordings issued this past winter. As time goes on, however, we will endeavor to call attention to the most important items. In view of this fact, it might be well at this time, to invite our readers to ask their dealer for a copy of the RCA-Victor pamphlet, A New and Extraordinary List of Red Seal Records, compiled by the writer—if they have not already seen it.

Lucrezia Bori's Operatic Album (Victor set M-405) brings us a series of arias chosen from her favorite rôles. This is a valedictory album of operatic selections, for the singer is no longer connected with the opera house. Although it would be ridiculous to refute the fact that Bori's voice has lost some of its original bloom, these recordings, none the less, are welcome, for her admirable and inimitable artistry is most assuredly set forth in them. Arias from Mozart, DeFalla, Wolf-Ferrari, Puccini, and Massenet are included.

For occidental ears, oriental music has never been more impressively set forth on records than from those made by the musicians that accompany Uday Shan-Kar, one of the greatest male dancers of all times (Victor album No. M-382). Anybody who has seen these dancers and heard their fascinating music knows its quality, but for those who have not seen them I recommend that they hear the *Kartikeyya*, with its dulcet toned bowl its vibrant conch shell tones, or the *Taranga*, a musical miracle on t drums, played by the talented Shiral composer and director of the musi Or again the *Danse Indra*, with its nos flute, or the *Danse Snanum*, with its odic vibrancy.

Two notable Bach sets, recently br out, contain the composer's famous *caglia*, played on the organ of the minster Choir School at Princeton, Jersey, by Carl Weinrich (Musicraf 10), and three of his six sonatas for and harpsichord, played by Georges Ba and Yella Pessl (Victor set M-406). *Passacaglia* owes its origin to two contemporaries, Buxtehude and Re It is one of the most imposing pieces kind ever written, in which the com gradually builds up a volume of soun enhances his detail from the quiet ning to the magnificent splendor o closing measures. Weinrich's brillian majestic performance of this mus matched by excellent recording. Ba and Pessl, two distinguished artists on respective instruments, the flute an harpsichord, give performances of "Flute Sonatas," "B minor," "E-flat m and "C major," in which the ingeniou tuosity, the lovely *cantilena*, and the de and humor of the music at hand are re in expert style.

Beethoven is said to have writte "Sonata for French Horn and Piano, 17," in a day. It is not a great although its construction is sound a feeling is sincere. Gottfried von Fr unites with Miss Yella Pessl, at the in Columbia set X86, to give us a fine formance of this music, which should very welcome to Beethovenians.

Among violoncello sonatas one o most popular has always been the "S in A major, Opus 69," by Beethoven. a work of dignity and serenity, richly tiful in its *adagio*. Casals performed sonata in a recording some six yea more back, now Emanuel Feuerman Myra Hess bring us an up to date r duction of it (Columbia set 312). Alth Feuermann gives an admirable perf ance, it cannot be said that he ec Casal's inspired reading of this work.

Piano students and music lovers will find many rewarding items in r recording lists: a glowing performan Chopin's *Scherzo in E major, Opus 5* Vladimir Horowitz (Victor disc 14 a sparkling and beautiful *legato* readi Mozart's "Variations on Gluck's dummer Pöbel meint," K. 455 (Mus discs 1051-52); an appreciative and u standing performance of Busoni's "I Diary" (founded on American themes) by the composer's pupil and f Egon Petri (Columbia disc 69010D) a scholarly and sonorous interpretati Schubert's posthumous "Sonata in minor," by Ernst Victor Wolff (Col set 311).

Recommended: Sir Thomas Beec revelatory reading of "Tragic Overt by Brahms (Columbia set X 85); the ton "Pops" Orchestra performanc "Spanish Rhapsody," by Chabrier (V disc 4375); Miliza Korjus' facile si of *Lakme's Bell Song* and the *Or Prayer* from Delibes' "Lakme" (V disc 12136); and the harpist Mildred ing's playing of *Prelude in C majo* Prokofieff and *Pastorale, Opus 46,* by Sibelius (Columbia disc 17107D).

WEST POINT'S BAND TO-DAY
The Band of the United States Military Academy at West Point, New York, during the summer of 1937; passing in review, with Cadets in summer uniform.

Bugles Over the Hudson

By HARRY V. MILLNER

PARADE REST! The Cadet Adjutant barks his command as the sun begins to set, and fifteen hundred es are miraculously tilted. Sound Off! ree thunderous chords, Tonic—Domiat—Tonic, rolling across the parade ound at West Point, prelude the Band the United States Military Academy ooping the Line."

This is truly a new and thrilling experie for the thousands of visitors who come visit relatives and friends in the Corps Cadets, or others on duty at "The int."

The trumpets and drums of the Field sic mingle with the music of the Band this point in the ceremony, and the ctators are treated to something all too le in this country. There are any numof bands, and hundreds of drum corps the United States; but it is unusual for nericans to have an opportunity to hear m all together, in one of the many od-tingling marches written for just h a combination.

Visitors are accustomed to, and expect, meticulous marching of the West nter and quickly notice that the band, , executes its own part of the display t as faultlessly. This precision is not ange when one remembers that this oranization of musicians has served conuously at "The Point" since June 16, 7; though not, of course, with the same n.

As the band swings along in its trim, nservative blue uniforms, faced with ite, one wonders if a ghostly company musicians of long ago marches with m.

Gay Uniforms

THEY DO, they will be clad in white forms, trimmed with scarlet. Their users will be tucked into high black ts, and the nodding plumes on their mets will be white and scarlet. They managed to play their instruments h a yellow sword suspended from a k belt around their waists. It must e been quite difficult to do; for many, o are entitled to wear swords at functs, have great difficulty in keeping them m getting between their legs and bring- on an ignominious disaster.

n view of the high cost of good music 1937, it is interesting to note that the old records state that musicians and "Martial Music" were paid from seven to eleven dollars per month. Still it is comforting to read further that this munificent salary was augmented by a compulsory donation of twenty-five cents per month from each cadet.

There are many amusing anecdotes to be culled from musty papers in the tower of the Library here. One of these about the Band is typical. An official entry states for posterity that "One Herman Bruno, of Hamburg was this day enlisted. He shall be paid nine dollars per month, provided—he studies the bass drum. When he has learnt to beat this 'Great Drum' as well as the man who now beats it, he shall receive ten dollars, provided further—that when he learns to play a musical instrument he shall receive eleven dollars!" It would amaze this no doubt earnest young student of percussion of years ago if he knew the salary a first class "swing" drummer can command to-day.

All members of the Band, with the exception of its Leader, Lieutenant Francesco Resta, are enlisted men of the Regular Army, who may be retired after thirty years service, on a pension. Many of them serve the entire thirty years at West Point, while others have come from the Regular Army, National Guard and the Navy. This settles a common query of the curious. "Is that the Cadet Band, or the soldier's Band. If it is the Cadet Band, how is it that so many of them have gray hair?"

The reason why this exceptional organization is practically unknown to America at large is because its duties are exclusively with Cadets, and its unoccupied time is so limited that it is not available for broadcasting.

A Gallant Record

IT IS IN ALL PROBABILITY the oldest band, in point of continuous service in the country; as on June sixteenth the organization completed its one hundred twenty-first year. Day in and day out it serves The Corps efficiently and devotedly. It is seldom heard outside the limits of the Reservation up the Hudson, except when it accompanies the Corps of Cadets to one of the Army's spectacular football games, to Washington for an Inaugural Parade, or at some patriotic or Service event within a short distance of the Military Academy.

The amount, scope and quality of the performance demanded of this organization would appal many musicians who think themselves overworked. An ordinary day begins with a rehearsal at half past eight of the morning. Then there is a change of uniforms to play "Dinner Formation" (the Cadets have to march formally to dinner); and perhaps a change again for one of the frequent military funerals (all graduates of the Academy, and enlisted men serving here or retired from West Point, have the privilege of a final resting place in the lovely cemetery overlooking the quiet reaches of the Hudson). Later in the day will be a change again for Parade and Guardmount; and there must be another change for the concert from seven-thirty till eight-thirty in the evening; after which the time of these musicians is their own.

Not only is physical equipment second to none necessary to pass the doctor for enlistment, but musical ability of a high order is essential. A hundred years ago a desperate urge to beat the "Great Drum" might have got an applicant consideration; but nowadays performers in a United States Military Band must be able to do much more than play marches well. Important as that duty is, the modern conception of a band has changed definitely in the last few years.

"Art is Long"

THE POPULAR CONCEPTION of a band was long a street organization that blared out a few of the well known marches. The more noise it made the better it was. To-day we have with us the symphonic band. Such great organizations as Goldman's Band, and The United States Marine, Navy and Army Bands, present a class of music previously considered possible only by a symphony orchestra.

The United States Military Academy Band has made great strides, musically, under the inspired baton of its leader, Lieutenant Francesco Resta. It is a passion with him that the only difference between a great orchestra and a band is the "tone color." He has demonstrated that the military band can be just as flexible under the baton of a master as the string ensemble. The scoffers have come, listened and gone away convinced and enthusiastic. One of the outstanding and unusual events in recent musical history was the performance of Tschaikowsky's "Piano Concerto in B flat minor," with military band accompaniment, at West Point. Miss May Allison

THE UNITED STATES MILITARY ACADEMY BAND OF BYGONE DAYS

Stage Deportment at Student Recitals

By RUTH E. FRENCH

STAGE DEPORTMENT may be compared to the wrappings around a Christmas gift. In themselves they are not particularly valuable, but they add much to the pleasure of receiving the gift. It is true that pleasant and easy stage manners will not take the place of technic nor of musical ability, any more than an empty box in beautiful wrappings will answer the purpose of a gift. Nevertheless, when one has something to present it should be done in an attractive manner.

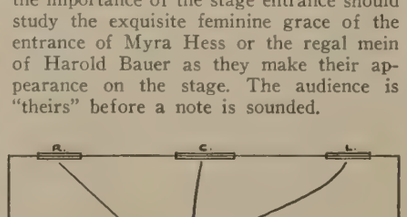
Let us first consider the reason for giving students training in stage deportment. Why is it necessary for them to bow before and after they perform? Why should they go on and off the stage in certain prescribed ways, which may seem arbitrary? Answering the first question, bowing in a recital is very much the same as bowing in social life. One does not absolutely have to do it, but one is more attractive and a better feeling is established in meeting people by means of a graceful bow. Then, too, there is the matter of courtesy.

Many people do not actually enjoy going to a pupils' recital. However much parents, and adoring aunties and uncles, may like to hear their own relatives, a whole evening spent in that way is likely to be boring to some without these personal interests. So a pleasant bow, by way of greeting an audience, is a courteous acknowledgment of their presence and may even cause them to overlook some technical slips. Since the audience has put forth the effort to come and listen to the pupils, the pupils should show appreciation by bowing as they come on the stage and again in acknowledging applause at the end of the number.

In Which Feathers Make the Birds

STAGE DEPORTMENT also includes the matter of dress, and in this the first consideration is comfort. If one is to have a new dress or new shoes for a recital, these garments should be worn and the number played while wearing them, and this several times before the day of the recital. This will help ward off self-consciousness, and it will furthermore insure the performer against discovering during a number that some ornament, bit of lace, or flowing sleeve is distressingly in the way, or that the tight bodice, which looks chic and feels comfortable when the wearer is inactive, is binding and uncomfortable when moving the arms in playing. A skillful dressmaker can add a bit of width between the shoulders of a dress which will look smooth but at the same time allow for freedom of movement so necessary to instrumental performers.

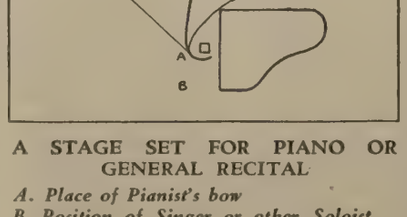
Of course it goes without saying that the dress must be appropriate to the time of day. An elaborate evening gown for an afternoon or morning recital is always in bad taste; however, a simple, inconspicuous, and sometimes inexpensive dress not exactly formal in style, may be worn in the evening. Tact and thoughtfulness by the teacher are needed in this matter, as she may be faced with the problem of a student wishing to be excused from playing because of not having an evening dress. In any event she should stress the fact that the performer and the performance are of more importance than the dress.



Going on the stage for a number is "zero hour" for many students. In fact to most seasoned artists the entrance to the stage is like *Coilantogle Ford* in "The Lady of the Lake":

"See, here all vantageless I stand."

This being the case, a number on a program may be said to begin just before the performer steps on the stage. In the green room there must be neither the deadly dullness which is one manifestation of extreme nervousness, nor the fluttering chatter which is another. As a rule it is best that students do not do much talking, as this is likely to upset the chain of thought and make concentration more difficult on the stage.



First Impressions Last

MUCH OF THE INTEREST of the audience depends upon the entrance of the performer, because this in a way reveals his attitude towards his work. The student who rushes on the stage, sits at the piano, plays, and then rushes off as if it were a hated job well over, spoils the whole effect of the number. No matter how lovely the piece, no matter how well it is played, the rushing type of entrance and exit nullifies everything else. The same is true of the student who slinks nervously in and out. He acts as if he were ashamed of himself. He begets no respect for his art because his attitude is one of depreciation, and this is reflected in the audience. A little too much assurance in the entrance is better than not enough. The entrance of the performer whether student or concert artist may be likened to the frame of a picture or the stem of a rose. Since it is of this importance, let us give due consideration to its place. The student who would learn the importance of the stage entrance should study the exquisite feminine grace of the entrance of Myra Hess or the regal mein of Harold Bauer as they make their appearance on the stage. The audience is "theirs" before a note is sounded.

A STAGE SET FOR PIANO OR GENERAL RECITAL

A. Place of Pianist's bow
B. Position of Singer or other Soloist

A STAGE SET FOR SOLOIST STANDING IN THE CURVE OF THE PIANO

A. The Solist enters from the Left
B. The Accompanist's Approach to the Piano

Technically there are three possible stage entrances, right, left, and center. Of these the center and right—as you face the audience—are considered best. The left entrance is good for a singer if the piano is placed in the middle of the stage so as to permit him to stand in the bend of the instrument. The line of entrance is on what is termed the "shepherd's crook" as is shown in the accompanying diagrams.

After the stage entrance the next consideration is the bow. This is the performer's greeting to the audience. It must be formal, because it is directed to at least some strangers. It must be cordial, because they have come to the recital. The bow reflects one's personality the same as does one's salutation when meeting people. For this reason the student should not slavishly copy the stage entrance and bow of artists. He should study them and note the effects they get, but his bow must be in keeping with his personality. A student, who copies the entrance and bow of Harold Bauer, will only look pompous, because he does not have the older man's personality and experience to back it. In other words he does not happen to be Harold Bauer.

The Ease and Grace of Bowing

THERE ARE FOUR TYPES of bows, head, waist, hip, and ankle, according to the acting joint. The ankle bow is correct for the concert and recital stage. The man's concert bow is taken in the following way: heels and toes together, knees stiff, bow over the ankle making a half moon from feet to head. The arms are relaxed at the sides—not on the back of the piano chair or across the front of the waist—they simply fall where gravity takes them. There should be no extra movement with the head, and the eyes should focus on the back of the room. The reason for the latter is because the audience is more interested in seeing the face of the performer than the top of his head which is likely to be very much in evidence if he looks at the floor.

The woman's concert bow differs from the man's in being more of a curtsey. The feet are in the position of a natural step, the weight being on the back foot. The knee of that leg is bent while the other is straight. The bow is over the ankle of the advance foot, and the line from this foot to the head forms a half moon. As in the man's bow, the arms are relaxed at the sides and the eyes focus on the back of the hall. This bow may be conveniently practiced by walking backward, preferably before a mirror, and bowing over each step. This practice will stand one in good stead when two bows are to be made after a particularly successful number.

The place of the bow varies with the instrument. A pianist always bows in line with the piano seat, never correctly with the chair between him and the audience. It is true that some men—concert artists—bow in the latter way; but it is still open to the criticism that the chair cuts the figure of the pianist. Singers and performers on other instruments come a little farther down stage, nearer the audience, and bow where they are to perform. After bowing, the pianist enters the seat from the side nearest the audience and leaves from the same side, whether accompanist or soloist. Sometimes an accompanist, after a number, will turn directly away from the audience. This is construed as a gesture of modesty. He does not want to seem to share the applause that is for the soloist; but it is not in good form to turn the to the audience at any time. The a panist should look straight ahead unt soloist is going off the stage then toward the audience and follow. In ca a man having a lady accompanist, h companies her on and off the stage.

And Other Details

WHEN A PIANIST is playing two or numbers in a group, it is not nece for him to rise between numbers t knowledge applause. It is better to on the seat and bow from the hips just a nod of the head. When the nu is finished the pianist leaves the instru from the down stage side, stands aga line with the piano seat and bows. If is enough applause to warrant two there should be one backward step be them. If the pianist is a woman, she over one foot, takes a step backward bows over the other, then using the foot as a pivot turns and leaves the The last bow should always be ove opposite foot from the side to whic turns. If the applause is sufficient t mand a second appearance, the perfo goes one-third to two-thirds of the down stage and bows.

When there are two or more perfor confusion must be avoided. Their ent and exit must be arranged so that will be no crossing between performer audience. In a piano duet both players on a line together. If there is a first second piano, the players bow on an ol line with the second pianist a little of the first. String ensemble perfo bow on a line together and enter their from the down stage side. A soloist an orchestra bows first to the audi then to the conductor, and then to orchestra.

These details of courtesy add muc the success of a recital. They give a tain pleasing grace to a performance they also add dignity which promote spect. It is the duty of every teach instill into the minds of his pupils th recital is not primarily to display ability but rather to teach them to be to show something of beauty to the w For this reason there must be no during the time they are on the sta detract from that beauty.

A Pupil's Questionnaire

By D. D. Freas

There are nine questions which ma asked about every new piece whic opened for study for the first time.

1. What does the title mean?
2. Who composed the piece?
3. Where and when did he live?
4. Do you know any other compos by him?
5. What type of piece is it? Mili Dreamy? Lilting?
6. In what key is it written?
7. What is the time signature?
8. Does it start slowly or quickly?
9. Do runs, chords, and so on, see predominate?

When the pupil is prepared with answers, he is then ready to start on s thing new and has a very good found for real pleasure and intelligence in practice.

le Debussy, standing in front of his Home in Paris.

Debussy's Principles in Pianoforte Playing

By the distinguished French virtuoso pianist, conductor, Debussy disciple and teacher

MAURICE DUMESNIL

Member of the Piano Juries at the Paris Conservatory, The Ecole Normale and the American Conservatory at Fontainebleau

Debussy at the Home of Pierre Louÿs, about 1895.

What does the "Debussy blur" mean? M. Dumesnil, internationally known as a disciple of his friend and master, Claude Debussy, presents this very informative and thought provoking article, upon the occasion of the twentieth anniversary of the death of the great French modernist. In the last two decades Debussy's music has commanded more and more recognition, and M. Dumesnil's symposium gives a new insight into the performance of his pianoforte works, including a dissertation on the famous "Debussy Blur."

RECENT YEARS the piano music f Claude Debussy has steadily gained round among teachers and students, verywhere there is manifested a de- or a better comprehension of undoubt- the greatest contributor to the piano toire since Chopin and Liszt. The im- nce of Debussy's advent toward the ning of this century remains to this considerable. It was he who brought a revolution in the art of pianistic g, comparable in its consequences only at which Chopin had precipitated ty years before; it was he who intro- into his piano works that luscious tmospheric tone coloring—so novel in ffects—which caused him to be some- improperly labeled as an "impres- t composer."

e all the great masters, Debussy did me at once into full possession of his dual style. He went through the al process of evolution. It is interest- o follow him from his student days, his style was mostly melodic and ful, to his maturity, when his person- was fully developed and his contribu- to the piano literature became more more important, culminating in such s as the *Images*, the *Isle of Joy*, and wo books of "Preludes."

at were the characteristics of Debussy pianist? Here also he went through a evolution. When in 1873, at the age of , he entered the pianoforte class of ontel at the Paris Conservatory, his al gifts in this respect seemed far noteworthy; in fact, he had many lties with his teacher. He was loath t down at his instrument for hours o run scales and arpeggios up and the keyboard. Instead, he borrowed the library the scores of the string ets by Haydn and Mozart and spent, ducing and performing them at sight, valuable hours which Marmontel ght should have been devoted to the rment of his technic. When Claude le attended the class, the work which been assigned to him was seldom pre- d. Marmontel, of course, scolded, as befitting for upholding the dicipline e school; but, when he learned the reason, his resentment vanished ly. One day even, as he talked with nac about their mutual student, he ented upon the youngster's work as vs:

Characterization Questioned

T LITTLE RASCAL; he doesn't care very for his piano, but how he loves !" A statement which perhaps ap- d justified, though it was entirely rectified in his later illustrious years.

In reality the distinguished pedagogue was mistaken. Claude Achille was already very fond of the piano as an instrument; but he felt stifled by the strict discipline and the routine of the class; he had to play much music that did not agree with his temperament and interested him very little, or not at all; he wanted to devote some of his time to other branches of study which attracted his ardent curiosity. Consequently he was restless, nervous, as if torn between his own craving for freedom and the rigidity of scholastic processes, all of which combined to make him the rather rebellious and erratic student who sat at the piano and, before playing his etude or his fugue, improvised short preludes with rare harmonies of his own. Then, too, he shocked Ambroise Thomas, the director of the school and famous composer of "Mignon," by the romantic expression with which he played Bach, whose works at the time were regarded mostly as plain exercises for the development of finger independence.

Paul Vidal, who was his classmate and to whom he dedicated that exquisite song, *Sleep, dear love,* often recounted the queer impression produced upon him and the other fellow students by the mannerisms of Claude Achille. It seemed hardly possible that years later he would become a magician of delicate colorings and one of the most delightful and patrician pianists who ever handed a keyboard. His playing was always interesting, but it had many faults. His trill, for instance, was slow and awkward. Then he seemed to suffer from a sort of rhythmic complex which caused him to overaccentuate the strong beats of each measure, almost to the point of pounding. There were times, in fact, when he fairly pounced upon the keys; often he overdid all his other effects as well, sniffing noisily as if to help himself along through the more difficult passages. Sometimes, however, when he became appeased, he produced shadings of astonishing mellowness. His *forte* was the agility of his left hand. With all these defects and qualities, his playing had something very decidedly his own.

At his first contest, in 1874, Claude Achille took a second accessit, which means, the last (or lowest) mention on the list of awards; in 1875 he rose to the first accessit, this being generally looked upon as a "slow ascension"; and in 1876 he received no award at all. There was a reason for this: the piece selected and imposed by the director was the first movement of the "Sonata, Op. 111" by Beethoven, and this music, otherwise admirable, did not suit him at all. The following year, 1877, he had better luck with the *Allegro* from the "Sonata in G minor" by Schumann; and he won the second prize. But this was as far as he ever would go; and, in his eagerness to initiate himself into other things, he decided to drop the pianistic issue and resign from Marmontel's class.

M. DUMESNIL, WITH HIS "DEBUSSY CLASS" IN PARIS

This photograph was taken in front of the mansion, 64 Avenue Foch, where Debussy lived from 1905 to 1918, and where he died.

A Style is Found

ONCE LIBERATED from the requirements of the repertoire, and not having to concern himself any more with so many hackneyed works of mere technical appeal, his approach of the piano began to modify itself. In 1880, he took a brilliant first prize in the accompaniment class of Bazille. There his splendid musicianship could manifest itself without restraint. His contest was very brilliant indeed. It consisted of difficult tests, such as the instantaneous realization of a given bass, the improvisation of an accompaniment for a melody, sight reading with transposition, and reduction of orchestral scores. Debussy astonished the jury by his spontaneous versatility and also by the quality of his pianism. To his improvisations he brought much of that same liquid loveliness of tone in which he submerged the "cascades" of rare chords which had made him famous among the student body.

With such achievements, Claude Achille was ready to take his flight into the world of composition. During his study with his American born teacher, Ernest Guiraud, and following his Prix de Rome in 1884, he wrote a series of songs. All of them were treated excellently from the standpoint of accompaniment; and step by step Debussy seemed on his way to the time when he could try his hand at writing for piano solo and do it sucessfully.

From his first attempt with the "Arabesques," in 1888, to the suite "Pour le Piano," in 1901, which marks the turning point to his greater period, he contributed to the piano literature a series of charming and refined compositions, all of medium difficulty and very cleverly written. Among them is the famous *Claire de Lune,* which in the last few years has reached such a phenomenal popularity in the United States. Undoubtedly the name of Debussy has been made, in the Western hemisphere and among the public at large, chiefly by this delicate composition. Still, for over forty years after its publication in 1890, it remained dormant and almost forgotten among general indifference. Very few took notice of it, and less played it.

When at last it cast its spell, it spread like wildfire and rose instantaneously to the rank of a supreme favorite. How did this happen? Nobody knows. But it did happen. And may I say, in passing, that I was amused when some time ago a publisher in New York asked me if I could not possibly bring him from France something that would be "another *Claire de Lune*." "That is not easy," I replied; "because if I did, you probably would not see it before it reached success! Years ago you probably would have rejected the very *Claire de Lune*, guilty of carrying five flats in the signature, as well as an intricate middle part."

Regardless of its incredible popular achievement, in which luck played a part, this fragment of the "Suite bergamasque" remains as an exquisite sample of Debussy's first period. No music could be more adequate and true to its title, carrying us, as it does, into the realm of a moonlit garden illuminated softly by silvery rays, at that enchanted hour when all is repose, fragrance, and mystery.

The second period of Debussy started with the "Estampes," in 1903. Here we bow to the full fledged master. What a rich efflorescence of admirable compositions came to light during the following decade, the "Images," "Children's Corner," the twenty-four "Preludes," and the "Etudes." Also Debussy seemed less reluctant to come out of his solitary confinement, and on various occasions he appeared in public, performing his pieces as well as the accompaniments of his songs.

A Master Finds Himself

WHAT A METAMORPHOSIS had happened in the playing of the former Marmontel student; what an incredible change from the description given by Paul Vidal and mentioned above! Debussy, in his mature years, extracted from the keys and strings one of the most elusive and aristocratic tones that can ever charm human ears. His hands moved and waved flexibly, like a zephyr in the spring, removing any notion of a percussion instrument being used. The tone seemed to float gently through the air, like the perfumes at eventide sung by Baudelaire.

These personal appearances of the composer were altogether too few. They will never erase themselves from the memory of those whose privilege it was to hear them. Of special interest was the fact that, even in such halls as the Salle Gaveau and the Salle Erard, of moderate size, Debussy left the lid of the grand piano closed. In this way he could *drown* the tone better, an expression which may well apply to his pianistic art, too; though the master used it originally in reference to harmonic tonality.

And now, why is it that so many pianists and students seem to have such difficulty in finding that proper atmospheric rendering, so necessary for an adequate interpretation of his works?

In my book, *How to play and teach Debussy*, I have attempted to solve this problem, which every day becomes of greater actuality. I believe that, following the principles set by Debussy himself, one should combine the traditional acquisition of technic with that other more modern, delicate and poetic way of producing the tone, without which the understanding of his music would never become an open book. I can still visualize him as he sat at the piano, and I can still hear his remarks:

"Play with more sensitiveness in the finger tips. Play the chords as if the keys were being attracted to your finger tips, and rose to your hand as to a magnet."

And this:

"Too much relaxation, all the time, is not advisable. In order that the various notes of a chord should sound together, the fingers must have a certain firmness; but the firmness of rubber, with no stiffness whatsoever. The little cushions at the finger tips should be extremely sensitive, and, through their 'feel,' one should be almost able to foretell the quality of the tone which is going to come out."

A Modest Sage

CONCERNING PEDALING Debussy was almost as reluctant to write down any indications as he was about the fingerings. He limited himself to a few mentions of "the two pedals"; and his marks of the damper pedal alone are exceptionally scarce. However, if one makes it a rule to treat the runs, arpeggios and passages not in crisp fashion, but as "waves of tone," and from the sonorous and vibrating standpoint, he will be on the right path.

The word "blur" is often used in connection with this matter, but to find an actual description of what that words means is more difficult than merely to quote it. In the first place, one must distinguish that the spots in which this method of tone coloring can be used to advantage are found only here and there. It cannot be by any means a general rule, and can be likened to one particular touch used by a painter within his varied color scheme. Otherwise, it would resemble this curt definition once proposed in my presence by a well-meaning Western student: "Oh yes, Debussy. He is the man who writes his music in the whole tone scale"; when this, also, is no more than another occasional touch from the master's versatile pencil.

One should observe, in this matter of blurring, extreme tact and discretion; otherwise the result might be far from gratifying and turn to undesirable confusion. Treating the arpeggios of one same tonality in the way referred to above, cannot be called "blurring." It is simply a pedal process. Here is a definition of blurring such as my recollections of Debussy's own playing suggests: it consists of changing the pedal just a little too late after chord or each harmony, or group of ch or harmonies, in such passages that rant this sort of "encroaching" pro Remarkable examples of this instance found in *Reflections in the water, V* and *The submerged Cathedral*. The themselves are poetically suggestive, autumn landscape after Verlaine: *"L'o des arbres dans la rivière embrumée* shadows of the trees upon the river)," golden leaves, and distant Then the white sails rocking lazily o slate blue surface of the sea, in the la and drowsy splendor of a summer noon. Finally, the old Breton legend, sunken cathedral slowly rising from depths of the ocean and of the ages.

Throughout such pages it is appro to revel in splashes of tone coloring, t to evoke the settings so clearly descr Here are rare opportunities for playing "muffled, floating, caressing, groping, gering" manner; all of which, com with a slight pedal overvibration, will duce exactly the effect sought for, "blur."

But the very nature of this effect m it a tremendously arduous one to ac successfully. To be right, it must be ured with utmost precision; otherwis will be lost and the result may wel what one plainly calls a "mess."

In conclusion, it ought to be h profitable for all pianists to try to ac gradually an accurate conception of special equipment so vitally essential faithful rendering of Debussy's works doing so more than one point wil gained, because one will also come into session of a wider range of keyboard namics, with a wealth of polyphony will shine forth equally well in the inte tation of the old masters.

(M. Dumesnil will present in our issue an account of his last meeting the late Maurice Ravel.)

Musicians of March Birth

By W. FRANCIS GATES

MARCH brought on its bleak winds perhaps the musician whom we would be least willing to spare, in the person of Johann Sebastian Bach, the great "Cantor of Leipzig," and doubtless the greatest fountain of inspiration in the entire annals of music. Following him came the ingenuous Haydn, with his pellucid melodies so crystal clear. It has given such master violinists as Pablo de Sarasate, César Thomson, Jules-Joseph-Ernest Vieuxtemps, Otakar Ševčik, Franz von Vecsey, Max Bendix, Wilma Neruda, and Henri Marteau. Then there is the supreme conductor, Arturo Toscanini. And to our own nation it has been especially lavish in contributing Dudley Buck, organist, composer and educator; Arthur Foote, composer and teacher; Philip Hale, master critic; Thurlow Lieurance, composer and authority on Indian musical lore; Sebastian Bach Mills, pioneer pianist, teacher and composer; George B. Nevin, composer; Everett Ellsworth Truette, organist and composer; Harrison M. Wild, organist, composer and conductor; and David Duffie Wood, organist and composer.

A Natal Chronology

1st—Charles Samuel Lysberg (1821), Ebenezer Prout (1835), John Thomas (1826), Gottfried Weber (1779)

2nd—Andreas Porter Berggreen (1801), Jakob Dont (1815), William C. Carl (1865), Johann Christian Friedrich Häffner (1759), Sir Geo. Alexander Macfarren (1813), François Planté (1839), Marie-Hippolyte Rôze (1846), Bedřich Smetana (1824), David Duffie Wood (1838)

3rd—Jean-Michel d'Archambeau (1823), Alfred Bruneau (1857), Hugo Heermann (1844), Adolphe Nourrit (1802), Hugo Reinhold (1854), Joseph Sainton (1878), Gustav Strube (1867), Sir Henry J. Wood (1870)

4th—Joseph Böhm (1795), Gustav Kobbé (1857), Paul Lacome (1838), Watkin Mills (1856), Nicolai von Wilm (1834)

5th—Hans Balatka (1827), Arthur Foote (1853), Francesco Gasparini (1668), Johann Gungl (1828), Philip Hale (1854), Alfred Jaëll (1832), William Shield (1748), William F. Sudds (1843)

6th—Paul Juon (1872), Harrison Major Wild (1861)

7th—Gustav Graben-Hoffmann (18 Edward Lloyd (1845), Adele gulies (1863), Félix-Marie (Vic Massé (1822), Maurice Ravel (1

8th—Jean-Delphin Alard (1815), Philipp Emmanuel Bach (17 William Horatio Clarke (18 Ruggiero Leoncavallo (1858), Taubmann (1859), Hermann Wi mann (1849)

9th—Nicolas-Prosper Levasseur (17 Alexandre Luigini (1850), Joha Sembach (1881), Francis Lodo York (1861)

10th—Dudley Buck (1839), Felix Bo ski (1872), Lorenzo Da P (1749), Rev. John Bacchus D (1823), Henry Edward Kre (1854), Charles Macpherson (18 Pablo de Sarasate (1844), The Wachtel (1823)

11th—Julius Blüthner (1824), Franc Lamperti (1811)

12th—Thomas Augustine Arne (17 Alexandre-Félix Guilmant (18 Sir August Manns (1825), Ric Müller (1853)

13th—Sebastian Bach Mills (1838), H Wolf (1860)

14th—Joan de Manén (1883), Jo Strauss, Sr. (1804), Georg Ph Telemann (1681), Everett Ellsw Truette (1861)

15th—Johan Halvorsen (1864), Georg Nevin (1859), Mary Turner S (1856), Niccolò Vaccai (1790)

16th—Willy Burmester (1869),

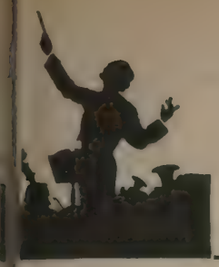
PRIZE WINNERS
"Why I Take *The Etude*" Contest

We are pleased to announce the following as prize winners in the "Why I Take THE ETUDE" Contest, which closed in July, 1937. It required many months for our judges to read the large number of letters entered, and decision was made particularly difficult because of the high standard of discrimination and judgment shown by the most of those who participated.



The judging finally narrowed down to six contestants; and the final decision was made by a musician of national reputation, independent of the offices of THE ETUDE.

The prize winners are:

1. Mr. Edward J. Plank, Stevens Point, Wisconsin $25.00
2. Mrs. Harriet J. Morse, Mansfield, Massachusetts $15.00
3. Mrs. Catherine Levering Bjelke, Oakland, California ... $10.00

We are deeply appreciative of the fine spirit of coöperation which so many of our loyal friends have shown in this contest. The winning letters will be published next month.

—The Editor.

BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND TRAINER AND CONDUCTOR

"Where Do We Go From Here"

Introducing a new and widely known editor for our Band Department

EDITOR'S NOTE

r. William D. Revelli began his musical cation in 1915, in St. Louis, Missouri, re he was a pupil of D. Sarli of the St. is Symphony Orchestra, and enrolled e Beethoven Conservatory of Music to y the violin and theory. In 1919 he red Chicago Musical College to study such eminent figures as Leon Sametini, is Victor Saar, and Felix Borowski. m 1919 to 1921 he toured with the Red- Chautauqua. His public school music ning was obtained (1924-1936) at the umbia School of Music in Chicago, re, from 1925 to 1935, he studied with A. VanderCook, founder of the Vander- k School of Music.

1925 Mr. Revelli was elected Super- r of Music in the Public Schools of art, Indiana, where he organized the rumental music department in the high ol. His work with the Hobart High ool Band has been widely noted as nomenal. Four years after its organiza- the Hobart High School Band was red in the National Contest, and the owing year it won first place in Class For five years Mr. Revelli has directed Hobart Band to first place in this ional Contest.

the fall of 1935, Mr. Revelli was ted to his present position in the Uni- ity of Michigan. He is conductor of University Bands, and an Assistant fessor in the School of Music, and s among the foremost American author- on school bands. He has judicated and ducted at clinics and conferences in tically every state in the Union, and present is vice-president of the National ool Band Association and a member of Board of Directors of the North Cen- Music Educators Conference. He is a mber of the American Bandmaster's As- ation. THE ETUDE is particularly proud present Mr. Revelli as the head of its d and Orchestra Department.

NO TEACHER, director nor administrator who is a member of that vast army of educators concerned n the music education program of our th can deny that the purposes, aims and ectives of this program as conducted in y of our schools to-day are notably erior to those in vogue a few years ago. he rapid progress attained by many of bands and orchestras of our public ools during the past decade is truly azing. What a far cry it is from the lit- school band or orchestra of a few years t, with its totally unbalanced combina- of instruments playing inferior music the "clap-trap" variety to the present unit, with its complete instrumentation senting the works of the masters in a ner comparing very favorably with the formances of many of our professional anizations.

Whereas, but a short time ago, very few our school bands and orchestras were pped with a full complement of the ous woodwinds, brasses and strings, we many of these groups to-day with a plete quota of instruments. Only very recently have the oboe, English horn, bassoon, French horn, alto and bass clarinets made their débuts in our school bands and orchestras. For many years these instruments were shunned as a group which could not be played satisfactorily except by a talented and gifted few; or, in the case of the oboe and bassoon, only by those musicians classed by the layman as "a bit peculiar."

We find to-day hundreds of plucky and determined young Americans astounding us with their remarkable technical facility and interpretative skill upon these same impossible instruments.

In this same line of progress we are also greatly impressed with the gradual development that has come about in the quality of music being played by our modern school organizations. The caliber of music studied and performed by the school bands and orchestras in the not too distant past left much to be desired. Generally, the music itself was not worthy of serious consideration; the arrangements were usually poor, being in most instances too thickly scored. This overscoring was intended primarily for the small park band, which was woefully lacking in instrumentation, particularly in the reed family, and the result was naturally brass and percussion heavy arrangements.

It is a short while, too, since the solo cornet part often served as the conductor's sole means of following the entire band's performance. The matter of having a condensed or full score was given little consideration, and editing on the part of the band conductor was a rare occurrence indeed. Due to the efforts, however, of various serious minded professional and school music conductors, and through excellent coöperation of the publishers, band and orchestra compositions, arrangements and transcriptions have gone through many changes which are proving of great value and influence to the modern conductor and his organizations.

Improved Instrumentation

THE DAY OF INADEQUATE instrumentation, mediocre arrangements, and inferior music for our school bands and orchestras is definitely on the wane, and although we find many localities where the bands and orchestras are still struggling for more satisfactory conditions, even in those school systems the seed for better music has been sown and we can expect a decided growth and advancement within the near future. Lest these organizations be eliminated from the musical picture, it behooves all of us to consider their problems as our own, for the criterion by which our musical development eventually will be judged is what the entire nation is doing, and not solely what the more fortunate few have accomplished.

In addition to the aforementioned phases of musical development, there is another aspect of equal if not greater importance—one which has been of inestimable value and service to the present success of our school music program. I refer to the part which the school administrators, boards of education, and school patrons have played in the development of our program. Without their interest and support the school music program could not function and the results never could have been achieved.

Although school instrumental music did make its bow in most communities unrecognized by administration, patrons or state, these same factions were in most cases quick to recognize the value of this new program. School patrons readily saw the worthiness of the music program and what it meant in the lives of their children. Some administrators realized the value of the music program not only from an æsthetic and cultural viewpoint, but as a tangible means of creating a mutual bond and a better understanding between the home and the school. As a result of this new attitude, the status of music in the school curriculum has seen a remarkable transition during the past several years.

William D. Revelli

Formerly, the majority of our school organizations held their rehearsals by necessity before or after the regular school day. Rehearsals and music classes of all types were offered as extracurricular, given without any school credit, and, in the case of the instrumental groups, usually paid for by the individual students. The instrumental musical director was in most cases not a regular member of the faculty, and his presence in the school building was tolerated only at the end of the school day.

From the progress achieved in this respect, it is quite evident that the present teachers of public school music should feel grateful indeed to their predecessors for the pioneer work accomplished, and for the sympathetic guidance accorded the music program by a few far seeing administrators. Through their support and interest, we find our bands, orchestras, and choruses of to day meeting daily on school schedule, practicing in acoustically treated rehearsal and practice studios. In addition, we find a highly developed music program for grade and junior high school. Rhythm bands, music appreciation, ear training and harmony classes, and classes in musical history are being offered to the student who is interested in the study of music in its various fields. Such is the greatly improved music program in many of the schools of our nation.

THE FAMOUS UNIVERSITY OF MICHIGAN BAND

With its Seventy-seven finely Trained Performers

Where do we go from here?

AS MUSIC EDUCATORS truly interested in the future of our program, we might well

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano M appearing in the Music Sectio of this Issue

COLUMBINE.

By CHESTER NORDMAN

Like a fragrance from another age there drifts down the years to us the ever new story of those fanciful characters Columbine, Harlequin, Pierrot and Pierrette, and from this motley company Mr. Nordman has chosen to draw for readers of THE ETUDE this month a musical sketch of the flirtatious Columbine.

Observe that this composition begins *Moderato,* and very gracefully, but in the style of a *caprice,* bringing to mind at once the outstanding qualities of Columbine the young and lovely dancer.

Observe the sharp release of the first phrase followed by G in the melody played *sostenuto* (measure 2), and the change in pace which is clearly indicated. This elasticity of *tempo* adds to the capricious character of the musical portrait.

The first theme is in C major. The second, beginning with measure 17, is in the relative minor key, A minor, and is to be played with delicacy and expression as the text indicates.

The Trio, or third section, lies in the subdominant key, F major, and here we find the theme in the inner voice although played by the right hand. The *tempo* of the Trio section is slower although the tone may quite properly be a bit more resonant than in the preceding measures. Give the proper sonority to the melody and let the answering accompanying chords be echolike—sparkling but delicate.

Pedal marks are well indicated and are to be followed exactly.

MARCH OF THE LOLLIPOPS

By WILMOT LEMONT

With his usual Puckish understanding of the Never-Never Land of Childhood, Mr. Lemont has imprisoned in the measures of this march the genuine spirit of a little children's party, where the proceedings always include the march in to the decorated table and the delights of creamed chicken, ice cream and birthday cake.

The purpose of the march on such an occasion is exactly that of military use. It enables the children to advance in orderly fashion, hence *tempo* and rhythm are of paramount importance.

The first section is in C major; the second in F major, subdominant key, and the third in A minor, relative minor key. In the third section the melody is in the bass for the most part and suggests the trombone section of a band.

Set a smart pace and preserve it.

MRS. WASHINGTON'S MINUET

By PIERRE LANDRIN DUPORT

This little number affords an interesting example of the type of music prevalent in "upper circles" during Colonial days. The minuet was introduced to America of course from France where it had been a popular court dance for many years. This particular number was recently revived by the United States Government in connection with the Anniversary of the Constitution, and its title makes it apropos for inclusion on "American Programs."

Preserve the same classic treatment accorded this type of dance from the pens of the older masters. Simplicity and grace are watchwords, not overlooking phrasing, especially the slurred groups of two in measures five and six, and so on.

Strive for a broad *sostenuto* in the Trio section thus gaining contrast. As in all dance forms, rhythm is uppermost. Be sure it is well defined, therefore, by means of proper accent, strict *tempo* and correct phrasing.

HUNGARIAN ECHOES

By JAMES FRANCIS COOKE

Hungarian rhapsodies always emanate the flavor of Gipsy music. The Gipsies were a race of unknown origin. The English assumed them to have come from Egypt, hence the name Gypsies. The French called them Bohemians. They were severely persecuted and driven from one country to another until they finally found refuge in Hungary. They had a style of music particularly their own and it consisted for the most part of improvisations. In gratitude to Hungary they adopted the Hungarian folk tunes as a basis for their music and the Gipsy treatment of the Magyar tunes finally became adopted as the national Hungarian music. Liszt set the style of the Hungarian rhapsody as we know it to-day and Dr. Cooke has carefully preserved this style in the number here presented. It opens with the *Lassu,* sometimes called *Lassan,* which is a very slow movement in the form of a lament. This is followed by the *Friss* or *Friska,* which jumps to the other extreme and is quite gay in character. It is a characteristic of Hungarian-Gipsy music to change without warning from one mood to the other. Fast to slow; sad to gay; major to minor, and so on, are all outstanding traits which can be found in this example from the pen of Dr. Cooke. Being an extensive traveler and an expert linguist, Dr. Cooke has come into direct contact with the musical idioms of many countries. This is yet another musical "impression" to add to the interesting ones that already have appeared in THE ETUDE from Italy, France, and other countries.

By obeying carefully the markings in the text it will be impossible to miss the interpretation intended for this little Hungarian rhapsody.

VOLGA BOATMEN'S SONG

Arr. by CHARLES FONTEYN MANNEY

Before playing this piece be sure to read the note preceding the music which describes in detail the origin and intent of the music itself. Begin with the *una corda* (left pedal) and while the notes are to be played *pianissimo* they must be well sustained. Do not overlook the little swell and *diminuendo* signs in many of the measures. They give the effect of a labored effort in towing the heavy barges.

As the volume increases be sure the melody is always heard above the accompanying chords. There are many parts which will stand left-hand-alone practice. Regardless of the skips involved and the complexity of the accompaniment, never must the theme be obscured or the feeling of drudgery be lost. The simple folk-song is quite descriptive in itself and the power of description must be added to, and not lessened in this advanced transcription of the famous old Russian barge-hauler's song.

THE MUSIC BOX

By L. LESLIE LOTH

Here is a waltz to be played in the style of a music box. Try to produce a thin, tinkling tone—shallow touch; and a slight blurring of the pedal is not only permissible but desirable as it helps the music box imitation. Toss off the little four note phrases in the opening measures of the first theme and apply clean finger *legato* throughout. This is especially apropos when playing the second theme which is one long, continuous running passage in *legato* eighths, played *forte* and brilliantly.

Note the *accelerando* beginning in measure 47 and continuing in effect to the very end, where the music box runs down suddenly.

NOCTURNE

By R. HUNTINGTON WOODMAN

Nocturne means night song. The title thus indicates the proper mood to create when playing this number by Mr. Woodman. The melody line is clearly indicated and must be played of course in songlike manner. Do not let the *tempo* drag. The arpeggio accompaniment gives a colorful background when played smoothly and with nuance. The broken chord figures should be rolled rather than fingered, thus producing a more "liquid" quality and blending with the melody to form a complete whole. The mood becomes more animated at measure 18 and a brilliant section in sixteenths follows, suggesting a decided stirring of the night breezes. The first theme again enters after measure 35 and with it returns the quiet mood of the opening strains. The whole piece should be played with the utmost expression.

ITALIAN CONCERTO

By J. S. BACH

The masterful oratorios, cantatas and church music of Bach all indicate a profoundly religious feeling. No doubt he was greatly influenced also by the outward symbol of his religion, the cathedral, as all his works are perfect masterpieces of form, design and structure. Bach experienced three definite forms of architecture in his lifetime; the Gothic, which preceded his birth; the Baroque period, which began shortly before his birth, and the Rococco; which evolved during his era. His ability to build musical structures on well defined patterns can be readily traced in the "Italian Concerto." Nowadays a concerto means a solo, usually in sonata form, to be played with orchestral accompaniment. In the earlier days the term was used to designate any important instrumental piece.

Keep in mind, however, that this composition was written to be played, not on a modern piano, but on a harpsichord, the tone of which was much smaller than that of a piano. Be therefore not too robust in the *forte* passages.

In this issue of THE ETUDE will be found a master lesson on this interesting composition by the renowned piano virtuoso, Mark Hambourg. Be sure to make a careful study of the analysis by this great master.

SWINGING IN THE TREETOP

By SIDNEY FORREST

This first grade piece shows the melody in the left hand throughout. The right hand plays the accompanying chords which consist of the second inversion of the tonic and the dominant seventh chord.

It should not be played too fast—rather follow the text literally, that is, "Slow and dreamily." As is usual with first grade pieces, words are supplied, thus suggesting proper atmosphere.

BIG CHIEF

By ROXANA PARIDON

The Indian theme is one that always delights youngsters and this one, wit melody in the right hand against the present tom-tom in the bass, should of unusual interest. Play it in pompous manner suggesting the di and self-esteem associated with Chiefs" in general. Let the left hand tom chords be played with dry for *staccato.* Be sure to apply all the ac indicated in the right hand part. moderately fast *tempo* at the very ning and preserve it throughout.

SANDMAN'S COMING

By ADA RICHTER

Here is another first grade tune nothing faster than quarter notes in hand. The left hand supplies a broken accompaniment against the right melody. Words are included, maki possible to do the number as a song A very easy but melodious little piece

BEDTIME MARCH

By LOUIS WEITZ

This little musical bedtime story with the chimes—heard in the left ha after which the clock strikes seven, cated by the chords in measures 5 From this point the composer very cle takes the chords as a "motif" and dev a theme in march time. It is suggested the chords be played with forearm a The theme repeats itself, first and se ending, after which the chimes are heard, the clock once more strikes and its time for Betty and Ted to bed.

An unusually interesting novelty should make an immediate appeal to youngster in the second grade.

A WALTZ IN SPRINGTIME

By IRENE RODGERS

Readers of THE ETUDE have com expect something unusually pianistic the pen of Miss Rodgers and this exception. Besides having the meri being tuneful, this number presents a c little etude in broken chords, divided tween the hands. The *arpeggio* gr should be rolled from one hand to other with the smoothness of an e juggler tossing brilliantly colored bal the air. Follow the expression marks the result will be a charming second number which will sound much more cult than it really is.

AMARYLLIS

By HENRI GHYS

Whether this old Gavotte was comp by Louis XIII or not, no one can defi say. But in any event it has been a po favorite for many, many years and charming and fresh to-day as the da was written. The gavotte is an old of French origin, said to have origi from a race of people who live Dauphiny and known as the Gavot became a popular dance at the Fr court and differed from the minuet in the dancers lifted their feet from ground instead of sliding or shufflin was the fashion up to the time of its pearance. It is very dignified and sta it is written in four-four time and b always on the third quarter of the mea

Be sure to snap the grace notes li and daintily into the principal notes w follow. Play the middle section—meas 8 to 12—with vigor and mark all acc

Hands Mixed

I have two young pupils aged seven d eight whom I started to teach in nuary. They are both bright and telligent, quick readers and otherse normally musical. They read the sic correctly, but here is the difficulty—neither of them cares whether e right or the left hand plays. metimes the right hand plays the 't hand notes, and *vice versa*. I ve never encountered such a probn before, and I have done everying I can think of to break them this habit. Can you help me?—T., Pennsylvania.

afraid I cannot help you with this em," as you call it, for I have considered it important. I have found any young children are ambidextrous efore it is of no consequence to them hand plays a series of notes. On the ry, it seems to me an excellent indi- of good coördination. If it disturbs ust try to believe that your two will soon outgrow the habit. They ably do.

Pre-School Pupils

I am a young teacher with about ree years of experience, and there a possibility of my getting a couple pre-school children for students; I am a little at a loss as to how begin. I am afraid it will not be ssible to conduct an elementary nd or rhythm class, as is usually ne in such cases. I should greatly preciate the names of a few books read, and suitable material to use. so, one mother of a little boy of two very anxious for me to do something th him; she is even willing to buy expensive toy piano which would more suitable for his hands. I perally feel the child is too young to rk directly on the piano, and sugsted the trial of a nursery where ey might have group classes in ging and rhythm. Are there any oks written about the approach to y tots of that age and what is there the way of material?—E. S., New rk.

glad that every year more teachers rting pre-school piano classes. Such , when successful, pay large re- spiritual and financial, and are the ossible "feeders." With pre-school , it is, of course, necessary to teach rudiments of music in activities away he piano; but I firmly believe in getl children accustomed to playing the as early in life as possible. Four years is none too soon, in many cases. If y of whom you write is precocious, ht well be introduced to the piano as as three years of age. But make it a strument, not a toy imitation. How- t that age you will, of course, strict- it his musical activities; play and olk songs to him, holding him on lap as you play—so that he may your hands, the notes, or the pictures music. Such a playing position is a concerting, but with a little patience be managed. Try the book of "Song " (written by my two sons when ere five and six) on him, and you will have him entranced. He will o sing, dance and conduct the songs; xt step—for him to play the tunes—llow quite naturally. All this, I re- s advisable only if he gives early ce of musical interest and aptitude. pre-school help you might examine cher's manual of "Playing the Piano," uer-Corzilius, especially pages 5 to to 16, 84 to 91; "Music for Young en," by Alice Thorn; and "How to Music to Children," by Elizabeth Newman. For the earliest beginner's books I like "Music Play for Every Day"; Ada Richter's "Kindergarten Class Book"; "A First Piano Book for Little Jacks and Jills," by Rodgers and Phillips; "Little Songs to Play and Sing," by Berenice Bentley.

Some illustrated books of folk music are the Willebeek LeMair volumes of "Little Songs of Long Ago" and "Our Old Nursery Rhymes"; "Sing Sang für's Kleine Volk" and "Sang und Klang für's Kinderherz"; "Vieilles Chansons et Rondes."

All these I can highly recommend.

Use of the Pedals

1. Would you please tell me the use and action of the three pedals of an upright piano?
2. What books should I get, that illustrate phrasing, style and interpretation from Grades I to IX?
3. What books should I use to develop the correct arm and wrist movement?
4. Is there any particular course to follow for development of octave passages?—P. D., Saskatchewan.

1. The pedal on the right is the damper pedal which, when depressed, raises the dampers from the strings preventing them from shutting off the tone. The pedal at the left, the soft pedal, in many upright pianos simply moves the hammers closer to the strings. The middle pedal of some uprights is a so-called "practice" pedal, deadening and muffling the sound so effectively that even the neighbors downstairs will not rap on the steam pipes; on others it is a "sustaining" pedal which usually acts only on tones below middle C. If one or more of these tones are played and held, with the middle pedal depressed immediately afterward, they will continue to sound exactly as though the damper pedal were used. Other tones on the piano are not affected. I wonder if any of those pianos of ancient vintage still exist in which the middle pedal releases a kind of mandolin accompaniment. What a thrill that used to be for bad little boys and girls who hated to practice!

2. An impossible question to answer. I can only recommend some material for you to look over: Christiani, "The Principles of Expression in Piano Playing;" Matthay, "Interpretation;" Adolph Kullak, "The Aesthetics of Piano Playing."

3. For you to examine: Mason, "Touch and Technic;" Matthay, "The Child's First Steps," and, "The Rotation Principle and Its Mastery;" Maier-Corzilius, "Playing the Piano (Teachers Manual)."

4. See: Presser, "Selected Octave Studies;" Rogers, "Octave Velocity (24 exercises and etudes);" Doering, "Exercises and Studies in Octave Playing, Opus 24."

An Ambitious Student

I have played the piano for eight years. For technic building I play Czerny's "Op. 299," Bach's "Two-part Inventions," and still brush over Pischna. My worst trouble in playing is blundering on wrong notes, notes not played, and being unable to play scales and arpeggios with respectable speed. I work during the daytime in an office, therefore cannot practice more than two hours at the most at night. What I wish to know is whether I am trying to advance too fast, or whether I should change teachers. My present teacher, it seems to me, does not pay enough attention to details of phrasing and pedaling, and does not seem to care much whether I strike a wrong note once in a while. I am also studying harmony and counterpoint, together with orchestration, using the following textbooks: Anger's "Treatise on Harmony, 3 vols.," and "Manual of Counterpoint"; and E. Prout's "Double Counterpoint" and "Canon and Counterpoint, Strict and Free." For orchestration I am using Forsyth's well known manual.—A. M. M., Connecticut.

I love that expression, "brush over Pischna"; and as I write this answer on one of those swift streamlined trains of the Middlewest, its soothing repetition "brush over Pischna", "brush over Pischna", goes perfectly with the smoothly purring wheels, and fills me with the same gentle drowsiness that comes over students when they practice such exercises. Try it yourself and see! And now, try repeating *this* instead: "No wonder you blunder", "No wonder you blunder", "No wonder you blunder"—and you have the answer to your first question. (It goes well with the old fashioned, flat-wheeled day coach!)

In piano playing you can never "brush over" anything. If every moment of your practice is not spent in the most intense concentration, it is futile for you to go on —especially after a day's work at the office. Blundering and inability to play at good speed are due only to lack of concentration, which means not knowing how to practice. At night you are tired, of course, therefore you should spend at most, one hour at the piano. At the end of each five minutes (by the clock) you ought to take three turns around the room. At the end of every twenty minutes, five minutes rest during which you read the newspaper, write, walk, lie down, anything but play piano. Throw Pischna out of the window; and, if your teacher cannot prescribe something better and you think he is not thorough enough, throw him ————. I mean, get another at once!

You are much too ambitious. The herculean tasks in counterpoint and orchestration which you have set for yourself are a full time, many years job, which you cannot expect to encompass. Like your piano practice, why not limit your theory work to one hour each night, devoting yourself for a year to a single one of those three subjects? By that time, if you have worked intelligently and regularly under the guidance of a competent teacher, you will be surprised at your accomplishment.

Meanwhile just keep in mind, will you not, that handy old saw—"not how much, but how well". And try too, in all you do, to be intense but not tense.

An Hour's Practice

My worst problems are, I think, timing—it is hard for me to keep even; trying to play differently—as to speed, heaviness or lightness of touch, and so on, with each hand; making runs smoothly and evenly—and, in general, playing accurately while playing very fast. My best points, I think, are that I read almost phenomenally swiftly and accurately, have a certain musicianly type of touch which my husband calls "feeling" for the piano, and find, on re-reading a piece for expression marks, that I have invariably done the right thing instinctively. There! If I were to spend say, one hour a day at the piano practicing, how should I use that hour?—D. A., Missouri.

All you need is a good, "hard boiled" instructor who will teach you how to practice; for it is easy to see that you dislike thorough, detailed work, and have come to rely entirely on your natural musical instinct. At least twenty minutes of your hour should be devoted to practicing short, concentrated finger and scale exercises, twenty minutes more to memorizing thoroughly a new piece, and the last twenty minutes to working up another piece to *tempo*. The short, finger exercises, memory processes and detailed study of rapid pieces mentioned here, all have been presented on this page in recent issues of THE ETUDE.

The Piano Class

I teach some class piano with anywhere from twelve to twenty pupils. How much time should I take out of the hour to give the pupils private attention?—R. M., Wisconsin.

A teacher who has mastered class routine usually devotes about two-thirds of the lesson time to group work, and not more than one-third to individual instruction. But even when he gives a brief few minutes "private" lesson to a pupil, he must make his criticisms so vital, interesting and general that the others will benefit.

Among the hundreds of large classes which I have attended very few were well managed; it takes a perfect paragon of a teacher—one with limitless energy, cool approach, imaginative resourcefulness, and one who is willing to spend much time in preparation for each group—to carry such a class through successfully. If you could limit your groups to six, or, at most, to eight pupils, you would get better results.

Beginning Pedal Study

How soon should the study of the pedal be commenced? Will you please give me a few ideas on introducing pedal study to children; also, are there writings dealing with the subject?—D. B. G.—Massachusetts.

In order that beginners may learn the habit of complete physical "letting go," at the same time listening intently to the tone produced, I recommend the use of the damper pedal from the very first lesson. If the student's legs are too short, get a pedal extension, or pedal for him yourself.

I begin with the following, done only with single tones or isolated chords: first, put down the damper pedal; two or three seconds later play a single tone or chord with fingers *touching* the keys before playing; the moment you hear the sound, let the arm bounce up in the air and back to the lap; hold the pedal as you listen relaxedly to the sustained sound; practice this *pp* to *ff*, with single and both hands, in widely spread positions, and in "chords" of two and more tones.

When the same chord or tone is played in the various octaves, hold the pedal through.

The "syncopated" pedal must not come until much later, just how much later depends on the progress and coördinative ability of the pupil. "Beginning with the Pedals of the Piano," by Cramm, or "The Pedal Book," by Johann Blose (Op. 35), will give you all the directions for foot work that you need. Both may be procured through the publishers of THE ETUDE.

"The present academic atti' de towards music history is scarcely calculated to bring the subject nearer to the layman."
—Paul Bekker.

The "Italian Concerto" of Bach

A Master Lesson

By the World Renowned Virtuoso

MARK HAMBOURG

Mr. Hambourg brings to these lessons a breadth of view which, in a way, reflects his own contacts with leading musical thinkers around the world. We never know whether our next letter from him may be from London, Rome, Paris. Cape Town, Calcutta, Melbourne, Buenos Aires, or New Orleans. No pianist is more traveled or more experienced in matters pedagogical. The composition analyzed will be found in the music section of this issue.

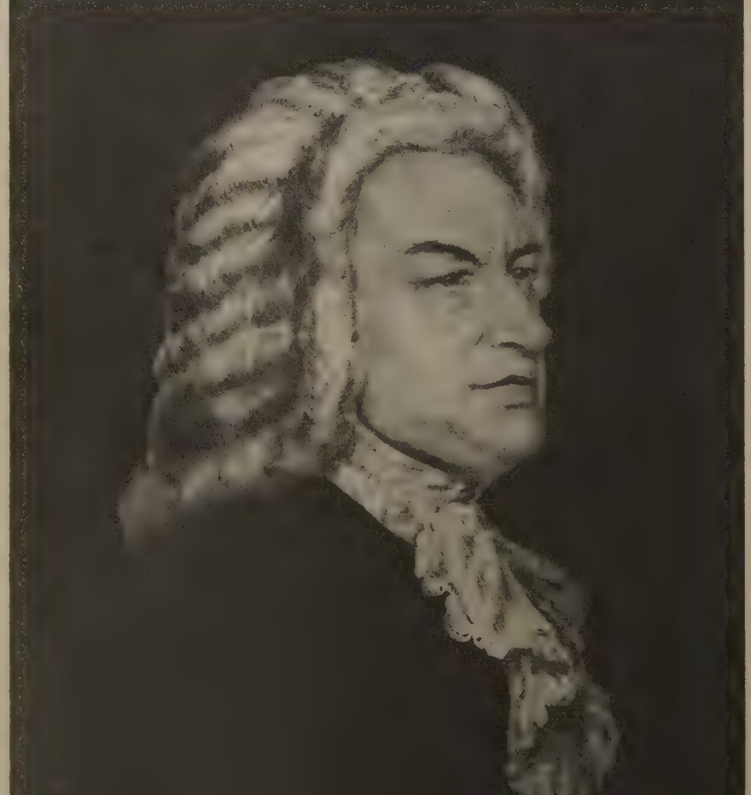
THIS "ITALIAN CONCERTO" belongs to the less severe type of Bach's compositions; in fact it shows the composer in an unusually mellow and kindly mood.

The whole of the first movement which I am annotating here, must be played without hurry; brightly, lightly, rhythmically. Yet, in the melodic passages, expression must be introduced, but without sentimentality, and without using too much pedal. The fingers must be kept very close to the keyboard in these melodic passages.

The piece opens with an energetic statement of the main theme, in the treble, with the three opening eighth notes being played *staccato* and resolutely, and the following quarter notes, in measure 2 being stressed. The notes in measure 3 should be warm with expression, and the terminating eighth notes of the phrase in measure 4, namely D and C, should again be stressed. The phrase should then end abruptly, with a quick lift of the hands off the keyboard, thus giving more significance to the pause which follows on the second beat of measure 4.

The theme starts again *forte* and gaily, a fifth higher on the dominant, in measure 5, to end again equally abruptly after the eighth note thirds, A-F and G-E, on the first beat of the eighth measure. These two thirds should be stressed as the similar ones were in measure 4.

The Soul Must Live



ON THE SECOND BEAT of measure 8 the three sixteenth notes in the treble, on C, B-flat and A, must be played *piano,* and lightly, to usher in the melodic theme which continues through measures 9, 10, 11, and 12, and which must be full of expression. A small accent is to be given on the second eighth note, G, in measure 9 of the treble; and a more prominent one on Middle C, in the bass, on the second beat of this measure. A *crescendo,* in measure 10, leads up to *mezzopiano* in measure 11, with another small accent on the second eighth note, high C, in the right hand, and again a more forcible one on the F in the left hand, as in measure 9. A further *crescendo,* in measures 12 and 13, drops again on the last half of measure 13, whilst little accents should be given in the treble, to G, tied quaver on the last half of the first beat of this measure, and F, a tied eighth note occupying the same position in the second beat.

In measure 14 the tone makes a further *diminuendo,* with an accent on the tied eighth note, E, on the second half of the first beat, and reaches measure 15 in *mezzopiano,* where the sixteenth note figures in the treble must be played very rhythmically, the effect to be as much as possible as if they were being performed with a bow on a stringed instrument. The phrase in the bass, in measure 15, commencing on the second half of the first beat with the sixteenth notes, C and D, must be brought out sharply, with well defined rhythm, and with stressing of the notes, E and C, and the bass octave C in measure 16. Measure 19 has a *crescendo* to *mezzoforte;* and in measures 21, 22, 23 and 24 there must be a continual rising and falling of tone on the sixteenth note groups, the *crescendo* being always on the second group of sixteenth notes in the measure; and the *decrescendo* on the first group of sixteenth notes. The whole of this series of passages, which begin in measure 21, and end in measure 24, should be brought out with emphasis and brilliance. In measure 25 there is another *crescendo* up to an accented F on the first beat of measure 26; and the two eighth notes, C and F, on the second beat of this measure, should be played very *staccato* and then proceed to the two accented chords in measure 27, which should sound out firmly and crisply. In measure 28 an accent must be given to B-natural, the second eighth note in the treble, and in measure 29, the bass notes should be brought out like the violoncello part in a quartet, and in strict time, but emphasizing the close of the theme.

Sound Must Echo to Sense

IN MEASURE 30 (where a new and more melodic theme is introduced, on C, the last eighth note of the measure, and in the treble), the tempo should broaden a little, and the graceful phrase in the right hand be played with singing tone, but *mezzoforte,* whilst the two eighth notes, G and B-flat, on the last beat of measure 33, in the treble, must be crisply *staccato.* An accent on the first note of measure 34 (coming after the *mordente,* or grace notes), namely B-flat in the treble, brings us to another close of a phrase; and the notes in the bass here, commencing on the second half of the first beat of measure 34, must be made prominent, so as to round off the statement and at the same time prepare for the charming development of it, which continues in *mezzopiano* until measure 39. Also, in measure 34 I take the G and F, written in the left hand, with the right hand, together with the B-flat and A in the treble. Here in measure 39 there is a little stress of the tied eighth note A, on the second half of the first beat in the right hand; and another stress of the similar tied eighth note on C, in the following measure.

A little *crescendo* in measure 41 brings us again to a close of phrase in the beginning of measure 42, where there should be an accent on the first beat of the measure in the treble, on the F, ornar by the *mordente,* and the notes in th must be brought out, as in measure measures 43, 44 and 45 the sixteen groups must be played *détaché* (deta that is to say, starting from the sixteenth note of each group, and f on to the first sixteenth note of th group, each cluster of four notes m self-contained and distinctly detached the succeeding one. Continuing to me 46, 47 and 48, the tied eighth notes i of these measures, on the second h the first beats in the right hand, m stressed; and in measures 49 and first sixteenth note of the first bea the first and third sixteenth notes second beat in the treble, should a especially brought out.

JOHANN SEBASTIAN BACH
From a marvelous steel point etching by Victor Mignot.

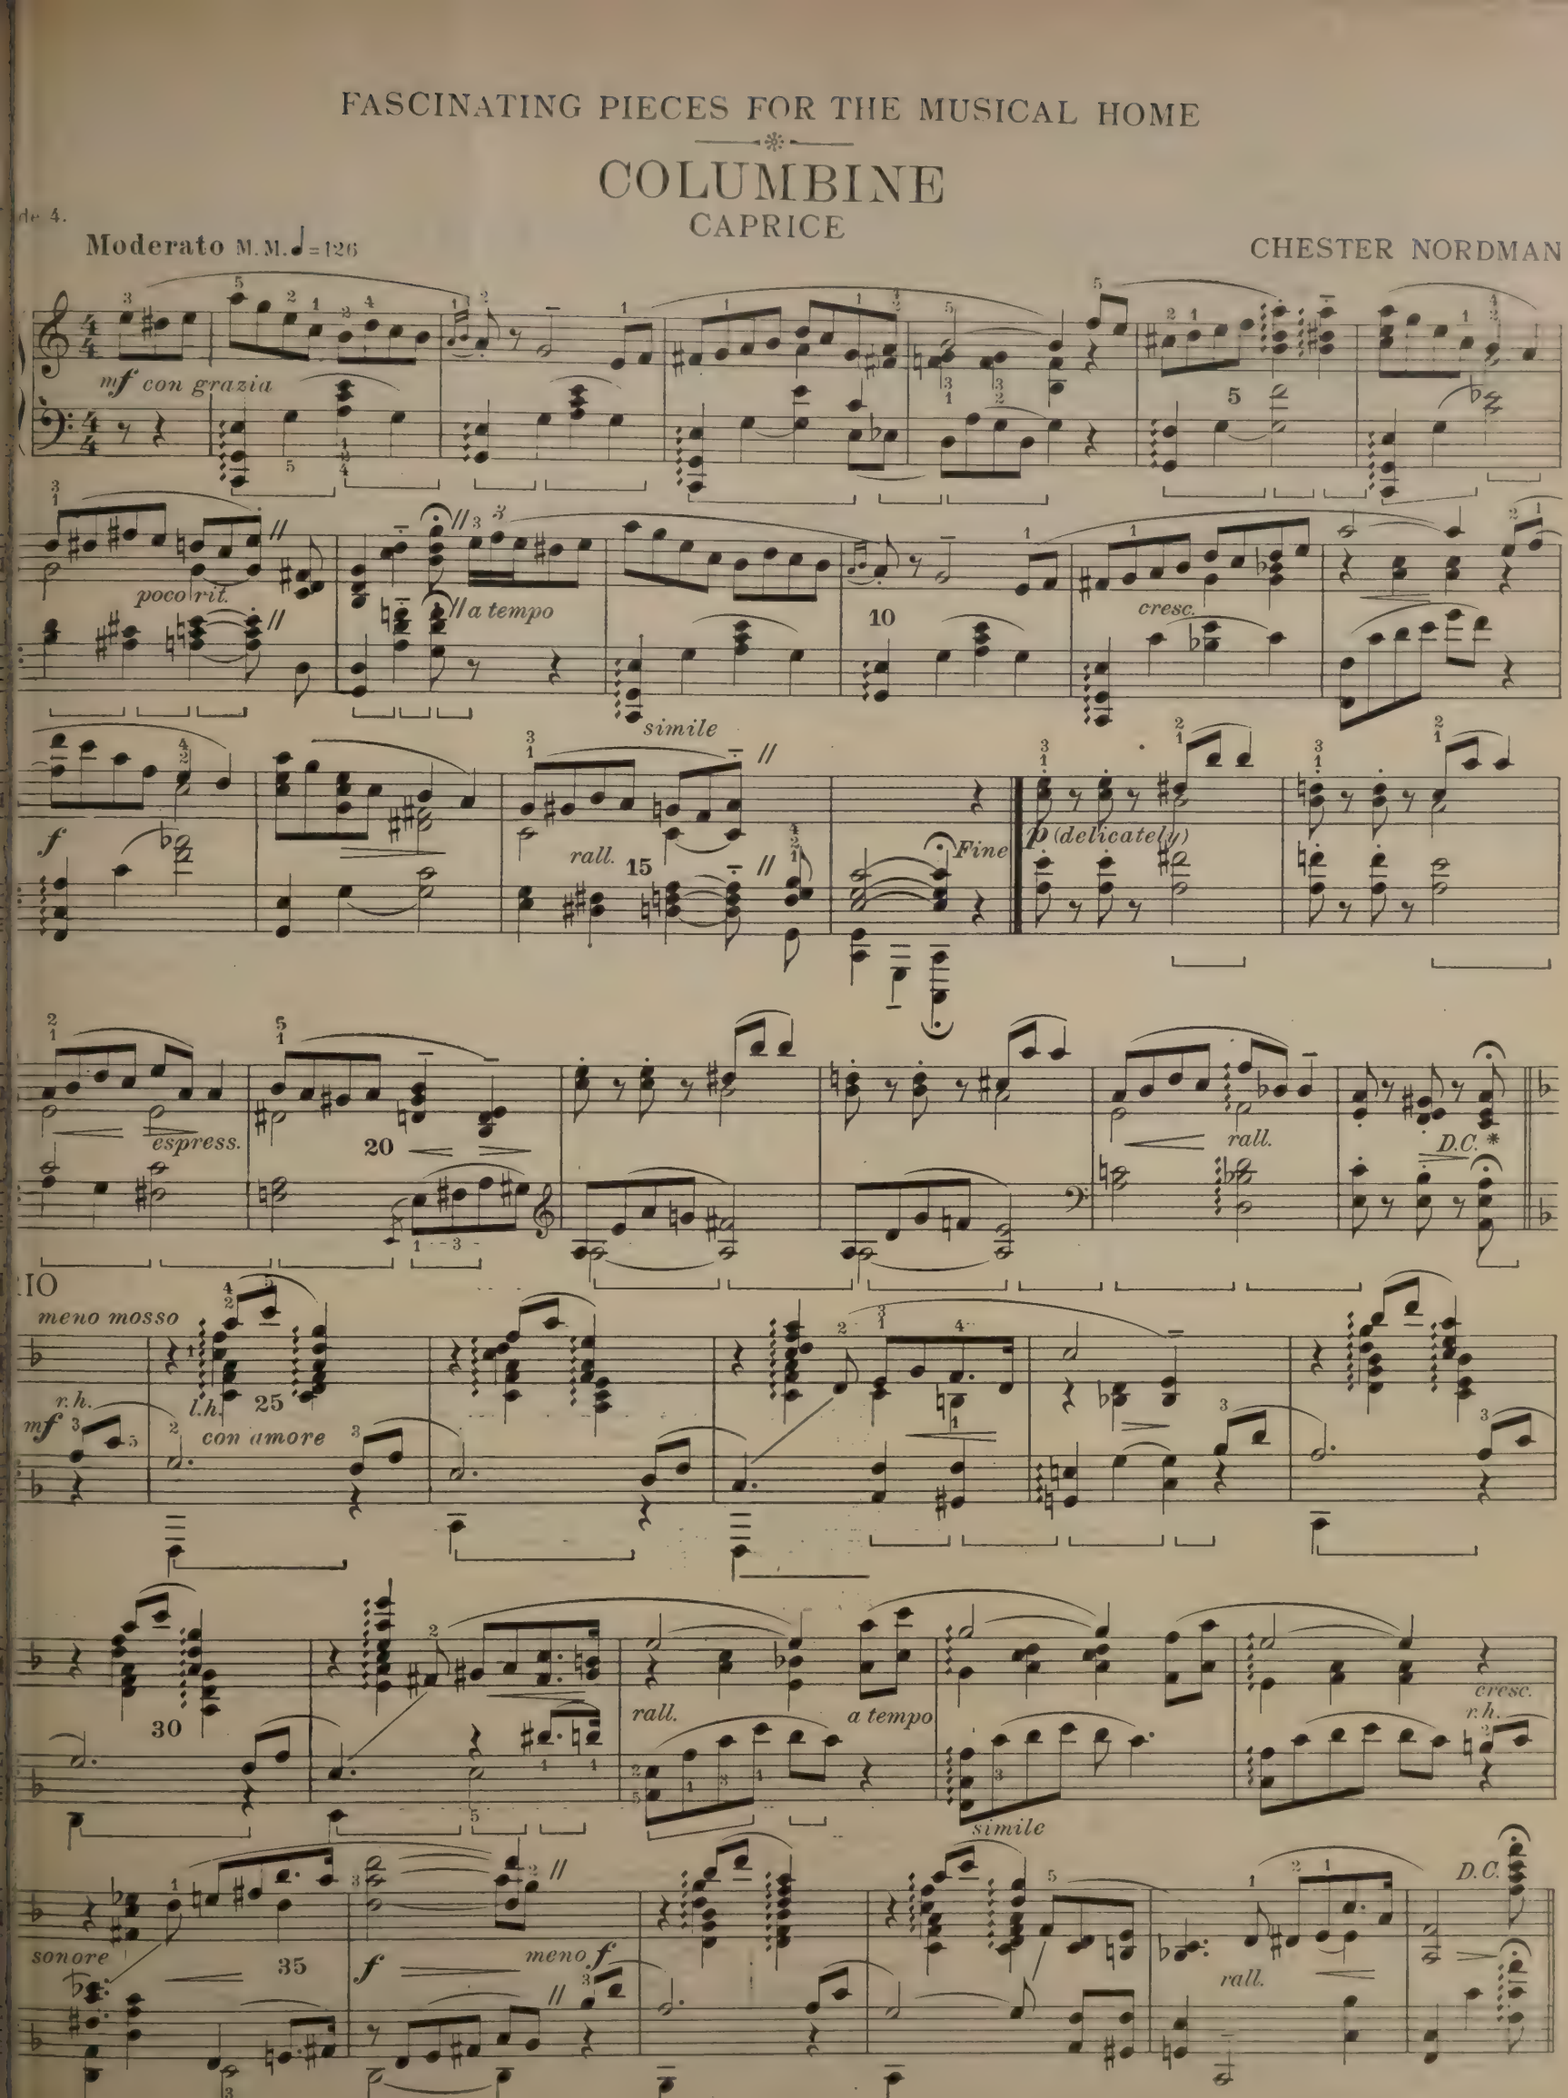
Conversational Music

HAVING ARRIVED at measure 51, I gi cents in the left hand, on the b quarter note of the second half of th beat; also on the B-natural which f the C, and on the sixteenth note C is the first note in the bass of measu A sudden *decrescendo* in measure 56 to emphasize the brightness of the when it is taken up *forte* again in m 57. Another drop in tone should be in measure 60; and the sixteenth n E-flat, D and C, in the left hand last beat of the measure—and th succeeding eighth notes in the bas on the first beat of measure 61, sound like a little question, the answe ing in the phrase in the treble in the measure, and the *tempo* being slower.

Having come to measure 65, th teenth note figures in the right hand be performed in strict time and mically. In measures 69, 70 and 71 are sixteenth note passages running bass, which should have a *crescen decrescendo* within the limits of each ure, whilst the last sixteenth note three measures, and the first sixtee the succeeding measure, must be e sized.

Continuing to measure 73, the inner ter notes—G-sharp and E—in the hand, should be brought out; and al B-natural and A, both quarter notes left hand of the next measure. Meas should be *mezzopiano,* the drop in to ing achieved by a *decrescendo* in me 73 and 74. The phrase in the left h measures 75 and 76 must sound sharply *staccato,* as also the similar p in measures 77 and 78. Also little must be given to the second sixteent of each group of four in the right of measures 77, 78 and 79. A *crescendo* in measure 85 brings us t on the high A, in the treble, on the beat of measure 86, and continues u end of the theme in measure 90. Th notes, commencing on the last eight C-sharp, in measure 88, and all th measure 89, including the first n measure 90, must be made prominet

An Eloquent Peroration



FROM MEASURE 90 ONWARDS, the piec sists of further developments of the v themes, either rhythmical or in di tonalities, but in a similar vein to has gone before. The music must th be rendered in the same manner.

VOLGA BOATMEN'S SONG

amous Russian folksong belonged originally to the peasants who lived on the banks of the river Volga. In olden times the chief occupation of easants was to pull barges and boats laden with merchandise from one town to the next; and while they were engaged in this exhausting labor g the melody which, by its strong rhythm and accents, lightened their toil. This piece should begin very softly, as though the Bargemen were hing from a far distance. Gradually increasing in volume, it should reach its climax as they pass, and then as gradually decrease and die away, disappear in the misty distance. Grade 5.

"Sugar Coating" the Scales for Sammy

By CHARLES H. MASKELL

ALMOST EVERY new student of the piano has a strong aversion to the study of scales; and it is rare that the first lesson is passed without the query, "Do I have to practice those dry old scales?"

Answer, diplomatically, "No, not for the present."

Now let the question of scales rest till an exercise or piece calls for the passing of the thumb under some finger in an ascending scalewise progression. It will be usually in the right hand. When such a situation is met, stop right there. Explain, and introduce the scale of C in the following manner. Place the fifth finger of the right hand on C, third space of the treble staff, play down to G, stop again, explain the eight notes of the scale, and ask which finger shall be passed over the thumb so that the thumb will come upon the last note of the scale at Middle C.

Pupils usually will answer correctly and be just a little "set up" by their brilliancy. Let the pupil play this descending scale three or four times, at the same time instructing him as to how it should be done smoothly and made to sound well.

Now play the left hand by placing the fifth finger on C of the second space of the bass staff. Explain that the fingering is just the same in ascending with this hand as it was for the right hand when it was descending. This greatly simplifies the whole situation; so let him play it three or four times, while you comment on any wrong fingering or hand position. Then explain again the passing of the thumb under the fingers, and how it will be used in the later part of the scale.

Now place the thumb of the right hand on Middle C and let him play the C scale several times ascending, until a certain amount of proficiency has been attained, while the thumb has been carefully watched. This will be followed by placing the thumb of the left hand on Middle C and proceeding with the descending scale, with a repetition of the fingering which was used for the right hand when ascending.

We Hasten Slowly

THIS is perhaps far enough to go for the first time. At the next lesson introduce the scale of C, with the two hands going in contrary motion. Place both thumbs on Middle C, and use the same fingering in both hands. This usually interests the pupil, as he begins to feel quite clever.

At the next lesson teach the C scale from the music, one octave only. By this time the fingering has been memorized, which helps a whole lot in this new process, for both the pupil and the teacher.

At the following lesson, teach this same scale with each hand playing it for two or three octaves. This gives a certain amount of fluency and at the same time interests the pupil. Do not attempt the two hands together in this until each has become quite proficient in its own part.

The G and the D scales may now be studied with special attention given to the fact that the grouping of the fingers remains the same as in the scale of C. Again let the work be at first with each hand alone and with the scale in two or three octaves.

We "Beat the Bugs"

NEXT will be introduced the scale of F, with a different fingering in the right hand; and this should be carefully explained. The left hand still retains the finger groupings of the scale of C.

In introducing the scale of B-flat, there will be a new fingering for each hand; and again rely upon a liberal amount of single hand practice, before venturing into the "tricks" of their combined activity.

After the scales using the finger groupings of the C model, it sometimes is well to present the Chromatic Scale. Play it for the pupil, at a rather rapid pace; and, after a careful outline and practice of the fingering, *let him try it.* He (or she) will get a deal of fun out of it.

With the scales introduced as here outlined, much hard work will be eliminated for both teacher and pupil. Perhaps that bugaboo of the scales will have been dissipated and the pupil will get a certain thrill out of a bit of display of which they may be the means.

At least it will in all probability be found to have been an easy way to tackle a hard job.

How to Make Chord Practice Interesting

By HAROLD MYNNING

PIANO STUDENTS who have not gone very far along the road of experience are apt to think that chords are easier to play than runs. But such is not the case. In fact the pianist who has a good chord technic is apt to be a good pianist. If one would learn to play good chords, they must be practiced correctly; and in this it is well to observe the following suggestions.

Be careful, when playing chords that you do not stiffen the little finger side of the hand. One way to insure the necessary relaxation is to feel that each finger is pushing the key straight down, not obliquely.

Some pianists are aided toward playing good chords by feeling they are gripping rather than playing the keys that make up the chord. But sometimes this mode of procedure tends to stiffen the wrist, so a word of warning is not amiss.

It is not unusual for students to master the art of playing chords with a relaxed arm, but still their chords may have a hard, brittle sound. This may be due to an unconscious stiffening of the shoulder blade. This should be watched. In fact when playing chords or anything else, for that matter, the whole body should be relaxed.

Listen carefully to the tone when you play chords. A good quality usually comes from listening for beauty in the tone played.

One of the most difficult technical feats is to play chords swiftly, for here rapid and often involved finger changes occur. A piece that demands rapid chord playing is Percy Grainger's delightful *Country Gardens.*

The right mental attitude has much to do with the problems in chord playing. Never believe that you cannot overcome a difficulty. In rapid chord playing relaxation is especially important. Very often one can the more easily acquire the knack of playing chords rapidly by playing very softly at first. Transposing chord passages into various keys is also helpful.

THE SINGER'S ETUDE

Edited for March by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

The Inflexible Jaw

By WILLIAM G. ARMSTRONG

TO OVERSTRESS the importance of a flexible jaw for singing would be impossible; for not only are clear enunciation and articulation dependent upon it, but also superior tone, range extension, and technical facility. Each of these is an essential of the adequate singing voice; so that, inseparable as they are, what affects one affects all others. For instance, should the tone quality be very somber, it is too heavy to be carried into the high range; and hence it becomes a drag on the height of the voice; while, should it be too bright, it becomes a lift on the depth of the voice; and in both cases range extension is restricted. Then again, the downward drag exerted by a somber quality prevents that muscular flexibility so necessary to technical facility; while the upward lift exerted by an excessively bright quality, which is always accompanied by considerable muscular contraction, also opposes muscular flexibility; and again facility suffers.

On the other hand, various tones, in the vowels, their combinations and modifications, are dependent upon muscular flexibility; for as every conceivable tone demands a different positioning of all of the organs of voice, tones will be perfectly formed only when those organs are given their proper positions; and, as it is muscles that draw the organs into position, those positions are utterly dependent upon muscular flexibility. Likewise are range extension and tone formation related; for, as range extension results from development of muscular flexibility, the same lack of flexibility which restricts range, restricts also the adjustments of the organs for different tones. Thus, lacking a muscular flexibility that would assure a full and complete adjustment of these organs for different tones, the adjustments of the organs are only partially made. Because of this, the tones, in the vowels, their combinations and modifications, lose their purity, through one of these defects: the failure of the muscles of the soft palate to close sufficiently the entrance to the nasal cavities to prevent nasality; inactivity of the muscles of the throat, which causes the tone to be throaty; an improper adjustment of the epiglottis, which, if too high, causes bright sounds to be "white" and shrill, and, if too low for dark sounds, causes the tone to be muffled, and gutteral; anyone of which is fatal.

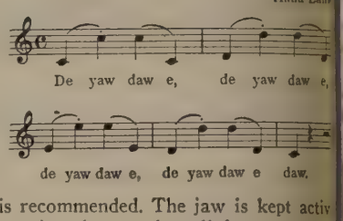
We Learn Ourselves

NOW ALL OF THE ORGANS, namely, the larynx, vocal ligaments (cords), epiglottis, tongue, and soft palate, are linked together by muscles which are, directly in some cases and indirectly in others, attached to the larynx; while the under jaw is connected with the larynx through muscles which pass from the center of the chin to the tongue-bone, which is itself attached to the larynx. Therefore, as the jaw is attached to the larynx, it must be viewed as an organ of voice, as are the muscles which attach it as parts of the muscular mechanism of the vocal apparatus. So, as all of the organs, including the jaw, are linked together by muscles, it should be readily seen how lack of activity, or excessive activity of any group of muscles, can disorganize the muscular mechanism as a whole, and the chin to larynx group in particular.

Attached as these muscles are to the tongue, and indirectly to the larynx and epiglottis, they can, when constricted, exert a pull on all of those organs which will result, firstly, in the drawing of the larynx up and away from the spine, where it must remain in order to transmit its vibrations to the chest cavity, so essential to fullness, soundness and depth of tone. Secondly, the pull upon the tongue bone can interfere with that mobility of the tongue necessary to clear articulation, and may also oppose the lowering of the epiglottis over the larynx for dark tones, which at the same time causes the tone to become harsh. Thirdly, the drag on the larynx can prevent its rising and falling for bright and somber shades of tone color, and so the tone becomes monotonous. In addition, this prevents the elevation of the larynx for *mezzavoce* tones in the high range. Fourthly, the pull on the larynx can impede the muscles of the soft palate in their effort to adjust properly the opening into the nasal cavities, and nasal tone is the result. At the same time, transmission of the constriction in those muscles to the muscular mechanism as a whole, results in a throaty tone, and also in the aggravation of registers or transitions: and all due to an inflexible jaw.

That this is the center of general muscular contraction, we would have the reader prove for himself by gripping the throat while producing a throaty tone.

Several Mischief Makers



OF CAUSES of an inflexible jaw we have malocclusion of the teeth, or, a faulty meeting of the upper and lower teeth. This causes either protrusion or recession of the lower jaw, and either prevents a free activity of the muscles of the jaw. A frequent cause of this is extraction of one or more of the "baby teeth." A second, and by far the most common cause, is speaking too hastily, and in a slipshod manner, which results in inadequate time being given the jaw to move. Then a third cause, a temperamental one, is that in which a person of a nervous, retiring disposition, speaks in a low, soft, muttering tone of voice, with action centered in the lips. In singing, a common cause is preference for tone character foreign to the construction of the vocal apparatus, in which the person, as it were, sets his jaw in determination to reach his objective.

Some of the best exercises for developing jaw flexibility will be offered. Should there be a protrusion of the jaw not caused by malocclusion of the teeth, the chin should be pressed backward gently while moving the jaw downward and upward, say fifty or more times. Should there be a recession of the jaw, it should be relaxed and exercised by repeated protrusions. Further, the jaw should be relaxed, and swung repeatedly from side to side. Also, the muscles from chin to larynx should be massaged by kneading, and by drawing the tips of the fingers across the throat from the center of the chin down toward the larynx, and upward to the ears. Another good exercise, and perhaps the best of all, is to place a finger on the larynx, with the object of noting its upward and downward action while swallowing, and then to practice lifting and lowering the larynx independently of swallowing. This is difficult at first, but with practice it becomes easy to accomplish.

Of vocal exercises the following are advised. Pick out all consonants of the English alphabet, and place one of these before each of the vowel sounds, *e, ā, ah, aw, o, oo,* forming *Be, Bā, Bah, Baw, Bo, Boo; Ce, Cā, Cah, Caw, Co, Coo;* and so on to the consonant *z.* The jaw is to be dropped as far as possible for each figure, and the action of the different organs involved in forming them should be observed and exaggerated. For instance, for the consonants *b* and *p,* the lips are most active; for *l,* the tongue; for *k,* the tongue and soft palate; for *v,* the lower lip; and so on to the last consonant, *z.*

By multiplying the twenty-one consonants by the six vowel sounds, we have one hundred and twenty-six different sounds; and, as each of these necessitates a change in muscular action, we have, toward muscular flexibility, one hundred and twenty-six different muscular movements. Incidentally, this exercise is one of the very best for the treatment of stammering.

For a second exercise

is recommended. The jaw is kept activ opening the mouth well for *yaw* and and closing it for *de;* and, as it is n easier to drop the jaw for *yaw* and than for the plain vowel sound *aw,* the fixes *y* and *d* are of great assistance. should be taken that the dropping of jaw is slightly backward, rather than ward, to prevent protrusion of the which would impede flexibility. Also tongue should lie quietly with its tip to ing the lower front teeth—this to g against a back drawing of the ton which would cause constriction around root of the tongue and so defeat the er view. Constriction around the tongue- so upsets the muscular mechanism gene that it is often found necessary to str the muscles by drawing the tongue the mouth, first to the right, and the the left, and with the aid of a handker in taking hold of the tongue.

The notes marked *staccato* in the a exercise should be lightly thrown off, the exercise transposed upward and d ward in semitones, as far as the voice readily respond.

One excellent rule to be followe singing words of more than one syll is to drop the jaw for each syllable. finally, *do not* fix the lips exaggeratedly vowels, for such will be at the expen general flexibility of the jaw.

Voice Training in Our Schools

By REVEREND JOSEPH KELLY, Mus. Doc.

Part II

A VERY NECESSARY element of expression in school singing is rhythm. Rhythm is the life of the song. No matter how beautiful the song, no matter how beautiful the tone, if the song is not sung rhythmically correct, the spirit is gone—it is dead. Even the singing exercises, no matter how simple, should not be sung otherwise than rhythmically. By rhythm we do not mean simply keeping time; what is desired is that ethereal something that must be felt, and that makes the song flow on gracefully, as the flight of a bird that calmly and gracefully beats the air with its wings. Rhythm is a manifestation of our inward feelings; it consists of the harmonious flowing of musical sound, "the order of movement." Besides the length of tone, rhythm has to do with stress, pitch, and above all, movement. It is the part of expression in music that requires constant attention in teaching children to sing, in order tha songs may become living, vital th Rhythm has its foundation in time; bu sense of the words, the progressio musical figures, the feelings brought by the words and music, all must be pressed rhythmically. It is that partic phase of teaching singing to children calls upon the musical intelligence o teacher.

In the teaching of rhythm the follo method has been found very effectiv the first year double and triple mea should be studied, one note to a beat, rests and easy syncopations. In the se year, double, triple and quadruple time two notes to a beat, note rests and syncopations. In the third and fourth y double and triple measures with four to a beat, six-eighth time and the ele of phrasing. Rhythmic gymnastics a

great value in the teaching of primary singing. By this means the children get control of the motor impulses and their sense of rhythm is developed. Early in the work beating time exercises should be introduced, and this will lead the children to use their hands instead of their feet in keeping time. It is well to proceed thus: Insist that the children sit erect. Let them raise their right hand to the right shoulder with their right elbow firmly against the body. Then beat time upon your desk, with a hard object striking the desk, and at the same time say very clearly and decisively. "Down-Up, Down-Up." Then ask the children to do the same, with their upraised hands, striking the desk each time on the down beat and the shoulder on the up beat. The whole motion must be made with the forearm, while the elbow is kept close to the body in order that an even space be covered at each beat. The movements must be very precise, for both the up and down beat. All this is done while the teacher says, "Down-Up."

When the children are able to go through this performance satisfactorily, then they should be called upon to pronounce the words "Down-Up" in union with their movements. After a satisfactory drill in this work, then, instead of using the words "Down-Up," use the words, "One-Two," one being the down beat. At first the teacher should beat time with the children, but later the children should beat the time alone. However, the teacher should continue to count with the children. Sound is necessary in these exercises, to develop the sense of rhythm; for it is the ear that must be trained in rhythmic work. In fact the results obtained will depend a great deal upon the amount of energy and enthusiasm the children put into their rhythmic work. When once the singing is combined with the rhythmic work, all noise must cease, and the motions of the hand alone should be used. Finally this can be suppressed and the rhythmic beats of the teacher's baton will suffice to satisfy the children's sense of rhythm. By this time the children will follow the rhythm instinctively.

The Vital Breath

TOGETHER WITH THE EXERCISES in vocalizing and rhythm, the children should be taught the proper method of breathing. In fact, good tone production is not possible, and this is also true of children's singing, unless there is proper breath control. The correct manner of breathing should be taught at the same time as tone production. Teachers should insist that the children take breath principally through the nostrils, so that no unpleasant gasping sounds will be heard. Teaching children to sing becomes a comparatively easy task, when all the children are taught to take breath at the same time in an exercise or song. Deep breathing also should be insisted upon, depending upon the age of the child. Unless children breathe deeply, they will sing flat. They must have enough breath back of the tone to hold it up, and to prolong it to its proper time value. Children should never sing on the fag-end of their breath.

Whatever other positions children may occupy during a singing lesson, they should always stand erect during breathing exercises; for in that position alone can effective work be done. Breathing depends much on position. It is the power back of the voice in speech and song. There is a drawing in and a letting out process of the breath, and both must be carefully considered. In the drawing in process the children should not be allowed to raise their shoulders, which they are very apt to do. The breath should be taken in by the lower part of the lungs, through the nostrils, with lips closed. The teacher should stand before the children, with the palms of the hands together, and while slowly separating them, the children should inhale through the nostrils, while they expand the lower ribs. While the teacher holds the hands stationary, the children should hold their breath, and while the teacher slowly draws the hands together, the children should exhale the breath by articulating "m" or "n" —humming on a note between one line C and one line F until all the breath has been exhaled. This is a very helpful voice production exercise, because it places the voice in the nasal cavities, its proper resonance chambers.

Song Should Echo to the Sense

CHILDREN SHOULD BE TAUGHT that the breath should be taken in as in speaking, at particular places, so that the phrasing of the song may be correct, and the sense of the words preserved. Breath in singing should be taken between phrases and sentences, if there is to be an intelligent rendering of songs. This demands, above all, deep breathing as outlined in the method already given. An excellent practice, to teach children to breathe at the proper places, is to write the words of the song on the blackboard and place a caret mark where breath should be taken. Then ask them to sing it phrase by phrase, the whole class taking breath together at the marks. The younger the children are, the more breath marks will be necessary. In order not to interrupt time and rhythm by breathing places, the breath should be taken from the note preceding the breath mark and not from the note that follows it. Four measures generally constitute a musical phrase, and two consecutive phrases constitute a musical sentence. These must be taken into consideration when placing breath marks for the guidance of children.

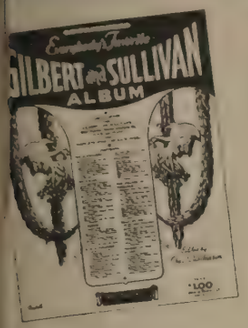
(*Continued in our Next Issue*)

The "Floating" Tone

By HESTER EVE ERICKSON

EASE OF PRODUCTION is the quality of tone which, almost more than any other, charms the ear. It is the cultivation of allowing the tone to float untrammeled on the outgoing breath which labels the coming artist.

Inhale a deep, free breath, with great care that there is no overexertion of the lungs. As this breath begins its outward flow, allow it to turn into tone on a medium pitch, listening carefully that it takes on the finest quality of beauty which you can conceive. Here is where the hearing of the great artists is invaluable to the student of singing. To listen to Flagstad as she pours out her stream of gorgeous melody should give the young singer a goal towards which to work through all her years to come.



Practice the medium tones with at first but very slight use of the *crescendo* and *diminuendo*. Make these variations of tone without the slightest feeling of stress of the nerves and muscles, but with the mere consciousness that there will be more or less of breath turned to use. The less of the voluntary act that takes place, the better. When this can be done with entire comfort on a medium tone, then very, very gradually add higher and lower pitches, till finally the entire compass of the voice can be turned to this beautiful medium of song.

* * * * *

"If you want to sing for years, do not strain the natural compass of the voice. That is like living on capital. I have always lived within my income, and I have always had something to put aside."—Adelina Patti.

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Who Wrote the First Organ Tutor?

By CLEMENT ANTROBUS HARRIS

THIS QUESTION has come often into my mind when playing from that classic of the organ chamber, Rinck's "Organ School." Indeed it was the very interesting article on this work, in a recent number of THE ETUDE, which inspired this attempt at an answer to this very interesting inquiry.

When faced with this problem, my own mind always has flown back to Bach's *Orgelbüchlein,* a collection of short movements based on chorales, and written before 1723; for in the title page it is implied that the contents were intended as educational pieces for the enhancement of the prowess of young organists. Primarily, Bach no doubt had in view his eldest and possibly most gifted son, Friedemann, born in 1710. And one also thinks of the famous eight "Short Preludes and Fugues" written for a very similar purpose. But neither of these works was strictly a school or "Tutor," for neither of them contained verbal instructions. And though a much earlier work, *Syntagma Musicum* (Treatise on Music), by Praetorius, published just a century before Bach's *Büchlein,* did contain verbal instructions, and these referred to the "treatment" as well as construction of the organ, we gather from the pictorial illustrations (which are all that the writer has seen) that these had reference to the upkeep and repairing of the instrument, rather than the playing of it. So this work is "out of court" too.

Search by Elimination

WHEN AT A LOSS to find the earliest instance of anything, we have sometimes begun with the *latest* and worked *backwards* till there was no farther to be gone. By this process we find that Rinck's monumental work was finished in 1820. Taking this as a starting-point—or perhaps it should be said, finishing post!—and searching for a preceding work, we meet with Johann Gottlob Werner's "Organ School." It was published in 1805 and frequently reprinted. A second part appeared in 1823 under the title, *"Lehrbuch, das Orgelwerk kennen, erhalten, beurteilen und verbessern zu lernen."* The author, whom, by the way, "Grove" does not mention, was born at Hoyen in Saxony in 1777 (seven years after Rinck); and from 1819 till his death in 1822 he was organist of the cathedral at Merseburg. His *"Orgelschule"*—his chief but by no means only work — was the outcome of a marked gift as a teacher.

Before opening what we may call the back door of the nineteenth century and passing into the eighteenth, we have another work to consider, and a very interesting one; namely, *"Der angehende pratische Organist oder Anweisung zum zweckmässigen Gebrauch der Orgel beim Gottesdienst,"* published in 1801. This title, Rinck, in the Preface to his Organ School, abbreviates and translates as "The commencing practical Organist." The author, Johann Christian Kittel, was the last pupil of J. S. Bach; and, in turn, Rinck was his pupil—his most famous one. Rinck was therefore a grand-pupil, so to speak, of Bach. The value of Kittel's work is shown by its being reprinted as late as 1831. He produced a number of other works for organ, piano (six sonatas) and choir; but he was more distinguished as a player, theorist, and teacher than as a composer. Born at Erfurt in 1732, and having died there in 1809, he was an exact contemporary of Haydn, as regards years. Like so many other musicians, he gave to the world a great deal more than he received from it. Had it not been for a small pension from Prince Primas of Dalberg, the "days of the years of his life," which were prolonged to seven beyond the psalmist's "three score and ten," would have been a constant and cruel struggle with poverty of the direst sort.

ORGAN OF THE CATHEDRAL, MEXICO CITY, MEXICO

Attention is called to the several groups of pipes in inverted position.

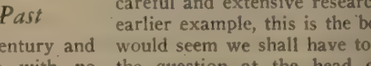
And More from the Past

ENTERING NOW the eighteenth century and searching backwards we meet with no check for five years. But at the end time we are "held up," so to speak, b tin Heinrich Knecht, and find that cannot claim to be the first organ produce a "Tutor" for his instr Born at Biberach in 1752, Knecht a fame as organist, composer, and t As a player he was regarded as only to the great Vogler. His many positions are now forgotten, exce *Tone-picture of Nature,* which anti the program of Beethoven's "Pastora phony." As a theorist he was a pio the view which regards all chords the eleventh as built up by a se thirds. This has much in common w "Day Theory" of fifty years later. carried the series up to chords of th teenth, beyond which such chords go, as they would synchronize wi double-octave. Here he interests cause of the organ school in three v which he published between the year 98, under the title, *"Vollständige schule für Anfänger und Geübtere."* cessful was this work that it was p ized by P. E. Martini, who publish edition at Paris. (This literary pili military officer, musician, and opera poser, known as "Il Tedesco (the man)," his real name having been S zendorf, must not be confused w great namesake, Padre Martini).

But the laurels cannot be giv Knecht unless, peering further do century, we find no letter press be tween us and 1723, the date of Bach' And we have but to look for eight to find Knecht's claim challenged. 1787 Daniel Gottlob Türk's "Im Duties of an Organist (*Wichtige P eines Organisten*)" was given to the Its author, a pupil of Hiller, was markably gifted teacher; but the w question does not seem to have b important as his *"Clavierschule,"* with critical comments, two years la to have attracted so much attention as Knecht's "Tutor." Nevertheles careful and extensive research shall earlier example, this is the book to would seem we shall have to point the question at the head of this

Better Hymn Tunes in the Service

By EDWARD G. MEAD



THE PERFORMING OF HYMN TUNES by organist, choir and congregation in the average church service is so often done as a mere matter of routine that a few suggestions for improvement might well be made by organist and choir for the benefit of all concerned.

So many organists seem to be content with announcing all hymn tunes generally on the foundation stops of Swell and Pedal with Swell to Pedal coupled and playing all verses for the congregation on the foundation stops of the Great with Swell to Great coupled and Swell and Great to Pedal coupled. Other organists, for accompanying, use the Grand Crescendo Pedal or the Sforzando, either of which may in some instances overpower the singing of the congregation. Furthermore, the average choir has, as a rule, formed the habit of singing all verses of hymns in the usual four parts.

To improve this situation let us see how the organist and choir may interpret two well-known hymn tunes—*Come Thou Almighty King* (*Italian Hymn*) and *Jesus shall reign where'er the Sun* (*Duke Street*), each of which is a classic of its type.

Italian Hymn

FOR ANNOUNCING THIS TUNE, draw foundation stops on Great, Swell and Pedal; couple Swell to Great and Swell and Great to Pedal. Play the three upper parts on the Great and the bass on the Pedal as written. "As written" is emphasi many organists play pedal note

an octave lower than written, feeli haps that the lower bass tones ad to the chords; but it is more in to have the chords well-balanced ing the bass notes as written. In 16′ pedal stops sounding an octav themselves will reënforce the ba

owly while the stops are being
the order of loud to soft, ap-
y Oboe and Diapasons (except
the louder and softer Strings
, leaving the Salicional or Dul-
nda Maris with which to release
the chord. A smooth *decrescendo* of stops can be made by hand, but more easily by a series of manual pistons. Set piston 4 with 8′ and 4′ foundation stops and Oboe; set piston 3 with Strings and Flutes; piston 2 with softer Strings and Flutes; and piston 1 with Salicional or Dulciana or Unda Maris.

Duke Street

SINCE THIS HYMN TUNE is broad and somewhat sustained in character, might it not be fitting to announce it in the style of solo and accompaniment? For the tune itself use the Oboe in the Swell, or one or two String stops, or any pleasing combination of Oboe and Strings. For the accompaniment use Flutes and soft Diapason tone on the Great or Choir. Couple either of these to Pedal Bourdon and Flute 8′.

Announce the tune, playing the bass part on Pedal as written. Play the first verse with the same registration as that used for announcing *Italian Hymn*. Add Grand Crescendo Pedal, if needed for support of congregational singing. Let the choir sing the first verse in unison. With the same registration, let the choir sing the second verse in parts, and third verse in descant. The fourth verse may be performed like the second, except that the melody may be brought out as a solo on the Great, with inner parts on the Swell and bass on the Pedal, without of course the Great to Pedal coupler. The fifth verse may be performed like the third and the *Amen* similarly to that of the *Italian Hymn*.

Just as variety is the spice of life, so variety in the performance of hymn tunes is the spice which makes them interesting to the three parties who share in the performance.

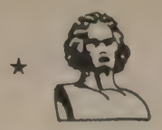
Vocal Couplers

By MARVIN ANDERSON

Y CHORUS and choir director find an interesting experiment he use of a device that might a vocal coupler. It gives to the h well blended tone that is truly

nging of four part chorales and harkable effects can be obtained g a few male voices to sing with nd soprano sections. In a small about twenty voices one male ach section is enough. It is best nusic where the bass part does high and the alto part not too der that the men singing alto singing below the basses. Where it can be remedied by making opy of the alto part for the men, sions and alterations to keep it bass, or in some cases by having sing an octave lower where the goes above the alto. The former preferable because it is less isturb the harmonic progressions. a of thus enriching the tone is not a new one. It is exactly what the organist does in drawing a sixteen-foot stop or intermanual coupler. Much eight part music produces the same effect. It must be understood, however, that in the plan here described the music remains in four parts. The male voices in the soprano and alto sections are not to be heard as separate parts; they should blend into their respective sections, beautifully augmenting and enriching them.

A most desirable addition to any choir is a basso profundo able to sing an octave below the regular bass. Here again the trained ear will notice that the sub-bass is not so much a separate tone as it is an enriching of the normal tone already in the choir. A weak bass section can be strengthened also by means of a "four-foot coupler," which is obtained by having a rich low alto sing with the basses.



For the male voice in the alto section a good strong baritone is best. A somewhat nasal baritone can be used very effectively with the sopranos.

Study and Apply New Ideas

Etude friend in a Midwestern State sent us the following:

is a real pleasure to be able to recommend THE ETUDE to my pupils. All pupils have access to the magazine and use it in some form in their work. ork includes piano, organ, accordion, and voice so you can understand use every page of THE ETUDE. I am especially interested in the new lion department, especially so since my co-worker in that field is studying ummer with Pietro Deiro.

wish it were possible for all good music teachers to know THE ETUDE. e a feeling if they would study and apply so many of the new ideas ETUDE contains they might stop worrying about the problem of new pupils. nally, I've never found it necessary to advertise for pupils as my teaching ules are always full. I attribute a great deal of this to a careful use of magazine."

Eastman School of Music
UNIVERSITY OF ROCHESTER

One of America's great institutions of music, the Eastman School offers courses in all branches of music—instrumental, choral, voice, theory, composition, harmony, education, languages, psychology, etc.—for the degrees of B.M., M.A. in Music, M.M. and Ph.D. in Music. Affiliation with the University of Rochester provides additional opportunities for study in the liberal arts and sciences.

MODERATE TUITION

Partly because of the endowment provided by George Eastman, the tuition and other expenses are moderate. Student Aid funds are available for qualified students.

COMPLETE FACILITIES

In physical equipment the School is unusually well supplied—a library of 35,000 volumes, 196 practice pianos, 18 organs, recording equipment, etc.

NBC BROADCASTS

The Eastman Orchestra, band, ensembles, and chorus broadcast over the NBC Network Thursdays at 3:15 P.M., E.S.T. Additional opportunity for performance is provided by other regular concerts and recitals.

PLACEMENT BUREAU

The School's Placement Bureau has had a gratifying success in securing professional and teaching positions for graduates and students.

ORGAN AND CHOIR QUESTIONS
Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Are there any foot exercises that can be practiced away from the pedal-board of the organ? Independence between hands and feet is desired?—E. L.

A. We have heard of practice without the pedal-board, but do not consider it very practical. Would suggest a pedal-board and bench which would provide opportunity for practice, away from an instrument. The pedals might be attached to a piano, if one is available for the purpose. For pedal technical work and independence between hands and feet, we suggest "Studies in Pedal-Playing, by Nillson; and "The Organ," by Stainer-Kraft.

Q. I am interested in organ building, as an amateur. Is there any way by which the Pallet (A) in enclosed drawing can be opened by an electro-magnet? Will you name some books that deal with electric actions in such a way that an amateur can understand them for use? Where can I obtain second hand pipes? What is the address of The American Organist?—T. S.

A. We are informed that the Pallet can be pulled with solonoid type magnet, which consumes high amperage.

We suggest the following books for your information: "The Electric Organ," by Whitworth; "Cinema and Theatre Organ," by Whitworth; and "The Contemporary American Organ," by Barnes; all of which can be obtained from the Publishers of THE ETUDE.

You might obtain some second-hand organ pipes by communicating with some of the pipe organ builders. The address of *The American Organist* is 90 Center Street, Richmond, Staten Island, New York.

Q. I am enclosing a revised copy of an organ specification. Do you think that taking the twelfth and fifteenth from the independent Octave 4′, and Dulciana, respectively, is all right? Would you prefer a Geigen Octave in the Swell, to the Salicet? I think that a Clarinet would be more useful than a French Horn, as it would not be so thick in the ensemble. If the Bourdon 16′ in the Pedal is voiced rather loudly, do you think it could partly take the place of a Diapason in the Pedal? The 16′ Contra Salicional would be a little louder than the 16′ Lieblich. Can the 16′ Salicional be mitered for a lower height?—Inquirer.

A. The twelfth, being an off unison rank, is very likely to be too prominent if borrowed from the Octave, and we should advise the extension to come from a softer rank of pipes. The choice between a Geigen Octave and Salicet is a matter of opinion and taste. Why not have both? We would not ordinarily include a Clarinet in a real ensemble combination, so that the choice between that stop and a French Horn is also a matter of preference. The Pedal Bourdon might be treated as you suggest. The 16′ Contra Salicional can be mitered, if necessary. If a 16′ Dulciana were included in place of the Contra Salicional, and a 4′ Dulciana placed in the Choir organ—with the Dulciana speaking at 16′—8′—4′—2⅔′ and 2′ you would have a Dulciana Chorus (choir organ).

Q. I am enclosing proposed specification for a small two manual organ. Would it be more satisfactory to include Great to Pedal and Swell to Pedal? Do you think the Pedal division sufficient in comparison with the others? What do you think of adding about three combination pistons to operate on any or all divisions, and duplicated by toe studs? Is it really advisable to include the crescendo pedal on a small specification such as this? I presume the synthetic stops are obtained by borrowings from other stops. Do you think they add anything to the general flexibility or tonal properties which might really warrant their inclusion?—C. F. J.

A. As the organ you specify is probably a "stock" instrument enclosed in a case, it may not be very convenient to make the changes you name. There would, of course, be some advantage in having the two additional couplers. With stops at 16′, 8′, 4′, 2⅔′, and 2′, the Pedal Organ specification ought to prove satisfactory, though of course the two couplers you suggest would improve the department. If these lers are included, the Pedal 2⅔′ and 2′ be omitted. The pistons and toe studs are desirable, if necessary space is available finances permit. There is no objection crescendo pedal being included, and there advantage in having it for use if desired synthetic stops obviate the necessity of ing the two stops necessary to produ synthetic tone.

Q. Enclosed find a copy of specifica of a two manual organ. Please name some able combinations. Will you name suitable binations for the pistons, building up soft to loud? Kindly tell me how to set combinations. Please explain purpose of juster and General Release.—N. M.

A. We will try to give you some idea tone color of the various stops as an your securing combinations. Open Dia and Dulciana represent organ tone—Dia loud, Dulciana soft. Octave 4′ is Diapason an octave higher. Violin Diapason has a of string quality included in the tone. M Harmonic Flute, Stopped Diapason and Traverso are of the Flute family—the monic Flute and the Flute Traverso be the imitative or orchestral type. The Tu Oboe are reed stops—the former of the or loud type; the Oboe probably somew Horn type but soft. The Viol da Gamb Viol Celeste are of the String family, the being an undulating stop, with the way duced by being slightly out of tune in bination with another stop—in your probably Viol da Gamba. The Vox Humana reed stop, intended as an imitation human voice. Some solo stops include Vox Humana, Viol de Gamba and Viol C in the Swell organ, and Melodia in the organ. The Dulciana may be used as an panying stop for the Swell organ solo and the Viol da Gamba as an accompa stop for the great organ Melodia. Stops 8′ are of normal pitch (same as piano); stops speak one octave higher. You mig setting your pistons as follows:

Swell No. 1. Viol da Gamba and Viol
2. Stopped Diapason, Vi Gamba and Flute Tra
3. Violin Diapason added t bination on No. 2
4. Full Swell (all stops exce Celeste and Vox Hum

For the Great organ try the following
Great No. 1. Dulciana
2. Dulciana, Melodia and monic Flute
3. Add Open Diapason to co tion on No. 2
4. Add Octave 4′ to combi on No. 3 (Tuba ad lib.

We presume the "setting" operation is
1. Draw stops desired for combination
2. Push in and hold Adjuster
3. Push in Piston on which combina to be set
4. Release Piston
5. Release Adjuster.

General Release, we presume, canc stops drawn.

Q. Having dealt with quartettes for I have suddenly acquired a chorus cho members are intelligent and enthusiast largely untutored musically. I have tri doses of sight reading, but the result been disappointing and the interest no enthusiastic. On the other hand to dev four parts by rote seems an impossibi What do you advise?—Diapason.

A. If the young people are not int in sight reading, the only thing we can is teaching each part separately when sary. This work is sometimes necessary with experienced singers. Perhaps if phasize the importance and value of a edge of sight reading, your choir will such doses as may be helpful.

Q. I have come across a small reed and am at a loss to know how to manu stops, as some of the names are strange I enclose a list of the stops and will app suggestions as to effective handling for vocal solo work, full choir accompa and Voluntary solos.—M. M.

A. You do not give the pitch of the 8′ stops produce normal pitch (same piano). 4′ stops produce a tone one higher—2′ stops two octaves higher. stops one octave lower than normal pit judge from your list that Dulciana and are soft 8′ tones: Diapason and Melodia 8′ tones: Flute, Flute d'Amour and 4′ and Harp Eolian and Piccolo 2′ tones. coupler couples notes in its range one higher, and Bass Coupler, probably one lower. "Forte" is used to increase the of stops being used. The Vox Humana Tremulant. The stops to be used for solos, choir accompaniment and Ve solos will depend on the character of age being played, amount of tone desi so forth. If you have a large choir, with passages you might use "full organ" w probably available through the opening two knee swells.

Piano Accordion Department

The Game of Teaching

By PIETRO DEIRO

As told to ElVera Collins

HE PAST MONTH has brought an interesting group of letters from accordion teachers who have prob- to be solved. Believing that the replies to them may be helpful to readers is column, they are presented in this e as a sort of potpourri of advice and nation.

e first problem submitted was what to hen a student requests, and in fact in- upon new selections at such frequent als that if the requests were granted would be no opportunity to perfect elections. This can be quite a problem, ularly if the student is abetted in his s by a devoted parent. It is the old of the pupil's wanting to play every he hears and having a large stack of , without being able to play any of it tly. The mere explanation by the er that the student is not ready for a piece does not always satisfy. Of e, this condition would not arise with tist student who takes his study seri- and sets about to learn all he can. rtunately this type is in the minority e other situation must be coped with. students did but realize it, a teacher eed conscientious when he insists upon d selection being perfected; as, from a ing standpoint, it is far less monoto- to assign new material and merely go it in a general way than it is to cor- and review old material and endeavor nvey the finer points of interpretation musicianship. Then too, if a teacher commercially minded instead of con- ious, the natural tendency would be ll as much music as possible. One er who has recently lost several stu- due to this cause has become quite uraged and writes to ask if he had change his tactics and humor the nts rather than lose them. Most em- cally No! There are ways of combat- the situation rather than admitting t. A teacher would lose his own self ct as well as the respect of his stu- if he catered to their whims. The es are that students who leave a er on this account will in due time n when they realize that the teacher working for their best interests.

Suggesting A Cure

NOW A FEW suggestions for a remedy. on as this tendency is discovered in a it would be well to insist upon all selections being memorized. Have the ict understanding that no new material be assigned until the present selection een memorized. This will require more ice time than the mere reading of the , and the student will feel he is work- or a definite goal. This extra time will e the teacher to bring out the finer s of interpretation so that when the tion is finally finished both the teacher the student can be proud of its rendi- One reason why students want to keep ging selections is because they really ve in their own mind that they play the ones they have just had.

is advisable to keep a card record of student with not only the date and e of each lesson but also a memo- um of selections assigned. Frequently st the playing of some selection pre- ly given, as students will then keep rehearsed on past lesson material lest they be caught unawares.

Accordion music libraries of the present have splendid arrangements of the greatest composers. When assigning a selection it is a good idea to draw attention to the composer and request that a brief biographical sketch be written out and brought to the next lesson. Such material is available to students at all public libraries. This will make the lessons interesting without using any of the lesson time. The reason why some students think they know a selection before they do is because they have never been taught thoroughness. Before a student attempts to play the new assignment, ask him what key it is in, what time, and so on. Then ask him to name the notes in the melodic line without looking at either the instrument or the music. It is surprising how many fail in this test, even though they have practiced the selection a full week.

Studio Recitals Help

ANOTHER MEANS of encouraging the student to perfect his selections is to have frequent studio recitals. It is best to group students of the same grade, as rivalry soon enters, with one endeavoring to surpass another. Such recitals could be conducted as social affairs with perhaps only six or seven students appearing at a time and their parents and friends invited. It is surprising how students who formerly were content to play in a sort of hit or miss fashion will soon realize the necessity of perfection. Teachers also owe it to their students to present them in a public concert at least once a year.

Another question which has recently been submitted is whether the principle of rotation should be applied by the right hand on the piano keyboard of the accordion. Yes, it will be found a distinct help and should be given to students early in their training on scales, Hanon and Czerny studies as well as velocity and other studies especially arranged for the accordion.

The mention of these books brings to mind a recent conversation with a prominent accordion teacher. Having received a fine musical education himself, he understands that diversified study material must be given to accordionists if they wish to become full fledged musicians. Ten years ago the average accordion student merely wanted to learn a few pieces. To-day he wants to become a real musician. The problem this teacher encountered was that the financial condition of some of his students was such that it was difficult for them to invest much money for music at one time. Under such circumstances it has usually worked out well if the teacher sets aside a certain amount for music during the teaching season and then permits his worthy students to have the material they need, when they need it, without paying the entire amount at one time. Small weekly payments can be arranged and few teachers have suffered any loss by such a system. The day has passed when an accordionist limits his study material to a single text book. He needs training in each phase of playing just as a pianist does. In addition to the many fine accordion text books published to-day, there are numerous

"..IT'S THE Finest Accordion I EVER PLAYED"

JUVENILES LOVE THIS NEW PETITE

Soprani AMPLIPHONIC

SO LIGHT, SO EASY TO PLAY!

*Doris Mae Door from St. Louis, Mo., with her Petite Soprani.

● This new Petite Soprani Ampliphonic Accordion, so light and small and easy to play, is *"made to order"* for the young musician. Weight reduced nearly HALF through Soprani's *exclusive* "Ampliphonic" feature. Ideal for women, too. Smaller, lighter, easier to play, yet has the full volume, tone and playing range of concert accordions.

EASY TO LEARN—Soprani assures fastest, easiest learning. Piano keyboard, volume control, one-third less bellowsing, smart new design. Transfer your piano playing almost directly to this modern instrument. Easy to teach.

TRIAL—EASY TERMS—Your music dealer will demonstrate this new accordion. Or send postal direct for beautifully illustrated book and complete details. This is the instrument you want for complete musical enjoyment. Teachers in great demand. Mail postal today sure. 192

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

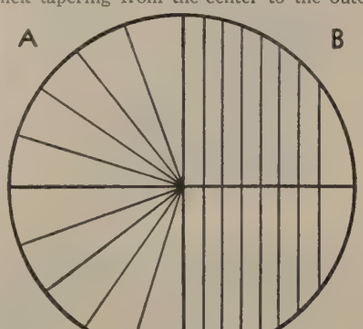
It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself.

How a Violin Is Made in Mittenwald

By MAZIE MATTHEWS

With Photographs by the Author

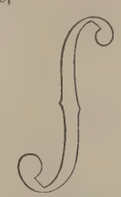
A Statue of Mathias Klotz at Mittenwald.



"AGE does not improve the tone of a good violin," said Joseph Wörnle of Mittenwald, Bavaria, who has been making models of Stradivarius, Amati, Guarnerius, Klotz and other master violin makers for the last forty years, as had his father and grandfathers before him, back to 1685. It was in 1684 that Mathias Klotz came back from Italy; his apprenticeship days in violin making having been spent with Railich at Padua. Proof of this has been found in the inscription in a true Amati violin, "that Klotz of Mittenwald along with Guarnerius, Stradivarius and Amati spent the years of 1678-79 together in Padua." To Amati is given the credit of designing the first perfect violin, and from his model masters like Guarnerius, Stradivarius, Klotz and later, Stainer built their violins.

Prior to the Thirty Years' War Mittenwald was a prosperous trading town. The wide stone road used to-day from Austria through Mittenwald was originally built by the Romans and was the chief trading route from Italy to Nuremberg, Munich and other "free cities" in Germany. After the devastation of the war, other trading routes opened and Mittenwald's popularity began to wane. The people were destitute and near famine when Klotz returned. He introduced the art of violin making, first to his brothers, then next relations; and he is known from that time as the savior of Mittenwald, for it was he who brought back prosperity to a starving people. There is a bronze statue to his honor in the center of the town.

In Klotz's time the wood for making violins was found in the immediate vicinity of Mittenwald, on the Krantzberg and Kalvarienberg mountains, but to-day it comes from farther afield. "A tree that grows on the flat land," continued Mr. Wörnle, "grows quickly because of the richness of the soil, therefore it will not have the tone producing qualities of the tree that has had to struggle for its existence against poor soil, wind, and storm. Therefore the best maple and pine is found high up on the top of the mountains, because the tree grows slowly. The tree from which the best instruments are made must be at least two hundred years old before the wood is even considered, and if older than that it is better; it must not be a dead tree, but one whose growth is finished. After cutting it is cured for fifteen years before it is salable to a violin maker."

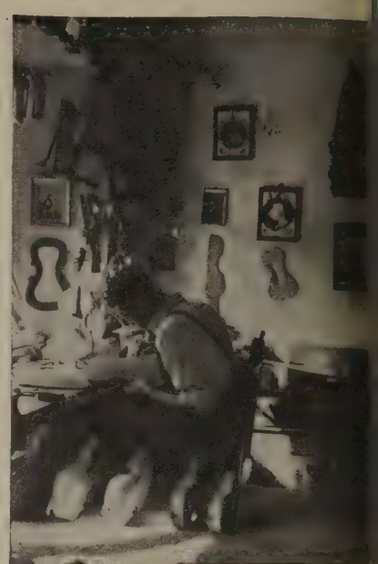


Cutting the Wood

WHEN THE WOOD is sufficiently aged, the log is quartered—for the years rings must remain intact—the pieces are chosen that are most alive (those that vibrate), each piece is cut to the length of the body of the violin and about three-quarters of an inch thick tapering from the center to the outer edge. This is then carved to shape by hand with a small one inch plane and sandpaper. The violin is symmetrical, so only half a pattern is used. Each piece of the violin, neck, back and front, when sounded with the tuning fork, must be of the same pitch. Those pieces tuning to F, are placed together, those tuning to G are placed together. Should the maple back of the violin not be of the same pitch as the pine of the top, the instrument will never be clear, and cannot harmonize. The violin makers take the utmost care and precaution that all wood will be exactly of the same pitch from the very first.

A. Showing the method of cutting wood for a back in two pieces.
B. The method of cutting wood for a back of one single piece.

The next step is the cutting of the F-holes,

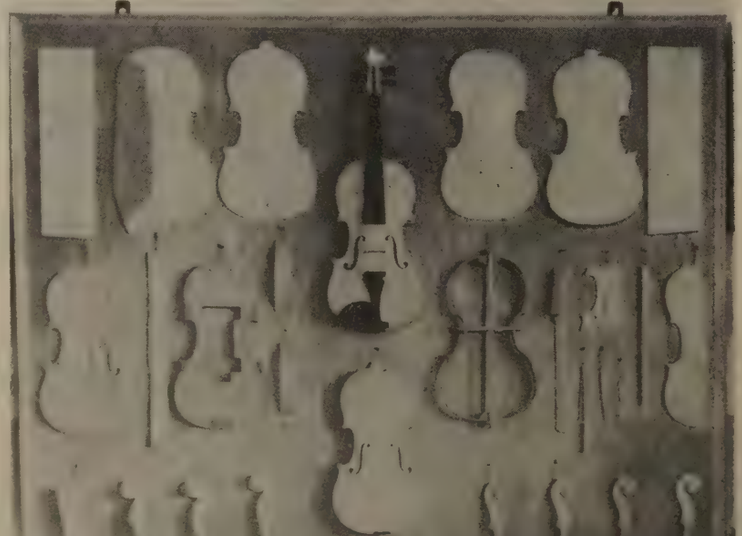


A Stradivarius F-Hole.

A Stainer F-Hole.

This is a very exacting task. Each model has a slightly different one. Some masters preferred a small straight F-hole; others made it longer and on a slant (the first one pictured is a Stradivarius). Every part has to be so exact that, when the instrument is played, it can vibrate freely, with its tone improved by this F-hole. Great care is taken in putting the lacquer and varnish around the edges and corners of the finished instrument, as all edges of the F-hole must be free to vibrate.

"Each maker," continued Herr Wörnle, "put a different cubic space in his violi The instrument made by Stainer would n be suitable as a solo instrument, because the cubic space, which is seventy mill meters; while a good solo instrument shoul have only up to sixty millimeters, in orde to give a good resonance and clear ton and not as the Stainer which has a dar tone. The Stradivarius is good sounding bu on account of the space between the ceilin and bottom has not the same qualities in big room or in an orchestra. It is be adapted to a small room."



A. Baader of Mittenwald, in his worksho where he specializes in the restoration o Klotz violins.

There are six pieces of hard maple use for the banding. This is planed or dresse down to a mere shaving, then it is place on a hot shaping iron, after which it glued together around the model board.

The groove—or what appears to be black line around the violin, and in machine-made instrument is but a blac line—is cut in so that in case the viol should have to be repaired the front back can be removed without breaking in the year rings of the wood. This tin banding that is fitted into the groove is three kinds of wood, the outer one is blac hence the dark line. Machine made violin have inner supports conforming to th shape of the violin, but the inner contour not smoothed off, consequently the ton will catch or hold in the sharp corners, an the tone becomes shrill and hard.

The Soul of the Instrument

"THEN," SAID THE MAKER, "after all th exacting work, the soul of the violin the sound post! And this, to sound perfect harmony must have from ten twelve year rings. The whole post about six millimeters in circumferen and it is made from wood which gre only one millimeter in two years. If th sounding post is one-half millimeter m

A display of the steps in violin making, as seen in the workshop of Joseph Wörnle of Mittenwald, Germany.

cumference or one-half millimeter too
the tone will be hard. If too short the
will be spongy, and if too far to the
the E and A strings will sound cor-
while the D and G will lack reson-
and *vice versa.*"

hen completely finished (except for the
er) the violin is tuned to proper
ony and lacquer is mixed; and even
will improve the sound, because, should
iolin not be "clear as a bell," it can
lanced by different kinds of lacquer,
etails of which we did not ask Herr
le to explain to us.

this mountain village, when the con-
of summer guests and cars is gone
the quiet life of the country is once
resumed, these master makers again
to work. For during the summer most
em were gathering their bit of hay,
up in the mountain pastures, for each
y owns a cow or a goat that must
be fed through the long cold months.
So his scythe and rake are the lilt of the warm summer days, but his ear is keen and his hands, though rough and weather worn, do not lose their cunning, and when snow clouds drift across the peaks of the mountains and settle over the valley, his plane and saw take up their song for the winter. It may be a model of a Stradivarius, a Gagliano, a Klotz, a Stainer; it matters not, for these artisans are qualified to make any or all.

When a violin is to be sold the instrument is "played in" for a week or ten days by a teacher in the Conservatory of Music in Munich or Vienna, who gives his opinion as to the value of the instrument. Only then, is the violin completely finished. The tone is as good as it ever will be. The artist maker has done his work. The violin has grown to perfection under his skillful hands; it awaits only the master player to give its song to the world as a singing living instrument.

Paganini from a Personal Point of View

By SOPHIE MICHEL

IN STUDENTS like to read the biog-
es of great violinists and perhaps the
vith the strongest appeal has been and
continue to be Nicolo Paganini. He
tall and angular; though according
me sketches the angles were chiefly
ed in elbows and flying coattails. Be-
the silhouette of his hooked nose and
y, straggling locks of hair, gives the
tro a Hallowe'en appearance which
nothing but the traditional black cat
broom to convert him into a witch in
dline attire, suitable enough to frighten
e. This guise accentuates only one
of the story of Paganini's success in
nding the musical world of the nine-
century—performances by means of
magic, as many superstitious people
ed. His use of double and single har-
s, the simultaneous pizzicato and bow
ges, double and triple notes, staccato
unusually wide finger stretches, all
considered so difficult in those days
only a "son of the devil," as some
him, could be expected to perform
. In fact he spent a great deal of
in composing music which he jeal-
guarded for his own use and in which
rove to introduce the greatest number
fficulties, so that the accounts of his
ny skill gave him the reputation of
g been assisted by no less capable a
nage than His Satanic Majesty.

Elson's "Book of Musical Knowl-
" however, there is a good illustration
aganini which shows him in something
approximates a hair cut, with a lovely
ead, and a warm light in his eyes,
ugh far more remarkable are the
s and the slender fingers of which the
urn up. That is my favorite picture.
e the stories about his phenomenal
reading of concertos, in manuscript
sometimes upside down; and about his
g the guitar to a Duchess of Tus-
; and the other tales about how he
ed to play whole compositions on one
; and even the tid-bits about his char-
. But I thought the most practical
mation was evident in the finger tips,
se the ten or twelve hours of prac-
tice he did in working out his technical problems are recorded there.

To the violin student this is as overwhelming a fact as was the playing of Paganini to his amazed public, for the average pupil cannot do more than three or four hours without fatigue. The only solace lies in knowing that in his later years Paganini seldom practiced, so well founded was his marvelous technic. The striver for virtuosity might find in this some consolation for his drudgery by painting for himself a rosy future in which he may play to his heart's content without the routine of practice. On the other hand, a genius like Yehudi Menuhin claims he never studies more than three hours a day; and his results are beyond doubt equal, if not superior, to what Paganini achieved, because, disregarding his extreme youth as an excuse for any shortcomings, he was hailed by critics as a *Wunderkind* (wonder child), who, in spite of his lack of grace, untutored platform manners, and heavy walk, played with the maturity of "a man of forty."

The point is, is it possible to make a virtuoso on twelve hours a day of practice? The answer comes back that no amount of toil can make a genius. We are told that for all his miraculous performance of violinistic tricks Paganini could not do justice to a Rode or a Kreutzer concerto, and that, according to Fetis, he was a master of technic and phrasing, rather than a pathetic player, that Baillot could not stand the harshness of his pizzicato, harmonics or staccato.

Paganini's counterpart in the art of painting might be Van Gogh, who could not take time off to eat a regular meal even on the few occasions that he had the money. Critics of painting are still arguing whether or not the Hollander is nothing but a hack; the same doubts might apply to Paganini whose prowess has been matched by modern virtuosi. We have nothing but what he left us in his defense; his "Caprices," bearing the dedication, probably in nomination of himself: "Agli Artisti (I am only accessible to artists)."

WHERE SHALL I GO TO STUDY?

LEHTO SUPER VIOLINS
Best Since Stradivarius
I build my violins all by HAND, like Stradivari did, out of the finest, old wood that money can buy. My varnish is the result of life long tireless research and rivals the varnishes of the Cremona Masters.—Beautiful in appearance, magnificent in tone—the kind of violin you have longed to own—for all artists. Re-built violins, all prices. Great values. Ask for details. (Proposition for teachers.)
JOHN LEHTO
Master Violin Maker
935-14TH, SAN PEDRO, CALIF.

Special
On Credit
Henning Violin
DEEP - MELLOW - SOULFUL
For a limited time you can purchase this high-grade violin, with the qualities of the finest, at a price far lower than ever asked for such an instrument; made possible by our many years of experience in violin making. Satisfaction guaranteed.

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Bowings and Vibrato.

M. C. W.—In playing passages of rapidly repeated notes, if there are no slurs, a single stroke of the bow is given to each note. Various bowings can be used. Sometimes the exact form of bowing desired is indicated in the music, and sometimes not, this being left to the performer. 2. The composer often writes in the music the exact type of bowing he requires, such as *spiccato, martelé, springing,* and so on, but usually he leaves this to the performer. It would be well for composers to indicate the bowings more frequently than they do. 3. Vibrato is a trembling quality imparted to a note or notes by a to and fro motion of the hand, from the wrist. It is very seldom indicated in the music. The sign by which it may be indicated resembles the teeth of a saw, like the following— placed over the note or notes on which it is desired that the vibrato should be used.

A Chinese Fiddle.

H. G. F.—A Chinese fiddle looks a good deal like a croquet mallet, with the hammer part covered with snake skin. It has only one string, and the tone is strongly reminiscent of the screeching of a rat, whose tail has been caught in a door. To a Chinaman, however, the tones are beautiful.

Violins by Bianchi

O. D. S.—Nicolo Bianchi was a violin maker of considerable note in France. He lived in Nice, France (also in Paris, and Genoa, Italy), between the years 1796 and 1881. Works on the violin give few details of his life. He made some excellent instruments which command prices of several hundred dollars, according to quality.

Locating Squeaks

C. D'A.—I cannot tell the cause of the squeaks and bad tones of which you complain, without examining your violin and hearing you play. This is because the trouble might come from so many causes. It might come from faulty bowing, from imperfect strings, inferior rosin, a bad job of re-hairing the bow, and many other causes. Take your violin to a good violinist, or violin maker, and he can easily determine where the trouble lies.

Stradivarius Valuation

J. S.—Antonius Stradivarius was the greatest violin maker who ever lived. A genuine Stradivarius is worth from $15,000 to $25,000, according to quality, as some of these violins are better than others. It is claimed that an exceptionally fine model has sold as high as $50,000, but this is not authenticated. There are hundreds of thousands of imitation Strads, which sell from five dollars up. Many people fondly imagine that they have real Strads, whereas their violins are only imitations, in many cases worth little or nothing. 2—Andreas Morella was not a famous maker. I think he made violins in Venice, Italy, but they are only of medium value. A relative of his, Morglato Morella, made finer instruments and hence is better known. He also operated in Venice.

Rehairing the Bow

L. E. W.—Directions for rehairing violin bows can be found in the little work, "The Violin and How to Master it, by a Professional Player." This book can be purchased through the publishers of THE ETUDE. It contains a vast amount of interesting material for violinists.

If you expect to rehair your own bow only occasionally, I would strongly advise you not to attempt to do the work yourself, as it requires a great amount of skill and experience. It would be much better to take the bow to a skilled repairer. It is very difficult to do the work well without much experience. Good repairers have told me that they could not do the work even passably well, until they had rehaired fifty or a hundred bows. If, however, you expect to learn the trade of violin repairing, the best way would be to place yourself under the supervision of a good professional repairer.

The book mentioned describes the process as well as it can be described in written words.

Studies in Double Stops

S. T.—Part Two of Schradieck's "Technical Violin School" is given to exercises in double stopping. The student can also get much valuable practice in double stops in the scales in thirds, sixths, octaves and tenths in Schradieck's "Scale Studies." 2—In his "School of Violin Technic," Ševčik has devoted Part 4 to "Exercises in Double Stops." Some of these exercises are quite difficult. 3—For beginners in double stop work the teacher could procure books of easy two part songs, or four part songs in which the pupil could play the soprano and alto parts as double stops. 4—It is impossible to say just when the study of double stops should be taken up. Some pupils are ready for them sooner than others. Almost every violin instruction book contains a certain number of exercises in double stop work. 5—Schradieck's "Technical Violin School," and Ševčik's "School of Violin Technic" are both admirable works for developing all around violin technic.

Splitting Hairs

N. H. G.—I cannot tell, without seeing your bow, what causes the hairs to split, and to break so frequently. The trouble is no doubt caused by the hair being old and worn out; or maybe the hair catches on some part of the violin or the cake of rosin, thus breaking it. You are not far from Boston, so why not send your bow to a good repairer there. Write to the New England Conservatory of Music in Boston and ask them to recommend a first class repairer to whom you can send your bow. The theory that the hair had been attacked by moths or other insects from the plush lining of the violin case might be true, but I have never heard of such a case.

So "Kitty" Loses Her Credit

By HENRY E. ELVERSON

WHEN the word "catgut" is used, as applying to the strings of certain musical instruments, it really is a misnomer; for, as a matter of fact, these strings are not made from the "gut of a cat" at all. Originally the word was "kitgut," or "gut of a kit"—the kit being a tiny violin which dancing-masters carried in their pockets.

Moreover, "catgut" is really made from the muscular coat of the intestines of a sheep, which are steeped, scoured, fermented and inflated, then cut into strips, if large, and twisted. For the smallest violin strings three strands are used; for the largest seven; and for the largest strings of the bass viol, one hundred and twenty.

The intestines of lean sheep are said to make the stronger strings, while those of sheep that have been "high livers" produce the sweeter toned ones. The finest quality of strings, and the largest quantity of them, are made in Rome and Naples.

* * * * *

Two on Parnassus

"Haydn and Verdi stand in a place to which no other great composer has entrance. They were susceptible to external influence in their old age, and they did their best work then. Haydn was influenced by the music of Mozart, his junior by twenty-four years; Verdi by some of the plays of Shakespeare, as these were put before him by Arrigo Boito, a poet, libretto writer, and composer who was his junior by twenty-nine years."—The British Musician.

FRETTED INSTRUMENTS DEPARTMENT

Edited by GEORGE C. KRICK

The Banjo

THE RISE OF THE BANJO and the other members of the banjo family to their present prominent position is one of the most interesting developments in American musical history. Although frequently called a distinctly American instrument, we must not overlook the fact that for hundreds of years in many countries of the old world, gourd shaped instruments covered with snake or sheep skin were in use. The invention of the American banjo is credited to one, Joe Sweeney, who was supposed to be the first white man to construct one and play upon it. According to the story which is generally accepted, Joe Sweeney produced so much music from his instrument that he was called a whole band in himself and was nicknamed "Band-Joe," and from this we derive the present name of the instrument. With the advent of the blackface minstrels the banjo came into its own, as no minstrel troupe was complete without a clever banjo player. Amongst the players of this period the names of Gus Mead, Tom Briggs, John Savarie and Frank Converse stand out preëminently. During the latter part of the nineteenth century a veritable wave of banjo popularity swept across the country, and everywhere banjo clubs were quite the rage. The five string banjo, plucked with the fingers, was reigning supreme; and in the course of time a number of outstanding performers appeared on the concert stage. The names of Vess Ossman, Van Eps, Fred Bacon, Frank Bradbury and Alfred Farland are familiar to all lovers of the banjo.

Farland in his prime was considered the greatest artist of them all. For many years his concert tours took him from one end of the country to the other; and his recitals were invariably sold out long in advance. His programs included many transcriptions of classical compositions, which were executed with the greatest of skill and artistic taste.

The Jazz Influence

WHILE THE FIVE STRING banjo still retains its popularity, some vaudeville players have experimented with wire strings and plectrum, in order to get a greater volume of tone; and we now have the plectrum banjo with four strings. Eventually this instrument was introduced into the dance orchestra; and most of the young banjo students now prefer this style of playing. The change from the old A notation to C, tuning the strings to C, G, B, D, also makes matters simpler for the beginner, as he is now able to read directly from the piano score. But the final blow to the five string banjo, came with the advent of the tenor banjo.

The jazz age arrived, and old and young began to dance. Small and large dance bands sprang up over night, and every one of these needed one or more tenor banjoists to supply rhythm. Teachers were swamped with pupils, manufacturers were working overtime, turning out tenor banjos selling from fifty to five hundred dollars. Publishers were printing numerous instruction books, collections of studies, solos, duets and orchestra parts for tenor banjo. Harry Reser and his Eskimos and many other banjoists were heard over the radio, and the popularity of the tenor banjo was ever up and up.

But now enters the guitar, sonorous, somewhat subdued, not as boisterous as her younger brother, the banjo, but preferred for its mellow voice, and gradually the tenor banjo apparently loses its "place in the sun."

When banjoists come together the question frequently is asked, "Will the banjo stage a comeback?" In the writer's opinion it is still here and here to stay. It is a far cry from the crude instrument of sixty years ago to the artistic creation of to-day and American youth will always succumb to the exhilarating, scintillating tone of the banjo.

Throughout the middle west, many dance bands still prefer the plectrum banjo to the guitar. In England and its colonies the banjo has never been more popular than during the past year.

It is to be regretted that the five string banjo has been neglected by aspiring concert players. Its full chords, rippling, sparkling arpeggios, snappy *staccatos*, its beautiful right hand *tremolo* with thumb accompaniment, all will bring an audience "to its feet." A clever banjoist, whether he plays the five string, plectrum or tenor banjo, is always received with open arms, be it on the concert stage, on the radio, or in private gatherings.

After all, the banjo is the instrument "par excellence" for entertainment and relaxation; and for this reason it will always attract a large following.

The prospective student should first of all place himself in the hands of a reputable teacher, one who not only is a good performer but also knows how to teach. In buying an instrument, select the best that you can afford. A cheaply and poorly constructed banjo is worse than useless and is a hindrance to the progress of the student.

The literature for banjos of every type is most extensive; and all the leading publishers are in a position to supply instruction books, scale and chord exercises, music of every variety, modern and classical transcriptions, also arrangements for small and large banjo ensembles.

An effective ensemble of banjos should include first and second banjo-mandolins, first and second tenor banjos, cello banjo and bass or guitar-banjo, with drums and traps.

In Earlier Days

IT MIGHT BE OF INTEREST to some readers to mention the instrumentation of banjo clubs during the early days. A representative group of which a photograph was recently seen, included a piccolo banjo, banjeaurine, five string banjo, and bass banjo. This combination was used extensively by professional and college clubs.

While it is true that some otherwise well informed musicians still frown upon the banjo, there are others who seem to feel that its characteristic voice should be exploited in scoring for theater or concert orchestras. The tone color of the banjo is so different from that of all other instruments, that creative musicians might find possibilities that so far have been neglected.

Percy Grainger, the Australian composer-pianist, in a published interview some years ago, expressed his opinion that "the plectrum instrument will play an important rôle in the orchestra of the future. There are superb possibilities in these instruments when used in sufficient numbers. You know the happy effect produced, when the entire

Bands and Orchestras

(*Continued from Page* 155)

ask ourselves the question, "Where do we go from here?"

Upon making a general survey of the progress made during the past decade, we find that although many of our communities have been successfully "sold" on the music program, there are too many communities in which this program has not yet been given serious consideration as an important part of the school curriculum. In other words, development, while having been rapid, has not been general. Certain sections of the country have made excellent progress, while other sections have not at all kept pace.

During clinic engagements, which in the past five years have taken the writer to practically every section of our country, we have had the privilege of observing and studying at first hand the instrumental music programs in the schools of the various states. Although in many localities this is an integral part of the general educational program, as a whole the standards of performance, aims and objectives are not in agreement throughout the nation.

In some sections we find outstanding bands and orchestras, while in others the quality of work and emphasis on better standards is rather disappointing. What are the reasons for the variation in the results, and what can be done to help unify the progress of our instrumental music program?

It is generally agreed that the majority of the outstanding school bands and orchestras are to be found in the states of the midwest. Hence we can find, perhaps, a solution of our problem if we ascertain the reason for midwest leadership in this field.

First, we believe that the tradition of excellence of the band and orchestra programs of midwest schools has left its influence upon the present day instrumental program of this section of our country. In some other sections, unfortunately, the past instrumental program leaves very little of inspiration, impetus, or achievement.

The fact that in the middle west the school band and orchestra program was adopted as an important medium of education at an earlier time is significant in that the program has had sufficient time to acquire community and administrative support. Thus in this section is found a music schedule which calls for daily rehearsals, on the regular school curriculum, and the granting of credit for the various classes offered. As a direct result of this emphasis, we find the students' interest intensified, their attitude sympathetic, and morale at a high pitch.

If the midwest does lead in worth of its instrumental music program, this leadership may be attributed, perhaps, to 1. traditional excellent standards; 2. intensive individual preparation; 3. home, school, and community interest and support. Of course, such problems as finances, geographic and other difficulties undoubtedly have their effect upon results achieved in different parts of the country, but this is the exception rather than the rule.

The Contest Feature

ANOTHER IMPORTANT feature in the development of the midwest band and orchestra has been the national contest movement. Without a doubt, this project has had its effect upon the standards of this section of our country for national contests have been held primarily in its midst (due to the fact that the midwest contains a larger number of bands and orchestras than any other section of the country). Therefore, the influence of the national contest was greater here than in other sections. These bands and orchestras were fortunate in having the opportunity to participate in the annual spring contests and festivals, thus receiving constructive criticism of competent adjudicators. These events, in spite of their faults, have been extremely beneficial, not only in motivation for the individual student, but also as a great stimulus for the individual director.

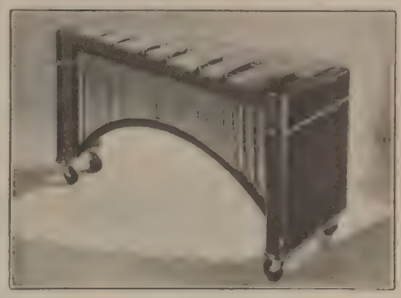
Less fortunate are other sections of the country which have not experienced the advantages of participation in these events. Up to the inauguration of the regional plan as adopted by the National Band and Orchestra Associations last year, the schools of the midwest had the "breaks" so far as the national contest was concerned. With the new regional plan in effect, however, we will undoubtedly see a more uniform development in the ideals and results obtained by our instrumental groups throughout the country.

Also, through the channels of the National School Band and Orchestra Associations, in coöperation with the National Music Educators' Conference, a more closely knit relationship between each of the ten regions and the national offices should materialize. This will enable each region to develop its own program to the greatest possible extent, and at the same time receive impetus and coöperation from the national headquarters.

I feel confident that the elimination of the national contest and the adoption of the present regional plan will have a far-reaching effect upon all of the bands and orchestras of our schools, and will prove of particular aid in the building of finer traditions, interest, standards, and support for those bands of the sections outside of the midwest.

There is much left to be done in the matter of instrumental organization and administration in the schools of the east, south, and far southwest. It is true that these sections have made remarkable development in a comparatively short time, and that they have had competent leadership. There are entirely too many schools, however, in which the music program does not have its proper place. There are too many rehearsals only after the regular school day has ended; too many students being taught on "mass production" basis; and classes of seventy-five to one hundred beginners having meetings of one to three hours per week on the average. Is it not pertinent to ask, "Where do we go from here?"

For years the slogan of the Music Educators' National Conference has been "Music for every child, every child for Music." This is indeed a worthy motto, and as a result of the excellent manner in which its inspiration has been carried out, we have to-day the most musical nation in the world, so far as the number of students actually participating is concerned. No country can boast of such a great program of music education for the youth of its land. No other country begins to carry on such an extensive plan of music education.



Yet in spite of this tremendous program we are constantly being reminded of the decided lack of participation and appreciation of music by the adult population of our country. The usual corollary of the above statement is that we are not attempting to build a nation of musicians but rather a nation devoted to the love and appreciation of good music. Granted so: Is our mission in this regard being carried out? Are we successfully cultivating a keen appreciation for good music?

After Graduation

IS THERE NOT a decided lack of professional

Music in the Dark

By BERNICE B. STEINEL

As a young girl I spent several summers with my parents at a country place away from the city electric current. In the cool of the evenings they would sit outside and listen while I played the piano. The kerosene light would not burn satisfactorily in a breeze, and to close a door or window sometimes made it uncomfortably warm. Also, the light attracted myriads of tiny winged creatures. Frequently, then, I played in a room that grew quite dark before I finished, or was lighted only by the moon streaming through a window. I soon learned that I must know *where* the note was as well as *what* it was. I found that my playing gained greatly in sureness and my self-confidence was increased.

I now use this method of practicing in a dark room, or with my eyes closed, before every public performance. It is recommended also to my pupils and they obtain highly gratifying results. It is a genuine aid in gaining poise, and it really is not so difficult. If an organist can find his pedals, a pianist should be able to find his keys without searching for them. When a composition has been mastered, including memorization, my pupils are asked to close their eyes and imagine a vast audience while playing, the larger the better because of the psychological effect on the performer. It is hardly necessary to add that the imaginary audience should not arrive before the number is well in hand, or the result is certain to be disastrous. This system develops also more freedom of the emotions.

A Romance of Easter Carols

(*Continued from Page* 145)

Oh, ladies and gentlemen that sit by the gire,
Put your hand in your pocket, that's all we desire,
Put your hand in your pocket and pull out your purse
And give us a trifle, you'll not be much worse.
Fol de diddle dum,
Fol de day!

In medieval times frivolity entered even the churches. In a cathedral of France a solemn game of ball was played by Bishops, with the congregation as onlookers. In the present day only the sublime remain of early celebrations and music. The thought, Phillips Brooks has happily expressed in his *Easter Flowers* from which we quote:

"O risen Christ! O Easter flower!
How dear Thy grace has grown;
From East to West, with loving power,
Make all the world Thine own."

The "Italian Concerto" of Bach

(*Continued from Page* 158)

measures 91 to 96 the playing must be quiet and with expression, a little *crescendo* being made in the last half of measure 92, and another one in the same place in measure 94; whilst measure 95 is again *piano*.

In measure 96 a more definite *crescendo* brings us to a new development of a spirited character, in the treble; and this must be attacked resolutely and continue in the same energetic way until it reaches double *forte* in measure 105. Having arrived at measures 107, 108, 109 and 110, an accent is to be given to each of the first eighth notes in the right hand of these measures.

The long trill, lasting through measures 112, 113 and 114, must be played as equally as possible, and as smoothly; and the sixteenth note figures in the bass of all these measures must sound out prominently below the trill, as must also the similar figures in measures 116, 117 and 118.

I make a *crescendo* in measure 128, leading up to the high A in the treble of measure 129, where there is a sudden *piano*. In measure 142 I take the last sixteenth note group with the right hand—though it is written in the music for the left hand—this facilitates the execution of the passage. Finally, in measure 162, where the passage in the right hand are brought to a loud and incisive close, the four eighth notes in the bass can be played in octaves if desired. The octaves certainly add weight and significance to this ending of the phrase which presages the end of the whole piece.

From measure 163 to the close of the piece in measure 192, the music is a repeat for note repetition of the beginning of the work, from measure 1 to measure 30, and it must be played as such. The *tempo* should broaden in measures 190 and 191, so as to announce the approaching end of the composition; and the last chords of all must be played deliberately and with a final emphasis. The whole impression of this first movement of the "Italian Concerto" should be that of gay, colorful music, pulsating with rhythm; at times, flowing; at times abrupt; but always confined within the strict pattern of the composer's design.

* * * * *

Fortunes to Music Teachers

"Never before in the history of the world has so much money been spent on musical education as is being spent in the United States at the present time. It has been estimated that $100,000,000 is expended every year for music tuition in this country, and this takes no account of the incidental items, such as musical instruments and accessories, published music and other corollaries of musical education. A few years ago there were only three musical conservatories of high rank in the United States; now there are at least a dozen with the highest standards, some of them endowed with millions of dollars."—Harold Vincent Milligan.

Question and Answer Department

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Many Questions!

1. Please list all the posthumous works pin.

(a) What is the best edition of Bach's Part Invention in E minor?

How do you finger the three voices in re 21?

What exercises can I practice other than ually on this Invention?

Has there been a master lesson in THE *on this Invention?*

(a) What is the best edition of Chopin's Op. 10, No. 1?

Should the left hand chords in measure rpeggioed?

How is the left hand fingered in meas-1-42? (d) The right hand in measure (e) The left hand in measures 54-55?

In the arpeggios in measures 64-65, may ngered 5-3-2-1?

How is the penultimate chord arpeg- that is, do both chords start simul-sly or is it rolled from the bass upward?

Where are variations of tempo per-*le?*

What exercises should I use in connec-n with this piece?

What tempo *should I use?*

How can I obtain sufficient speed?

Is there a master lesson on this piece?

(a) What is the best edition of Chopin's te in D-flat?

How do you play the right hand in res 4, 11, 15, 17, 23 and 79?

How do you pedal and finger measures 1 84?

Where are variations of tempo per-*le?*

What is the tempo *of this piece?*

What exercises should I use in per-y this composition?

Is there a master lesson on this piece?

(a) Should the ninths in right hand ure 7 first movement) be arpeggioed or

What is tempo *of first movement?*

What is tempo *of second movement?*

Should I take repeat in the finale?

Please write out trills in finale?

In measures 15, 18, 19 and 20 from end, beats remain fixed?

How do you play measure 1¼ from end?

How are the two grace notes before re 5 from end played?

What is tempo *of this movement?*

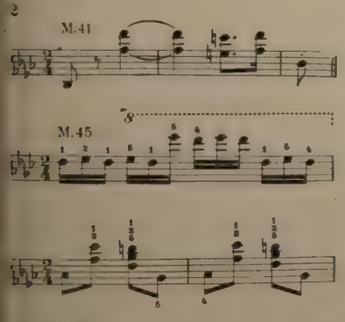
Where are variations of tempo per-*le?*

What exercises should I use?

Is there a master lesson on this piece?

—L. A. P.

1. There are about 45—too many to re.



(a) I know of no *best* edition of Bach.

.1

I know nothing better than more Bach.
Not that I know of.
(a) There is no *best* edition.
Not necessarily.

2

Yes, some editions have it so fingered.
artists make a *glissando* of this run.
Only the lower chord is rolled.
There should be very little change of

Practice scales, arpeggios, and Hanon ses in G-flat.
About ♩ = 116.
Do as much light scale practice as le.
I know of none.
(a) There is none.
In measures 4, 23, and 79 there can be a liberty taken with the last few notes of m: that is, with a *fermata* on the last note in the bass. In measures 11, 15, and 17 the three grace notes should take the time of a sixteenth note. In each case they come on the last quarter of the third count.

(c) Most players are safer in using no pedal. That is why it is so fingered, so the tones will be connected by the fingers rather than by the pedal.

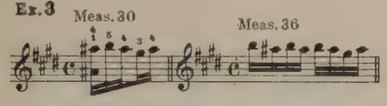
(d) It should be quite steady, but not mechanical.

(f) About M.M. ♩ = 72.

(g) It is not a question of exercises. Playing the quiet numbers from Mendelssohn's "Songs Without Words" will help you.

(h) Yes, in THE ETUDE, November 1922, and December 1924.

5. (a) You probably mean measure 8. To arpeggio this interval makes it easier to play the thumb *pianissimo* and still bring out the melody with the fifth finger.



(b) About M.M. ♩ = 52.

(c) About M.M. 𝅗𝅥 = 69.

(d) Not necessary. Many artists do not.

(e)

Ex. 3

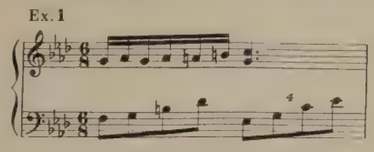
(f) Try to feel two beats to the measure.

(g) Start trill on principal note (A), trill about the length of one measure before starting run, which should be played as fast and even as possible, retarding much at the end.

(h) Which ever way you can play with the most tone.

(i) About M.M. ♩ = 160.

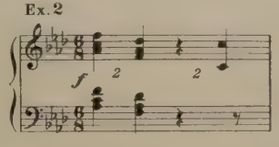
(j) There should be very little of it.



(k) A good dose of scales, arpeggios, and octaves.

(l) I know of none.

Rhythm In MacDowell.



Q. 1. In A Scottish Tone Picture *by Edward MacDowell, could you tell me how to count or play these measures? This is the seventh measure from the beginning. Just how is one to put the bass and the treble together; and how does one count the six eighth notes of the treble with four eighths of the bass?*

Ex. 1

2. Also, how would one count the following measure in six-eight time?—Inquirer.

Ex. 2

A. 1. Mechanically, that is, according to the time value of the notes, this is a case of playing two in the left hand against three in the right hand, and this means that the second of the pair of two notes in the left hand comes half way between the second and third of the three in the right. But musically it is rather a case of feeling the entire measure as two large beat groupings, the first of which is divided in the right hand into six parts and in the left, into four. Do it mechanically a while until you see how the notes fit in; then throw away the exact timing and try feeling two large groups in the measure.

2. Here again you must differentiate between time and rhythm, between the mechanical and the musical. Mathematically MacDowell made a mistake and according to the time value of the notes he should have written two eighth notes and marked them with a figure 2 to indicate a doublet. But musically and artistically his meaning is perfectly clear: he wants each of the two parts of the duple measure (6/8) to be divided into two groups of two's instead of the usual two groups of threes. Try *feeling* each measure of the composition as having two large groups, these to be sometimes subdivided into threes and sometimes, as you quote, into twos.

Tempo of Mussorgsky's Intermezzo.

Q. Can you tell me at what metronome mark the "Intermezzo" by Mussorgsky is generally played? Does the same tempo *continue to the end of the piece?*—Miss I. B.

A. I should say that the *tempo* is approximately M.M. ♩ = 126. The same *tempo* is kept throughout the composition.

Q. In Buck's Festival Te Deum, *the word "infinite" appears. What is the proper pronunciation of this word?*—B. D.

A. The dictionary pronunciation is given as in'-fi-nit, and the accents in the Buck *Te Deum* fit such use.

Opportunities in the Music Field

University Methods For Home Study

Founded in 1903 and advertised in the Etude columns since 1908

MUSIC HAS ALWAYS RANKED HIGH AMONG PROFESSIONS. THERE IS NEVER AN OVERCROWDED FIELD FOR THE WELL TRAINED TEACHER

You can get this invaluable training right in your own home, without any interference with your regular work, and at but a fraction of the cost in time and money otherwise necessary. Thousands of professional musicians, teachers and artists throughout the world owe their success wholly to the authoritative methods and the painstaking guidance of the master teachers of the UNIVERSITY EXTENSION CONSERVATORY, and gladly testify to that fact.

Raise your standard of teaching and make your own lessons worth while. With a diploma or bachelor's Degree you can meet all competition. We offer the highest class instruction to you, gained in a busy experience of 33 years. Do not imagine the lessons dry, uninteresting, and hard to learn. They contain complete, explicit instruction on every phase of music.

The scope of the service includes personal attention to each individual member while studying—all done under expert supervision.

To you, we extend an invitation to join the ranks of teachers now enrolled for our extension courses, working toward higher positions.

WHAT AN OPPORTUNITY!

You will be interested in seeing the samples that we will gladly send to you on receipt of the coupon.

A proof of quality is important for one interested in further training. We give a demonstration to build confidence. We send you regular lessons from the course. You examine these at your leisure and then decide for yourself how they can be adapted to your needs. An examination of the lessons which are sent without obligation to you, may be the means of starting you upon a career that will pay dividends in increased cash earnings.

Band and Orchestra Department

(*Continued from Page* 193)

and amateur bands, orchestras and choruses in the cities, towns and villages of America? Is there not a great let down in musical participation after students graduate from our high schools and universities? Do we not experience great difficulty in fostering community and industrial music programs? Yet all of this exists in a nation which without a doubt is the leader in music education.

The fact remains that the reason for America's lack of adult participation in music is what we might term the mortality rate among students after they are graduated from high school. Too often the love and appreciation for good music (if they have ever been actually a part of the student) die upon the day the student passes from the portals of his high school rehearsal room. What causes this situation?

Is it due to our methods of teaching? Are the people of America too busy to participate in the community music program, or is it a matter of our never truly having felt the effects of music appreciation? The writer believes it is a combination of all these situations.

Due to our system of mass education in music, we have been too concerned with the matter of "every child for music" and not sufficiently devoted to "music for every child." Perhaps we have been a bit guilty of "mob rehearsing", with a lack of attention being given to what each individual is receiving from his participation in the rehearsal.

We have been too concerned with what the child does to his music rather th[an] what the music does to the child. I ne[ver] have been very enthusiastic about abstra[ct] or artificial music appreciation. I believe the music appreciation programs that a[re] tempt to provide appreciation not so mu[ch] through listening to, as from active pa[r]ticipation in the rendition of good mu[sic]. I believe that greater satisfaction and [en]joyment are achieved through participati[on] in the playing of good music, even thou[gh] it might not be a perfect performance, tha[n] through listening to a great orchestra [by] way of the "air waves". Genuine love a[nd] appreciation is not attained by mere ta[lk] reading, or listening.

Few people have the profound inter[est] and understanding of the art of music u[n]less they have actually experienced an a[c]tive participation in its performance, a[nd] it is this thought that we wish to emphasiz[e]. When our students who yearly gradua[te] from our high schools and universities w[ill] continue in active participation in co[m]munity music programs, then I believe w[e] will promote the slogan of "Every chi[ld] for music, music for every child" to that [of] "America for Music, Music for America".

This can be brought about only wh[en] the thousands of students graduating yearl[y] will continue to perform with the technic[al] equipment and musical skill they have [so] well acquired during their school expe[ri]ences.

In the spread of adult participation in th[e] rendition of good music there lies a[n] answer to where we should go from her[e].

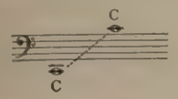
The Wisdom of a Savant

"A good music school gives an admirable training of eye, ear and hand, and imparts an accurate and faithful use of all the senses. This sort of training is a much needed supplement to the kind of education given in the public schools. . . . It is not physical training alone, but also intellectual and moral training. . . . It is by such coördination of the trained senses, acting in common with the imagination and the reasoning power, that the greatest discoveries of the human mind are wrought out, and put to do the work of humanity."—The late Dr. Charles W. Eliot.

VOICE QUESTIONS

Answered

By FREDERICK W. WODELL



No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Discretion

1. I am sixteen; is this too young to training my voice?
My lowest note is second C on the piano can go two octaves higher. Am I a bass?
sang excessively for a week, and I got hoarse. Now every morning my voice is but after I sing one song I get hoarse. should I do?—W. J.

-1. Not if you can find a careful teacher nows how to manage very young voices is yours, which is probably still in the of "changing."

We wish our men correspondents would te the compass of their voices with the notes on the staff and the bass clef. We nderstand you to mean that your com- s as follows:

would indicate that you are a bass. Voices, er, are judged by their quality, as well their compass.

Stop singing "excessively." Study with a teacher, of whom there are no doubt a er in the large city in which you live, and n regulate your work. See announcements achers in the ETUDE.

Question of Placement.

Will you please advise, through the ns of THE ETUDE, *concerning voice place-*—F. G.

The professional music critic, when g for his newspaper, of a "well placed" may be referring not so much to a mat- vocal technic, as such, but rather to a al effect by which the singer has given action to the listener. This effect may scribed as the result of a type of tone ction and emission which permits the ition of a consistently musical and ex- ive tone quality; a genuine *sostenuto* and ; an even, agile delivery of scales, pass- nd *arpeggi;* the power to shade and color the tone; and to pronounce distinctly with *finesse*.

ere is much disagreement among vocal ers and students as to "voice placement." xample, the following varied ideas have put forth:

Place tone at all pitches, in all voices, upper front mouth only; (2) at the level bridge of the nose; (3) of the forehead. th men's voices, place the upper range: p behind the bridge of the nose; (2) in pper front mouth only.

ce the lower tones, all voices, far for- in the mouth.

s a "combined" placement in front mouth "face" on lower and middle pitches, all s.

ace the notes of the top range, women's s; (1) well up in the face; (2) on the ead; (3) between the eyes; (4) at the les; (5) in the upper back head.

rtain writers strongly oppose any attempt place" the voice. To quote: "Erroneous ptions, like voice placing, lead directly terference and wrong action." "Of course mere idea of placing the voice anywhere terly fallacious." "In trying to place a physically or mentally we attempt the ssible."

ice is "air-waves." These will make their into every space that is open to them, the point of generation in the larynx, ding laryngeal, pharyngeal, buccal, nasal "head" cavities. (In this connection see Voice Beautiful," by Ernest G. White, an argument, with many photographic trations, in favor of "sinus tone-produc- ")

ngers have been trained to artistic at- nent without talk of "voice placement." rtheless, as a teaching devise, properly , that is, upon a basis of breath-con- and freedom from rigidity throughout ocal instrument, by "indirection," without opting local, direct muscular management, e-placing" has been proven of distinct e to some pupils. These have been led to ciate the production of good tone on the us pitches with certain vibratory sensa- until merely willing the appearance of sensation as known has sufficed to bring pitch and tone desired.

miliar elements of language, such as the onants *z, v, l, m, n,* and the diphthongs nd (*thing*, preceding and closely combined a vowel, are used in developing a con- sness of the location of a sensation as of l vibration.

ne voice placements are subject to slight ation and modification in location and in- ity, according to individual peculiarities, to changes in pitch, force, vowel and color one.

this connection it should be remembered a tone may feel "nasal," yet not (to the tor) sound nasal.

he *artist*, of course, thinks only of using ds and tones, combined, as a vehicle for the ression of the emotional and intellectual ent of his piece.

s a matter of fact, it is the movable, ad- able parts of the vocal instrument which, the above procedures, are unconsciously ed and conditioned.

Singers with the lower pitched and heavier voices are usually conscious of a sensation of vibration in the chest, while vocalizing. This weakens progressively as the pitch rises, or the tone lightens. It may finally disappear. It is most noticeable when the singer keeps the upper chest well up, but without strain. Most young children, and many adult sopranos, with light, high voices, are not conscious of such a sensation.

Some authorities hold that the chest does not meet the requirements for a genuine "resonance cavity."

The following volumes may be consulted for details concerning various ideas as to "voice placement":

"Polychrome Lessons" by Frederick W. Root; "Resonance in Singing" by Thomas Fillebrown; "How to Sing" by Lill Lehmann; "Art of Singing" by Francesco Lamperti, translated by Walter Jekyll, M. A.; "Position and Action in Singing" by Edmund J. Myer; "Lyric Diction" by Dora Duty Jones; "The Natural Method of Voice Production" by Dr. Floyd S. Muckey; "Science of Voice" by Douglas Stanley; and "Creative Singing" by Paul Savage.

The Ubiquitous Vibrato

Q.—I am to take a second examination for membership in a special mixed chorus within a very short time. You have helped me before, and I now ask for assistance again. On my first audition I was told that I have an unnecessary vibrato in my higher register which stands out most when I hold long tones. Otherwise the examiner was pleased with my voice, sight-reading, and so on. I was told this defect was not permanent, and could be overcome. This vibrato seems to stand out most when I am in the least bit nervous, in fact I never seem to have the trouble when at home. Please give me a few good exercises.—C. U.

A.—By your own statement your first job is to become the "captain" of your own soul. About what are you "nervous," and why? These examiners are not your enemies, but your well-wishers. They would be glad to find you of acceptable material. The tonal "wobble" is often the result of "over-blowing" the voice—what is called forcing it. Fear, however, destroys breath control. Practice your upper voice on holding tones on single vowels, and on a succession of vowels, one long note, with a firm determination that the voice shall be free from the objectionable vibrato, of which you write, at the same time resolving that the breath shall flow freely, though *very slowly*, through the throat, and that there positively shall not be even the slightest degree of stiffness of the tongue or jaw. Be satisfied at first with a comparatively light, conversational weight of tone. Look for a slight sensation of vibration in the upper front mouth upon the vowel, accompanied, on the pitch E (fourth space, treble clef) and those above, with a sensation as of vibration reflected along the cheek-bones into the upper back of the head, there rising and falling with the pitch. Keep the upper chest well up, but without strain. Above all, believe in yourself. "I can do it—therefore *I Will.*"

A Contralto's Problem

Q.—I have sung much as a professional contralto, though still a young woman. I have a large and varied repertoire. My upper E, and several tones above that, I take as head voice, and most people say they are quite musical. However, of late, when singing up in the middle register, the quality sometimes becomes rather hard, especially in broad, crescendo phrases. I have tried placing these middle notes farther forward, but not with invariably good results. I would appreciate any assistance you may give in this connection.—Artistic.

A.—As a contralto you are fortunate if you have discovered how to take your upper E in the real "head" voice quality. Do not allow a desire to get bigger tones on that pitch and above it to cause you to alter that production. Seek there for "more of the same thing," working for fuller use of the resonance resources of your voice. For the middle voice difficulty you describe, follow the example of some of the old Italian teachers who are believed to have loosened and ultimately broadened the middle range without hardening it by practicing much *downward* work, slowly, trying to keep the velvety quality and throat ease of the "head" voice, had on your upper E, throughout the downward singing to as low a pitch as possible. After a great deal of this type of singing, try carefully singing slowly in the middle range short upward scales and arpeggi, insisting upon retaining the comfort of throat experienced on the head voice production, and bringing into use more and more of the combined mouth and facial vibration, as it feels, especially when more force of tone is needed. A slight increase of *controlled* breath pressure, combined with a more full use of resonance chambers, is involved in the true crescendo upon any pitch.

* * *

"We could all double our incomes if we were prepared to substitute humbug for good, honest, scientific work."
—Sir Thomas Horder.

AN INVITATION

To Study In CHICAGO This Summer

As President of Sherwood Music School I invite you to join the hundreds of ambitious students and teachers who are planning now for a happy, worthwhile summer of study and recreation at Sherwood in Chicago. This great lake-side metropolis is cool when other cities are sweltering, and offers an abundance of opportunities for leisure-time activities. I know your summer here will be one of accomplishment and pleasure!
GEORGIA KOBER

Sherwood offers special summer courses at unusually low cost. Private instruction in piano, voice, violin, organ, cello, wind instruments, theory, composition, dramatic art and dancing. Faculty of 75.

Special short-term classes in 50 subjects, including piano normal class, teaching repertoire, class piano, master classes in violin and voice, public school music, band, orchestra and choral conducting, theory, composition, microphone technique, and many others.

Cultural and recreational advantages of Chicago include performances of the world's finest music "under the stars" at Ravinia and in Grant Park; theaters, art galleries and museums; sandy beaches, parks and playgrounds.

Dormitory accommodations, certificates, diplomas and degrees awarded. *Write today for catalog and all-expense estimate and plan for your summer at Sherwood.*

Teaching the Beginning Pianist to "Take Dictation"

By GLORIA F. PUGLEY

HAVE YOU TRIED dictation for better coördination of mind and body and for strengthening the mental capacity of your backward pupils in memory work?

If you have not, then why not give the following plan a trial? It is certain to bring results.

It may be suggested to the child that she is to play a game with you; and then you will call out a group of notes, which the pupil will play not in the formation given but in the formation specified.

For example: The teacher may call out C-E-G (the chord of C). She may ask for it to be played either as given, or she may ask that it be played in broken formation, which would be the scale of C, arpeggio formation, or she may call only one note and ask for its third, fifth, or any other number above or below. She may ask for its relative minor, arranging the notes she chooses, of course, to suit the particular needs of the pupil. Likewise, according to the advancement of the pupil, the ran notes given will number anywhere one to five or six. Sometimes it is w do some of these problems without th of the musical instrument, the pupi citing the answers.

It is really remarkable what this ty training will do for pupils; even th only a few minutes of each lesson i aside for it.

A pupil, if he is to become an ac plished musician, must be able to see his mind's eye every note which c from his finger tips. And in giving dictation you are helping him to do that thing. He must picture the positic these notes, if he is to rearrange them rectly. Moreover, once he catches o the idea, he will become fascinated b especially if he thinks the teacher is participating. And the best of the gan that both participants will share in pleasure and profits.

Fretted Instruments Department

(*Continued from Page* 192)

string section of an orchestra occasionally strums the strings; and one can imagine how a large body of instruments intended to be plucked or strummed would sound. Some new and ravishing color combinations inhere in this class of instruments."

Then, here is a paragraph from a review of the first performance of the opera, "Life of Orestes," by Krenek, whose "Jonny Spielt Auf" proved an international success: "Unquestionably the most beau and inspired portion of the score is *Ore* monologue: *Es ist Abend,* with the sl herds' song. This exquisite lyrical pas is accompanied throughout by the humm of the invisible chorus of the orches with a passage between flute and ba which is ravishing in effect and is as n in invention as it is inspired in treatme

And so the banjo's lure lives on.

Bugles Over the Hudson

(*Continued from Page* 151)

New York was the soloist. Frankly sceptical that a band could meet the demands of the complex score, she became enthusiastic after the rehearsal, and gave a faultless performance of this monumental work, before a keenly interested audience of music lovers. Many invited musical celebrities who attended were sure they had witnessed the dawn of a new chapter of varied usefulness for the military band. Lieutenant Resta's genius in scoring the accompa ment, and his brilliant interpretation ri him as one of the outstanding bandmast to-day before the public.

Everyone should come to West Point a visit. In watching parade, when you the Adjutant walk briskly forward lis for his roar of "Parade Rest!" The ri will snap. Then "Sound Off!" Listen; y will hear one of America's great ban

Piano Accordion Department

(*Continued from Page* 189)

other books of study material which are quite as essential. Each of these specializes in some particular phase of accordion instruction. The Hanon and Czerny accordion books mentioned should be embodied in the teaching curriculum of every accordion school. They should be used in conjunction with the general text book being used. Advanced velocity and dexterity books have also been written especially for the accordion student.

Pianists who are beginning the study of the accordion may have access to books which concentrate on left hand practice. These are useful as the pianist requires no particular training for the right hand on the accordion as he merely transfers his piano technic to the accordion keyboard. These books of bass solos and other bass studies are also useful for students wh left hand has not developed on a par w the right.

The study of harmony and its applic tion to the accordion bass keyboard is pr sented in a book which is most thorou The key, or answers to the problems, m be found in an accompanying booklet. T is useful for either self instruction or an aid to teachers in correcting lesson a signments on harmony. Instruction on t manipulation of the bellows has been co ered in a book dealing with that phase accordion study. Sight reading and orch tra training have been covered in individ text books on those subjects. Accordioni who have difficulty in chord progressio and modulations will find material d signed to help them in this study.

...he Cover for This Month

The cover for this month is a tribute to the celebrated French composer, Maurice Ravel, who died in Paris, December 28th, 1937. The health of this man, who had become France's foremost modern classicist, was considerably impaired in recent years. He had been afflicted ...pains in his head for a number of years ...e his passing, and his death was directly ...to the effort to relieve him through a ...is head operation.

...avel came from the land of the Basque. ...was born at Cibours, Basses-Pyrenees, ...th 7, 1875. In 1891 he became a first ...alist, after two years in the preparatory ..., at the Paris conservatoire. His later ... in the advanced class at the conserva... was under such teachers as Charles de ...ot, H. Pessard, André Gédalge, and ...iel Fauré. In 1901 he won the second ... de Rome, his cantata "Myrrha" winning ... this honor.

...avel gained recognition as the foremost ...odern French composers, but this was ... after the bold impressionism displayed ...s writings made him the center of musical ...roversies in Paris. The conventional ...ical disciples clashed with the musical ...conformists among composers, who reveled ...odern experiments in the developments of ...ical impressions, even when the effort to ... atmosphere employed frequent and sud... changes, unresolved dissonances, and bold ...onies. Ravel, however, was a gifted crea... artist, and his music was appealing be...e it had a rational quality, and his skilled ...smanship never permitted his composi...s to drift into puzzling vagueness.

...is "Bolero" is his most famous work, and ...most symphony orchestras the world over ... featured it on their programs. His opera ...leure Espagnole" was produced at the ...s Opera. Some of his smaller works de...ing of mention are his "Jeux d'Eau," ...roirs," and "La Valse," for piano, his ...psodie Espagnola" for orchestra, his ...ing Quartet in F," his "Piano Concerto for the Left Hand Alone," and his "Scheherézade" set for solo voice and orchestra.

Ravel made concert tours of Europe, England, and the United States. His American tour was in 1928. Besides his conducting appearances at that time he appeared as a concert pianist, and assisting in his recitals were Samuel Dushkin, violinist, and Lisa Roma, soprano.

Ravel never married. His brother, Edouard, was with him when, at the age of sixty-two, Maurice Ravel drew his last breath in the early morning at the private hospital where he had undergone the operation.

Orchids from Broadway

• THE ETUDE recently received a lovely bunch of "orchids," as Walter Winchell, who made the word synonymous with applause or bouquets, calls them. They came from the Radio City Music Hall, not exactly on Broadway, but very near to it. The largest theatre in the world produced upon its stage a dramatization of *The Magazine Rack* including in the series L'ILLUSTRATION of Paris, PUNCH of London, LIFE of New York, and THE ETUDE of Philadelphia and everywhere. The screen on the huge stage and the programs in the visitor's hands, announced that the next number would be a tribute to America's oldest and best-known music magazine, THE ETUDE. The symphonic orchestra of one hundred seated in an orchestra pit, the floor of which is lowered and raised by hydraulic lifts, came to stage level; Erno Rapee's fiery baton flashed and a splendid arrangement of the music of Gounod's Faust was performed to the applause of the 6,400 auditors (25,000 a day). In addition to this, the event was repeatedly announced over the air and through the daily press to many millions, all of which made us very happy and made us want to tell you about it, because you have manifested such splendid interest in THE ETUDE and the achievements of its publishers. The world just now is again in a grand mix-up, but we are striving to forget the unchangeable past, realize the wonderful now, and anticipate the glorious future in our efforts, through THE ETUDE, to contribute more and more to your musical progress, prosperity and happiness.

Music for Commencement and Graduation Exercises

One of the most important days in the life of the earnest student is that set aside for graduation, and music in one form or another is naturally associated with the event. Individual music students as a rule will be guided by their teachers as to numbers to be selected for performance, but there is much that it is possible to do in the way of ensemble playing or choral work on the part of groups of players, or singers, that will lend color and interest to the occasion.

It is quite needless for us to outline or suggest programs as these will depend upon the special conditions confronting those who may be responsible for their planning; but we are happy to offer help in selecting suitable things for solo work, piano and ensemble numbers for two or more performers, also part songs in every practical combination. A liberal assortment of any designated classification will be sent promptly on request with full return privileges if application is made to Theodore Presser Co., Philadelphia. Our well-known Selection Service is always available. Those who prefer to receive circulars or catalogs in advance will be accommodated. Just mention "Commencement Music" and tell us something about your needs.

Changes of Address

When changing your address, be sure to write directly to this office advising us at least four weeks in advance and giving both old and new addresses. This will prevent copies going astray.

Easter Music

While many choirmasters and church music committees have selected the music for this year's Easter Program some may have been delayed. For these we suggest the helpful service of the "On Sale" plan, created by the Theodore Presser Co. and offer a few suggestions in easily-prepared material.

Everlasting Life (Forman) (60c), *He Lives, the King of Kings* (Risher) (50c), and *Life Eternal* (Dale) (60c) are cantatas that require no great amount of rehearsing on the part of an average volunteer choir.

A brand new anthem has just been published which easily may be learned—*Hymn of Joy* (Catalog No. 21328) by Louise E. Stairs (12c).

For the Good Friday services there is a new arrangement for treble voices-three part of Rodney's well known solo *Calvary*. This has been made by the Philadelphia organist James C. Warhurst, whose many settings of devotional numbers for choirs of women's voices have been used extensively.

Of course, the publishers gladly will supply a copy of *Folder P-1* giving a complete list of Easter Music publications, but if time doesn't permit selection from a catalog just ask for material for examination, stating the needs of your choir, the number of members, their capabilities and any other information you think may help in making an intelligent selection. Presser Service is invaluable when time is short.

One-String Solos

For Violin Beginners

By Kate LaRue Harper

Similar to the five-finger pieces of the pupil in the first grade of piano playing is the material in this unique new work for the violin. Fascinating story texts and charming illustrations make these miniature melodies most attractive to young violinists, serve to inculcate a feeling for rhythm (especially valuable in class teaching) and make the average youngster just want to learn to play the violin.

The book may be used supplementary to any violin instruction book. Only three fingers and the open strings are used, as the beginner has difficulty in placing the fourth finger at first.

One-String Solos will be published in two volumes—the violin part for the young players, the piano part for the teacher, or accompanist. The volumes will be printed in the convenient oblong size. In advance of publication single copies of the violin volume may be ordered at 15 cents; of the piano volume, 20 cents, postpaid.

Fourth Year at the Piano

By John M. Williams

With the same painstaking care that has characterized all of his work and which has made his published books so popular with teachers, the author is now putting the finishing touches to his latest study material offering. This consists of careful arranging and skilful editing of piano pieces that students enjoy playing and their relatives and friends like to hear.

There has been a considerable delay in the publication of this book, the cause of which has been explained in previous issues of THE ETUDE, but our editors assure us that advance subscribers will feel well repaid for their patience when their copy is received.

Orders for single copies at the special advance of publication cash price, 50 cents postpaid, still are being accepted. The sale of this book will be confined to the U. S. A. and Its Possessions.

Child's Own Book of Great Musicians

Brahms—Tschaikowsky—MacDowell

By Thomas Tapper

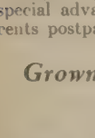
The influence of the radio upon the appreciation of music by the general public is well exemplified in the announcement of the forthcoming publication of these three booklets. Time was, and not so long ago, when only adult concert-going cosmopolitans were privileged to hear the works of these great modern masters. Now, almost any school child can recognize, not only the tender Brahms *Cradle Song*, the Tschaikowsky *Waltz of the Flowers*, MacDowell's *To a Wild Rose*, but they're hearing and enjoying the *Symphonies* of the first two composers and the larger orchestral works of our own American genius.

Naturally, a desire to know more of the men who wrote this fine music is evident. Music educators for years have been asking the publishers to add to the *Child's Own Book Series*, the thirteen previously published booklets having been so successful in creating and stimulating musical interest in pupils.

The Theodore Presser Co. is pleased to announce the early addition of the Brahms, Tschaikowsky and MacDowell booklets and, while they are in preparation, offers teachers an opportunity to become acquainted with their merits by accepting orders for single copies at the special pre-publication cash price, 10 cents each postpaid, 25 cents for the set of three. This special price applies to the three new books of the series only—Brahms, Tschaikowsky and MacDowell. The thirteen previously published books are priced at 20 cents each.

Little Pieces from the Classic Masters

For Violin and Piano
Compiled and Arranged
***By* Leopold J. Beer**



For many years the interesting selections from the classics have been the most familiar, due to ceaseless repetition in one edition after another. Such an excess of repetition was bound to have but one result—lack of interest *because* of the constant working over of the same material. Hence, instant relief and return of interest was felt as rich melodic numbers were gradually unearthed from the older and in some cases less known composers.

Leopold J. Beer, a competent composer and teacher long identified with musical life in Vienna, has been especially successful in this department of research, and has furnished us with a choice number of musical gems from the following old-time masters: Purcell (1658-1695), François Couperin (1668-1733), Rameau (1683-1764), Bach (1685-1750), Handel (1685-1759), Gluck (1714-1787), Kuhnau (1667-1722), and Louis Couperin (1630-1665). Every selection is a masterpiece of inspiration and is carefully bowed and fingered for the violin in both first and third positions. The collection cannot help but be of great value and interest to both teacher and pupil.

Single copies may now be ordered at the special advance of publication cash price, 35 cents postpaid.

Grown-Up Beginner's Violin Book

By Maurits Kesnar

Musicians engaged in community social work, and many directors of high school orchestras, complain of the lack of available players for the violin section of their beginning organizations. And when they do find young folk of the teen age, or older, willing to take up the violin, they are faced with a dearth of study material that is practical and interesting.

The author of this book has had thorough experience in the work, being one of the leading educators of the Middle West. His method utilizes the Middle C approach, giving careful directions as to details of fingering, bowing, etc., frequently simplified by illustrations and charts which carry the student into the playing of a fair sized repertoire of attractive numbers, including arrangements of folk songs and dances, as well as some choice original numbers of contemporary composers.

A single copy of *Grown-Up Beginner's Violin Book* may be ordered now in advance of publication at the special price, 40 cents postpaid. The sale of this book will be confined to the U. S. A. and Its Possessions.

A Series Welcomed by Music Educators

The Etude Historical Musical Portrait Series Is Proving Helpful Alike to Student, Teacher, Performing Artist and Music Lover

The diversity of uses for *The Etude Historical Musical Portrait Series* is revealed in the letters received by the publishers from all types of individuals interested in music.

Pupils in music appreciation classes find these 44 portrait-biographies invaluable in making scrap-books; teachers of history in the schools and even private teachers of the piano, violin, and other instruments keep constantly at hand copies for reference. Artist performers base their program notes on the information given in these picture-biographies. Music lovers have said that this is the first page they turn to when their copy of the journal arrives.

While the preparation of this page entails considerable research, and no little correspondence, the publishers gladly assume the expense, feeling that here is a distinct contribution to the music-loving public, a work that when completed, will be cherished by its possessors.

Incidentally, it may be well to remind our readers that it is not necessary to mutilate copies of THE ETUDE to secure a complete, compact volume of the series. As each page appears an extra quantity of it is printed and these copies may be obtained at the nominal price of 5 cents, postpaid.

Reward Cards for Music Pupils

(Second Series)

In response to numerous requests that additional composers be added to the set of *Reward Cards* issued some years ago by Theodore Presser Co., we are pleased to announce a second series of sixteen cards, representing classic and modern composers not included in the original set.

As many who have used these cards in the past will know, each card in the series is devoted to a composer, having on one side a beautifully colored photograph of the composer and his birthplace, or other scene of interest, and on the reverse side a short biography, with a fac-simile of the manuscript and autograph of the composer. This furnishes a condensed and illustrated "story of the composer" which will serve many useful purposes in the music studio.

Among the composers to be included in this second series are Georges Bizet, Cecile Chaminade, Claude Debussy, Antonin Dvorák, Edward Elgar, Christoph W. R. von Gluck, Edvard Grieg, Edward MacDowell, Jules Massenet, Moritz Moszkowski, Modest Moussorgski, Giacchino Rossini, Anton Rubinstein, Camille Saint-Säens, and Jean Sibelius.

The complete set of sixteen cards of the Second Series may now be ordered in advance of publication at the special price of 35 cents a set, postage prepaid. As has been the custom with the First Series of Reward Cards, a Prize Card, reproduced from steel engravings, will be included in each packet of these sixteen new Reward Cards. The Prize Cards are sold separately at 10 cents each. Complete sets of the First Series, including Prize Card, 50 cents, postpaid.

Master Pieces with Master Lessons

For the Piano

Despite the time devoted to lectures and the teaching of classes the acknowledged authorities on, and world famous exponents of, piano playing, personally can have only a comparative few before them in their presentations. Even then it is only the unusually-gifted person who is able to retain accurately even the high-lights of a lesson or of a recital performance.

If however, many earnest students of piano playing feel that what they can glean from such sources is worth the dollars each spends for recital admissions, or master lesson courses, think of the value to such strivers for pianistic perfection there would be in a book giving playing details of classical piano pieces carefully keyed with accompanying complete reproductions of those pieces.

That is exactly what this collection will give. Thousands, who never could get to a metropolitan center for lessons or recitals, may with this book study how to render intelligent and artistic interpretations of piano compositions by Chopin, Bach, Handel, Mozart, Liszt, Schumann, Schubert, Brahms, and Mendelssohn. The analytical lessons on these master compositions are by such celebrated authorities as Moriz Rosenthal, Mark Hambourg, John Orth, Sigismund Stojowski, Edwin Hughes, Katherine Goodson, Walter Spry, and Victor Biart.

The advance of publication cash postpaid price on this book, for orders placed now, is 50 cents a copy.

A Child's Journey

Rote Songs For Primary School Activities
***By* Ada Richter**

Delightful rote song material for use in primary grades is offered in this unusual collection of original songs by Ada Richter. The sixteen songs making up the book illustrate definite experiences of the school child, and all are woven into a story which represents a child's journey on a holiday.

Before setting out on his journey, the child visits *At the Barber Shop*, where he hears the "click, click, clack, as they run the clippers up the back." On the way home, he meets his friend, *Mr. Policeman*, in his uniform of blue. Riding *on a Double-Decker*, his first stop is at the Zoo, where he encounters *The Camel, Lazy, Sleepy Crocodile*, and *Mrs. Kangaroo*. Next, via *An Airplane Ride*, he makes a landing in the country where *Two Frogs, A Cow*, and *The Happy Bee* contribute to the merriment. Returning home, he listens to "The Story Lady" of the radio as she tells of *Lo Ling Lee, Tiny Suki San*, and the *Little Dutch Children*. Songs of other holidays complete the book, *Halloween, Mr. Turkey Runs Away*, and *My Christmas List*.

The progressive primary teacher will recognize in this book material useful for the various study units or projects which play such an important part in present-day pedagogy. The music is melodious and easy to sing, and is written within the limited range of the child voice. The piano accompaniments are very simple. Should a piano not be available, in the class room, the tunes are sufficiently rhythmic to be effective without accompaniment.

A single copy of this book may be ordered now, with delivery to be made when published, at the special advance cash price, 35 cents, postpaid.

Play with Pleasure

An Album for the Grown-Up Piano Student

When we find a collection of music in which the selections are so melodious and varied that we overcome the few difficulties with no sense of the usual fatigue of learning, we have reached the point when we can indeed "play with pleasure." This new publication is just the kind of "musical friend" with which we should wish to become well acquainted. It is full of appeal especially to those who, having had in youth neither time nor opportunity for music study, have in later years learned enough of the rudiments of piano playing to be eager to make greater use of their new-found knowledge.

In this book will be found simple but well-edited arrangements of such universal favorites as the following (we name but a few): *Gypsy Song* from "Carmen," Bizet; *Selections* from "Mikado," Sullivan; *Nazareth*, Gounod; *Cavalry Ride*, Suppé; *España*, Spanish Waltz, Waldteufel; *Ballet*, Lecocq; *Kiss Waltz*, Arditi; *Sailing*, Marks; *On Wings Of Song*, Mendelssohn; *Coronation March*, Meyerbeer; *[illegible] rolle* from "Oberon," von Weber; *[illegible] Dance*, Grieg; and a number of others [illegible] good. A copy of this fine book in your [illegible] should be a source of "playing for pleasure" for a long time to come.

Single copies of this book may be ordered at the special advance of publication price, 40 cents, postpaid. Available only in U.S.A. and Its Possessions.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

By Ella Ketterer

There are any numb[er] practical teachers who [would] ously share with their [colleagues] freres, through their abili[ty to] compose, knowledge that [would] have gained on how to [overcome] come technical difficulties [encountered] perienced by their pupils, [no one] has been more successful [than] Miss Ketterer, whose [many] published piano pieces are in everyday use in studios everywhere and whose piano instruction materials—*Adventures in Music* [Book 1] *($1.00)* and *Adventures in Piano Technic* [Book 1] —have been so cordially received.

In her new work, *28 Miniature Etudes*, Miss Ketterer takes up the technical problem[s] the student ready for third grade work. [In] she presents one page study pieces cover[ing] *arpeggios, chords, hand-crossing, chromatics, fingered thirds, wrist development, repeated notes*, etc. Each is attractively titled to appeal to the pupil's interest.

During this month teachers have an opportunity to order a first-off-the-press copy of this book at the special advance of publication cash price, 30 cents, postpaid.

Ten Studies in Style for the Piano

By Carl Wilhelm Kern

Style, in music as in language, is a mode of expression. In language, it is evidenced by skilful, original choice and arrangement of words and ideas; in music, it is indicated in an infinite variety of ways, some of the most important of which are touch, phrasing, pedaling, rhythm, finger dexterity, contrasting dynamics and so forth, besides the wealth of tonal color shadings when some or all of these properly used in combination. A past-master in style is Carl Wilhelm Kern, composer, teacher, theorist, editor, and for many years head of his own school of music in St. Louis, Mo.

Each one of the following ten titles bristles with style suggestion: *Elfin March, Banjo Jig, Merry May, Tarantelle, Con Amore, At the Military Post, Pranks, Rustic Dance, At Midnight*, and *At the Airport*. Mr. Kern, known to thousands for the fine piano compositions he has written, has kept up his high standards of excellence in this attractive book.

The book has extra value because the grade of difficulty is not too great for players of average ability, while at the same time practical details are fully taken care of. Melody is abundant, holding the interest from start to finish.

This book will soon be published in the Music Mastery Series, uniformly priced at 40 cents each. Single copies may be ordered now at the special advance of publication cash price, 20 cents postpaid; delivery to be made when the book is published.

Manual of Fugue

By Preston Ware Orem, Mus. Doc.

In this new book Dr. Orem explains, in the lucid and entertaining manner that characterized his previously published works on Harmony, Counterpoint, Theory and Composition, all of the problems of fugue writing including Canon, Imitation and Double Counterpoint. Furthermore, he treats the writing of fugues as a making of real music, not as an exercise in musical mathematics. Natural[ly] as a preliminary to the study of this book a practical working knowledge in harmony and counterpoint is assumed. Ten lessons and an Epilogue comprise the chapters of this book. In advance of publication, a single copy of *Manual of Fugue* may be ordered at the special cash price, 40 cents, postpaid.

Uncovered Rocks

It is when close to nature that the philosophical mood seems at its best. Many have been in the delightful intimacy with nature where a lively, many-spring-fed, rippling stream courses its way by a secluded woodland spot, its deep banks giving evidences of the
aken to carve a tortuous bed for its flow.
on the banks and in the midst of such
g waters that sturdy rocks are to be seen,
hen memory's pictures have been fixed
ly, the "Uncovered Rock" of to-day is
d as a little jutting stone on the banks
rs ago, or perhaps as a little peak stick-
p in the water, surrounded by many
r rocks. The irresistible flow has swept
the smaller rocks in memory's picture,
as removed the earth which once con-
the rock by the side of the stream.
music publication many things put in
appearances, but the final judgment of
rs, and other active music workers is
be denied. These judgments sweep from
the things of lesser merit, and clearly
e the substantial ones. The Publishers'
ng Order is like viewing the rocks which
not been swept away, because it is on
ublishers' Printing Order that we find
ibstantial music publications which must
stock replenishments to meet continued
nds for them.
lowing is a list of some of the publications
ented in the printing order of last month.
lore Presser Co. gladly will extend the
ege of examining a complete copy of any
se.

A FAVORITE COMPOSER . . .

Each month we propose in the Publisher's Monthly Letter to give mention of a composer who, by reason of the marked favor in which music buyers of today hold his compositions, is entitled to designation as a favorite composer of piano music.

DR. ERNEST R. KROEGER

In 1904 the Kroeger School of Music was established in St. Louis. Its founder and director was Ernest Richard Kroeger, who had established an international reputation for himself as a pianist, organist, and composer, beginning his recital tours in this country in 1893. His musical activities were many and varied. He not only held important church organ positions, but also was director of the St. Louis Morning Choral Club of women's voices, and conductor of the Amphion Club men's chorus.

In 1896 Dr. Kroeger became president of the Music Teachers' National Association. He was elected a member of the French Academy in 1904, and in 1915 was made a member of the National Institute of Arts and Letters. Also in 1915 his organ recitals at the Panama Exposition, and his lecture-recitals at the University of California added to his fame.

Besides directing his own school of music Dr. Kroeger was director of the College of Music at Forest Park University, a position which he assumed in 1887. It is quite natural then that this accomplished musician has devoted much of his composing efforts to meeting needs in the realm of piano teaching, but he also has created a number of works in larger form, including several overtures and suites for orchestra, some string quartets, a violin and piano sonata, and some piano ensemble works. Dr. Kroeger also wrote a number of songs, but space below is being devoted only to the listings of his piano compositions.

Manuscripts bore the name of Ernest Richard Kroeger over composition efforts made when he was but a lad of ten. He worked diligently on his musical creations, and when he was only sixteen he was giving piano recitals of his own compositions. He was actually twenty-three, however, before he forsook all else for a musical career, after he had spent very close to eight years working in a mercantile establishment.

Dr. Kroeger was born in St. Louis, Missouri, August 10, 1862. His father was renowned as a translator of German philosophical works. It is quite natural then that in such a cultured family environment the boy was started on his musical education at the age of five, and in the course of the years following Ernest was placed under the best of local teachers. He studied piano under Edmont Froelich, Waldemar Malmene and Charles Kunkel. P. G. Anton, and W. Goldner were his teachers in harmony, counterpoint, and composition. He studied instrumentation under L. Mayer, and took a course in violin playing with E. Spiering as his tutor. Dr. Kroeger lived until April 7, 1934.

Your Opportunity to Obtain Fine Merchandise at No Cash Outlay

Readers having musical friends who are not subscribers to THE ETUDE can enroll them as permanent readers by bringing THE ETUDE to their attention, securing their subscriptions at the regular price of $2.00 a year, or at the special $1.50 rate good only until March 15th. Of course in Canada collect 25 cents extra a year to cover postage; in foreign countries, $1.00. In return for this co-operation premiums may be selected from the following list taken from our catalog:

SILVERCRAFT JAM SET: The cover, spoon and tray of this set are all chromium-plated, while the Jam Jar itself is white china, 3⅛" square. The Tray is 5½" square. Your reward for securing three subscriptions. (Not your own)

BON-BON BASKET: Here is a new chromium-finish Bon-Bon Basket. It is 6¾" in diameter and 4⅞" high. A fine reward for securing one subscription. (Not your own)

ZIP-SAC: This is an artistically decorated and colored Florentine Leather Purse which may be carried in the hand, or in a handbag. It has a gold-finish zipper, chain and ring, and is 4" x 3" in size. Awarded for securing one subscription. (Not your own)

HOSTESS TRAY: For gift-giving or use at your own parties, this novel Tray is highly desirable. The Tray itself is finished in gleaming chromium and is 13" x 8". The four compartments for hors d'oeuvres, etc. are ribbed crystal glass and removable. This feature makes it easier to keep clean and also permits the Tray to be used for other service purposes. Your reward for securing four subscriptions. (Not your own)

WAFFLE OR TOAST DISH: Designed in the modern manner, this all-chromium Dish has a convenient finger-hole for removing the cover. The plate is 8" in diameter while the cover is 6". The height over all is 3½". Awarded for securing three subscriptions. (Not your own)

SILVERCRAFT SERVER: This new, chromium-finish, pointed edge design Server is 13½" in diameter and has a removable, etched glass compote 5" in diameter and 2½" high. This center dish can be used for cheese, jelly, butter, etc. Awarded for securing seven subscriptions. (Not your own)

Your Opportunity to Make a Substantial Saving on an Etude Subscription

Celebrating the 55th anniversary of the founding of THE ETUDE, we shall accept, until March 15, 1938, $1.50 for a year's subscription to the ETUDE MUSIC MAGAZINE. We wish every music lover to be a permanent reader of THE ETUDE and to enjoy the many fine features which include from 20 to 24 pieces of music in each issue.

Now is the time to subscribe. Tell your musical friends and also remind them that subscriptions must be postmarked not later than midnight of March 15, 1938, to come in at the low $1.50 rate.

Add 25 cents a year for Canadian postage—$1.00 for foreign.

The Music Teacher's Handbook

Send for a copy. It's FREE!

A helpful and valuable reference catalog for the busy music worker. Contains descriptions, illustrations and prices of hundreds of items—musical prizes, awards, diplomas, games, studio decorations (pictures, busts, plaques, etc.), studio and classroom supplies (metronomes, music writing materials, charts, music binders, wrappers, folios, etc.), music carriers, musical instruments and accessories, etc. 28 pages. Indexed by items.

World of Music

(*Continued from Page* 140)

A NATIONAL MONUMENT to Richard Wagner is reported to be anticipated, the memorial to be placed in the new "Richard Wagner Forest Park" of Leipzig. Present plans are that it shall be dedicated on May 22, 1938, the one hundred and twenty-fifth anniversary of the master's birth in this so musical community.

BEETHOVEN'S "FIDELIO," with Kirsten Flagstad in the title rôle, is reported to have been one of the greatest successes of the recent season of the San Francisco Opera Company.

"GREEN MOUNTAINS," a short opera, composed by Louis Gruenberg expressly for radio performance, was recently heard over the Columbia System, with Howard Barlow conducting. It is one of six operas commissioned from American composers, the other musicians to receive this recognition being William Grant Still, Dr. Howard Hanson, Roy Harris, Walter Piston, and Aaron Copland.

ETHEL BARTLETT AND RAE ROBERTSON, those marvelous piano-duo artists which England has lent for our musical edification, were recent soloists (duoists?) with the Cincinnati Symphony Orchestra, when they triumphed in the "Concerto in E-flat major (K. V. 365)" of Mozart, and the "Concerto for Two Pianos, in D minor" by Poulenc.

THE COMMUNALE OPERA HOUSE of Florence, Italy, has opened a *Nido* (children's nursery) for mothers who find it inconvenient to leave their children at home while attending the opera. A ticket to any seat in the house entitles children (up to six years) to this expert care, while Mama enjoys "Il Trovatore" with quiet mind.

JOHN SMALLMAN, for the last twenty years perhaps the leading choral leader of the Los Angeles district, died December 19th. He was conducting a performance of the "Messiah" at the First Congregational Church and had just signaled the chorus to be seated after the close of the first part of the famous oratorio, when he fell from the conductor's stand.

* * * * *

COMPETITIONS

THE AMERICAN SOCIETY OF THE ANCIENT INSTRUMENTS is offering a Prize of Five Hundred Dollars for a composition to require not less than fifteen minutes nor more than twenty-five minutes in its performance, and to be suitable for interpretation by this ensemble. The competition closes August 31, 1938, and full information may be had from Mr. Ben Stad, founder and director of the organization, 4331 Chestnut Street, Philadelphia, Pennsylvania.

A PRIZE OF ONE THOUSAND DOLLARS is offered by the Cincinnati May Festival Association, for a composition for a children's chorus of six hundred voices (to which an adult chorus may be added), with orchestra, or organ, or both. The work will be performed at the May Festival of 1939; entries close August 31, 1938; and full information may be had from the May Festival Association, 142 West Fourth Street, Cincinnati, Ohio.

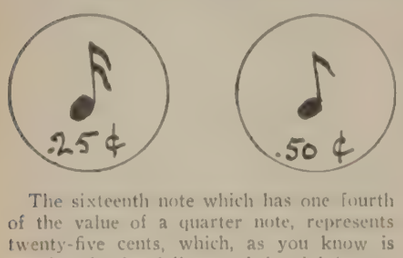
THE SALZBURG OPERA GUILD is offering a prize for an Opera on an American subject, by an American composer. The winning work will be performed by the Guild, and the composer will receive a trip to Salzburg with two months of entertainment at the Guild Headquarters in the Schloss Mondsee, during the summer Salzburg Festival. Manuscripts must be sent not later than May 1st, to Mr. Paul Csonka, Mondsee, Austria, from whom further details may be learned.

THE W. W. KIMBALL PRIZE of One Hundred Dollars is offered again by the Chicago Council of Teachers of Singing, this time for a setting of the poem, *Longing*, by Matthew Arnold. The contest closes June 1, 1938, and full particulars may be had from D. A. Clippinger, 617 Kimball Hall, 306 South Wabash Avenue, Chicago, Illinois.

THE JUNIOR ETUDE

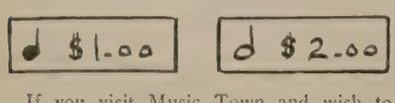
Edited by

ELIZABETH A. GEST



Musical Shopping

By Janet Nichols



IN MUSIC TOWN absolutely everything is paid for in notes; that is to say, the sign of a note is stamped upon the coin or paper bill.

The coins are in these denominations:

The sixteenth note which has one fourth of the value of a quarter note, represents twenty-five cents, which, as you know is one-fourth of a dollar; and the eighth note, which has one-half of the value of a quarter note, represents fifty cents, which, as you also know is one-half of a dollar; and the dotted eighth note, which is three-fourths of the value of a quarter note, represents seventy-five cents.

The paper bills are in these denominations: The one dollar bill receives one beat; one dollar and a half ($1.50) receives a beat and a half; two dollar bills receive two beats, and so on.

If you visit Music Town and wish to purchase THE ETUDE (I am sure that they are for sale there) you will of course, pay for it with a twenty-five cent coin, or a sixteenth-note.

If you are buying a pair of shoes and the cost is $2.50, you will give a coin and a paper bill, equalling a half note and an eighth note.

Make lots of these coins and bills and play the game of trading in Music Land. Buy anything you want. It will be lots of fun for a club meeting.

Add a Word Game

By Gertrude Greenhalgh Walker

A SIMPLE but a good memory musical game is this one called Add A Word. The players sit in a semi or full circle. The first person to be chosen leader starts the game by saying "To-day I practiced a tarantelle." The next player to her right would say "To-day I practiced a tarantelle and a sarabande." Continuing in the circle the next person would say "To-day I practiced a tarantelle, a sarabande and a gavotte." Thus the game continues, each player repeating in order all that had been said and adding one more word. The person failing to remember all given words in their order falls out, and the one that stays in the longest is, of course, the winner.

This game may be varied by using composers' names. "To-day I played Bach's preludes." "To-day I played Bach's preludes and Scarlatti's 'Sonata,'" and so on.

For little people just learning their musical terms one could say "To-day I played *Forte*," *Andante*, and so on.

The IRISH HARP Through TARA'S HALL

(Playlet)

By KATHERINE PAINTER FULLING

Characters:
JEANNE
MARGARET
BETTY
JOHN

SCENE: Interior, with a few chairs and a piano.

JEANNE (*seated and reading aloud*): *The Harp that once through Tara's Hall* is an old song of Ireland. It celebrates the fame and mourns the passing of the Irish Harp. The old harp of Ireland was called cruit, or crott and was a small instrument with three or four strings. The players kept their finger nails long so they could pluck the strings more easily. Even before the coming of St. Patrick the harp was popular. (*Pauses, to turn pages.*) Ancient Ireland had a parliament, very much like our congress, and after the business of the day was completed harp contests were held. The harp was also passed among the guests in the banquet halls. Even the Irish King was a good performer. (*Lays book aside, picks up knitting.*)

(*Enter Margaret, picks up Jeanne's book and continues reading.*)

MARGARET: The Irish missionaries traveled to England with their harps. Alfred the Great and King Richard I were among the royal English performers. To-day many of the tenth century harps can be seen in the British Museum and the Library at Cambridge. (*Head nods sleepily.*) The famous harp "Brian Boru" is in Trinity College, Dublin. There is a famous legend about the harp—(*Head falls on shoulder. Jeanne also doses in chair.*)

(*Enter Betty, looking around.*)

BETTY: Dear me! Everybody asleep? What have they been reading? (*Picks up book.*) Oh, the Irish Harp! I love that. Let's see. (*Continues to read.*) The melody called *Robin Adair* was known in the fourteenth century, called *Eileen, My Treasure*. The composer, Carrol O'Day disguised himself as a harper and sang this song when he went to court his fair lady. Later, in the eighteenth century Handel used this melody in his oratorio "Esther."

(*Robin Adair may be played or sung, off stage.*)

BETTY (*reading*): In 1270 King Edward I went on a crusade to the Holy Land and took with him a harp player, who saved the King's life. The Irish nobility in the Stuart period loved the harp, too. And the people of those times danced to the harp and the bagpipe. They had lovely old dances. (*Enter John.*)

BETTY: Hello, John. I'm just reading about the Irish harp and dances. Can you play any of those old Irish tunes?

JOHN: I ought to be able to. I certainly have lots of Irish blood in my veins. (*Jeanne and Margaret wake up as John goes to piano. John plays two or three Irish melodies.*)

JEANNE: Those are beautiful melodies. I'm going to learn some myself.

MARGARET: So am I. I was only half asleep, Betty, and I heard some of what you have been reading. It certainly is interesting.

JOHN: Well, some day I hope to have an Irish harp myself. Miss Jones says they are not difficult to learn.

MARGARET: And the book says there was a famous blind harpist named Turlagh O'Carolan, who went about the country singing his own compositions, and Beethoven thought he would have been a fine composer if he had had more education.

JOHN (*reading*): Here it says the harp has a history as old as the world and all the ancient poetry was sung to the harp. Here is a couplet from the middle ages,

"He loved much to hear the harp
For man's wits it maketh sharp."

Old Irish Harp

Come on, Jeanne, give us an Irish song. You can sing—at least you sang beautifully at Miss Jones' recital.

JEANNE: Oh, no, I will not sing alone, but you all sing with me. John, you play the piano and we will imagine it is a harp. (*Turning to audience.*) Will you all join in singing *The Harp that once through Tara's Hall?* (*Audience sings.*)

Curtain.

LITTLE FINGER

By FRANCES GORMAN RATHER

Little Finger, are you ill?
I s your side so tired and weak,
T hat you can not play with skill?
T ry, please, not to be a freak
L ike a little circus clown,
E very minute tumbling down.

Firmly stand! Play on the tip.
I n each piece you learn to play.
N ever fall, or slide, or slip;
G ive good ear to what I say;
E arnest work each day will bring
R eal reward in tones that sing.

A Composer Enigma

By Gayle Ingraham Smith

A name of letters, numbering eight,
A fine composer of music great.
You all know his Childhood Scenes,
And know how much his music mean
Now, can you find this master's nam
A name indeed, of world-wide fame.
My first is in SUN and also in SH
My second's in CODA, but is n
LINE;
My third is in HARMONY, but i
in NOISE;
My fourth is in UNISON, but nev
JOYS;
My fifth is in MUSIC, but nev
CHORD;
My sixth's in AMBITION as we
REWARD;
My seventh's in FINIS and als
MINOR.
My eighth is in MAN, of whom non
finer.

(Answer: SCHUMANN)

The Real Waltz

By Leonora Sill Ashton

"ONE, TWO, THREE. Wait a minute, Dor
hold your hand like this when you
that low bass note."

Miss Marston sat back in her chair;
usually enjoyed hearing Dorothy play,
not to-day!

"But I don't like this waltz, Miss M
ton. It does not seem like a real walt
me at all."

"Well, you keep on practicing it
week, anyway, and then I will take yo
a place where I think you will find it
real waltz."

So Dorothy practiced until she c
play it without a mistake, and at her
lesson played it very well. She wond
where her teacher was taking her, as
started out.

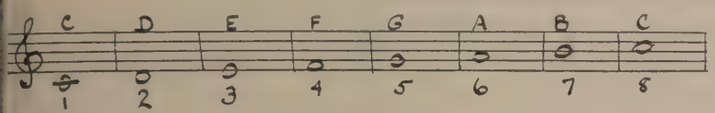
"This is the Art Center," explained
Marston, as they entered through a
door and led the way into a room w
some boys and girls were waiting. "Th
Dorothy," she began, "and she is goin
help me to play for your dancing to-d

Dorothy, thrilled, sat down at the p
and as she began to play the waltz
could feel the rhythm 'way down in
of her. The music was like a boat sa
over the water, she thought. Glancing
ways, she could see the boys and girls
ing past her. Suddenly she thought it w
be nice to play very softly, and mak
sound far away. When she reached the
of the waltz she hated to stop, so
started at the beginning again.

When she finally finished the chil
crowded around the piano. "Can she
again and play?" they asked Miss Mar

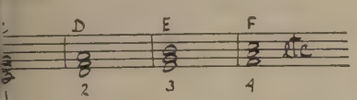
"Certainly, if you want her, and if
wants to. Do you, Dorothy?"

"I certainly do," answered Dorothy
is lots of fun to play for people to d
And it's lots of fun to practice when
know some one wants you to play for
ing, because then you just *must* have
fect rhythm."



And Dorothy *did* have perfect rh
for she had found how important it

Music Town



(For Very Little Juniors)

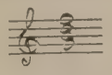
By MATHILDE BILBRO

DAY Miss Gray had an entirely new for the Saturday class. She called me MUSIC TOWN. "We are going d STREETS in that town," she said, showed them at the blackboard how off a nice smooth street, divided into ots, like this (and she drew a staff). n she told the following story: ter C Major came along and bought umber One and lot Number Eight. so they named this street C Major because he came first and bought ts.

n Mister D came along and bought umber Two.
ster E came along and bought lot ber Three.
ster F came along and bought lot ber Four.
ster G came along and bought lot ber Five.
ster A came along and bought lot ber Six.
ster B came along and bought lot ber Seven.
d then all of the lots were taken.
en Mister C built a three-story house s lot.

en D built a house; and E built a ; and F built a house; and G built se; and A built a house; and B built se; and C built another house on lot number eight. All of the lots now had houses, and Mister C had two houses.

All of these houses belong in C Major Street.



When the houses were all built Mister G, in lot number five, said, "I believe I could use another story on my house."

So he built another story.

At once all of the others wanted to add another story to their houses, but the Major of Music-Town said, "No, you'd better wait. After a while you can build another story, but while the Street is new, Mister G is the only one who needs a taller house."

"Why?" several in the class asked.

"Because he lives in lot Number Five, and Five is a very, very important lot on any street in Music-Town."

"Why?" again from the class. Miss Gray laughed.

"I am glad you want to know," she said, "and after a while you are going to know all about it, when we study more about Harmony."

"Are there stories in Harmony, too?" inquired Mary.

Miss Gray said, "yes, indeed; many beautiful stories."

Then Miss Gray said she wondered who could build G Major Street on the blackboard?

Many hands went up.

Could you build G Major Street? Try it.

Answers to Who Knows

Little by little slower. 2, Eighteen. Engelbert Humperdinck. 4, Germany. ngland. 6, The case enclosing the key-ds, pedals and stops of an organ. 7, arp minor. 8, G-flat, B-flat, D-flat. or making improvements in the staff the notes, so that music could be ten on paper more correctly. 10, Wales.

Honorable Mention for December Essays:

aimi Euren; Jeannine Hoeffel; Bertha e McKinnon; Eva Alexander; Elsie vener; Kathleen Mack; Constance Freund; bryan Shinholser; Ilfa Kohl; John Bring-; Grace Teal; Anna Taylor; Kitty Osborn; ie Robinson; Florence Farrel; Edna nk; Lillian Montgomery; Anna Belle Mar-Marian Bradley; Bernice Elson; Anstes r; Julia Meadows; Marjory Gillman; ela Peck.

Letter Box

DEAR JUNIOR ETUDE:

I never miss reading letters for the "Letter Box" and would be pleased if more were printed.

I have taken piano lessons for three years, and play a clarinet also. My greatest accomplishment, however, is the ability to sight read exceptionally well—so I've been told. I prize this most in playing accompaniments, which now vary from choruses and vocal solos to orchestra parts and instrumental solos. My former teacher, I feel, is responsible for this asset. Through her help and coaching I started accompanying at the age of ten.

From your friend,
BETTY JEAN HUFF (Age 14),
Idaho.

DEAR JUNIOR ETUDE:

I am thirteen years of age and a freshman in high school. I play the piano for accompanying and play some concerts. Although we live in a country where opportunities are few, there are some talented young people around here. I have perfect pitch, myself, and like music very much.

From your friend,
EUGENE JENNINGS (Age 13),
Kansas.

Junior Club, Lander College, South Carolina

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl, under sixteen years of age may complete, whether a subscriber or not, and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "My Favorite Composition." Must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by March eighteenth, 1938. Names of prize winners and their contributions will appear in the June issue.

RULES

Put your name, age and class in which you enter on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet. Write on one side of paper only.

Do not use typewriters and do not have anyone copy your work for you.

When schools or clubs compete, please have a preliminary contest first and send in no more than two contributions in each class.

Competitors who do not comply with all of the above rules will not be considered.

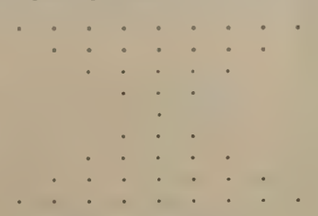
The Concert

(Prize Winner)

The first concert I ever attended was at Belle Isle. It was an all Wagner program, played by the Detroit Symphony Orchestra.

The orchestra was seated on a platform, the conductor on a podium in front. Back of the orchestra was something shaped like a shell, with colored lights on it and it made a beautiful scene. The audience sat on benches and many sat in their automobiles, and some sat in canoes on the lagoon near the shell. The concert was enjoyed by the people very much. We have many fine concerts here and I hope to go to many more.

DOLORES WOSEK (Age 10), Class C.



Juniors of the Bronx, New York

Musical Hourglass Puzzle

By Stella M. Hadden

REPLACE each dot with a letter. The central letters reading downward spell the name of an opera by Verdi.

1—A portable reed instrument.
2—An African instrument sounded by hammers.
3—An instrument of the trumpet class.
4—A violin implement.
5—A consonant.
6—Part of an organ.
7—Favorite instruments in the sixteenth century.
8—Instruments associated with Spain.
9—Instruments sounded with a plectrum.

Honorable Mention for December Puzzles:

Kathryn Shinholser; Helen Erday; Rita Kroupa; Marie Paula Beaudry; Nancy Dangroise; Betty Jean Cooper; Theadore Wolfe; Jacqueline Noreyko; Olive Dragon; Darleane Christian; Isabelle Knox; Hilda Bunting; Elsa Monta; Aileen van Tassel; Eunice Diffner; Jack Diffner; Robert Benners; Tannis McHugh; Jeanne Hofmann; Bobby Earl.

The Concert

(Prize Winner)

A concert to me is a land of musical harmony; its inhabitants are instruments of string, wood-wind, brass and percussion, sometimes a harp.

After I enter the music hall the lights are lowered, silence reigns over all and the director lifts his baton. I am swiftly carried away to the Land of Music; there I see fields of flowers waving in the wind, rivers tumbling joyfully into a rushing ocean, and I hear the happy, carefree songs of a bird. At other times I visit foreign lands and live among other nations for an hour or so; or, sometimes I live with the famous composers in their studios, amid many tunes and ditties, listening to this and that. I return reluctantly when the lights are turned on, but then there is always that substitute—the land of dreams.

VERONICA VANN (Age 14), Class A
Pennsylvania.

The Concert

(Prize Winner)

The concert is an expressive form of great music. An ideal concert consists of the performance by a symphony orchestra or some famed choir of the works of an immortal composer.

The volume of a symphony orchestra vividly portrays the Utopian scene as desired by the composer. The harmony expressed stirs the inner emotions of one's soul, for one is filled with joyous ecstasy at the tone of the orchestra or with the cultivated tones of the chorus. The powerful music tends toward a center of concentration. This purpose being accomplished, the volume increases and then approaches a great climax which stirs a magnanimous thought. Then our fantasy fades and disappears.

Thus is the magnitude of the performance felt at a concert. Such an entertainment embraces, through its influence upon our thought, a treasury of ethical instruction; and we may say a concert is a great laudation, in praise of the emotional traits in the nature of the composer.

JAMES J. O'REILLY (Age 13), Class B.

? ? ? Who Knows ? ? ?

1. What is the meaning of the term *poco a poco ritenuto?*
2. If a measure in six-eight time begins with a dotted eighth rest, how many thirty-second notes are required to fill the measure?
3. Who wrote the opera "Hansel and Gretel"?
4. In what country was Handel born?
5. In what country did he die?
6. What is a console?
7. What minor key has A for its sixth tone?
8. What are the letters of the subdominant triad in the key of D-flat major?
9. For what is Guido d'Arezzo famous?
10. From what country does the folk-song *All through the Night*, come?

(*Answers on this page*)

LETTERS FROM ETUDE FRIENDS

A Recital Novelty

TO THE ETUDE:

In reading THE ETUDE, I notice other teachers send in ideas they have used in recitals. Enclosed is a program I used very successfully last spring. We used rather attractive costumes, but appropriate to the country visited.

The students learned quite a bit of history concerning the music of other countries and were more interested than usual in this recital because it was so different.

Of course it could be changed to suit the teachers' different students.

An unknown philosopher of some half century ago wrote: "How can there be any bad music? All music is from heaven. If there is anything bad in it, I put it there—by my implications and limitations. Nature builds the mountains and meadows, and man puts in the fences and labels."

A Boy's Game

By HAZEL DITZ BROWN

A BALL OF TWINE is given to several boys who are told to make five lines on the floor to form a staff; also a G clef sign, winding the twine around the second line, G, at the same time saying, "The notes of this staff are played above Middle C."

Lines are named E, G, B, D, F, and numbered 1, 2, 3, 4, 5. The spaces are named F, A, C, E, and numbered 1, 2, 3, 4. All should repeat these aloud.

Each player has five turns, rolling marbles from a given distance. If a marble rests on, or very near line five, it counts five points for the player; if it rests in second space it counts two, and so on. The player must give the name of clef and the name of the line or space before the score keeper writes down the number. This is repeated for the F clef, the players giving the facts relative to this clef. A small inexpensive prize is given, as it is always better to have those in a game to play for the enjoyment and not for a prize.

This has proven a most successful game, for both the fun and the results, the boys shouting and laughing, while learning in their play. Being old fashioned enough to feel that it is necessary to know lines and spaces, we always try to present such facts in an interesting manner.

Next Month

AN APRIL SHOWER OF FEATURES!

New features that uncover fresh fields of musical lore are always hard to secure; but the April issue of THE ETUDE will be especially rich in these.

ARTUR BODANSKY

BODANSKY TALKS

The early Wagner was as complete a "financial loss" to his producers as opera ever knew; but the tables have turned and the great musical bard of Bayreuth is at this time the most reliable box office attraction at the Metropolitan in New York. Our greatest of present-day Wagnerian conductors, Artur Bodansky, tells, in THE ETUDE for April, why this is so.

THE INTERESTING FALSETTO

Frederick W. Wodell, noted voice expert and author of "Choir and Chorus Conducting," gives the results of a wide research among the specialists of the centuries who have made investigation of this peculiar vocal problem.

DRESSING UP THE STUDIO PERFORMANCE

Stephen West gives, in his very unique manner, some ideas on costuming and make-up which teachers will surely welcome. It outlines the technic employed at the Metropolitan Opera House.

THE ROMANCE OF MOZART'S LIFE

There is something particularly appealing about the child-like Mozart, whose blithe moments were often interrupted by great struggle and disappointment. This article, by Heinz Grevenstett, tells of Mozart's best known love affair.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

Do You Know?

THAT the god Mercury, in Grecian mythology, is given the credit for making the first harp, the Testado (tortoise); and that he did this by accidentally plucking the dried tendons in the shell of a dead tortoise he found on the banks of the Nile?

That in the old harpsichords there were rows of additional strings, known as resonator strings. These were not struck but merely picked up sympathetic vibrations?

That John Milton's father, also named John, was a well accredited musician in his day and wrote six part madrigals, motets, and psalm tunes? The great poet was also a skilled amateur musician?

That one of the most popular of old English dances was the cushion dance, in which the dancer made his selection of a partner by dropping a cushion before her?

That one of the very earliest dates in music is that ascribed by the Egyptians to the discovery of the seven sacred sounds in music, in 3892 B. C., nearly forty centuries before Christ?

* * * * *

"To get the right start as a virtuoso one must comprehend the true meaning of relaxation, not merely relaxation of the hands and arms, but of the mind and body as well."—Mischa Levitzki.

MUSICAL BOOKS REVIEWED

Music and the Community

The Cambridgeshire Report on the Teaching of Music

We have here an authoritative report the musical activities and advancement one of the most musically progressive co ties of England. The findings are illuminat and to a large degree applicable to any w organized community. The very fact that report was compiled by such highly quali musicians and musical pedagogs as Sir J. B. McEwen, Principal of the Royal Acade of Music, London; Sir Hugh P. Allen, Dir tor of the Royal College of Music, Lond Sir Henry Hadow, formerly Vice-chancellor the University of Sheffield; Dr. C. H. Kits Professor of Music in the University Dublin; Dr. W. G. Whittaker, Principal the Scottish National Academy of Mus with some twenty equally eminent collabo tors; this is enough to warrant the wor of the Committee's findings. A valuat addition to the library of anyone interested general musical education.

Pages: 259.
Price: $1.25.
Publishers: Cambridge University Press.

Beethoven and His Piano Wor

By HERBERT WESTERBY

Here we have a most enlightening guide the piano works of this Titan among composers. Concisely it presents these wo in the three usual periods of the master's velopment. It does this by following a hap medium of treatment which finds its way tween the flowery interpretations of Elteri and the formal analyses of the academics." is the sort of companion which it will be plea ant for the student to have by his side wh studying the works treated. At the same ti the volume leads to a better understanding the historic movements in the development our musical art, and especially to the relatio of the Classic and Romantic spirits in co position.

Pages: 114.
Price: $2.25.
Publishers: William Reeves.

Of Men and Music

By DEEMS TAYLOR

This unusual book begins with a series radio talks which the gifted and able Dee Taylor delivered as part of the Columi Broadcasting System's Sunday afternoon co certs of the New York Philharmonic Symphor Orchestra, which is supplemented by materi taken from reviews in the lamentably extin *New York World*, in the *New York America* and in other publications. The work embraces wide range of interesting essays, which ha been translated from the field of radio a the newspaper to the more permanent bo form and make "mighty good reading" for t music lover.

Pages: 318.
Price: $2.50.
Publisher: Simon & Schuster.

Class Lessons in Singing

By ANNE E. PIERCE and ESTELLE LIEBLIN

An unusually interesting and unique cour of vocal study, with excellent illustrations the way of portraits of famous singers as w as pictures of notable pedagogical value. T book includes thirty-two song classics and very interesting appendix in the nature of key to the pronunciation of the Italian, Fren and German languages. The work is w planned as a practical teaching book for t vocal pupil in the class. The authors are An E. Pierce of the State University of Iowa a Estelle Liebling of the Curtis Institute Music. Miss Liebling, teacher of many succes ful singers, is a member of the noted fami which has brought such names into our Am ican musical life as Emil Liebling, Geor Liebling and Leonard Liebling.

Pages: 212.
Price: $2.00.
Publisher: Silver Burdett Company.

Music Since 1900

By NICOLAS SLONIMSKY

An altogether extraordinary chronology the chief musical events of the world, from t beginning of the twentieth century, which r flects thirty-five years of the most acti period in the annals of the art, at least fro the aspect of quantity. The work has be done with the meticulous, almost microscop care of the real master of research and shou prove invaluable to libraries and education institutions.

Pages: 592.
Price: $4.75.
Publisher: W. W. Norton, Inc.

The Country Dance Book

By BETH TOLMAN and RALPH PAGE

Country dances have come into immen favor in recent years, and this manual t shall we say *pedual?*) of the art is comple and interesting. Here they are, Grand March Sicilian Circles, Quadrilles, Jigs and Ree with a few Hornpipes and Round Dan thrown in for good measure. Yes, and th are full directions for acquiring their step and at the end is a list of music to be us with them.

Pages: 192.
Price: $2.00.

Earn A Teacher's Diploma or A Bachelor's Degree

In every community there are ambitious men and women, who know the advantages of new inspiration and ideas for their musical advancement, but still neglect to keep up with the best that is offered.

It is too easy for them to say "I am busy and haven't the time for more study myself." They find that excuse instead of making the effort to use the minutes each day which so often go to waste.

The most successful musician, of course, is a very busy one. The demands upon his attention are never ceasing—yet he is the one who can find the extra time for something worth while. It is for such a one, chiefly, that the Extension Courses are the greatest benefit. For him it is hard to give up his interesting class or position and go away for instruction.

Extension work is also equally advantageous to the beginner and the amateur. The work can be done at home in spare time, with no interference with one's regular work.

The Increased Demands for DEGREES have Resulted in Larger Classes for the ADVANCED COURSES offered by the UNIVERSITY EXTENSION CONSERVATORY.

Look back over the last year. What progress have you made? Perhaps you've wanted to send for our catalog and sample lessons before—just to look into them. That is your privilege. We offer them without obligation to you. Ours is one of the leading musical institutions and we urge you to take advantage of the spare moments you are sure to find. You must not rely upon your good intentions, as you have in the past, or you will miss this opportunity.

The service offered to teachers in our classes continues long after the diploma or degree is awarded.

There is a greater demand all the time for the courses we offer, as they fit teachers for better positions. This is an age of specialization and the specialist is earning fully double or more the salary of a musician with only a general knowledge. Openings in the music field are growing very rapidly. There are big paying positions for those who are ready for them.

A Diploma is the key to the best teaching position. Do you hold one?

Our Diplomas and Degrees are Awarded by the Authority of the State of Illinois

It is up to YOU. On your own decision will rest your future success. Fit yourself for a bigger position—demand larger fees. You can do it! You can easily and quickly fit yourself right at home through Extension Courses.

This great musical organization now in its 34th successful year—has developed and trained many musicians and many successful teachers. And to you we offer the same advantages which have been given to them.

Now is the opportune time for you to clip the coupon below. Get it in the first mail. Don't waste any more time! The coupon will bring you information about the lessons which will be of untold value.

This Is *Your* Opportunity—Mail the Coupon TODAY!

THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of

THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3300 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued.

Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

Alexander Scriabin—B. Moscow, Jan. 10, 1872; d. there April 27, 1915. Comp., pianist. Studied at Moscow Cons. A mystical, iconoclastic musical impressionist. Works chiefly orchl. and piano

Irma Seydal—B. Bo[rn] Concert violinist. Pup[il] G. Straube and C. M[ar]fler. Has appeared with p[ri]cipal orchestras in [the] Two successful tours of [Ger]many.

Instrumental Ensemble Music

EASY QUARTETS FOR YOUNG VIOLINISTS

Each Part, 40 cents
Piano Acc., 75 cents

This collection also is delighting quartets of B-flat clarinet players.

This album may be used by a group of young violinists, just for the fun of ensemble playing, or for participation in programs. The piano is not essential to the rendition of these 15 attractive and interesting numbers. The 4 violin parts are quite easy, the 1st violin being the only part to go out of the 1st position and then only for an occasional use of the 3rd position.

THE BRASS CHOIR

A COLLECTION FOR BRASS INSTRUMENTS

A dandy collection of well-arranged selections of an attractive character. These are ideal for amateurs, as no parts are difficult. Various combinations can be made. Four different practical quartet combinations are suggested. The B-flat and E-flat books may be used by saxophones if desired.

PARTS PUBLISHED FOR
First B-Flat Trumpet
Second B-Flat Trumpet
First Trombone (*Bass Clef*)
Second Trombone and Tuba (*Bass Clef*)
E-Flat Horn
Baritone or Trombone (*Treble Clef*)

Each Part, 35 cents
Piano Acc., 60 cents

GONDOLIERI (GONDOLIERS)

By Ethelbert Nevin—Arranged for WOODWIND ENSEMBLE (Flute, Oboe, Clarinet, Horn, and Bassoon)
By Hugh Gordon
—Complete, $1.25.
—Score, 40c. Separate Parts, 20c Each.

This is one of the favorite tone poems from Nevin's world famous suite. *A Day in Venice* (*Un Giorno in Venezia*). It lends itself particularly well to the woodwind combination, and Hugh Gordon has made a very excellent scoring for this group of instruments.

DANCE OF THE ROSEBUDS

By Frederick Keats—Arranged for FOUR CLARINETS—By Hugh Gordon
—Score, 25c. Separate Parts, 15c Each.

A bright, tuneful composition that has the rhythmic appeal of a sprightly ballet. It is here arr. for a quartet of B-flat clarinets.

MELODY OF LOVE

By Hans Engelmann—Arranged for STRING QUARTET—By Ladislas Kun
—Complete, 50c. Separate Parts, 15c Each.

Everyone loves this melodious selection. Its theme has been borrowed for ballads, gospel songs, etc., but still it holds its standard worth and it is especially appealing in this string quartet form.

MENUETTO (From Quartet No. 52)

By F. J. Haydn—STRING QUARTET
Edited by Rob Roy Peery
—Complete with Score, 75c.
—Score, 25c. Separate Parts, 15c Each.

The Committee on Instr. Affairs of the M. S. N. C. recommend this easy number for small instrumental ensembles.

MENUETTO (From Quartet No. 41)

By F. J. Haydn—STRING QUARTET
Edited by Rob Roy Peery
—Complete with Score, 75c.
—Score, 25c. Separate Parts, 15c Each.

The more advanced string quartet will enjoy this charming movement from Op. 76, No. 2.

GARDEN OF ROSES

By Irene M. Ritter—Arranged for VIOLIN, CELLO, AND PIANO—By W. M. Felton—Complete, 75c.

With pleasing themes this number delights. This arr. is of moderate difficulty.

PRESSER'S FIRST STRING QUARTET BOOK

For First Violin, Second Violin, Viola and Cello. $2.25, Complete.

15 worthy compositions each skilfully arranged for effective string quartet playing. Each player is given an interesting, but not difficult, part. The aim at variety, in making up this collection of entirely new material for student players, was carried further by having several gifted arrangers, instead of only one, edit the book.

THE TRIO CLUB

Collection for Violin, Cello and Piano.

$2.00, Complete.

A splendid album containing 19 excellent numbers for violin, cello and piano ensembles. This is a collection of pieces of such varied assortment as to make a strong appeal to the professional as well as the amateur musician. The pieces are melodious and attractive without being trivial, and none of them has ever before appeared in any similar collection. This album is especially recommended for its adaptability to school ensembles, since the arrangements, while being very excellent and entirely adequate, make no unusual technical demands on the performer. Truly a most unique publication.

TRIO REPERTOIRE

For Violin, Cello and Piano.

$2.00, Complete.

The well equipped amateur group, or the professional ensemble requiring a large repertoire of attractive, musicianly selections, can do no better than add this superb collection to their library. The arrangements are intelligently made and the composers represented mark this collection as one of genuine artistic worth.

A DAY IN VENICE

(UN GIORNO IN VENEZIA)
Suite by ETHELBERT NEVIN.
Arranged for Violin, Cello and Piano.

$2.00, Complete.

These 4 beautiful and world-renowned tone poems, *Dawn*, *Gondoliers*, *Venetian Love Song* and *Good Night*, are enhanced in these masterly arrangements for an instrumental trio.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

MME. ROSE PAULY

MME. ROSE PAULY created a furore, "unequalled in the present season," when on January 7th she made her Metropolitan Opera début in the title rôle of the "Elektra" of Richard Strauss; of which a conservative writer said that "Only a handful of artists have achieved such a triumph in the last several decades at the Metropolitan"; and, further, that "All in all the performance was probably the ablest that 'Elektra' has had in America."

THE CHORAL CONCERT is reported to be returning to favor in England. Thus the famous Hallé Orchestra of Manchester devoted an evening of its first quarter of the season to a performance of Haydn's "Creation," such an event as has not occurred in many years.

JOHN PHILIP SOUSA'S memory was recently given homage, from three-thirty to four (E. S. T.), when some of his most loved works were heard over the blue network of the National Broadcasting Company, as played by the famous Armco Band under the direction of Frank Simon.

ONE HUNDRED THOUSAND MUSICIANS are employed in the eight thousand registered musical organizations of Germany, according to a report of the Reich Music Chamber.

MARIAN ANDERSON, our internationally known American contralto, recently gave at Geneva, Switzerland, a program of songs of Schubert, and of Negro spirituals, "with a voice of extraordinary richness" and with "brilliant interpretation."

THE ITALO-AMERICAN ORCHESTRA of Philadelphia, with Guglielmo Sabatini conducting, closed its program of February 20th with a brilliant performance of the sparkling "La Serva Padrona" of Pergolesi, with Edward Rhein and Marie Zara in the leading rôles.

AN INTERNATIONAL SCHOOL OF LUTHIERS is reported to be contemplated at Cremona, the birthplace of Stradivarius, Guarnerius and the Amati family, with the approval of the Italian government.

H. J. LUSCHWITZ

MR. H. J. LUSCHWITZ, Director of Music to His Exalted Highness the Nizam of Hyderabad, India, is reported to be doing a notable missionary work in the cause of cultivating a better knowledge of Western music in that important state of the Far East. Educated at the Royal Academy of Music of London, he has been responsible for raising the state bands to a high standard of equipment and artistry; and he is here shown in his official regalia.

THE PHILADELPHIA ORCHESTRA, with Eugene Ormandy conducting, presented Harl McDonald's "Tragic Cycle" for soprano, chorus and orchestra, on its program of January 11th at Washington and of January 12th at Baltimore, with the assistance of the Choral Society of the University of Pennsylvania and of Selma Amansky, soprano.

GIOVANNI MARTINELLI, popular tenor of the Metropolitan Opera Company, recently completed a quarter of a century as a leading artist of that organization, in honor of which the Metropolitan Opera Club gave a testimonial dinner—when he became the second artist to receive such recognition.

THE BANJO HELD BY UNCLE NED on the statue of Stephen Collins Foster in Highland Park, Pittsburgh, is reported to have been cut away by vandals. The statue portrays our perhaps best known and most loved composer standing, while at his feet Uncle Ned, one of his most celebrated of musical characters, strums the now purloined banjo. A fund is being raised for its restoration.

THE "PARIS AND HELEN" of Gluck had recently its first performance in Germany, when given at the Weimar Opera House.

LUDWIG WÜLLNER, oldest of Germany's living singers, and known to the entire world of the past generation, has been for the last twenty years and still is specializing in readings of Goethe and Schiller.

A RECENT SUNDAY "POP" concert program of the Minneapolis Symphony Orchestra, led by Dmitri Mitropoulos, consisted of seven overtures, ranging from the demoniac and dramatic "Ruy Blas" of Mendelssohn, to the gay and garrulous "Anacreon" of Cherubini.

ARTHUR DUNHAM, widely known organist, choral conductor and composer, of Chicago, died there on January 24th. Born March 8, 1875, at Bloomington, Illinois, he early made a place among leading Chicago musicians. At his demise he was organist of the First Methodist Temple (the skyscraper church) and of K. A. M. Temple, and he had been conductor of the Association of Commerce Glee Club for nearly twenty-five years.

A MOZART FESTIVAL has been held at Prague, in honor of the one hundred and fiftieth anniversary of the première of "Don Giovanni" in that city; of "La Clemenza di Tito" which was written for the coronation of Leopold II; and of "The Marriage of Figaro." In honor of their beloved master, a Mozart Museum in the Villa Bertramka was dedicated.

THE FESTIVAL FOR 1938 of the International Society of Contemporary Music will be held in London, from June 17th to 24th, sponsored by the *Daily Telegraph* and the *Morning Post*.

THE SALZBURG FESTIVAL, to be held from July 23rd to August 31st, offers Mozart's "The Magic Flute," "Don Giovanni," "The Marriage of Figaro," and "Cosi Fan Tutte"; Beethoven's "Fidelio"; Wagner's "Tannhäuser," and "Die Meistersinger"; Verdi's "Falstaff"; Gounod's "Faust"; Strauss's "Der Rosenkavalier"; and Gluck's "Orpheus"; with also orchestral concerts and performances of Mozart's "Mass in C minor" and "Coronation Mass."

WERNER JANSSEN, young American composer and conductor, began his incumbency as leader of the Baltimore Symphony Orchestra, by directing its program of January 9th, which included the *Overture to "The Magic Flute"* by Mozart; the "Second Symphony" of Beethoven; and the "First Symphony" of Sibelius.

THE NATIONAL ASSOCIATION OF CHOIR DIRECTORS is a new organization for the improvement of choral music in the church service. Further information may be had from Robert G. McCutchan, president-general, 1822 Sherman Avenue, Evanston, Illinois.

FOLLOWING HER ELECTION as an honorary member of the Tuesday Musicale of Detroit, a program of works by Evangeline Lehman was presented by this organization, including a "Trio for violin, violoncello and piano"; solos for these instruments; songs and choruses for women's voices.

WAGNER AND STRAUSS are said to have led native composers during the past season of the Berlin Opera, with fifty-six and eighteen performances respectively. Of alien composers Puccini led with thirty-four performances, while Verdi seconded with twenty-five.

THE ANNUAL SPRING FESTIVAL of the American Society of the Ancient Instruments, of Philadelphia, with Ben Stad as its founder and conductor, will be held on April 5th and 6th, at the Irvine Auditorium of the University of Pennsylvania. Among the interesting novelties will be a Buxtehude and Bach program, with several compositions not before heard in America.

THE NBC HOME SYMPHONY, a service conducted by Ernest La Prade, is a new venture by which the musician at home may participate in certain programs of the National Broadcasting Company. Particulars are too intricate for presentation in these columns but may be had by addressing NBC Home Symphony, RCA Building, New York City.

VLADIMIR DUBINSKY, widely known concert violoncellist and formerly first violoncellist of the Philadelphia Orchestra, the New York Symphony Orchestra under Dr. Walter Damrosch, and the New York Philharmonic-Symphony Orchestra, died January 11th, at Syracuse, New York, during a rehearsal with a local orchestra.

RICHARD WAGNER

THE BAYREUTH FESTIVAL of 1938 is announced to begin on July 26th and to close on August 19th, in spite of a former statement that this significant event had been abandoned for the summer of 1938. There will be two performances of "Der Ring des Nibelungen" with also presentations of "Tristan and Isolde" and "Parisfal." The change of design is brought about as a part of plans by which all of Germany will celebrate the one hundred and twenty-fifth anniversary of the birth of Wagner.

LA FENICE of Venice, one of the larger opera houses of Italy, which has been previously a private enterprise, is reported to be about to be rebuilt by the government.

"A MASS OF LIFE," master work of the late Frederick Delius, for double chorus, quartet of soloists, and orchestra, had its first American performance, when interpreted on January 12th, at Carnegie Hall, New York, by the Schola Cantorum; with Julia Peters, soprano; Lilian Knowles, contralto; William Hain, tenor; and Robert Nicholson, baritone; and with Hugh Ross conducting. It had its world première at Queen's Hall, London, in the summer of 1909, with the baton in the hand of Sir Thomas Beecham.

"AUNT CAROLINE'S WILL," an opera by Albert Roussel, which was presented during the past winter at the Opéra-Comique of Paris, is in preparation for its German première.

FERDINAND HIMMELREICH, distinguished pianist, organist and composer, of Laurel Springs, New Jersey, died there on December 11th. Born November 15, 1880, in New York, in spite of almost total blindness he had overcome this handicap till he was known throughout many eastern states, especially as organ recitalist. He was long a valued contributor to the catalog of Theodore Presser Company.

ANN AND HARRIET TAYLOR, sixteen and fourteen year old sisters of Sidney, Nebraska, travel four hundred and five miles each alternate Saturday, to have music lessons in Omaha.

GILBERTO GRAVINA

COUNT GILBERTO GRAVINA, Grandson of Hans von Bülow and Cosima Liszt-von Bülow-Wagner, led on last December 8th a Wagner-Liszt Program by the Philharmonic Orchestra of Berlin—his first such appearance in that musical capital. From the beginning of his career Count Gravina has played the flute in the Bayreuth Orchestra, and for seven years he has been the conductor of the Civic Orchestra of Merano, near Venice, Italy. Magnificent Musical Auditorium of St. Louis, the scene of the Music Educators National Conference from March 27 to April 1.

How Can I Help?

THE purpose of this editorial is to speak very frankly and plainly to our readers, whose magnificent friendship throughout the years emboldens us to point out some ways in which musicians and music lovers may help in these cataclysmal days, when a large part of civilization incessantly fears that at any moment the world may break out in another of those sociological cancers known as war.

We never permit ourselves to believe that more than a relatively small section of mankind is made up of assassins, thugs, vandals, butchers, cutthroats or vampires. Most of the people of the civilized world are not so very different than you and me, who are anxiously striving to do the very best we can under given circumstances. It must be clear, however, to every observing, experienced person that it frequently happens that power over many millions of submissive, kindly, finely-intentioned people, sometimes falls into the hands of wicked, vengeful, devilish men, who, to elevate themselves and their fiendish friends, think nothing of using their power in hellish manner to wreck nations and races. While the great leaders of the world are doing their best to avert war, the peoples of the nations must join in a common movement to strike at the thing which does more to cause war than any other one factor—and that thing is fear.

Speaking at the banquet of the highly successful convention of the Music Teachers' National Association held in Pittsburgh, Pennsylvania, in December, we called attention to the fact that, in these rabid days, all art throughout the world is likely to be definitely restricted as long as half of mankind continues to work frantically in churches, universities, laboratories and research hospitals, for the preservation and the elevation of the human race, while the other half is working fanatically to employ the latest devices of science for the annihilation of mankind through war. How soon shall we get done with this diabolical nonsense of breeding fine boys and girls for slaughter? What is the world going to do about the Caesars fertilizing the fields with the youth of the land; the Attilas destroying the accomplishments of centuries for the gratification of a lust for power?

In Europe, we confess, the outlook for art is very dismal until some St. Francis of Assisi, some Savanarola, some John Huss, some Calvin, some Voltaire, some Goethe, some Gladstone, some Disraeli, arises to save humanity from the danger of international suicide. Too long have musicians lived apart from those fundamental currents of the state, because they permitted themselves to be considered separate from the greater concern of men. Is it not time that the millions of music and art lovers throughout the world, the men and women of ideals and culture in every city, town and hamlet, the great army of labor whose existence depends upon peace, all those who love the opportunity to work and enjoy the beautiful things of life, should come courageously forward and through those invincible agencies of peace, which work miraculously when properly employed, insist upon a better, finer, stronger, more enduring understanding of their fellow men in the light of the highest ideals of Christianity?

With the miasmas of war contaminating the many countries of the globe, there is naturally a horrible unrest in the countries not actually in combat. This is manifested in the incessant fears which infect millions in this day and are, to our way of thinking, the most serious factors in preventing a return of international balance, sanity, prosperity and happiness. For every present day "phobia" there is, of course, an "ism" presented by some demagogue as a cure. Yet no one seems to say outright, "Rid yourself of the fears or help others to do likewise." Hundreds of millions of people throughout the world who call themselves Christians seem to forget those majestic lines, "Yea, though I walk through the valley of the shadow of death, I shall fear no evil; for Thou art with me, Thy rod and Thy staff they comfort me."

Even in our land, more blessed with comforts, and affluence than any other, multitudes of men are in a continual nightmare of fear. In their sleep they find themselves in some horrible dream in which they go to their offices, their jobs, or their schools, as they have for years. When they get there, they find unfamiliar faces handling their tools, their papers, their instruments. There are other individuals taking their places. Obviously they have been "fired." Other people are going over their accounts, opening the letters they have loved to open for a lifetime. Strange people, ugly people, terrorizing people, are asking them cruel questions. Just outside the door stand poverty and desolation. Revolution has come! So this is the advancing horde! This is what the dreamers have read about, have heard about over the radio and seen in the

movies. It is leading them to the firing squad for no offense other than that the revolutionists desire to possess without labor what they have worked hard and long to secure. These victims have subconsciously dramatized their fears into a nightmare, and this is only one of the nightmares that people are morbidly carrying around in their subconscious minds—frightful, morbid imaginings that cannot occur in a democracy such as ours, as long as we retain our common sense and our respect for others. Just now these fear dreams are the greatest barrier against world recovery. Worst of all, these dreams which have been assimilated from a terrible era of world history, are just as invisible and insidious as they are real and virulent. Every psychologist knows the truth of this statement. The problem of rooting them out is one of the greatest of the time; and we believe that music may play a great part in this.

In aggravated cases, the problems are strictly those for the psychiatrist and the psychoanalyst who, by means of suggestion and rationalizing, arrive at the seat of the difficulty and sometimes produce results which resemble miracles. With the average individual, however, we feel that music in the hands of the proper persons may be of great advantage in diverting the mind, resting the intellect, and relieving the nervous strains to which so many millions in our dynamic country are daily subjects.

"What can I do?" you ask. "I am a musician. This is all new to me. I have nothing to do with world factors that are affecting life so seriously."

There are many important things that you can do. A simple song reaching out from the heart, a well played solo, a finely planned church service, each has its place in the scheme of things. If you are a teacher, you may be providing, through your lessons, just that form of substitution of concepts and ideas which may keep some man from losing his reason. It is not always the great general in history who has won the wars of the world. Sometimes an apparently very simple and inconsequential toss of the coin of fate, in the hands of a poet or a muscian, has settled the affairs of nations. What general was worth to France that fire that Rouget de l'Isle's "Marseillaise" put into the hearts of the soldiers? What leader, in gold braid and brass buttons, put more patriotism and love of liberty into the spirit of those splendid boys that went over seas "to make the world safe for democracy" than did John Philip Sousa through his *Stars and Stripes Forever?*

What can you do? Well, try these:

Organize with other teachers of all kinds to plan a war upon fears, hates, intolerance and misunderstandings. Join your local music teachers association. Join the Music Teachers' National Association, and strive to attend its National Convention. Interest yourself actively in all the splendid musical organizations of your country. The twenty-fifth National Music Educators Conference, which meets in St. Louis this month, under the able presidency of Dr. Joseph E. Maddy, has in the course of a quarter of a century so stimulated musical education in the schools of the United States that a whole new life has come into our educational system. Nothing but music could have brought the spirit, the cheer, the animation, the school unity and the refining influences which have given a new character to all of our great program of public instruction.

Hunt out some of the troubled business men in your community. Persuade them that a course in music study will make them far more able to forget their cares and to fortify themselves for work than almost anything else they do. Arrange special classes with special terms. We know a teacher who tried this with great success.

In your contacts with your fellow man, never permit yourself to add to the difficulties of the hour by emphasizing the evils of present day life, by stressing the very phobias we have discussed in this editorial to help "get them out of your system."

When you find pupils or associates who insist upon taking a pessimistic view, try to persuade them not to dwell upon such things and to substitute music study for lurid movies, crime radio programs, or inflammatory reading material. In other words, lead them to a simpler, calmer life and to embellish it with as much as possible of

THE MUSIC TEACHERS' NATIONAL ASSOCIATION BANQUET AT PITTSBURGH, LAST DECEMBER

MAURICE RAVEL IN HIS GARDEN

This exceptional portrait of Maurice Ravel was made during the summer of 1936, by the well known American composer, Evangeline Lehman. The photograph was made just before the master was stricken and is doubtless one of the last ever taken of one of the greatest of modern composers.

Maurice Ravel (1875-1937)

By the distinguished French pianist and conductor

MAURICE DUMESNIL

MAURICE RAVEL'S unexpected death is a severe loss for the French school and might be called passing of an era of music. France has n hard hit in the last few years: Widor, ndy, Dukas, Pierné and Roussel rather ftly have disappeared from the scene; now Ravel also is gone. Who is there replace them, and how long will their nes remain unfilled?

Even though the unfortunate affliction his last and probably his best years made mpossible for Ravel to go on creating and actually significant works, what has left behind is quite sufficient to ablish him as a sovereign in the realms music.

Since we happen to be his contemaries, it is not for us to attempt an luation of the true importance of his duction, nor to settle his eventual place the history of musical art.

An Inimitable Figure

ME WILL TAKE CARE of doing that. But seems justified in assuming that a ade or two hence Ravel's music—orstral, piano, chamber and operatic—will e more frequent performances than it received to date, and that he will be- e more generally appreciated and more ous as the days go by, and for works er than the *Bolero*, which he wrote on mmission for a dancer. Ironically enough, was this ubiquitous piece that gave him rld fame and the first real monetary urns for his unceasing toil. Yet it is not essary to-day to bring in the dance to tify Ravel as a lonely and unmatchable are among composers of our time. And too, like many other artists worthy of name, is to have his revenge while enjoying his well deserved, eternal rest.

He produced some of the most exquisitely wrought art works which will outlive all of us, and which will keep on shining as luminous gems when the deeds of other more publicized composers, and heroes by accident, will have been relegated to dust and oblivion. It is this survivial which constitutes the artist's revenge.

A Taxicab Accident

ALTHOUGH, ON THE SURFACE, Ravel's health remained apparently normal or at least fair, we, his friends, knew that he was failing since the taxicab accident which occurred six years ago, and from which he never completely recovered.

One night, as he returned to the small hotel, the only one on the Rue d'Athènes, where he stayed every time he came to Paris, his taxi collided with another car at the corner of that street and the Rue d'Amsterdam. Ravel was taken to the hospital and I visited him the next day. There he lay in bed, his head all wrapped in bandages. All I could see of his face was the tip of his nose and his eyes which had lost none of their vivacious sparkle.

After recounting the details of the mishap, he started recollecting some experiences of his then recently completed American tour, insisting particularly on one episode in a Pullman car, during which he carried on a conversation by signs with a jovial colored porter. His sense of humor had been quite aroused on that occasion. When he started reënacting some of the mimics, the nun who nursed him gently interfered and recalled to him the drastic prescription of the surgeon, that he should remain very quiet.

When I left him after such a lively conversation it was with the comforting impression that the accident had not been a serious one after all, and that a few days of rest would restore him to his own best self.

His Death Blow

THIS WAS WRONG. Although he went back to his country home at Montfort-l'Amaury but a week afterwards, Ravel on that fateful night had received his death blow. Little by little a strange condition developed within him. Intermittently his memory began to fail, and he suffered from spells of depression which lasted several days and sometimes much longer. Then he would go and stay at the magnificent estate of Dr. Bour at Malmaison, where a skilled staff of specialists took care of distinguished patients of the world of politics and arts.

This always brought a betterment, and when he was seen in public it was impossible to realize that something was wrong. So much so that at times a renewed hope came to us.

One Sunday afternoon of 1934 is remembered, when I took him riding through the forest of Rambouillet. On reaching the city of that name we stopped at the rustic inn directly across from the chateau. As we drank beer, Ravel started reminiscing. He recalled the night in the winter of 1902 when he brought his manuscript of the now famous *Fountain* to the apartment of Gabriel Dupont, that prematurely departed genius of French music; how we made him play it three times over, delighted as we were with that revelation. As a young Conservatoire student, I shortly afterwards attempted to play it for my teacher, when it almost created something of an artistic revolution among the class.

An English Trip

THEN RAVEL TALKED about the trip we took together all through England in 1913, during which the red London buses, the Horse Guards parade, the "Flying Scotsman" and many other things had impressed him so vividly. Gradually he grew more and more animated; the hours passed and he seemed quite himself again and in full possession of his sense of humor and even his caustic wit.

Later on I visited him with Evangeline Lehman, the American composer whose "Ste. Thérèse" legend had just been performed with success in Paris. Once more he was in splendid mood and he proved to be a supremely refined and aristocratic host. He took us all over his house, showing special delight in demonstrating the Swiss mechanical miniature bird which had been presented to him shortly before and had become his most treasured possession.

In a corner of the Chinese room—"more or less authentic," he commented with an ironic twinkle in his eyes—there were piles of musical magazines from all parts of the world and packages of phonograph records. All remained unopened.

We sat for a long time on the terrace, in the balmy atmosphere of that summer afternoon. Below us was, on one side, the quaint old city and the historic church with its turrets and gargoyles, and opposite, the verdant lawns and the secular trees of a country estate.

"Isn't this a marvelous location?" Ravel asked, as he pointed with his finger. "There

Composers Are Stylists

By HELEN DALLAM

This Able Composer and Teacher, of Chicago, writes for Those who Feel the Impulse to Compose

HELEN DALLAM

A GREAT MANY musicians, at some time in their lives, feel the impulse to create music, as well as to interpret it. A few of these people may succeed in composing good music, whereas most of them involuntarily borrow ideas from material already written. This so-called plagiarizing is the result of hearing and playing music written by classicists as well as modernists; and, if not an unconscious act, it is at least a subconscious one.

For instance, if a pianist is a noted Bach player or a noted Chopin interpreter, he naturally thinks in the idiom which interests him pianistically. If he were to write, he would perhaps fall quite naturally into this vein, without realizing it unless his attention might be called to the similarity in style.

It is, perhaps, wise for an interpreter not to be a stylist, if he wishes to compose music; for he will be much more likely to create his own style if he does not feel too much favoritism for any certain composer. The classicist created his own manner of expression, which the modernist also has done. If one must write, why not be different? And if one must be different, be beautifully so, rather than resorting to tricks to inveigle the public. Why try to put something over on an audience which is hoping to find something new expressed in music?

Certain tricks have been tried on the public, finding favor with at least a part of the hearers, while others have been discovered to be false experiments which the public failed to swallow. These so called faddists (or fakists) may find popularity temporarily, but only sincere composing will be permanent.

How are we to judge as to sincere and insincere musical expression? First, if music copies or borrows ideas from that which has already been set down and heard repeatedly, one knows that the composer is not original. On the other hand, if a new work shows no similarity to preceding compositions, but is hard on the ears, one is at first skeptical as to its greatness, at least until he becomes accustomed to the new idiom and penetrates into its meaning. A very excellent method by which to obtain information regarding a new style is to analyze it, if possible, and to discover what pattern, if any, is used. It will be found that modern music is not so apt to follow a definite outline of reasoning as is the old style of composition.

This brings to mind the great Bach fugues. A fugue must have a set pattern, in order to be a fugue. This statement is proved by the definition which follows: "A fugue is a polyphonic musical composition constructed, according to rules of imitation, from a given phrase, theme or short melody called the subject." In order to write a fugue, then, one must make one's self acquainted with the method of procedure by studying and analyzing the contents of the Bach "Well Tempered Clavichord." After delving into the whys and wherefores of this mode of writing, one may pattern his own work after that of the great master.

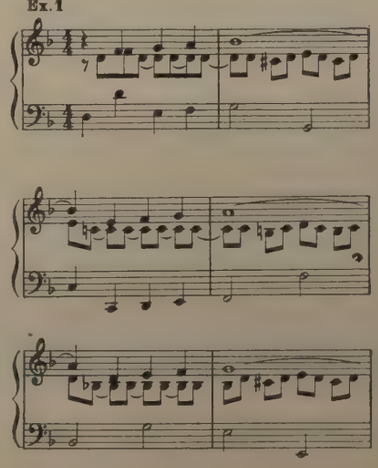
Shall We "Be Original"

THIS BRINGS ABOUT the argument of imitating another's style. In order to find ourselves musically, we must first procure a foundation of mimicry of great men who have blazed the trail. This is the only way by which we can build our technic and musical understanding so that we will be able to find ourselves and discover what is our own personal idiom.

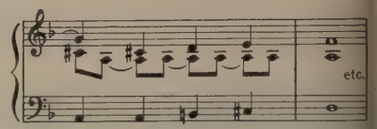
A composer cannot even commence to write until he has a certain amount of technic, just as the performer must have adequate technical equipment in order to interpret.

If the performer's fingers are not ready, or if the composer's knowledge of the appearance of notes on the page is not sufficiently developed (which is necessary if he wishes to create), the only procedure by which these matters may be adjusted is to practice much mental study. The brain must first realize a fact before the body may enact it.

The question arises now as to how one may analyze a fugue. This is answered by the obvious information that one must start at the beginning of theory, with a good instructor, gradually building up his education till he is ready for anything as seemingly complicated as a fugue. He should, at the same time, study the playing of the fugues with a good piano teacher. It is vital for the composer to be also a performer, not necessarily with a career in mind on the chosen instrument, but for the good of his own personal education and understanding. Many composers have made the mistake of underestimating the value of the piano as it influences composition. It is agreed that few composers become truly great unless they are interpreters also. There are exceptions to all rules, naturally; but, if one can play a few instruments, if only for his own amusement, it is a great aid to composing. This is an accepted fact, and it is a mistake to attempt to divorce composing from playing. The piano is perhaps the best and most natural foundation for work of this kind, it being the universally adopted instrument, and especially because it is a medium for the study of almost the entire musical literature of the world.



There are those individuals who are determined to close their minds to the Bach idiom, and there are also musicians who are equally disinterested in the Ravel mode of expression. It is a mistake, if one has one's own interest at heart, to bar any kind of music; for it is necessary to investigate every style, in order at least to satisfy the curiosity. Only after such investigation may one intelligently separate the wheat from the chaff, as it were, and reasonably make up his mind as to what he admires and enjoys. Even then he should take advantage of this deep, thorough study, and of deviating from the field which he has studied, thus finding his own path of originality.

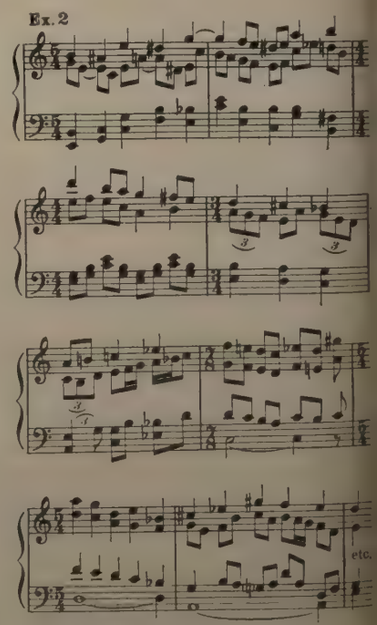


An excellent method by which one may avoid expressing ideas in a pedantic manner is to experiment with different combinations of harmonizations and melodies, just as a scientist experiments with various combinations of chemical fluids. This idea sounds rather material, but it must be remembered that science demands imagination and inspiration just as does music.

In discussing these so-called different combinations, let us compare the idiom of a representative classicist with that of a typical modernist.

The following sequence is a good example of the old school,

Ex. 1



Note the reasoning as well as the reasonable procedure employed here. It is exactly what the ear expects to hear, this being more generally true of the old compositions than it is of the modern ones.

In contrast, the next few measures might be found in the ultra modern idiom,

Ex. 2

In this excerpt one cannot fail to see the seemingly wandering, aimless traveling of

Personal Trip Through Musical Paris

By PAUL de LAUNAY
Lic. Mus., Litt. D., Ph. D.
Officier d'Academie (Paris), Teacher, Concert Organist and Director

Professor Paul de Launay is a distinguished French musician and authority upon art and literature, who has been long resident in the United States of America. He has repeatedly toured Europe, giving to groups of enthusiastic American tourists his lectures upon the great music centers.—Editor's Note

WHEN I WAS IN PARIS, my native city, last summer, after an absence of over twenty-five years, ıld not but feel melancholy at the ht of all the great French musicians had died during that time, several om I had known intimately. It was l with great sadness that I looked e old buildings of the Conservatory usic, rue du Faubourg Poissonniere, given to other undertakings; for the Conservatory is at present in the rue adrid, not far from the Gare Saint- e and the home of the late Albert nac, one of my favorite teachers. As ked at the great *porte-cochère* of the st conservatory buildings, I could see f as a little boy entering under it with my music folio in my hand. I recalled how in those early days of my life I had felt timid and filled with awe before all those great masters gathered in this sacred temple of music.

In those days Ambroise Thomas was its director, Gounod, César Franck, and many other great composers, now all gone, were still alive. Among the great masters I have known especially well, some of whom were my teachers for a while, there were the good old dean Eugène Anthiome, my first teacher of piano there; then Albert Lavignac, who at first taught me solfeggio and later on harmony and composition. One after the other came Pugno, Pessard, Guilmant and Massenet. In those days, Godard, Reyer, Delibes, Lalo, Debussy, d'Indy, and scores of other truly eminent musicians, were alive, a list too long to enumerate here.

AT THE ALEXANDER BRIDGE IN THE HEART OF PARIS
The most magnificent passageway between the two banks of the Seine

FESTIVITY IN THE GREAT FRENCH CITY OF LIGHT
Music, Art and Gaiety

A Divinity Directs

AT ONE TIME the 'divine' Sarah Bernhardt, whom I knew personally and whom in later years I met again in this country, had been appointed as professor of tragedy, a position which she held for only a short time. I could see again all those ancient class rooms with their bare and cold looking walls, a large door opening on a dark and long hall, benches built in the walls around the class rooms and literally covered with names and initials of generations of students. Following this fashion, I engraved my name there as seriously as if I expected it to remain forever. I remembered also those two large and high windows in each room opening on the rectangular closed-in court, a large yard all paved, surrounded by tall and gloomy buildings of the appearance of barracks or of a hospital, rather than of an artistic center. Nothing inviting in the architecture anywhere here. I saw again in my memory how my teachers, with their backs to the windows, and seated before an Erard grand piano, would improvise for some of us at the end of the class, or play some of their own compositions. I still can see Lavignac in those early days. How handsome I thought he was, with a fine-looking blond mustache, though later in life he wore a beard. Alas! how distant these days are now.

I remembered also how, during my first years, I used to follow several extra courses in the 'Salle Beethoven,' a hall not far from the old Conservatory. In that place we used to take lessons in theory in classes, also musical dictation. Walking between rows of students, our teachers would bend over our shoulders to see how we were getting along while a teacher was dictating from his platform. I still have in my possession many of those first manuscripts, with some of the corrections made on the spot by Lavignac himself and others.

Many of my old comrades have become famous since those student days. I will not undertake to list them for fear that should I forget one, I might be misunderstood, so I will mention but one, Louis Aubert, because he was one of my first friends in the piano class under Anthiome, the dean of the Conservatory at that time. We were both little fellows, for I was not yet ten years old. Then his father, who was a music teacher, gave me lessons in order to prepare me for my lessons at the Conservatory. It was a necessity to have extra instruction outside this great school, in order to be able to keep up with the fast instruction received there, and where every student was expected to be well prepared when appearing before the master. How different it is here in many sections of the country where students appear before their teachers with all sorts of excuses for their lack of preparation.

Taking the Musical Hurdles

IT IS WELL KNOWN that it is very difficult (at least it was in my days) to enter the Conservatory of Music of Paris, and still harder to stay in it. Strict work is expected from all pupils. A single failure, and the pupil is 'out.' This is a necessity, for there are thousands of applicants and only a few admitted. Inferior work and indifference are not tolerated under any circumstance. Some readers may remember how even the great Liszt, when only a child, was refused admittance when he came with his father to see the director Cherubini about being enrolled. Cherubini refused the lad admission because he was not French, forgetting that he was a foreigner himself. I have often thought that this was not the principal reason. It is

possible enough that the old master saw through the child's future, guessed in him a genius, and consequently felt jealous; just as we are told of Haydn when this giant saw young Beethoven for the first time. Berlioz himself seems to have known that particular trait about old Cherubini. However this is only a supposition. Whatever it was, the Conservatory of Paris lost a great opportunity of honoring itself when Liszt went elsewhere to study.

For years this fine old conservatory remained absolutely too conservative, even intolerant. Many of my fellow students, with great talent and ambition, left it in order to give themselves completely to what they considered a real departure from the antiquated old rules, held in such veneration, year after year, by the masters of those days. I firmly believe that the creation of a rival school, with broader views, known as the Schola Cantorum, has had much to do with the appearance of the neo-modern school. This excellent school is one of the results of the rebellion that took place. This great school of modernistic ideas was founded by d'Indy, a musician who luckily for him was financially able to be an independent. Vincent d'Indy was a disciple of César Franck, the beloved "vieux (old) papa Franck." To-day the Schola Cantorum has many fine young professors with futurist tendencies, one of whom I was fortunate enough to meet last August at an informal supper at the home of one of my old friends.

Giants at the Consoles

After having left the old Conservatory, I directed myself toward some of the very old churches of Paris. I visited again Sainte Clothilde, where once César Franck played and received a ridiculously low salary—so stupidly low that I am ashamed to mention it here. I went in many churches where I had known the organists at one time or another. All had passed to the great beyond. Sad to be said, the majority of the organs are still pumped by hand; only a few have at last an electric motor. About these motors it must be said that their installation was not easy; for the organists, such as the late masters, Widor, the famous organist-composer of Saint Sulpice who died last April (1937), and Vierne, the blind organist-composer of Notre-Dame, the cathedral of Paris, who died shortly after Widor, last June, met with a rebellious spirit when they asked the clerical authorities of their respective churches for this improvement. At last, both masters succeeded in the accomplishment of their wish, but it certainly was not without trouble. At Notre-Dame, one of the priests had the stupidity of replying to the great Vierne, "What do you want with an electric motor? The organ, just as it is, was well played for years by all your predecessors; and there was no kick about it by any of them. They were satisfied, and I am sure that what was good enough for them is good enough for you." Luckily this antagonistic priest went to his reward sometime after this argument and Vierne, through the influence of some of his admirers, was able to have an electric motor installed. It has been said that, when the electricians came to do the work, they found in the organ all sorts of trash, birds' nests, broken stones, decayed wood and what not, which had been one of the chief causes for many of the pipes to be entirely without sound. But poor Vierne did not live to enjoy his motor long. The great artist who, for many reasons had been very unhappy for many years, exclaimed one day in a fit of melancholy, "I wish I could die soon and at this great organ!" His wish became a fact. He died as he had desired. Last June, as he finished playing one of his organ symphonies at a recital given in the great gothic church, his head fell forward on the manuals, causing a terrific noise which at first the audience attributed to ciphering. When friends came to him they found the master dead of heart trouble.

A Youthful Master

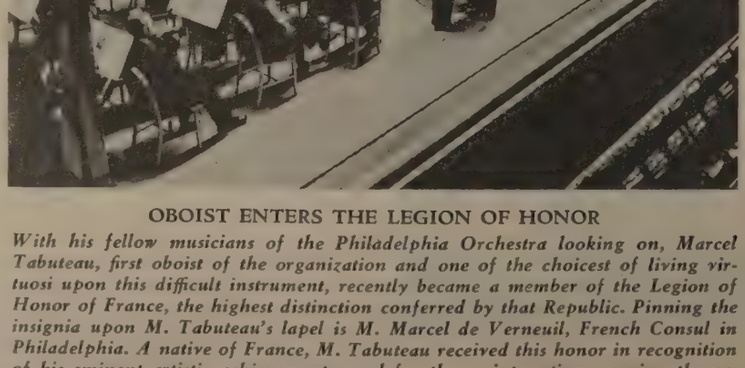
Next came a visit to the magnificent church of Saint Sulpice, the church which had been enjoyed in the days of the great Widor, he who was the last of that galaxy of truly great masters of the organ and the last link of that glorious past; he who, when still a young man, was warmly complimented for his magnificent organ performance, by Liszt himself. As it was a Sunday morning, I climbed once again the spiral staircase of this church, a staircase which had many times caused my heart to beat with excitement and expectation in the years gone by, when I used to come and see Widor, to watch him play, and to admire him silently as does a fervent priest his idol. That morning I was fortunate to hear the successor of the beloved master, Marcel Dupré. This organist played for the two masses, improvising during both, from the beginning to the end without stopping except for necessary short pauses caused by the changes of movements. His improvisation during the second mass was a symphony beginning with a *staccato* theme, followed successively by other movements in different moods, according to the various phases of the mass. His playing was immensely enjoyed, and when the mass was over I came to congratulate him. We had a pleasant chat for a few moments, during which I told him how the sight of the empty choirstalls saddened me. In the great past all these magnificently carved oak stalls, hundreds of them, were filled to the limit with those splendid young men, seminarists of the great Seminary nearby. There were also scores of choirboys and many extra musicians besides the regular choir organist. That Sunday morning not a note was sung, not a single chant, only the music from the organist of the 'Grandes-Orgues,' Marcel Dupré. No wonder this organist had to improvise all along and keep on playing until the very end of the service. While he was playing, I looked down below and saw a pitiful sight. Only a very few people were there, the immense central nave being practically empty. I said something about it to Mr. Dupré, who answered, "This sad condition is due to the separation of State and Church, and to the confiscation of all church property, schools, seminaries, monasteries, convents, and so on." Thus, empty churches.

After returning to the main floor and leaving the beautiful church behind, I glanced to the left in the direction of the famous Seminary of Saint Sulpice. There, also, marked changes had taken place. The Seminary existed no longer, for the buildings have been taken by the government and transformed into offices for the city. Readers will no doubt remember this institution mentioned in the beautiful opera-comique, "Manon," by Massenet, that most charming of the composers of the end of the nineteenth century. This seminary produced some of the greatest men of the pulpit that ever lived, orators such as Lacordaire, for example. Gounod, himself, studied there for a while.

Among Tombs of the Mighty

Another day my steps turned toward the Pantheon. As all know, it is a temple dedicated to the greatest men of France; and in the crypt of it are buried such men as Voltaire, Jean-Jacques Rousseau, Victor Hugo, Zola, and so on. When leaving the building I entered into the rue d'Ulm close by, in which once lived a fine old musician, a man who was a contemporary of Chopin, and one of his most intimate friends. This elderly gentleman, Dr. Reinkoff, was born in 1810. He had been present during the last moments of the great pianist. Dr. Reinkoff was still alive in 1902.

Looking at the old mansion, a house dating from the seventeenth century, many pleasant moments were relived as the old musician related valuable stories about some of the masters he had known during his long career in Paris, many intimately, among these Chopin himself.



This gentleman had once been one of the leading organists of the capital and was forced to abandon his beloved instrument, after a period of over fifty years of faithful service, because of rheumatism which had distorted the joints of his hands. Though an invalid, he had been able for quite a while to pass his time reading music directly from books he held on his lap. Unfortunately, a few months prior to the time I met him he had fallen from his bed and hurt his head in such a manner as to lose his sight completely. Except for his two daughters, elderly ladies who had charge of a girl's school, this old gentleman was quite alone. People came to see him from time to time, but otherwise he was very lonely. One of my music tea- ers had told me of this very sad case a suggested that, since he was now una to read, it would be good on my part go as often as possible to play to him. T was luckily done, as will be seen.

When I was introduced by one of daughters, he welcomed me most cordial and, to make it brief, I went regula twice a week to play anything for wh he asked. We soon became very me attached to each other, I a young lad s in the teens and he, a nonagenarian enough to be my great-grandfather. I lik to go to see him, not only because it w excellent practice for me but also beca his large salon was like a museum, be full of interesting bric-a-brac, souvenirs all sorts, autographed photos and s houettes, statuettes, medals and what n Then his piano was a magnificent Era grand kept in perfect tune. He had also splendid music library, to which I had fr access—another fine attraction. When r calling those afternoons, I can see him his ancient armchair, a black velvet sku cap over his head, a shawl over his shou ders and crossing his chest, his feet on stool, and before him a lively fire in t grate. He had side-whiskers which r minded me of good 'papa' Franck. I c hear him exclaiming in the middle of r playing, "No! no! Chopin did not pl this measure like that, but like this!" a he would hum the passage and beat tim with his withered hand. Many times d he interrupt me in this way; but I enjoy his criticisms which did me much go in studying Chopin right. I knew th during his long life he had known ma of the greatest people of Europe, especial famous musicians, artists and writers; I did not hesitate to ask him, after I w through playing, for a story or two. H readily agreed, inviting me to take a se by him.

A Patron of Genius

Many were the stories of some of th masters that he told me in the quiet that Paris home. Though he spoke of pra tically all the musicians of his day Rossini, whom he knew well, Berlioz, Biz and many others, Chopin seemed to be h favorite theme. He had been one of Ch pin's first friends in Paris, when the you Polish pianist was struggling for reco nition and living with the help of son friends he knew in the Latin Quarte Mr. Reinkoff told me of the first conce Chopin gave in Paris, and of how pitif were the results. The concert passed u noticed; and, had it not been for the d votion of those young friends, Chop might have returned to his native Pola or might have come to America to sett here. Luckily for the master, one day whi walking in some street he met prin Radziwill, an old Polish friend of his, an from that moment, Chopin never kne want. He, who had been dressed in shabb clothes and with holes in his shoes, becam from that time one of the best dressed me in Paris. "He never went out without wear ing the most lovely neckties—in those day large scarves which came up to the chin and extremely beautiful white kid gloves my old friend once said to me. "He use to visit us, his old friends, quite frequently he continued; "for he was really a ver grateful man. It was during one of hi visits to Delacroix, the famous Frenc painter, when I happened to be presen that this artist make a rapid oil sketch Chopin, a painting which has since becom famous; for it was a splendid likeness a part of our conversation which I re corded. Another day, this good old gentle man, when discussing Beethoven, Moza and some other masters, said to m "Strange to say, Chopin did not like Bee thoven. Once we heard him say, 'Il m fait peur, ce geant (I am afraid of thi

(*Continued on Page 270*)

OBOIST ENTERS THE LEGION OF HONOR

With his fellow musicians of the Philadelphia Orchestra looking on, Marcel Tabuteau, first oboist of the organization and one of the choicest of living virtuosi upon this difficult instrument, recently became a member of the Legion of Honor of France, the highest distinction conferred by that Republic. Pinning the insignia upon M. Tabuteau's lapel is M. Marcel de Verneuil, French Consul in Philadelphia. A native of France, M. Tabuteau received this honor in recognition of his eminent artistic achievements; and for the so interesting occasion the orchestra played an all French program with Eugene Ormandy conducting.

Vagner and the Box Office

A Study of Musical Trends

By ARTUR BODANZKY
Senior Conductor of The Metropolitan Opera

Conference Secured Expressly for The Etude *Music Magazine*

By ROSE HEYLBUT

ARTUR BODANZKY

ITHIN THE PAST three years Wagner has become the greatest "box office draw" of the New peratic season. This is the second ive year that Wagner has been ed on opening night. Before that, ic dramas were considered "heavy" ghbrow," and they rarely filled a Before that, again, there were when it was considered distinctly f not "freakish," to endure Wagner The music of Wagner has not . Therefore the change must lie in ic's receptivity to it. And that, in plications, is an enormously inter- ning to consider.

e begin by saying that I am pur- pproaching this question from the view of popular interest. This may not coincide with musical aware- my own mind, I am not confusing But we are not considering the value of Wagner just now; rather, attempt to fix the cause and the nce of his new popularity.

e no hesitation whatever in saying first impetus to the recent trend Wagner was given by the arrival Metropolitan Opera Company of soprano. Wagner had been reg- resented before her coming, with less success, but with nothing like The lady came entirely unheralded. ie publicity was accorded her. No- new very much about her or her had seldom been heard outside the avian countries. She was not her- a "star." She simply came and d turned out to be . . . Kirsten

Gatti-Casazza, then General Man- the Metropolitan, invited me with ear her, in Europe. We were both tely aware that here was an un- tist, bringing a magnificent voice, nding dramatic ability, and an all- ng sincerity to her work. Both of hat such an artist would add con- to the strength of the Wagnerian e. But neither of us—nobody, in s prepared for what resulted from ing to New York.

A Queen in Hearts

CONVINCING CRITICAL opinion of artistic worth, Mme. Flagstad ly captured the popular imagina- d from the first I have felt that t general public displayed more han is generally credited to it, in ing her. Here, at last, was an ho not only assumed her rôles on , but became them, carrying them he footlights into the living con- s of her hearers. People felt this, e hurrying to hear Kirsten Flag- stad. Then, because she sang in Wagnerian opera, they found themselves listening to Wagner, as well; and, falling under the compelling spell of this singer's impersonations, they found themselves also falling under the spell of Wagner.

In the beginning, it was really as simple as that. I am no advocate of the star system in opera—that is to say, a system by which some favorite singer is regarded as the main consideration, and the music which he (or she) sings comes limping along in second place, a mere vehicle in which stellar attractions may display themselves. That is all wrong; and it is fortunate that we do not tolerate it. But in the case of Mme. Flagstad, the popularity of a star had important consequences.

In a word, Flagstad has given to the public, which came to hear *her,* an entirely new conception of Wagnerian opera. Suddenly, the heaviness and the highbrowism had vanished. The music and the stage play became infused with her all-compelling earnestness and took on new life, new light, new reality. I may add that, from the viewpoint of a conductor who has devoted years to the music of Wagner, and who approaches it with a familiarity that few non-professional hearers can be reasonably expected to possess, I have found this same thing to be the case when working with her. And the public discovered that something like a miracle had happened.

Wagner Made Approachable

COMING TO HEAR Flagstad, who was the rage, they heard Wagner, who was by no means the rage, and found in his works an inspiration they had never before suspected. This, I hold, is very different from the star system. Indeed, it is the exact opposite. It proves that great music can be made—or marred—by the quality of the public interpretation it is given. Wagner has been made vital and approachable by the work of an artist who ranks, not merely as a star, but also as a superb interpreter of Wagner. That covers the first step in the new popularity of Wagner.

The next step is even more interesting. You may ask, in disappointment, whether this new interest in Wagner is not, after all, the public's way of satisfying its curiosity about the talents of one singer. I believe I can show you that it is not. At the start, as I said before, this was the case. But, after people had heard Flagstad a few times, they began to listen to Wagner, too. After that had happened, it was interesting to note that Wagnerian performances, given without Flagstad, were attended by crowded houses. And outside the Metropolitan, summer seasons of opera and popular seasons of opera began playing Wagner to crowded houses, as well. This proves, I believe, that once an opera loving public permitted itself to listen to Wagner instead of shunning him as highbrow, it was captured by his music, regardless of any special star. To my mind, this second step is more significant.

The importance of this step does not lie merely in the fact that Wagner is being heard and understood by more people than heard and understood him five years ago. I should be equally delighted to see the same thing take place with any good music. And it would, I think, if each type and school of opera could be interpreted as magnificently as Flagstad interprets Wagner. A second Caruso would do exactly the same service for Italian opera. Indeed, I do not like to see music broken up this way into little groups of national or temporal nature. There is no old or new or Italian or French music—there is only good or bad music. Verdi stands at the head of the school he represents, just as Wagner stands at the head of his. Both should be received with respect. The importance lies in the fact that Wagner became popular through interpretation—which has nothing to do with the composer at all.

No operatic music can be well received if it is not well presented. Teachers and lecturers may argue by the hour over the reasons why Wagner should be admired, but it generally makes but little impression. You cannot take music as a part of yourself until you hear it. And you cannot hear it well until it is well sung. Good singing means good opera. Thus, Mme. Flagstad stands, not as an argument for the star system, but as the best possible proof of what consummate artistic interpretation can do to influence public opinion about a composer.

The Interpreter's Goal

HERE IT IS THAT the singer comes into his own. Music means little until it is interpreted. The singer sways popular taste for or against the music he sings. Whether he is an experienced professional or a struggling beginner, it lies with him to project his music in such a way that his hearers will say, "That is a fine song"; *or* "I don't care if I never hear that again!" Musical values are constant—but they can come to life only through interpretation. This creates a tremendous responsibility for the interpreters.

It forms the best possible plea for an earnestness of musical approach, as against a mere ambition to be a star. We have enough stars. We need a new crop of earnest, self-denying, hard-working artists who see their goal in terms of musical truth and artistic interpretation, and not in terms of glamour. Flagstad proves what such art can accomplish, without any effort to be glamorous. And Mme. Flagstad is not alone. Friedrich Schorr, Emanuel List, and others testify in their work that the best glamour a singer can have (if he or she must have glamour) comes not as a goal in itself, but as the result of artistic zeal and integrity.

And now we are ready to progress a step farther in our scrutiny of this new popularity of Wagner. Having listened to his works at first as a means towards the end of hearing fine operatic casts; and having come, in the second place, to listen to him for his own sake; the public is beginning to realize a number of things about him which music scholars have been saying for a long time, but which needed personal experiment and personal conviction to drive them home. We are learning to appreciate Wagner's truly heroic position in the world of the theater.

To my mind, Wagner stands beside Sophocles and Shakespeare, as the third great foundation pillar of drama. His music represents but a part of his gigantic achievement. He conceived his own opera plots, from sagas and legends; acquainted himself with the minutest details of research in order to work them out in accurate fashion: wove his own dramatic

The Etude Prize Winners

In The Contest

"Why I Take The Etude"

This Contest closed in July, 1937, but the number of Letters submitted was so great, and the quality of the manuscripts so high, that the judges reached their decisions only after long study. The following were the letters finally selected by a judge independently of The Etude Editorial Staff.

Why I Take The Etude
First Prize

I TAKE THE ETUDE because I am a music lover. The "World of Music" section keeps me posted on events in the tonal art world. "The Etude Historical Musical Portrait Series" informs me about all musical personages, past and present.

I take THE ETUDE because I am a church organist. It provides a new, usable organ number monthly. The "Organist's Etude" points out new possibilities and warns me against certain common failings.

I take THE ETUDE because I am a pianist. With some seventeen new pieces every month to be played, THE ETUDE becomes a permanent reference library. I am especially interested in the master works and the master lessons. Prof. Gehrken's "Question and Answer" department suggests solutions for difficult passages. The many articles in each issue give printed advice from the world's specialists.

I take THE ETUDE because I am a teacher. The music section presents a new teaching repertoire monthly. Mr. Thompson's "Music Extension Study Course" gives a pedigogical analysis of this piano music and offers clever teaching tips. "The Junior Etude" is just the magazine for the waiting pupil to read; and The Junior Etude music section presents real teaching gems. I utilize the clinical services offered by the "Teachers' Round Table." Guy Maier discusses universal teaching problems, often identical to my own cases. Varied articles broaden the teacher's horizon. Besides presenting new methods of teaching the same routine necessities, these articles open up unexplored vistas to the growing teacher. "The Publisher's Monthly Letter" is a professional news bulletin containing a brief pep talk, data on advance of publication music, and discusses "The Cover." THE ETUDE is a gold mine of pictures for the studio bulletin board. A teacher should take a professional magazine, and why not the world's largest?

For these reasons I look THE ETUDE through from cover to cover upon its arrival.

EDWARD J. PLANK.

What Interests Me Most in The Etude and Why
Second Prize

THE ETUDE is a magazine that I think should be in every home. It is so interesting, instructive and inspiring with its varied music, its lovely pictures, and its valuable information on everything and everybody connected with music. I first started taking THE ETUDE years ago, after graduating from college, and I have derived much pleasure and profit from it. I love to sing, and so the first thing I look for is the vocal music. There have been many lovely songs in THE ETUDE. Then I glance through the instrumental music for a master lesson. A recent one I especially enjoy is the Chopin *Berceuse, Opus 57.* I have learned to play the piano through THE ETUDE, and I have found the Music Extension Study Course a great help to me in appreciating music. The article in the February number, "How to become a better Pianist," by M. I. Philipp, interested me especially. Then, I have greatly enjoyed the reading matter in THE ETUDE. Even one not especially interested in music could not help enjoying such articles as "Start The Day With A Song," by Henry Ford; "Radio Music," by David Sarnoff; and "Romances of the Musicians." Present day artists, whom we hear over the radio, we like to hear more about; and so we enjoy reading about them in THE ETUDE.

The editorials appeal to me, too, especially the one entitled "Whither Youth?" There being four young people in my family, I have felt that THE ETUDE is a necessity. My daughter uses the piano articles and the Singers' Etude; one son, the Organists' Etude; and one is interested in the articles concerning the various instruments. Each of us finds something interesting and helpful, and we appreciate the efforts and high ideals of those who have made and kept THE ETUDE the splendid magazine it is.

A Music Lover,
MRS. HARRIET L. MORSE.

Mrs. Morse supplements her letter with the following:

"I think perhaps that the editorial, 'Whither Youth' (September, 1936) interested me particularly. It should interest every parent because it presents an answer to the problem of youth development. There is no better way of employing leisure time and of developing the best in our young people than by encouraging them to study some musical instrument. They need companionship and an outlet for their emotions. What is more constructive than playing or singing in groups? The editorial should certainly help a great many parents, who are wondering how to protect their young people from the dangers of the present age.

A SUGGESTION

Many young people like to sing and I have often wished that some part songs could be published in THE ETUDE. There have been in the past one or two duets.

(Editor's Note: We shall be glad to hear from Etude readers who have a similar request.)

What Interests Me Most in The Etude and Why
Third Prize

THE SECTION OF MUSIC. As a teacher of violin this part of THE ETUDE was valuable for its new and appropriate material. Now, as a busy mother, this section of THE ETUDE interests me most, because it gives me many simple, clever pieces to play on the piano, stimulating my interest, keeping up my piano practice, and affording me pleasant hours of relaxation. Thus my household tasks are lightened and brightened.

My not quite three year old son enjoys the little songs with me, and this is giving him an early appreciation of music. He has several times surprised me by remembering the name of some catchy little tune, or one expressing some phase of nature. I have tried to show him that music is full of fun and joy, giving pleasure to performer and listener alike. THE ETUDE music selections make this plan possible, expressing life in its multiple phases.

I play advanced violin compositio only simple ones on the piano. H I have improved considerably with th of the grading in THE ETUDE. The c that are arranged are a joy to me, alt I am unable to play them. But by gl through them away from the piano, I am having an advanced course in Appreciation. The accompanying pa "Music Extension" is an excellent

A friend and I take delight in p the duets. Another friend has bor copies of my ETUDES for songs to in church.

THE ETUDE in its entirety is remar It is a complete liberal education in since music is so closely related and woven with all the other arts, histor literature. Even the mechanics of m and repairing instruments have pla THE ETUDE.

THE ETUDE as a whole interest because:

I was a teacher;
I am a mother;
I expect to teach music again soon.

* * * * *

My first glance, after the music, the "Musical Portrait Series," for fa names, their photographs, and hist Then I read the "World of Music" f concise current news, and the Edit which are splendid, always. As a r peruse the succeeding pages, me choosing which article to read first. I read the "Violinist's Etude," an "Violin Questions and Answers." "Teacher's Round Table" follows, and the feature articles. Seldom do I mis article offered, even those in the "J Etude," although THE ETUDE may be eral weeks in the process of being In this way my store of general m knowledge has been greatly increase say nothing of the joy THE ETUD brought me. I read the department "Band and Orchestra," "Organ," "V and "Accordion," to improve my u standing of music in all its phases. the advertisements give much useful interesting information, about diff parts of the country, and about rene teachers. The lists of advertised music helpful in teaching.

I have nothing but good to write THE ETUDE, and the wonderful m in which it is edited.

Again, thanking you sincerely.

Yours, very truly,
CATHERINE LEVERING BJEL

"He Never Took Lessons"

By MRS. HARRY MILLER

HAVE YOU AN ADULT in your home who regrets that he has never taken piano lessons? Does he sometimes touch the keys and seem so disappointed that the piano does not respond with pleasant music? But still the thought of taking lessons does not appeal to him. We have in our house one such adult—my husband. And one day when he surprised me with a gift of a beautiful grand piano it seemed to be sure evidence that he had as much love for the instrument as I did; and then came the determination to teach him to play so he also could enjoy the lovely gift.

First of all, to make the lessons as interesting as possible, we selected for the first book, the "Preliminary School for the Pianoforte," by Ferdinand Beyer. This book contains so many exercises in duet form which make the adult beginner feel, from the very first lesson, that he is accomplishing something. And, of course, he learns correct time more quickly in four hand playing. Pieces were selected which he knew and liked; yes, even popular music. We used single notes in the treble and revised the bass part so he could play it. His good memory fired his ambition to learn more complicated selections.

Our next group of pieces included "Faust Waltzes," selections from "Il Trovatore," "Edelweiss Glide," and several others. We also played "Chop Sticks Waltz," in duet form. Then we looked for pieces that appealed to the imagination, such as Indian war dances and Irish jigs. "The Melting Pot," an excellent book compiled by William M. Felton, is very interesting and has many simple selections from different countries.

After he could read the treble and bass notes, and knew something about time and the signs in the music, he desired to be left alone. So I went over new pieces and marked the fingering of all double or triple notes in the bass and wrote other helpful explanations in the margins so he could work out as much as possible himself.

If there is a violin around the house there is usually at least one adult who, when he was young, had taken lessons, but who, because of long neglect, is afra try to play lest he be ridiculed. My hus has such a friend, and as they both about in the same grade, they have of fun playing together.

These books also are excellent for with adult beginners: "Grown-up B ners Book for the Piano," by Willia Felton; "Book of Piano Pieces for Beginners"; "Book of Piano Duets Adult Beginners"; "Progressing Studies for the Grown-up Student. William M. Felton; "Book for Older ginners," by John M. Williams; "A Approach to the Piano," by Mary B Mason; and "Adult Beginners Book Caroline I. Norcross.

The Interesting Falsetto

By FREDERICK W. WODELL

This is the last article written by the late Frederick W. Wodell, who died February 13th. An obituary notice will be found elsewhere in this issue

THIS ARTICLE we are not con-erned with the artificial male alto, at ic period used in the service of the ı and the opera. The Roman Church stored the use of the falsettists in its , and male altos are to be heard in English and American cathedrals.

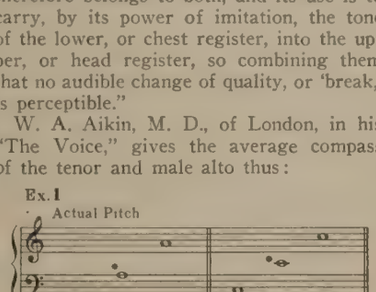
en an uninstructed man singer pro-up the scale with full voice, until his ecomes unmusical, his throat uncom-ly tight, and his voice suddenly breaks relatively weaker and feminine sound, ıroat constriction disappearing, he is aid to be singing *falsetto*. So when a yodels, skips from a low, full, virile o one an octave higher, which sounds or less like the high voice of a n, he is said to be using the falsetto ction upon his high note.

many years physiologists have been igating the singing voice, and paying attention to the falsetto production. this, as well as concerning other types ıe, the so-called chest, medium, head, voice, covered tone, *Mezzavoce*, there iety and conflict of supposedly expert n as to what goes on in the larynx, ne resonating cavities.

est G. White, in "The Voice Beauti-denies that the vocal cords are the of tone, and claims that voice ates in the cavities of the head. The cords he looks upon as the breath iors.

ı Van Broekhoven maintains, in his True Method of Tone Production," oice is not produced by the vibration vocal ligaments. He writes of the cords" as "pocket bands"—"a set of lips found in the inner larynx tube liately above the vocal cords proper. By their action upwards, downwards deways, they alter the inner space, or ded cup of the larynx, *where the vocal s produced*, just as it is produced in ıp of the trumpet mouthpiece by the ı current of the player." He holds he falsetto is produced by the drop-of the edges of the pocket bands, thus ng the cup space of the inner larynx, ing in "a high, thin, flutelike tone, ıt volume and power. The singer, in ing the pocket bands, should be able ain muscular control over them, so as rease the small cup space to a more ded form of the cup." Our author's s that in this way the thin falsetto s broadened "so as to obtain a full tone quality," which head tone, he ıtes, is the tone heard in the alto of the cultivated male alto voice. head tones, like the falsetto tones," Van Broekhoven, "require less mus-effort than is necessary for the chest . . . Head tones cannot be delivered a full breath-power."

Divergent Views



CONVENTIONAL VIEW of the human roduction apparatus is that it has the anism and action of a string instru-Some, however, hold that it is more tly described as a reed instrument, or ombination of both.

n Howard, a graduate of Yale Uni-y, and a teacher of singing, claims, in The Physiology of Artistic Singing," he peculiar falsetto quality is due to naller size and softer state both of the al vibrating material (vocal cords) of the parts surrounding the larynx. Morell Mackenzie, in his day one of the most renowned throat specialists of the world, examined the throats of a large number of professional grand opera singers, and tabulated his findings. He notes, in "Hygiene of the Vocal Organs," that, according to Rousseau, most of the old Italian writers used the term *falsetto* as synonymous with head voice; by others it was employed to denote "that kind of voice whereby a man, going beyond the limit of his natural voice, counterfeits that of a woman." Mackenzie holds that in the chest voice the vocal cords vibrate in their whole length; "in the head voice, or falsetto, only a part of the cord vibrates." He says, further, "I am inclined to believe that under certain circumstances the two principles of shortening and marginal vibration (of the cords) may be combined. . . . This may possibly be the mechanism of the falsetto voice."

C. E. Rowley, in "The Voice," quotes the author of "Advice to Singers, by a Singer" as saying of the head voice that "It comprises, in reality, all that part of the voice which lies above the chest register, *all the lower part of it being shared by the falsetto*, exactly as the falsetto shares the greater part of the chest register. The falsetto therefore belongs to both, and its use is to carry, by its power of imitation, the tone of the lower, or chest register, into the upper, or head register, so combining them that no audible change of quality, or 'break,' is perceptible."

W. A. Aikin, M. D., of London, in his "The Voice," gives the average compass of the tenor and male alto thus:

Ex. 1

Dr. Aikin states that the shortened and thinned vocal cords ("stopped" cords) give a higher note "without increase of tension or air pressure. . . . They are best adapted to *piano* passages, for when forced they are hard and penetrating. . . . In a man's voice the much compressed (stopped) note is so different from the full, free note, that it could not often be used except by small tenor voices. When slight it naturally makes less difference, but when considerable its sound would be recognized at once as 'falsetto,' which cannot be regarded as natural to a man's voice." Dr. Aikin shows the way to the development of the falsetto voice by pointing out that the two principal cavities of resonance are the neck and the mouth, while "Nasal resonance is always present in a well-resonated voice," but is to be considered as "an adjunct to the normal full resonance" of the principal resonance cavities.

According to Rev. Charles Gib, in his "Vocal Science and Art," Dr. John Wyllie (1865) supported the view that during the production of the falsetto voice the vibrating portion of the cords is shortened. Dr. Oertel, of Munich (1895), using the stroboscope, is reported as stating that "in the case of a marked falsetto voice, on delivery of high notes, two parallel nodes along the length of the cord were noticed."

A "String Instrument" Advocate

ONE OF THE KEENEST investigators among the physiologists concerning voice, Dr. Floyd S. Muckey, author of "The Natural Method of Voice Production," worked for many years on a series of investigations regarding the nature and action of the human vocal apparatus, in conjunction with the late Prof. Hallock, physicist, of Columbia University. He declares positively that the voice mechanism is that of a string and not of a reed instrument, and gives photographs of the results of cordal action in tone production, in support of his statement. We call particular attention to his claim that the larynx contains the means for the lessening of the length, of the weight (breadth and thickness), and the increase of the tension of the vocal cords; and that there are in a properly produced voice "no registers." He says further, "This analysis of the pitch mechanism demonstrates that, if not interfered with, it is capable of producing a range of three octaves in pitch."

Dr. P. Mario Marafiotti, a throat specialist of New York, and friend of Caruso, the Metropolitan grand opera tenor, to whom his book, "Caruso's Method of Voice Production," is dedicated, also holds the doctrine of "no registers." He states, "The full extension of the natural range of the voice is produced only by using the minimum tension of the vocal cords, and the minimum breath for each tone."

Dr. Frank E. Miller, A.M., M.D., once first tenor of St. Thomas' church, New York, and a widely known throat specialist and investigator of vocal problems, in his largest work, "Vocal Art-Science," thus defines the falsetto: "An unsuccessful attempt to combine a true fundamental of the vocal cords with an overtone out of balance, so that the overtone predominates by its intensity. A frequent phenomenon about the age of puberty, by some called 'breaking' of the voice. An attempt to registrate octaves without correct balance of a fundamental with overtone." Dr. Miller says that "falsetto is in reality a bad habit, probably induced by too much tension of the vocal folds (cords), and *displacement of the larynx from its position on the fifth cervical vertebra.*" (The Italics are ours. See John Howard and Muckey for conflicting views upon "spinal resonance.") Miller continues, "As the tension of these folds may be relieved by extrinsic muscles, this false voice could undoubtedly be developed into true tone."

And So Doctors Disagree

THE SINGING MASTERS have also varying explanations of the "falsetto," its use, and abuse.

Leo. Kofler, at one time choirmaster of St. Paul's Chapel, Trinity Parish, New York, declares in his "The Art of Breathing," that "the old Italian masters understood by the term 'falsetto' the soft production of the highest tones of the male voice, with *closed throat*." He protests against the singing of the male alto being called "singing falsetto," for the reason that "a male alto does not sing with a closed throat, but with an open throat; otherwise he would not have sufficient power to be heard. Musical ears do not desire to hear him anyhow. . . . A male alto has two voices: his real male voice, and his alto voice. . . . As a rule, soft humming exercises will lead the singer, in the simplest way, to a practical knowledge of the falsetto."

Luigi Parisotti, once a teacher in New York, a graduate of an institution in Rome, in his excellently written work, "Speaking and Singing," refers to the falsetto, saying that the exact meaning of the term in Italian is "a small, false thing," and declares it to be "an unmanly whining little trick, for which there is not the slightest necessity, or justification, and to which no self-respecting and thoroughly capable vocalist should ever lend himself."

Per contra, one may read a report by Francis Rogers, in his "Some Famous Singers of the Nineteenth Century," and himself a professional singer and teacher of singing, that Nourrit, first tenor, from 1826 to 1837, of the Paris Grand Opera, and a pupil of Manuel Garcia, had a ringing voice, under admirable control, and one which was "unusually effective in the head and falsetto registers." It is said that Nourrit once finished a high-pitched phrase with a *"thrilling falsetto."* Parisotti would doubtless have recognized in Nourrit an artist who had met his requirements for a "full-toned sound," namely that "the whole of the nasal passages must resound," which cannot be "unless all of the speaking action is focussed on the fore part of the mouth. . . . The man always endeavors to use the so-called head resonance, at least in the high notes."

Then Dr. G. Edward Stubbs, M.A., Mus. Doc., one-time choirmaster of St. Agnes Chapel, Trinity Parish, New York, claims, in his "The Adult-Male Alto, or Counter-Tenor Voice," that the counter-tenor is a legitimate voice, and favors the use of the properly educated male alto in church choirs. Of this voice he makes two classifications, first, "the falsetto alto, in which the singing and speaking tones disagree." This he calls a two-register voice, in which both registers are used in singing. The "break," particularly in young voices, can be smoothed, or eliminated. Secondly, he classifies a "falsetto alto" in which the singing and speaking tones disagree and there is a "break" which cannot be removed. This he designates as a two-register voice, in which only the upper register is used in singing. He does not advocate the "exclusive use" of this type of voice by basses and baritones.

No Danger in the Falsetto

THE PRACTICAL DISPOSAL of the male falsetto voice by its use and development downward throughout the complete vocal range is the especial interest of E. Davidson Palmer, Mus. Bac., Oxon., in his "Manual of Voice Training." He says that the falsetto "should be carried downward until the bottom notes are reached." Male altos use the falsetto at "too high a pitch, neglecting its use on the low pitches. . . . No male alto ever did or ever will lose the power to use the 'chest voice' by exercising the falsetto." He declares that the voice called by a few teachers "head voice", and believed by them to be something utterly different from the falsetto, and a voice which may be developed, is the true falsetto. "They are in fact the same species of voice." The type of voice sometimes called "head voice," and at other times "mixed voice," is, according to Dr. Palmer, "a mere modification of the so-called chest voice, wrongly produced, but subdued, and held in reserve. . . . All attempts to develop this kind of voice must necessarily fail, for it is only so long as it is subdued and restrained that it differs from ordinary chest voice. The "chest voice," Dr. Palmer

The Story of "O Promise Me"

By E. A. BARRELL

REGINALD DeKOVEN

At the age when he wrote O Promise M

LIKE ETHELBERT NEVIN, whose lovely song, *The Rosary*, has been discussed in this same series of articles, Reginald deKoven turned to Europe for the consummation of his musical training. In Stuttgart, where he studied with renowned teachers, he must have been much impressed with the meticulous methods of German instruction. His teachers, for their part, quickly became aware of the high abilities and ingratiating personality of the young American who had come to them in quest of further knowledge.

After a time, deKoven began to realize that a great weakness in his musical equipment lay in his insufficient skill in orchestration.

"Why not go to Vienna and study with Richard Genée," suggested a friend. Genée was then held to be one of the finest contemporary masters of this subject.

Immortal Melody Born

DEKOVEN EVIDENTLY THOUGHT well of the idea, for in a short time he and Mrs. deKoven moved to the Austrian capital, where lessons with Genée were speedily arranged. Besides serving as his mentor in orchestration, Genée acted also as critic of any original manuscripts which his pupil chose to bring for his inspection—and it was while serving in this latter capacity that a short ballad entitled *O Promise Me* came to his attention. DeKoven, we are informed upon the authority of his wife, had written this song in little more than twenty minutes, which only goes to show that a gem of the art world may be created in an insignificant amount of time.

Just what Genée said in appraisal of the new song, we do not know. Unquestionably he must have sensed that the melody possessed extreme originality, grace, and what is perhaps best described as allure.

When entertained, shortly after, at the home of the Baron d'Anethan, deKoven sang the song and it was heard with intense delight by all. The baron was a son of the Premier of Belgium; his wife, a sister of the very successful writer, Sir Rider Haggard; well suited to pass judgment on a new art work.

Then in the autumn of 1888 the deKovens left Austria and returned to Chicago. The manuscript in question was packed away among various other papers; for the time being it was more or less forgotten by its composer busied with other matters.

The deKoven home in Bellevue Place was the scene of numerous pleasant gatherings of notable people. Among the prominent stage folk entertained there may be mentioned the Kendals and Francis Wilson. Eugene Cowles, the singer who later became so widely known by reason of his song, *Forgotten*, was one of the musicians often found there. Another was the contralto, Jessie Bartlett Davis—and it is largely due to her, as we shall see, that *O Promise Me* is to-day so universally known and loved.

On June 9, 1890, in Chicago, the opera "Robin Hood," which was to prove the outstanding success of deKoven's brilliant career, had it first performance. Harry Smith, who collaborated with its composer on various other occasions, had constructed for this opera a book of unusual charm, with great literary value as well, and it had so caught the fancy of deKoven that he was able in the short space of three months to complete his fascinatingly tuneful score.

On the night of the première the composer and the librettist sat together in a box, both considerably apprehensive of the verdict of the audience. Gradually, however, they grew confident as they listened to applause so hearty as to leave no room for doubt—and with the many curtain calls at the close, they knew their opera was far from being an ordinary success.

Temper Resurrects a Tune

BUT TROUBLE WAS BREWING. The contralto, Jessie Bartlett Davis, in a fit of temperament such as only opera singers can brew, announced to deKoven after this first performance that a certain song in her rôle was so badly suited to her voice that she absolutely would not be a member of the cast the next night. In this predicament the ballad which the composer had written while abroad flashed into his mind. Quickly he located the manuscript and handed it to Mrs. Davis for her consideration. Seeing its possibilities, she agreed to its interpolation in Act II, to replace the unsuitable number. How dearly she came to love the song is evidenced by the fact that she asked to have a copy of it put into her coffin when she died.

The second performance is now ready to commence. In his box again, was deKoven. "Will the ballad which has been substituted be liked?" asked the anxious composer, of himself. The tremendous ovation, which was accorded *O Promise Me* on that night, is now history.

"Robin Hood's" New York première, which did not take place immediately, duplicated in every respect the Chicago success. Since that time the opera has had many performances here and abroad, and it is one of the few stage works by an American composer which have "held the boards" over a long period of years.

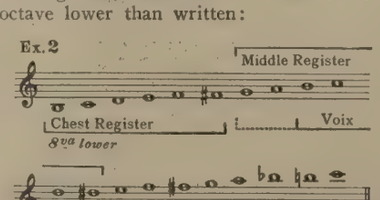
The text of *O Promise Me* was the work of Clement Scott. It is splendidly lyric and expressive.

It is an interesting fact that the song has won wide acceptance as wedding music. Indeed it has sometimes been referred to as the inside of a sandwich of which the external portions are the famous wedding marches of Richard Wagner and Felix Mendelssohn.

The unfailing instinct which leads great masses of people to lodge in their heart a piece of music, a painting or a bit of sculpture, is entirely remarkable and constitutes an authority far and away superior to the trained observations of all the critics in Christendom.

The Interesting Falsetto

(*Continued from Page* 221)

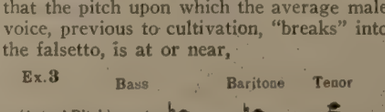


declares to be the "wrongly produced" voice.

Charles Lunn, professional tenor and teacher of singing (claiming to be a follower of the old Italian school, with Manuel Garcia), states, in "The Philosophy of Voice," that the falsetto does not extend equally in both the female and male voices, but "extends collaterally with the greater part of the full vibration. It is a false production, created by the false cords being squeezed together, the true cords being open. . . . The cavity and its upper opening are used for its production, in the same way as the mouth and lips are used in whistling."

Douglas Stanley, M.S., S.C.G.I., teacher of singing, observes, in his "Science of Voice," that "ultimately the upper tones of a well produced male voice are, in a great measure, merely developed falsetto tones," though he requires that "the low register must (also) be trained, and the proper resonance conditions obtained. . . . Ultimately the upper register becomes so perfectly developed and coördinated that it is apparently lost as a falsetto, and the entire voice is one continuous whole, the range extending practically as far as the falsetto will reach."

Giovanni Battista Lamperti, of Dresden, a relative of the widely known Francesco Lamperti, of Milan, claims in his "The Technics of Bel Canto," that besides the usual three registers, chest, medium and head, "the male voice possesses a fourth, which renders it essentially different from the female voice, namely the 'mixed' voice, wrongly called falsetto." Prof. Lamperti appends a staff representation of the various divisions of the tenor voice as follows, it being understood that the sounds are an octave lower than written:



Ex. 2

He explains that "On the tones B, C, D and D-sharp, the head resonance mingles with the chest voice, carried on from below, so that the singer sings with but half the chest resonance. The main point is to blend the medium register with the so-called *voix mixte*, the chief object in view being to acquire an even scale from the lowest tone to the highest."

Frederic W. Root, in "The Polychrome Lessons in Voice Culture," declares that "what is called falsetto is more a fault of voice production than a register. It is, so to speak, tone without focus . . . without intensity from the process which I have called 'the sounding board.' . . . Keep the tone steadily against the soundingboard, with sensation at the bridge of the nose or hard palate." Mr. Root further says, in "Guide for the Male Voice," that "The register changes of the vocal cords which are most distinctly evident, divide tone of voice into two widely contrasted qualities, one of which is strong, assertive, heavy, masculine, and the other light, flexible and feminine. . . . Woman has both of these registers, but speaks and sings with a preponderance of the one (the higher), while man, having both, speaks and sings mainly with the other. In the male voice we call these the chest register and the falsetto register . . . the latter made by allowing only the least possible, the thinnest amount of substance to vibrate." In this work Mr. Root covers also the item of "covered" tone, in the man's voice. Continuing, he suggests that the pitch upon which the average male voice, previous to cultivation, "breaks" into the falsetto, is at or near,

Ex. 3

according to peculiarities of the individual voice.

William Shakespeare, tenor, widely known teacher (of London), and exponent of the method of Lamperti the elder (Francesco) of Milan, referring, in his "The Art of Singing," to "frontal singing," which he says, "is produced by squeezing the throat probably just above the vocal cords," while singing not only the higher notes of the chest voice, but also those of the upper medium register. "This distortion brings about a bawling, or hooting, accompanied by a sense of vibration of the frontal bone . . . The falsetto of our cathedral altos—the attempt of a bass or baritone to make use of the effeminate head register—too often affords an example of the unintentional use of this objectionable method of production." Dealing with the medium register, Mr. Shakespeare remarks, "This is sometimes called 'mixed voice,' through its being accompanied, though in a slight degree, by vibration of the chest, as well as the important sense of the vibration of the air in the mouth associated with the register. Occasionally it is termed by the Italian masters falsetto, as being inferior in force to the grander chest register. Of course this has no reference to falsetto as distinguished in English usage." Shakespeare diagrams the medium register for the tenor voice as here shown;

The Story of a Great Librettist

Eugene Scribe and the Opera

By JOHN A. ROBINSON

Eugene Scribe

E HUNDRED YEARS AGO, on ebruary 23, 1835, the première performance of Halevy's opera, "La was given in Paris. The libretto written by Eugene Scribe. Durpreceding decade had appeared en other splendid operas with by Scribe; and the ensuing years 865—were to witness the première more. The felicitous reception of e," therefore, was but one of a es of triumphs which this playas destined to share with the foreposers of his time.

it was, who wrote the stories for r's "Robert le Diable," "Les ts," "Le Prophet" and "L'Afri- r Halevy's "Manon Lescaut"; for 's "Les Martyrs"; Auber's "Fra and "La Muette de Portici"; and thirty other operas, in collaboraswith such composers as Verdi, Rossini, Cherubini, Ambroise Thomas and He created, too, an almost innumber of librettos for the opéra nd plays for the speaking stage—outmoded and seen no more, and miques seldom produced to-day. l on his grand opera dramas still l. Scribe remains one of the best of playwrights.

mber of spectators, who still witdramas of Scribe in opera houses t the world, must run to hunthousands annually. But few of safe to say, have ever heard his know anything of his career. e names of not a few of the comith whom he collaborated are words, his is forgotten. And the of this raises a question as to he importance of the libretto to is not, as a general thing, very rrated.

Lure of the Spectacle

K how long the opera houses of could remain open were their given only in concert form. Con- Sunday evenings on which the in evening dress, are ranged on irs along the footlights, with the lked in rows behind them. Rather this, if given seven nights of a

not all make it a point, before e opera, to have an understand- play that underlies the music, that lends to it so much of d color and human interest? But audience knows the name of or redit to the playwright? On the of the libretto usually only the name is given, and if the name does appear at all it is in inconspicuous type, down at f the page; though this is the t the musical score—and the did not put together any two he manuscript.

e, of course, good librettos and but to say that Scribe's were nerit is hardly enough. It must be said, rather, that he played no small part in the general development of the opera in the nineteenth century. As one commentator has written, "Scribe was the real author of modern opera, even more than Auber, Rossini and Meyerbeer." The dramas for the first of the great operas of this period were supplied by him.

A Work of Genius

As EARLY as 1828 his "La Muette de Portici" written for the music of Auber, created a sensation and was heralded by critics as an "innovation of the greatest importance, a contribution to the rejuvenation and enlargement of the operatic cycle." For the repertoire till then had been largely ancient tragedy turned into libretti—such themes as "Iphigenie," "Alcestis," "Oedipus," and so on, taken up in turn by various composers. The opera had grown monotonous, and the libretto of "La Muette de Portici" marked an immense progress in the structure of the musical drama. Scribe and Auber had the honor of being the first to take their place in the new school and to break with the tradition of the old classical style.

Shortly after "La Muette de Portici," appeared "Robert le Diable," a truly poetic creation; "La Juive" with its marvelous appeal to the eye as well as the ear; then "Les Huguenots" and other splendid frameworks, upon which rising composers had woven their beautiful tonal tapestries. And so it was at once seen and felt that these dramas were truer in history, nearer the times and of more universal appeal than the libretti that had been known up to that time.

Composers made full acknowledgement of the importance they attached to Scribe's collaboration. Adam, for example, wrote, "With you I shall be sure of having a work with dramatic scenes and words that suggest the accompanying music." And Meyerbeer, speaking for himself and a number of other musicians, called him "the incomparable genius to whom we owe so much gratitude for all that he has done for us." And well might Meyerbeer speak thus. He had written operas for twenty years without success up to the beginning of his collaboration with Scribe; and from that point on he had enjoyed one brilliant triumph after another.

A Biographical Bit

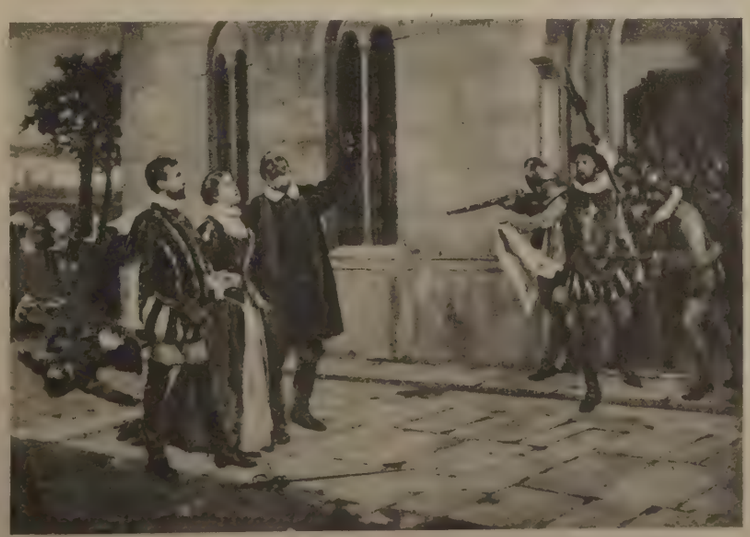
SCRIBE WAS BORN in Paris, in 1791, of a bourgeois family, in a small house in the Rue St. Denis. The sign above the door of his father's place read, "Le Chat Noir," but it was not, as we might imagine, a cafe. It was a silk shop. The father, on his death, left a modest fortune; but, the two elder children having been favored in his will, there was little patrimony for Eugene, the youngest. His mother, however, by dint of exertions entailing privations to herself, made up for this in a measure, and through her efforts he obtained a scholarship in the College of St. Barbe. Here he was a proficient student and was graduated with honors.

His mother had destined him for the bar, and her efforts obtained a place for him in the office of Guyonnet-Merville, with whom Balzac was later to show his inaptitude for law. Here he applied himself seriously for a time; but, having from his earliest days sketched vaudevilles and frequented the theater pits, he turned, on his mother's death, more and more in that direction. Nevertheless, he was still sufficiently devoted to his studies that in 1815 he received his degree of Bachelor of Law from the Imperial University.

Scribe's earliest efforts in writing were for the speaking stage, his work for musical settings not beginning until many years later. While still studying law he had several vaudevilles produced with indifferent success; but in 1814, with a piece entitled "Une Nuit de la Garde Nationale," he scored a triumph.

A Theatrical Renaissance

COMEDY IN FRANCE had for a long time been at a low and stagnant level, characterized by broad farce, buffooneries, stock characters and stereotyped situations; and this play by Scribe was a novelty, in that it utilized a background of substantial reality to portray a scene of contemporary life. To a public satiated with artificial and supercilious plays, such a theme, coupled with a strong but simple plot and with characters not overdrawn, was a welcome novelty. It established Scribe's name throughout Paris, and from then on he wrote prolifically and moved from success to success.



For five years his plays appeared at the Vaudeville, until in 1819 every theater in Paris was ordered closed as a result of the assassination of the Duc de Berry at the Opéra, and the Opera House itself was demolished. During the ensuing interval of inactivity Scribe, with his associates, organized a new theater called at first the Gymnase, but shortly renamed *Theatre de Madame*, it having received the patronage of the Duchess de Berry.

By 1825 Scribe had moved to higher ground and comedy dramas from his pen were appearing at the *Theatre Francaise*. About this time he also began to write libretti for the opera comique, and it was not long till he entered into his successful work in the field of grand opera.

From that date of Scribe's first success in 1814, and for almost fifty years, every season saw an average of ten of his new plays on the Parisian stage, pieces popular with all classes of society and drawing crowded houses. And, though he was universally recognized through the greater portion of this period as the foremost librettist for opera and opera comique, the preponderance of his work was for the speaking stage, and on that rested his reputation with the general public.

Pictures of the Times

THE PERIOD from 1810 to 1860 was one of tremendous political and social upheaval in France. It was an era that witnessed the downfall of Bonaparte, the restoration of Louis XVIII, the revolutions of 1830 and 1848, and the rise of Napoleon III. To these events Scribe was comparatively indifferent. First and last a man of the theater, his ambition was to please the public, and he avoided any rôle or reputation as a serious social or political protagonist. Yet his success resulted from his portrayal of almost every aspect of the life of the day. His works were characterized not by an avoidance of political events and personalities or of social manifestations, but by their use for the entertainment of his

A Scene from Meyerbeer's "Les Huguenots," for which Scribe wrote the Libretto

audiences. For example, Scribe never treated Napoleon as an historical subject, but he added to the Napoleonic legend by his stories of colonels and captains and grizzled grenadiers—battle scarred veterans of the Emperor's campaigns, returned to their homes and there engaged in the skirmishes of civil life.

With a light but realistic brush he painted the manners and affairs of his time. The scenes were the salon, the shop, the office and the street, peopled by fashionable women, bankers, politicians, notaries, bourgeoisie, workmen, living types of the day, and every play added something to the dramatic picture of general society. While not predominantly a satirist, yet he had his share of comment and ridicule for the absurdities of snobs and social climbers, the duplicity of political charlatans, the humbug of journalists and other foibles of the human kind.

Within his profession Scribe was held in high regard for reasons beyond his success with the public. For one thing, much of his work having been written in collaboration, he was known for his generosity in giving to his coworkers the fullest credit and for his liberality in sharing the financial rewards. Most of his best plays and librettos, however, he wrote alone, and that he was a prodigious worker is attested by the fact that in addition to more than four hundred pieces for the stage he wrote over a dozen novels and many short stories and articles for the press.

A Troubadour in the Twentieth Century Montmartre of Paris. In the distance is the Dome of the Basilica of the Sacred Heart

Labor of this sort, combined with his talent and natural business ability, made Scribe a very rich man. But in doing well for himself he also raised the standards of remuneration for playwrights in general. At the time of his advent in the theater, writers of the first rank were receiving only about one hundred francs for each performance of a play. But his great popularity with the public enabled him to impose his own terms on producers, and an authors' league which he founded remedied the financial situation for the profession as a whole. The players, too, regarded him with favor, and he developed and molded many of the leading actors and actresses of France.

In 1836 Scribe was admitted to membership in the *Académie Francaise*, and later in life he was appointed by Napoleon III to the Municipal Council of Paris. But his reputation extended beyond the boundaries of his own country. His plays were given throughout Europe, and he received many foreign decorations. In 1837 the director of the Royal Opera, Berlin, requested of him a libretto for the music of Beethoven. On another occasion the King of Holland wrote to him, asking for a drama to be used as the basis for a musical competition. In 1850 he adapted Shakespeare's "The Tempest" for an opera by Halevy; and he and the composer crossed the Channel for its première at the Royal Opera, London. For months he was the lion of English society, was feted and entertained by the literary world and the aristocracy of Britain, and for part of that time was the guest of his exiled monarch, Louis Philippe, with whom he collaborated on an opera based on the life of Henry the Eighth. In 1851 Charles Dickens, visiting Paris, asked his host to arrange a dinner in order that he might meet the French playwright.

Scribe was not without his critics, and such personages as Dumas Fils, De Musset and Heine bestowed upon him a liberal share of causticity. But this criticism was directed entirely at his plays for the speaking stage. For his librettos there was nothing but praise. A contemporary, writing in *Figaro*, said, "his music dramas, so well adapted for melody, so touching, so adroitly built up, would, even without music and merely with a little rewriting, become most interesting plays and highly successful." And Brander Matthews wrote, "Nowhere did Scribe show to better advantage than in the opera. It was he who in a great measure made possible Wagner's art work of the future."

When Scribe died in Paris, on the 20th of February, 1861, the universal homage paid at his funeral was a unique tribute. Thousands accompanied the remains to Père Lachaise, in a heavy rain. In the procession were people from all walks of life —writers, diplomats, generals, shopkeepers, workmen in their blouses, women of all classes of society—a gathering representative of those audiences which throughout so many years had nightly forgotten their cares, entertained by his genius and his labors.

* * * * *

And Soothe Dame Bossy's Breast

Experts of the Agricultural Department insist that radio music is conducive to barnyard harmony. It makes for contented cows, for more gentle horses, and for more satisfied fowls. "After all," said one department official, "the animals show that they don't like tinpanny music any better than most humans, and sometimes express their tastes with better discrimination and more energy."

Musicians of April Birth

By W. FRANCIS GATES

April, with its awakening of nature, has brought also a rich legacy to the musical world. Perhaps the most significant group of names is made up of conductors born in this month, four of them being more or less British; the inimitable Stokowski, offspring of a Polish father and Irish mother, first opened his eyes where April fogs of London provided that he saw the light but dimly; the picturesque Sir Thomas Beecham chose Liverpool as the scene of his infantile beating of time with arms and legs; the English father and Russian mother of Albert Coates received him from a St. Petersburg stork; and Sir Charles Hallé, a native of Westphalia, who made for Manchester a name that challenged all musical centers of the British Isles. Then may be mentioned Hans Richter, perhaps the greatest of all interpreters of Wagner. So long a mighty pillar of Bayreuth, perchance he should have led the list. There are, too, the brilliant Wilhelm Gericke, who raised the Boston Symphony Orchestra to a commanding position in the musical world; and Dr. Ernst Kunwald, who wrecked a notable career by a needless chauvinism during the World War; Giorgio Polacco, a star among our adopted operatic conductors; and Eduard Mollenhauer, the rock on which was built the Minneapolis Symphony Orchestra.

Among April-born violinists are found such towering names as Giuseppe Tartini, Ludwig Spohr (equally noted as a composer), Hubert Leonard, Heinrich Ernst Kayser, and Efrem Zimbalist. Accompanying these are Ferruccio Busoni, eminent among modern pianists and an unapproachable transcriber for the piano of Bach's organ works; Eugen d'Albert, long a lion of the keyboard; Sébastien Erard, the genius who perfected the mechanism of the harp, and Carlos Salzedo, an equal magician in its manipulation; Franz von Suppé, master of the opéra comique; Albert Roussel and Jean Roger-Ducasse, eminent among modern French composers; Dame Ethel Smyth, perhaps the greatest of English women composers; Franz Lehár of "Merry Widow" fame; and Giuditta Pasta, a light among singers of all time. To our own American music April has bequeathed such proud names as Edgar Stillman Kelley, H. R. Palmer, Augusta Cottlow, Luther Whiting Mason, Arthur Farwell, George L. Osgood, Arthur Nevin, Karl W. Gehrkens, Reginald deKoven, Henri Scott and Alfred George Robyn.

A Natal Chronology

1st—Ferruccio Busoni (1866), Arthur P. Schmidt (1846)

2nd—Augusta Cottlow (1878), Franz Lachner (1803), Ernest Van Dyck (1861)

3rd—Reginald deKoven (1859), Luther Whiting Mason (1828), Wilhelm Middelschulte (1863), George Laurie Osgood (1844)

4th—Edward Jerome Hopkins (1836), Blanche Marchesi (1864), Smith Newell Penfield (1837), Hans Richter (1843), Nicola Antonio Zingarelli (1752)

5th—Dudley Buck, Jr. (1869), Sébastien Érard (1752), Louis Ganne (1862), Max Meyer-Olbersleben (1850), Albert Roussel (1869), Ludwig Spohr (1784)

6th—Johann Kuhnau (1660), Jean Lebrun (1759), Carlos Salzedo (1885)

7th—Charles Burney (1726), Domenico Dragonetti (1763), J. Frank Frysinger (1878), John Alexander Fuller-Maitland (1856), Heinrich Götze (1836), Hubert Lé (1819), Clara Novello-I (1863), Franz Ries (1846), Gi Battista Rubini (1795)

8th—Oscar Paul (1836), Henri (1876), Giuseppe Tartini (1692

9th—Theobald Böhm (1794), W Wolfgang von Goethe Joseph Hellmesberger, Jr. Natalia Macfarren (1916), G Pasta (1798), Sir Francesco Tosti (1846)

10th—Eugen d'Albert (1864), W Fabricius (1633), Auguste chomme (1808), Sigmund S (1885)

11th—William Edwin Haesche (1867 Charles Hallé (1819)

12th—Joseph Lanner (1801), Emil ling (1851), Eduard Mollen (1827)

13th—Sir William Sterndale B (1816), Félicien David Eduard Lassen (1830), A Randegger (1832)

The Threshold of Music

A Melodic Alphabet — The Major Scale

By LAWRENCE ABBOTT
Assistant to Dr. Walter Damrosch

This article is the third in a series on "The Doorstep of Harmony." The first appeared in The Etude *for January, and an article will appear each month hereafter*

THIS POINT we are ready to make another important discovery. The bugle call, we have seen, used only es of the tonic triad for its melody. *lks at Home,* uses considerably more If we examine its melody carefully, scovered that all the notes in it are ound in the three chords which form mvirate—and likewise that all the n these three chords appear in the .

is arrange these notes in order and at they look like:

1

C- Chord G- Chord F- Chord

reader will discover at once that even notes (the eighth one doesn't being a duplicate of the first) are ther than the notes of that phenom- amiliar to every music student—the scale.

es, as you know, are the alphabets ic—the roll calls, or passenger lists, various sets of notes used on dif- occasions. The major scale is the ll of the notes used in most simple nd in the chords which harmonize

e want to include all the letters of glish alphabet in a single sentence e to invent something fairly elabo- ich as "The quick movement of the jeopardized six gunboats." But three chords will furnish us the entire t of the key of C Major. And the family trio in any other key will the alphabet, or scale, of that key. piano we take the major scale for ll. It has already been selected for he tuning of the strings, and, in the the C major scale, by the arrange- f the white keys. Yet the major scale rtificial device of the piano maker, re than the notes of the bugle call e artificial invention of some brig- general.

rove that the major scale is as nat- id fundamental as the overtones, all d to do is to commandeer the serv- three army buglers; give one a n C, the second a bugle in F, and rd a bugle in G; and to have them y the overtones which are natural r instruments. These will be none than the tones of the scale of C This diagram shows you which would play which notes.

Bugle in F
Bugle in C
Bugle in G

notes in parenthesis belong to the scale, too; but being outside the from C to C, they are not included playing a simple scale.

s we see that the major scale is an elaboration of the bugle call or natural overtones.

can go through a similar process, g with any note in the piano, and r for ourselves the major scale based on that note. Suppose we begin with E-flat. That is the fundamental tone, or keynote, of what is popularly called the "key of three flats." The "triad" overtones of E-flat give us the major chord: E-flat, G, B-flat.

Ex.3

The top note, B-flat, is the dominant (just as G was the dominant of C, in addition to being the top note of the C triad). The bugle call notes of B-flat provide us with the dominant triad—B-flat, D, F.

Ex.4

E-flat is the top note, or dominant, of another tonic triad, starting on A-flat—its notes being A-flat, C, E-flat. Since our point of view is still E-flat, this triad goes by the name of subdominant.

Ex.5

or

We can combine the notes of these three triads as follows:

Ex.6

These chords, rearranged thus,

contain the seven notes of the E flat major scale.

The Distances Between Tones—Intervals

SO FAR WE HAVE IDENTIFIED triads and scales only by "rule of thumb" or "rule of ear"—the test of whether they furnished the right notes for playing *I Can't Get 'em Up in the Morning* or *Way Down Upon the Swanee River.* We cannot go on doing this forever. Our next step is to become systematic and analyze scales and triads to find out how they are built and of what they are made. To do this we must first become acquainted with the means of measuring tone relationships: intervals.

"Interval" means the distance, or difference of pitch, between two tones.

The simplest way to reckon intervals is in terms of the eight notes of the scale. If two instruments play the same note, the interval is known as a *prime,* or unison. The interval between any note of the scale and its adjoining note, either above or below, is a *second.* For instance, the interval between C and the D immediately above it (or the B below it) is a second. Likewise the interval between D and E, or E and F, is a second. The next larger interval is the *third.* It measures the distance between any note and the next note but one to it. Between C and E, or between D and F, or between G and B, for example, is a third.

We continue according to the same system: from C to F is a *fourth*—from C to G, a *fifth*—and so on. In reckoning intervals, the note of starting is always counted, as well as the others. To illustrate: C-D-E-F-G-A are six notes; so the interval between C and A is a *sixth.*

From C to the C above it is an eighth—or octave. To our ears an octave is merely a repetition of the tone itself in a higher or lower pitch (as has been pointed out before); so an octave is practically the same thing as a unison. Likewise, a ninth is considered the same as a second (being an octave plus a second); a tenth the same as a third; and so on.

Intervals Turned Upside Down

THERE IS ONE PECULIARITY about intervals which should be known about.

Any pair of notes can be arranged in two different ways, thanks to the similarity of octaves. Suppose we have two notes, G and E. They can be so arranged that E is either below G, or (by placing it an octave higher) above it. If E is below G, it is only a third away from it. But if it is above G, the distance widens to the interval of a *sixth.* Whenever the position of any two notes is reversed (which can be done either by raising the lower note an octave or by dropping the upper one an octave), it will be found that the interval between them changes. It is as if intervals were reversible, like rugs—or had complementary numbers on their opposite faces, like dice.

Here is what happens to various intervals within the octave when their two notes are reversed:

Ex.8

2nd - 7th 3rd - 6th 4th - 5th 5th - 4th

6th - 3rd 7th - 2nd Octave Unison

The second becomes a seventh.
The third becomes a sixth.
The fourth becomes a fifth.
The fifth becomes a fourth.
The sixth becomes a third.
The seventh becomes a second.
The octave becomes a unison.

Yet their characters remain practically unchanged.

We have already found that octaves and unisons are interchangeable. We now discover that seconds and sevenths are closely related and interchangeable. Thirds and sixths are interchangeable. Fourths and fifths are interchangeable. And each pair of intervals has its own group personality, as follows:

Fourths and fifths have a thin, open sound. The empty fifth, heard when two hunting horns get together, has been already mentioned. The primitive music of the early Christian church, called organum, is composed of nothing but fourths, fifths and octaves. To modern ears it sounds curiously empty and incomplete; but a thousand years ago all other intervals were considered discordant and unsuited for church music. Debussy's music occasionally recalls from a misty past this ancient harmony of fourths and fifths.

Ex.9

(This quotation from *La Cathédrale Engloutie,* and the later one from *La Fille aux Cheveux de Lin,* are reproduced by permission of Durand & cie of Paris.)

One of the most popular songs of a decade ago, *The Japanese Sandman* by Richard Whiting, employs fifths profusely, taking advantage of their thin, open quality to achieve a special coloristic effect.

Ex.10

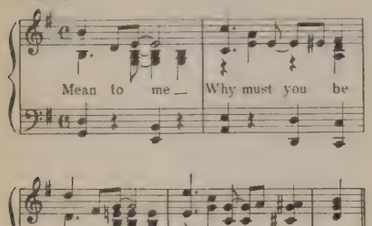
(This excerpt from *The Japanese Sandman,* and the one from *Indian Love Call,* are reproduced by permission of their publishers, the Music Publishers Holding Corporation.)

Thirds and sixths have a rich, sweet sound. Most "close harmony" consists of these intervals. The *Missouri Waltz* is written for the piano in sixths, but barber shop harmonizers usually place the second part an octave higher, a third above the melody. Rudolph Friml's *Indian Love Call* alternates between thirds and sixths. The thirds are in its opening phrase:

Ex.11

You may have heard musicians speak of Viennese and Hungarian music as abounding in "thirds and sixths." Because these intervals are two different forms of the same thing, they are referred to in the same breath. Be ready to find them in Brahms' *Hungarian Dances* (or in his well known *Waltz in A-flat*), in the Strauss waltzes, the Liszt rhapsodies, in Wagner's "Die Walküre" (the Motive of Sympathy), in the haunting, sensuous music of the gypsies, in the folk music of Czechoslovakia, in the love songs of sunny Italy.

Thirds and sixths lend sweetness to the undulating melody of the duet that forms the finale to the first act of "La Sonnambula" by Bellini.

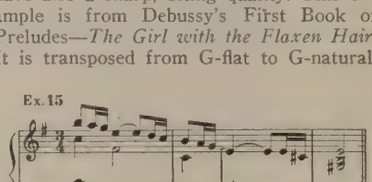


Ex.12

In the middle of the third measure Bellini changes horses, abandoning thirds for sixths. The next measure begins with a fifth and a fourth, but the last three notes of the melody are again harmonized in sixths.

When the interval of a sixth occurs melodically—between one note of a tune and the next—we enjoy not only the rich sweetness of the interval itself but also the pleasant sensation of a wide swing or leap. A song of a few years back, *Mean to Me* brings this satisfying effect:

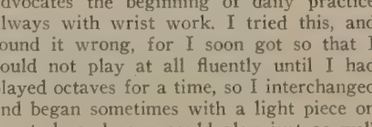
Ex. 13



(This quotation from *Mean to Me* is reproduced by permission of its publishers, the Crawford Music Corporation.)

Seconds and sevenths have a fuzzy, acrid sound. The pungency of the opening notes of that perennial favorite, *Chopsticks,* is due to the clash of two neighboring tones. Debussy shows a fondness for seconds in two pieces from his "Children's Corner—*Golliwogg's Cakewalk* and *Jimbo's Lullaby.* The biting trumpets in the fourth movement of Rimsky-Korsakoff's "Scheherezade" achieve a striking effect by the use of seconds.

Ex. 14



(These measures from "Scheherezade" are reproduced by permission of Belaieff, its publisher.)

Sevenths, being upside down seconds, have also a sharp, biting quality. This example is from Debussy's First Book of Preludes—*The Girl with the Flaxen Hair.* It is transposed from G-flat to G-natural.

Ex. 15

The sevenths are in the right hand, between the melody and the notes below it—C and B; F-sharp and E.

(*Part IV of this interesting series will appear in our May issue.*)

"Play with strong, 'even' rhythm! The playing of certain pianists resembles the staggering and jerky walk of a drunkard."—SCHUMANN.

FIFTY YEARS AGO THIS MONTH

W. WAUGH LAUDER, one of the most brilliant of American pianists, teachers and lecturers of his day, wrote at length for our columns of the ideas gathered in his so unusual associations with the master pianists of Europe. A Canadian by birth, Mr. Lauder spent most of his mature professional life in the United States. He is credited with having introduced the lecture-recital into America. We now quote from the thoughts on technic which he gathered:

"A particular hobby with Liszt was the practicing of scales in all keys and in all rhythms of 2, 3, 4, 5, 6 notes, with all fingerings, say first with 1, 2, 3, then with 1, 2, 3, 4, then with 1, 2, 3, 4, 5, never paying the slightest heed to awkwardness of thumb or fifth on black notes, and above all, scales with any two fingers, which, all done from memory in the air, and subsequently repeated on the piano, was of very great benefit. Some teachers have a faculty for making things plain, and I remember in particular one lesson in which Carl Reinecke showed me how to play and grade a melody. Starting out with the statement that as the piano lacks the singing and long-drawn-out tone of the wind or string instruments, we must supplement the failing by carefully studied and graded intensity of pressure; he told me that the very instant we strike a tone on the piano it grows weaker, and if we wish to make a melody *crescendo,* we must carefully grade the quality and quantity of pressure and hammer power, and in all melodious phrasing this weighing of power is of vital importance. I may say that that lesson was invaluable.

"We all know that the wrist and fingers represent the bundle of faggots in the old man's fable. We must untie the faggots by loosening the wrist, but Mr. Sherwood advocates the beginning of daily practice always with wrist work. I tried this, and found it wrong, for I soon got so that I could not play at all fluently until I had played octaves for a time, so I interchanged and began sometimes with a light piece on an etude and soon could play just as well without that preliminary octave practice. I do not think it wise to become accustomed to a pedantic or cut-and-dried method either with teachers or practice.

"Miss Amy Fay, in her paper at the Cleveland Convention of 1884, (the Music Teachers' National Association), said that in his latter days, Paganini rarely and almost never practiced the difficulties he himself had created, and so certainly do some play best when they practice mechanism least. I know, for a fact, that Arthur Friedheim, a young man with whom I lived like a brother for eighteen months in Weimar and Rome, rarely practiced technique pure and simple, and Dr. Gustave Wolff, of Bradford, England, an intimate friend of Rubinstein, told me that that artist rarely touched technique during his concert tours in Great Britain.

"Too much technique is like over-training in athletic sports. Still, when in Weimar, I remember well, when lodging for the first night in the old Hotel de Russe, prior to my first visit to the grand and lamented virtuoso and maestro, Liszt, I lay awake nearly all night and practiced technique with that frantic, Henselt-like vigor caused by stage fright, on a dumb piano, consisting of my knees. Liszt, however, had a regal contempt for mere mechanism, somewhat like Tausig, who reprimanded a certain demoiselle with the words, 'Miss, you ought to be ashamed of playing so correctly at your age.'"

RECORDS AND RADIO

By PETER HUGH REED

ONE OF THE MOST important and ambitious recordings ever undertaken, is that of Bach's "Passion of Our Lord According to St. Matthew," which Victor releases in three album sets. There are fifty-four parts to the recording, which covers two sides of twenty-seven discs. Bach's "St. Matthew Passion" is a sacred work to which only the composer's "Mass in B minor" is comparable; a work in which "the deepest expression of devotional feeling that the art of music affords, so intimately felt, unfolded with such sensitive emphasis and dramatic feeling, that the music," as one writer has said, "seems embroidered with tears and colored with flames and blood."

The performance of this work which Victor recorded was given a year ago in Boston by Serge Koussevitzky. It enlists the services of the Boston Symphony Orchestra, the Radcliffe Choral Society, the Harvard Glee Club, Jeanette Vreeland (soprano), Katherine Meisle (contralto), John Priebe (tenor), Keith Faulkner (baritone), and Fritz Lechner (bass). The performance, sung in English, is a fine one, dominated by the spirit of Koussevitzky who sustains the dramatic intensity and the devotional fervor without exaggeration or undue stress. More about this important release will appear later.

Recordings of piano concertos are increasing. Interest in the piano definitely has revived. Readers tell us that they often use modern concerto recordings as a standard for performing the work themselves. This in itself is a good idea, but the player should guard against imitating the performing pianist. The interpretation of the piano part of such works should grow from within and not be governed from without.

Walter Gieseking playing Grieg's "Piano Concerto in A minor" (Columbia set 313), gives us the most poetic delineation of this work so far issued on records. His sensitive lyricism is particularly effective in the idyllic slow movement and the *finale.* The orchestral background here, provided by the Berlin State Opera Orchestra, unfortunately lacks Gieseking's finesse and precision. The recording, however, is good. In Columbia album 314, we have a Debussy recital by Gieseking, who is justly famous for his performance of the Frenchman's impressionistic music. The records in this set all have been previously released; they include, "Suite Bergamasque," "The Children's Corner," *Reflets dans l'eau, Soirée dans Grenade,* and *La Cathédrale Engloutie.*

Bach, in one of his most joyous moments, is to be encountered in his "Concerto in A major," for clavier or piano (Victor set M-368). The music here, as in his "Concerto for Four Claviers" (Victor set M-366) moves forward with happy impulse and an inevitability characteristic of its composer. The "A major Concerto," in the recording, is impeccably performed by Edwin Fischer and his Chamber Orchestra; and the "Concerto for Four Claviers" (pianos in the recording) is deftly performed by four French artists, with the orchestra under direction of Gustave Bret.

Arthur Rubinstein, the Polish pianist, more than once has tellingly established, on records, his affinity with the music of Chopin. His latest contribution is a splendid exposition of the composer's first "Piano Concerto in E minor, Opus 11" (Victor set M-418). The "E minor Concerto" suffers from much ineffectual orchestral writing, and the long first movement lacks variety and true impulse, but the lovely *Larghetto* and the final *Rondo* are fine Chopin.

Toscanini in his performance of Beethoven's "'Pastoral' Symphony" (Victor set M-417) sustains the clarity of its design unlike anyone else that we have heard perform this music. The music requires not "interpretation" but purity of utterance, for its subdued lyricism is completely opposed to the dramatic intensity of most of the composer's other symphonies. In the recording Toscanini is leading the British Broadcasting Orchestra, which he recently conducted in England. The recording here is not so wide in its dynamic range as Toscanini's American recordings, nor is it so brilliant. However, since the scope of the music is almost entirely lyrical, the reproduction will no doubt satisfy many.

Two piano sonatas written by Mozart in his eighteenth year, the "E-flat," K-282, and the "G major," K-283, are neatly and intelligently set forth by Kathleen Long in Musicraft Album No. 13. Although charming and graceful compositions, neither of these sonatas represents the composer's genius at its best. Miss Long's performances are enjoyable, however, and should prove of value to the student.

In their album set No. 12, Musicraft presents a performance of Bach's "English Suite, No. 6 in D minor," played by Ernst Victor Wolff, the German harpsichordist. The opening movement of this suite long has been regarded as one of the most profound examples of Bach's craftsmanship. Wolff plays this music with sincerity and purpose, if not with true inspiration. The recording is most lifelike.

The Madrigal Singers, a New York WPA group, sing Brahms' "Gypsy Songs, Opus 103," in Columbia set X-88. Brahms described his "Gypsy Songs" as a sort of Hungarian counterpart to his "Liebeslieder Waltzes." Those who know and admire the composer's "Hungarian Dances" will delight in these songs, which are well sung and recorded here.

A group of eighteenth century symphonies is to be found in Timely Record-album set No. 2R, neatly played by the New York Simfonietta, under the direction of the talented young American conductor, Max Goberman. There are three works: "Concerto Grosso, Opus 1, No. 2," by Pietro Locatelli, a brilliant pupil of Corelli and a noted violin virtuoso in his day; "Concertino in F minor," by Pergolesi, a work of subjective beauty and unusual harmonic texture for its time (circa 1730); and "Quartet in F major," for string orchestra, by Karl Stamitz, a happy, brilliant orchestral effusion full of genuine joy of living.

Recommended: "Sonata in A major," for violoncello and piano, by Ferroud, played by Marechal and Pignari-Salles (Columbia set X-89); Sir Thomas Beecham's superbly played "Selections" from Wagner's "Die Meistersinger" (Columbia set X-87), including the *Kirchenchor, Wach'auf,* and *nahet gen den Tag,* from Act 3, and the complete *Preislied;* McBride's *Fugato on a Well Known Theme* and Mossolow's *Soviet Iron Foundry,* played by the Boston 'Pops' Orchestra (Victor disc 4378) and the "Selections" from "The Three Waltzes," with Yvonne Printemps (Victor set M-316).

"Music is to the other arts, considered as a whole, what religion is to the church."—Richard Wagner.

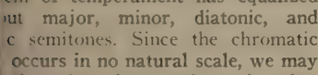
BAND AND ORCHESTRA DEPARTMENT

Conducted Monthly by

WILLIAM D. REVELLI

FAMOUS BAND LEADER AND TEACHER

CONDUCTOR OF THE UNIVERSITY OF MICHIGAN BAND



"Let's Tune Up"

IE FIRST INEVITABLY recur-ent problem that faces us in our chool band and orchestra work is uring of good intonation. Success ving good intonation determines the nd worth of all music performed e organizations, whether it be the : march or a most complex com-. Good intonation is the indis-e of the mechanics of music.

Just Intonation

RELATION to our tuning problems, tonation is of importance, and a -cussion of its place in our subject will be appropriate. The term tonation" has been sometimes used, correctly, as a synonym for singing ng in tune. Although it is of rather currence in practical music, it has l meaning and use among musicians. e the introduction of equal tem-t—the process by which all keys equally available for practical use— : of C major was usually tuned on l instruments in what is called nation; that is to say, the inter-re accurate, in so far as they af-he key of C, and approximately a very few other keys on either it. But, with just intonation, ab-urity was unattainable in any two n a keyboard instrument, unless ber of keys was so greatly multi-to add very materially to the difficulties.

t intonation, the successive intervals adjacent notes of the scales are of four kinds — not the simple ne and semitone to which the mod-em of temperament has equalized ut major, minor, diatonic, and c semitones. Since the chromatic occurs in no natural scale, we may the other three and see in what difference of a major and minor ects practical music.

we examine this diagram, we find accurate interval between the first nd notes of the major scale is a ne; that between the second and es is a minor tone. The scale may ed into two tetrachords of ap-similar but actually different con-, for in the last four measures the are successively: a minor tone, ne, and a semitone. It follows, , that if the simplest passage be first to one key and then to an-the course of modulation, there an appreciable difference, in just n, between what appears to be the erval in each scale. Thus in the agram, the position of *D* must be

ifically, the variation in pitch between D and D to E is but one-eightieth of tep, and the terms used are not to be with "major" and "minor" as applied ferent intervals used in Harmony.

slightly higher in the first case than in the second. Such a small difference as this is perceptible, of course, only to a trained ear; but, with instruments or voices that are capable of performing in just intonation, the beauty of an untempered chord is unmistakable.

Instruments of the String Family

THE INSTRUMENTS of the string family, on which the notes are not fixed, can be played in just intonation, and choral groups which make a habit of practicing without the aid of keyboard instruments can be made to realize the difference, and to make the intervals really accurate. Occasionally solo singers are to be found who can adapt their voices to give the correct intervals. But, in practice, the frequent modulations in modern music, which call for delicate adjustment in pitch to be made at every moment, make it more and more difficult to observe "just intonation."

Neither the keyboard of the piano nor the ordinary notation has any means of making clear such differences as explained above. Yet we know that B-flat and A-sharp do not represent the same tone—A-sharp being almost, but not quite, B-natural and B-flat almost, but not exactly, A-natural.

The truths of just intonation do not appear to be emphasized as much as they might be in teaching, but much may be (and no doubt is) done unconsciously in the training of the ear. In spite of the tendency for the subject of just intonation to remain an extremely theoretical phase of music, it plays an important part in the achievement of good intonation, and there is profit in the study of its various problems.

Right here it is quite safe to presume that intonation represents one of the most important and difficult phases which directors of school music have to teach.

We observe with amazement the abilities of music students, and the rapid progress which school music organizations have made within the past few years. High school bands, orchestras, ensembles and soloists from all parts of the country, meeting in the annual state and national contests, have astonished even the professional conductors and musicians by their display of technic, understanding of interpretation, and so on. Most of these organizations play the notes, and observe the dynamics and agogics, with true expression and tempo; yet in many instances, in spite of the careful treatment accorded these various phases, faulty intonation creeps in and spoils what would otherwise be a fine performance.

What can we do to improve the intonation of our individual players? Many factors come into consideration in meeting this problem.

First: The intonation of the entire ensemble cannot be any better than the intonation of each individual of that group. It is necessary, therefore, to work from the particular to the general. Of fundamental importance, it is, that each pupil's musical consciousness be steadily encouraged, from the very beginning. He must be made to sing, sing, sing. Tartini said, "*Per ben suonare, bisogna ben cantare!* (To play well, you must sing well!") And a certain wise musician and teacher corroborated this with, "If you can't sing it, you can't play it."

The beginner should produce no tone upon his instrument which he has not already fixed with his voice, for only thus can he be fully conscious of the precise tone he wishes to produce. If his voice is poor, whistling will serve as well. The main point is that the pupil must acquire a keen ear—an ear that is accurately perceptive of tonality. To be able to distinguish what is in tune from what is out of tune is by no means enough. He must be able to say with certainty whether a note is too sharp or too flat; whether it is the right note, and if not, he should be able to tell its relation to the note which should have been produced. Time and patience spent on the training of the ear will have an ample reward later on, especially if the student is given sufficient time to develop his musical consciousness.

Second: It is the writer's belief that we hurry our students too much; that is, we have a tendency to place technic ahead of musicianship. This probably is due to the rapid growth of instrumental music in our schools, and the playing of music which requires technical equipment. One of the penalties we pay for playing too rapidly is faulty intonation. The player is so engrossed with playing the correct fingerings and trying to keep up with the others that no opportunity is left for him to hear himself.

Intonation Troubles

A GREAT DEAL of our troubles with intonation is due to lack of careful and attentive listening on the part of the student. He does not hear himself. The ear does not follow through; he is more or less unconscious as to what tones are coming out of his instrument. The third factor in improving intonation, therefore, is the ability of the student to listen to his own tones.

Perhaps we can best illustrate this point with a personal experience. During the course of a violin lesson with one of my teachers I was stopped. The teacher pointed to a certain measure and, placing his hand in his pocket, he drew forth a nice new ten-dollar bill (this was before the depression). "This bill is yours," he said, "if you can sing that measure accurately in tune." Did I? I did not! The passage consisted of intervals of a diminished seventh chord, and although I had practiced it at home, several hundred times, it was entirely foreign to my ear. I had gone over it incessantly and had not really heard it once. Because I had not listened carefully and had not sung it, I was entirely unconscious of its tonality. All things being normal, we believe that when our students are out of tune either they know it and can tell whether they are sharp or flat, or else they are utterly unaware of being out of tune. If you were to apply the simple test of asking them to sing what they have just played, it would no doubt be found that their vocal tone would be proportionately out of tune.

Choosing the Instrument

THIRD: THE FACIAL characteristics, especially in regard to embouchure, must be taken into consideration. It is wise to have a student play that wind instrument best suited to his particular type of chin, mouth, lips, and teeth. In any case, the student with a receding chin (at times called an underslung jaw) should be taught to protrude the chin. This will automatically give the correct position and eliminate the tendency to play flat. Also this position of the jaw will enable the student to direct the breath into the upper part of the mouthpiece, which is, of course, essential to securing good intonation in the upper register.

An interesting experiment develops when we ask a student with this type of jaw to blow his breath into the palm of his hand. He will be amazed to learn that the receding jaw has focused the breath in a decidedly downward direction, so much so that in some instances the breath is striking his chest. Now ask the same student to protrude his chin, so that the breath stream focuses directly under his nose. This position, by shifting the breath in an upward direction, raises the pitch.

What does this experiment prove in regard to intonation? Only this. When the chin is drawn back the tone becomes flat, through downward direction of the breath, while a protrusion of the chin directs the breath upward, thus raising the pitch.

Fourth: The association of the head-tone for tone placement can also be used to great advantage in the teaching of the wind instruments.

Many students are troubled considerably in the upper register with an inclination towards sharpness of their tones. In some instances this is due to: (a) closing or rigidity of the throat, (b) excessive mouthpiece pressure, (c) lack of sufficient breath compression or support.

Complete relaxation of the throat and tongue is absolutely essential to the proper production of any tone. Quality and tuning are both seriously affected by the slightest tendency to throat contraction or other restrictions of any muscle employed in the production of the tone. No student should attempt under any consideration, to play notes above that register which he can play with complete relaxation. Great care and attention should be given to each individual player in this regard, for it is a fundamental part of his training.

Fifth: While there is no need for going into detail, correct posture and position are aids in the securing of good intonation.

These ideas on intonation, from the standpoint of the individual player, may be summarized somewhat like this: In order to play in tune he must be able to hear the tone first; he must sing and develop a musical consciousness which will advise him accurately as to the exact pitch of every tone he produces on his instrument;

A Monthly Etude Feature of practical value, by an eminent Specialist

MUSIC EXTENSION STUDY COURSE

For Piano Teachers and Students

By DR. JOHN THOMPSON

Analysis of Piano Mu appearing in the Music Section of this Issue

MINUET REVERCHON
By CARL WEISEMANN

A minuet in antique style serves to introduce us to the April issue of THE ETUDE. An examination reveals that the thirty-second notes in the right hand of the first theme are to be played in the style of grace notes and rolled rather than fingered.

Play the repeated notes of the melody, as well as the descending thirds of the left hand accompaniment, "long," but detached, as indicated by the little line and the dot, and also the words of the text—*non legato.*

The second theme, in G major, is to be played in smooth *legato,* with particular attention to the slur signs found in the melody part.

In the *Trio* section emphasize the droning effect in the bass. The composer obviously intends to imitate here the sound of the musette, an ancient instrument of the bagpipe family, which served to drone an accompaniment to many very old dances. Observe carefully, too, the accented D on the second beat of each measure throughout this section. The monotonous repetition of this D is an effective background for the right hand melody in sixths.

Hold to an even *tempo* throughout this music and follow the marks of expression which are shown so clearly on the printed page. Good interpretation is sure to follow.

IDYLIO
By H. ALEXANDER MATTHEWS

Idylio, a mongrel form of the Italian *idillio* (the Italian language having no letter "y"), that is synonymous with our English word "idyl," which in literature, pertains to a small poem of elegant construction dealing usually with a pastoral subject. The musical setting of such a poem is also known as an *idyl.* The form is essentially lyric, and so we are not surprised to find this *Idylio* of Dr. Matthews melodic from beginning to end.

The first theme begins in the key of G major. It lies in the most resonant section of the keyboard and is supported by a-cross hand accompaniment taken by the left hand. Attention is called to the accents occurring on the second beat of the melody in many instances, as in measures 1, 5, 9, 13, and so on.

The second section lies in the key of the relative minor-E minor. This section should be played with considerably more animation than the first theme. The *tempo* is somewhat faster—*poco piu mosso* with the second and fourth phrases of four measures *meno mosso* (slower)—and the tonal treatment is a bit more rugged. At measure 49 the *tempo* drops back to the original pace with the reëntrance of the first theme.

The composition ends quietly on a one line *Coda.* It should be needless to say that the entire piece is to be played expressively and with special attention to rhythmical and tonal nuance.

VALSE DE CONCERT
By IRENEE BERGE

This waltz calls for clean finger *legato* in the right hand, against a bouncing waltz rhythm in the left.

It is suggested that the first theme be practiced rather slowly with somewhat exaggerated finger lift. When the passages are well set in the hand, and as speed develops, keep the fingers closer and closer to the keys. This in itself helps to increase speed. Be certain, however, to use enough finger articulation at all times to insure clarity. A slight rolling (rotary motion) of the hand also adds smoothness and a liquid quality to the passage work.

The second theme—written in the style of Chopin—is a trifle slower in *tempo* and is to be played with repose, the performer striving for the utmost in resonance for all melody tones. The next section, marked *energico,* is to be played with broad *fortissimo* accents and in a "big" style throughout.

A repetition of the second theme follows—this time in the key of G-flat major. A modulation works back to the entrance of the first theme and the piece ends on a brilliant *Coda, presto and pianissimo.*

LITTLE PIERRETTE
By CHARLES HUERTER

Here is a piece destined to put to the acid test the player's daintiness and elegance of style. Since it is in the dance form, rhythm and *tempo* are of paramount importance. And, while the *tempo* allows of much *rubato* (in fact demands it), never must these variations in *tempo* be allowed to dull the rhythmical line which, at all times, should be sharp.

The first theme, played *allegretto rubato,* is in F major. The second theme, played *piu mosso,* is in the dominant key, (C major) and the *Trio* section is in B-flat major, the subdominant key. Note that the melody passes from bass to treble in the *Trio* section, beginning first with the left hand. As usual, Mr. Huerter has carefully edited each phrase so as to leave no doubt regarding his wishes in the matter of interpretation.

HUMORESQUE
By GLADYS V. GILBERT

Here is a number which opens *Allegro moderato,* in lively manner, but which changes pace frequently and abruptly throughout its course. The title, of course, gives sufficient clue to interpretation. Sharply contrasting *legati* and *staccati* are necessary, as well as strict observance of all phrasing marks, particularly the two note slurs in measures 16 to 20. A big *crescendo* is in effect, beginning measure 37, which reaches *fortissimo* in measure 40. After two measures, however, the tone drops just as suddenly and with a *dim e calando* recedes to *pianissimo,* on which the piece ends six measures later.

ALBUM LEAF
By RICHARD WAGNER

Because he is best known by his operas, and because the operas are so intensely dramatic, one almost unconsciously associates the name of Richard Wagner with descriptive music on a big scale—the sort of music depicting the "Ride of the Valkyries" or "The Flying Dutchman" or the exciting scenes from "Tannhäuser."

But here is an example of the master in one of his more quiet moments—a sort of *moment musical.* Even in this simple little *Album Leaf,* however, certain very definite characteristics of Wagner are apparent. For instance, the mordent figure in the melody (second measure), the triplet on the last quarter (measure 8) and the suspensions (shown by the tied notes), in measures 13, 14, 15 and so on.

Play the melody simply but tenderly against a rolling left hand accompaniment. Note that the melody appears in the tenor voice (left hand) beginning with the last quarter of measure 27.

The version presented in THE ETUDE has been carefully edited. Follow thoughtfully therefore all marks of phrasing and expression.

BELIEVE ME, IF ALL THOSE ENDEARING YOUNG CHARMS
Arr. W. P. MERO

This fine old song has been cleverly arranged in the form of a novelty for left hand alone. The advantage of separate hand practice, especially for the left hand, needs no comment. But the difficulty lies in making the average student feel enthusiastic about such practice. When a popular and attractive air is used, however, the exercise immediately becomes sugar-coated, as it were, and the problem of catching the pupil's interest is solved. Mr. Mero has made a very playable arrangement and one not too difficult. It should meet with the approval of both teacher and pupil and, incidentally, add something different to the recital program.

Not only is the left hand developed, but the pedal, too, comes in for its share of study. The pedal is carefully marked from beginning to end, as is also the fingering on the extended broken chords.

THEME AND VARIATIONS IN F MINOR
By F. J. HAYDN

"Old Papa Haydn" was so called, no doubt, because he fostered and developed the *sonata* form in music and fathered to a certain extent the cause of musicians in general. The appellation certainly could have no reference to his lack of youthful vitality. Born of hardy peasant stock, he seemed to retain a vigorous and refreshing enthusiasm to the day of his death. At the age of sixty-seven he wrote his oratorio, "The Creation." Two years later he composed "The Seasons." His work continued to improve as he grew older. In fact, he once made the complaint that only after a lifetime of study, when it was about time to die, had he reached the point where he felt he really knew how to score effectively for woodwinds.

All his compositions reflect the most painstaking care and merit the same amount of care on the part of the performer. Pay strict attention, therefore, to phrasing and be sure to preserve the melodic line as it passes from one hand to the other.

Keep in mind the tonal limitations of the keyboard instruments of Haydn's day; and, while not depriving the composition of the benefits of the modern piano, try to keep within well defined tonal boundaries.

WALTZ
By JOHANNES BRAHMS

The works of Brahms, especially the symphonies, are considered by some to represent the peak of absolute music.

Absolute (or abstract) music is music which derives none of its interest from external things—in other words, it is pure music. It does not attempt to paint or portray anything tangible. It is assumed that the musical idea is sufficient inspiration in itself and the treatment, the development, the musical adventures, so to speak, of the theme are of primary importance.

A large part of the music of the great masters is absolute.

Brahms created a style of writing that is distinctly individual. While he lived in the romantic period, his style is distinctly classic. He has often been referred to as the philosopher. This may be because of his Ph.D. degree, or because his works often promote a philosophic trend of mind.

The Waltz here presented is one of set of *Op. 39.* When playing the dances Brahms it is well to remember that th are related to the German *"ländler,"* peasant dance, rather than to the dan of the aristocracy. Therefore, let the st be rugged simplicity and sincerity, avoidi extreme nicety of interpretation whi would tend to impart an air of overrefi ment and elegance. After all, the ch charm of these dances lies in their dire ness and artlessness.

THE HOP TOAD
By HUGH ARNOLD

A simple *staccato* study for the fi grader is the *Hop Toad* by Arnold.

The accompanying verse is so contriv that the word "hop" always occurs on t *staccato* notes.

Since the melody is composed of b the broken triad and the descending sca the piece can be used as a study in e mentary keyboard analysis.

THE GIPSY CHILD
By MARI PALDI

Here is a piece which gives equal velopment to both hands in melody playi *staccato* and *legato.* It opens in the key G minor with the melody in the rig hand. The first measure is played w finger *legato* and the second with wrist forearm *staccato.* The third measure is a *staccato* and in the fourth the left ha applies a two note slur.

In measure 5 the left hand takes up melody in answer to the first phrase a applies *staccato* and *legato* as before.

The second section is in the paral major key and here are found passag divided between the hands, again calling nice distinction between *staccato* and *lego* Altogether the piece affords excellent stu in style and ease of performance.

WILL-O'-THE-WISP
By ELLA KETTERER

A cross-hand piece which develops a the playing of two note slurs.

As the hands pass over each other, sure they are relaxed. As the finger leases the last note of the slur the ha should hang limply until the first note the next slur is played. This will happ more or less automatically if the wor "Drop, Roll," are employed when playi the two note slurs. The second section played a trifle more slowly. It is in key of C major—subdominant—and melody lies in the left hand.

LET'S PLAY BASEBALL
By ELVA CHITTENDEN

This tune remains in the five-finger po tion throughout.

The patterns are fairly obvious, maki it adaptable as a rote piece.

As is usual with first grade pieces. comes accompanied with words.

As a study point, the matter of acc might be stressed.

LITTLE FLOWER WALTZ
By JAMES H. ROGERS

A little waltz of about second grade d culty in which the melody appears first the left hand in the key of D major.

The second theme opens in the key the relative minor and modulates with repetition of the *motif* until it ends fin

(*Continued on Page 278*)

THE TEACHERS' ROUND TABLE

Conducted Monthly by

GUY MAIER

NOTED PIANIST AND MUSIC EDUCATOR

Mr. Maier's Seventy-Five Test Questions

A Self-Rating Questionnaire

There seems to be a craze just now for tests of all kinds—geographical, historical, political, and so on. I have not yet seen any for music teachers, and wonder if you would be willing to give one. I am sure that many of us who are sincerely trying to improve our teaching would appreciate having a list of questions on which we could check ourselves every month or so. —N. S. M., Vermont.

Another of those challenging questions ich keep me up o' nights! This one, how-r, came at a propitious moment when I playing down in Oklahoma, where I ld consult my friend, Mrs. Marguerite eks, the teaching supervisor for the leral Music Project. She has charge of enty-five teachers there, and is perform-a significant service for music in her e. (By the way, you know, don't you, t Oklahoma is one of the most alert and gressive states of the Union? Its musical vity is no less than phenomenal.) Mrs. Meeks and I put our heads together, after many headaches, devised the fol-ing self-rating scale. No claims are le for its infallibility. Private teachers rate themselves on the first sixty-five stions; if you can answer "yes" to as y as sixty you are A+; fifty-five makes an A; fifty puts you in the Class B; forty-five places you in Class C. Any-who is honestly unable to answer "yes" more than forty must hide his head in me, and put on a dunce cap.

Class teachers use the entire set of nty-five questions; 70 = A+, 65 = A, = B, 55 = C, 50 or less—go to the of the class!

Here are the questions; tackle them lly and honestly.

I. *Equipment and Management*

Is your studio neat, clean, attractively and conveniently arranged?

Is it well lighted?

Are windows and doors adjusted to give the best possible ventilation?

Is your general appearance — posture, dress, and so on—good?

Is your voice musical, and do you enunciate clearly?

Do you maintain an even disposition during the lesson?

Are you in your studio at least ten minutes before lesson time in order to arrange all materials for the day's work?

Do you start lessons on time and dismiss pupils promptly?

Do you avoid all interruptions — telephone, door bells, irrelevant conversations—during lessons?

Are you careful to make each student comfortable at the piano (height of chair, back rest, conveniently placed music rack, and so on)?

Do you keep your records, reports and daily roll book up to date?

Do you have a bulletin board in the studio or waiting room, well filled at all times with attractive, interesting material?

Does each student have a note book in which you carefully write what you want him to prepare for the next lesson?

THE ETUDE has been very anxious to keep this much crowded department limited to short questions and short answers, but the following question was of such wide appeal that we agree with Mr. Maier in that it could not be disposed of with a brief reply. As Mr. Maier has written, this material represents "much thoughtful labor," and the Editor has a very strong conviction that many teacher-readers may get useful inspiration and practical direction from Mr. Maier's test questions equal to many times the cost of an annual subscription to THE ETUDE. Certainly anyone who can answer most of these questions affirmatively has established a teaching routine which should command patronage. Hereafter, however, short questions! to which Mr. Maier promises very short, direct answers.

—*Editor of The Etude.*

14. Do you keep good books and magazines on music in a prominent place in the class-room, always accessible to your pupils?
15. Do you subscribe to one or more music magazines?
16. Does your work advertise itself?
17. Does your enrollment steadily increase?

II. *Personal and Professional*

18. Are you enthusiastic?
19. Do you really enjoy your work?
20. Are most of your pupils interested and eager?
21. Do you set a definite goal for each student, and work toward it?
22. Do you have a sense of responsibility toward your pupils?
23. Do you encourage your pupils to ask questions and to express themselves in the lesson?
24. Do you help and encourage creative work?
25. Do you always praise or reward sincere effort of any sort?
26. Do you go out of your way to help and to advise pupils?
27. Do your pupils voluntarily come to you for advice and conference?
28. Do you play often for your pupils?
29. Do you especially like children?
30. Are you genuinely interested in your pupils?
31. Are you acquainted with the parents of your students, and do you occasionally visit their homes?
32. Do you receive parents' coöperation in securing adequate preparation (practice) for lessons?
33. Do you greet your pupils with a cheerful smile?
34. Do you often laugh and joke with them?
35. Are you fair minded, giving every pupil a square deal?
36. Are you sympathetic?
37. Do you honestly try to see things from the pupil's viewpoint?
38. Do the lesson periods and the work days pass quickly?
39. Do you accept obstacles and hard knocks as a challenge?
40. When your path is blocked by some difficulty or problem do you devise a way of overcoming it?
41. Are you constantly on the alert for new teaching material, new music, new methods?
42. Do you spend at least an hour each day in study and practice?
43. Do you take advantage of "master" classes or pedagogical courses which come to your region?
44. Do you take at least one music course each year on subjects in which you need "brushing up," or are deficient?
45. Do you play at least one informal solo or ensemble recital each year?
46. Do you have at least five informal pupils' recitals each year?
47. Do you honestly try to hold your interest in the less talented pupils, working with them just as hard as you do with the more gifted ones?
48. Are you a member of any organization of music teachers, or do you have teacher friends with whom you discuss mutually helpful matters?
49. Do you constantly vary the teaching materials you use?

III. *At the Lesson*

50. Do you plan the work for each pupil at least one week in advance?
51. Do you try to find out the individual needs of your students as opposed to putting them all through the same set routines?
52. Do you teach positively, convincingly, and authoritatively, being able to back up all your statements with sound reasons?
53. Do you endlessly emphasize the necessity for vital musical *quality*, no matter whether the matter in hand is a scale, etude or piece?
54. In your criticism, do you always first speak of the good features, and then when pointing out the defects, show the pupil clearly how they can be remedied?
55. Do you (in every lesson) make an attempt to clarify some point which will help the pupil prepare his lesson better, that is, are you always showing him *how* to practice?
56. Do you emphasize the imaginative quality of the music by frequent word pictures of the mood or program of the piece?
57. Do you make a point of teaching some musical fact or term unobtrusively, or a point of theory, harmony, and so on, at each lesson?
58. Do you devote a few minutes of each lesson to some musical activity away from the piano—swinging or singing, "conducting", or rhythmic games?
59. In all lessons is there some "pure" technical work?
60. Do you often play duets or two-piano ensemble music with your pupils?
61. Do you give sight reading assignments each week?
62. Do you originate or try out new methods of teaching—that is, do you experiment constantly?
63. Do you insist in each lesson that one piece (however short) be done as thoroughly and perfectly as possible, that is, musically, in good rhythm and by memory?
64. Do you let your pupils *hear* some good music, well played, at each lesson?
65. Can most of your students play at least five pieces (short or long) acceptably at all times during the year?

IV. *Additional Questions for Class Teachers*

66. Do your pupils attend class regularly, and on time?
67. Is the routine of passing material, moving to piano, and so on, systematically organized to be done without delay or confusion?
68. Do you make use of your blackboard at each period?
69. Do you spend at least three-quarters of each class period in group work?
70. Do you keep each student busy *all* the time?
71. Do you give some ear training, dictation, harmony, or rhythmic drill at each period?
72. Do you call on pupils frequently for their own criticism of the other students?
73. Do you pleasantly insist upon strict discipline and good behavior in class?
74. Do you give time outside of the period to pupils who need additional help in order to keep up with the class?
75. Is your procedure so carefully planned that all the necessary points are covered in each class period?

A Legato Problem

I have a boy, eleven years old, who started about nine months ago. It is impossible for him to connect two tones together in what I call *legato* playing. I have tried to make him hear the difference and I believe I have been successful in this endeavor; but the trouble seems to be more of a physical handicap. Whenever he plays the second note of a melody, there is always a new stroke, a "starting all-over-again" attack. I have tried "drop-call" *superlegato* practice, everything but the right thing. What is it?—V. W., Virginia.

A remedy which I have found effective in such cases is to apply an exaggerated up touch. Begin with very low hand and arm; as you play the tone swing the arm (elbow) up and out, almost in a circle; before playing the second tone let the hand and arm sink down to the original position; the second tone is played exactly like the first, but *both* tones are held (see exercise below) in order to sense the perfect binding; after the second return to the low position, drop arm to lap.

Dressing Up the Studio Performance

By STEPHEN WEST

Suggestions on Costuming, Make-Up, and Photography

Prepared Expressly for The Etude *Music Magazine*

ONE OF THE SADDEST fates that can overtake the school or studio performance is that, when the parts have been carefully mastered, and "the show" put together, the general result is less pleasing to the eye than to the ear. Somewhere during the final week of rehearsals, in the preoccupation with vocal line and dramatic fervor, there can be oversights of the most unbelievably obvious details: the costumes persist in looking not quite professional; the leading lady's complexion fluctuates somewhere between a consumptive pallor and the coppery glow of an Indian squaw; while the leading man has trouble with his eyebrows; and the group photograph of the entire cast shows but heavy black gashes where the mouths ought to be. It requires the most expert art, of course, to dress a production, make it up, and photograph it in professional style. Still there are a number of general hints which may prove useful in getting at the sources of most amateur difficulties.

In the matter of costumes, Mr. N. A. Lanzilotti, master of theatrical costuming, and Head of the Wardrobe Department of the Metropolitan Opera Company, points out that the first item to consider in dressing a show is the stage lighting. All colors should be chosen under the same color and intensity of light as those under which the finished costumes will be seen. It can happen, for example, that a certain shade of blue will show up as green, when illuminated by a heavy yellow light. If green is not desired in the scene in question, considerable confusion can result at the last minute.

"In planning a new production," says Mr. Lanzilotti, "where I must dress half a dozen principals, a hundred choristers, and another hundred supers, I first assemble perhaps fifty different color samples and spread them out together on a table, under the same color of light as will be used on the stage. From the complete lot, then, I keep those colors that make the best effect, and reject those that become dull. Next, I blend this working basis of usable colors for variety and harmony. No two characters should be dressed in the same color, if this can be possibly avoided, because it lessens visual interest. Nor should the colors of the different singers or ensemble groups be allowed to clash. Three or four predominating colors should be selected and the others adopted to blend with them, avoiding the garish, yet allowing for sufficient variety."

The Color Ensemble

EFFECTIVE UNDER NORMAL STAGE LIGHTS are purple, rose, blue, chartreuse, lavender, jade-green, and white. Mr. Lanzilotti secures admirable effects with accenting touches of bright red, but avoids the color for full costumes; unless, of course, it is specially called for in dressing a Cardinal or a King of Fire. In blending a scene, green, purple, and blue go well together, and they make an effective ensemble. However, all colors should be carefully chosen under light. A mere mention of color names leads to confusion, when the dozens of different tints and shades come into question.

Equally important with the color choice, is the style accuracy of the costume's design. Only scrupulous attention to the niceties of period dress can give satisfactory results. Period garments should be faithfully copied from reliable photographs, which can readily be found in histories of the period in question, or in volumes of dramatic history. Mr. Lanzilotti suggests that the simplest costumes to design are those of the Grecian, Roman, and Egyptian periods; since plain materials can be used, and simply draped on the figure according to sketch. The most difficult periods to copy are those of the Renaissance and of Louis XV, with their rich materials, elaborate trimmings, and their delicately adjusted fit.

Where costumes are to be made without professional assistance and at a minimum cost, Mr. Lanzilotti intimates that the body of the robe be cut from plain muslin, and that the effective parts of full bodice and skirt simply shall be draped over this foundation. In this way the fit and the style can be assured, without too much bewildering detail as to cutting, shaping, and sewing. Both the foundation and the uncut lengths of draped material can be used many times. In making one's own costumes, the simpler they are, the better; and thus the freer they will be from error, both in design and in fit. In place of costly silks, an inexpensive celanese can be used to good effect, for nearly all needs.

Such accessories as cannot be found in a Ten-Cent Store may be made at home. Crowns, for example, can be cut from buckram, wired to hold their shape, and covered with gold cloth or gold paper. Mediæval belts, and similar accessories, also can be made from buckram and covered with simulated metal or leather material. Jewel-colored stones sewed on either of these accessories add greatly to their effect and but little to the cost.

The Art of Make-Up

IN THE MATTER OF MAKE-UP, let us consult Mr. Adolf Senz, Head of the Wig and Make-Up Department of the Metropolitan, who comes to his post with theatrical and motion picture as well as operatic experience. The only need for a straight make-up (in contrast to the special character make-ups) is to counteract the devastating effect of stage lights and to present a natural appearance. Thus, again, lighting is the first consideration. Depending upon the lights to be used, the general scheme of make-up will be ruddier or paler. As a general thing, however, amateurs will get better results from underemphasizing their make-up than from overdoing it.

The most common fault of the amateur show is defective make-up. The tendency among novices is to apply grease paint as though it were the means of constructing a new face, which, of course, it is not. Make-up can correct certain types of facial defects (of which more later), but its general use is to make possible a natural appearance under unnatural light. A heavy slapping on of grease or rouge defeats its own purpose. Mr. Senz suggests the following as the simplest and best routine for applying a straight make-up. It is designed for women, but can be equally well used by men, with certain exceptions listed at the end.

First remove all normal make-up with cold cream, and wipe away the residue cream. For the application of the grease paint, take a small quantity in the palm of the left hand and work it into the exposed skin smoothly and evenly with the fingers of the right. It should be well distributed and any excess removed. Next outline the upper lash with a black pencil, extending the line about one-quarter inch beyond the eye. Apply green eye-shadow to the lids, carrying it down to the sides of the nose. The lids, close to the lashes, may be darkened with a black pencil. Outline the brows with a brown pencil, using short strokes. Apply cream rouge to the cheeks in a stippling motion. Apply lip rouge. The basic grease make-up is now ready for powdering. Smooth out the entire face with stippling strokes, and then apply t powder, patting it on. Cover the area b neath the eyes first, and then continue un the entire face is covered. Keep packin and removing all excess powder, first wi the puff and finally with a soft powd brush. Remove all powder from eyebro and lashes with a small eyebrow brus and accentuate eyebrows once more. R move all powder from lips and retou with lip rouge. Apply dry rouge to t cheeks, if needed. If false eye lashes a to be worn, apply them by covering the l nearest the lashes, keeping away from t inner corner of the eye, and extending t false lashes a trifle beyond the outer corn Push the false lash-piece down as clo against the natural lashes as possible. Wh the gum of the lash-piece has congeale extend the line with a black pencil on bo inner and outer corners of the eye. Ma cara may then be applied, if necessary.

Men's make up differs from the abo only in that it requires gray or brow eye-shadow instead of green; calls for litt if any cheek rouge; keeps the lip line natural as possible; and needs no d rouge whatever after the powder has be applied.

Where Judgment Counts

AS IN THE CASE of costume colors, it impossible to be definite about the exa shade of make-up needed. That must decided by the light under which the pr duction will be seen, the types of par to be portrayed, and the natural colori of the players. Ruddy tints, however, ma the best effect under the prevailing amb of stage lights.

Character make-ups are too widely d vergent to admit of much general couns ing. In amateur productions, however, t most usual character make-up is that an aged person, for which the wrinkles a depressed facial areas common to age a marked in by a dark crayon at the corn of the eyes, under the eyes, at the inn rounding of the cheeks, the corners the mouth, and the chin and throat. M Senz suggests that the most satisfacto results are obtained by a light-and-shad technic rather than by an attempt to pen in the individual lines. A single cray stroke, properly worked in, is quite su ficient. In elaborate character make-u Mr. Senz uses fish-skin or liquefied rubb to hold the muscles in the desired positi for age markings or scars. Build ups putty accentuate ears, noses, cheek-bon and chins. Effects of this type, while int esting to know about, are hardly for an teur use. Hand make-up is genera confined to liquid powder, well distribut and evenly worked in.

In planning any make-up at all, the s of the stage must be taken into cons eration; the greater the distance betwe spectators and players, the greater the l erties and the freer the pencil stroke while smaller distances demand grea attention to detail.

Cleverly applied make-up can go towards minimizing natural deficiencies feature. Mr. Senz cites the example o girl whose face is too broad. Nine tim out of ten, he assures you, she will to divert attention from this defect drawing her hair over her ears, paint

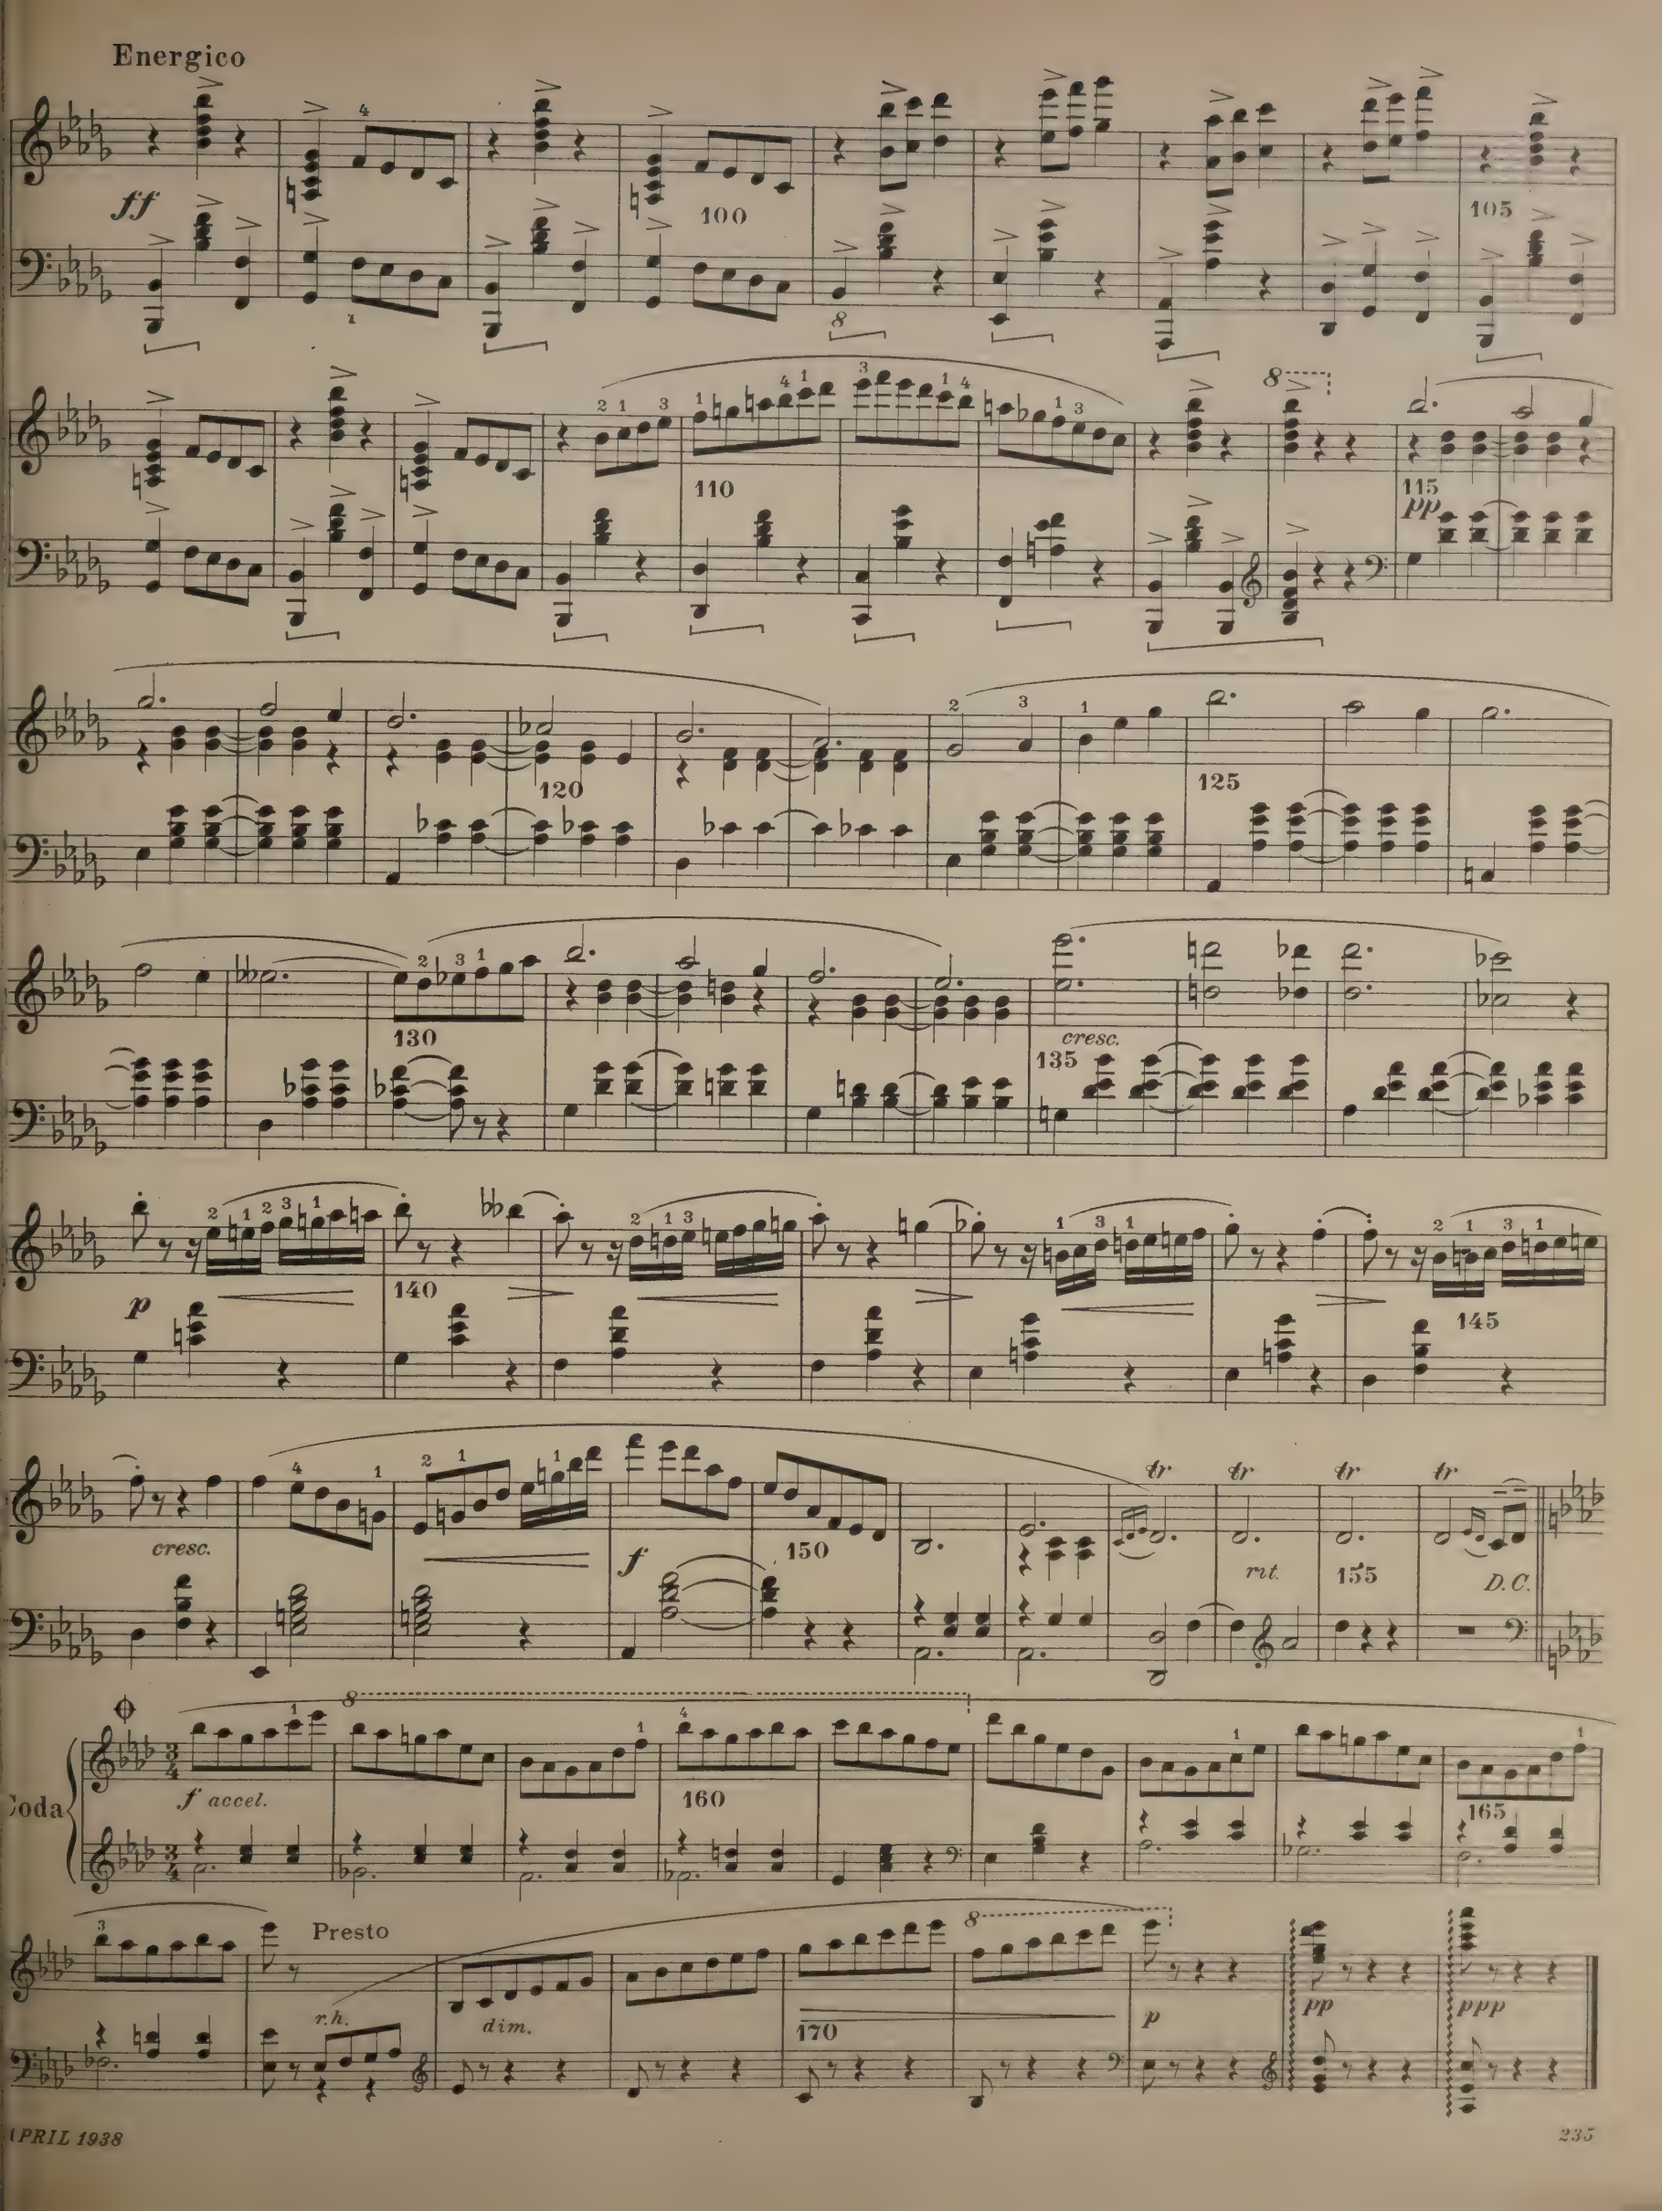
VALSE DE CONCERT



IRÉNÉE BERGÉ

When Chopin wrote the famous D Flat (Minute) Valse, he established a type which has produced many charming compositions in this class. We know of none, which, following the general form, but with such obvious originality, embodies the musicianly interest and yet popular appeal of this ingratiating waltz by Bergé which deserves to be far better known. The second section (Meno Mosso) is particularly distinctive and has a brilliant terminating climax at *ff*. Grade 5.

LITTLE PIERRETTE

DANSE FANTASTIQUE

CHARLES HUERTER

Charles Huerter, whose fine fancy has added so much to American pianoforte and vocal music, has put one of his choicest flights into *Little Pierrette.* The success of the performance of this piece obviously depends upon the manner in which the player brings out the inherent daintiness of the composition.

Grade 3. **Allegretto rubato**

From here go back to the beginning and play to *Fine;* then play *Trio.*

ALBUM LEAF

When Wagner was at the Russian Embassy in Paris in 1861, he composed two album pieces, one of which was intended for the album of Princess Metternich. This is published here in a carefully edited version. This piece was written during the turmoil caused by the first production of "Tannhäuser," in Paris, when Wagner was the centre of terrific opposition. Grade 4½.

Dressing Up The Studio Performance

(*Continued from Page 230*)

ier mouth small, and trying generally to pencil down the size of her features. Which s exactly the wrong thing to do. The hair hould be worn off the ears and away from he face, to avoid an added impression of eaviness, while the features should be distributed" to balance the width of the ace. A broad face should have its rouge pplied close to the nose and off the cheeks, hile the mouth needs to be made-up in bow, or in lines that tend toward height ather than width. The girl whose face is oo thin, on the other hand, should wear er hair over her ears and close to the ace, should apply the rouge far out on he cheeks, and curve the line of her lips nto a wide "cradle" effect.

Wigs and beards should be always measured and fitted by an expert. It is better o play in natural hair than in poorly itting wigs. Mr. Senz has interesting hings to tell about wigs. A long-haired peratic wig requires ten full days of work or its making. Most of the hair used in vigs comes from abroad, from the farm ections. The peasant women save their ombings, and once a year they trade off heir accumulation to itinerant peddlers in xchange for calico or pots and pans. After hat, the hair goes through a number of ifferent hands and different processes, nally reaching the metropolitan markets f the world, where it is sold by the ounce; inted by wig-makers to the exact shades esired; made up into pieces that range in ariety from a small covering for a single ald spot, to a complicated character wig; nd worn on the heads of theatrical celebities, who possibly may have come from he same corner of the world as did the air itself. For some reason of diet or limate, American hair generally does not end itself so well to the purposes of the vigman's art.

The Art of "Being Taken"

To assure the best results in photographing the casts and scenes of the studio production, there are a number of valuable counsels provided by Mr. William Freese, Director of The New York Times Photographic Studios, among whose many responsibilities is the personal supervision of all photographic work of the Metropolitan Opera.

"All scenic pictures should be taken under bright light," Mr. Freese will tell you. "Even if the scenes are played under subdued light or in heavy shadow, light them up for photographs. It is extremely difficult to get a satisfying picture of a dark set especially for reproducing purposes. When we photograph a normally dark set on the Metropolitan stage (as, for example, the Garden Scene in 'Faust,' or the Garret in 'La Bohême'), we flood the scene with light as bright as that normally used for an outdoor scene at noon. Do not be afraid that such a process of light alteration will spoil the accuracy of your picture. In the first place, reproducing a photograph, in a newspaper or magazine, normally subdues the lighting. And, furthermore, the people who look at your finished picture will not recall the original lighting of the scene. Time and again have we shown our pictures of dark scenes to the very artists who take part in them, and never has any one discovered or remarked that the lighting has been rearranged for photographic purposes. What you want your picture to record is a faithful likeness of the scene; and this can be obtained only under lighting conditions which are best adapted to photography."

When the cast members are assembled to be photographed, they should remove their stage make-up. Photographic make-up should be as light as possible, says Mr. Freese. A heavy base of white grease paint is never good for pictures, while even a normal application of lipstick should be toned down, since the rouge turns out black on the plates, and gives the face an over-heavy look. Metropolitan artists who come to the studios to be photographed, put on their costumes but use less make-up than they would on the street. When dressing-room pictures are taken between the acts, where limitations of time make it impossible to tamper with the finished stage make-up, the photographers have a great deal of touching-up to do, to free the pictures from the disturbing effect of heavy paint or rouge.

If a wig is used, great care should be observed in blending the wig-line with the forehead. A break at this point that could not be seen from the stage, stands out glaringly in a picture. Make-up never should go beyond the wig-line. If no wig is worn, the hair should be arranged as simply and naturally as possible. Waves that have been set by the hairdresser, should be combed out before a photographic sitting. Never let the camera catch you fresh from the hands of the coiffeur. Avoid the slicked look that comes from a too recent application of water or lotions. All such artificial settings show up as stiff on photographs. The more natural you look before the lens's eye, the better.

Eliminating the Arm Touch

By **RUBY BASSETT**

Almost every child in the early stages of piano study plays with a punchy arm touch. There is nothing more ruinous to acquiring a good tone, with control and strength at the keyboard, than is this defect.

Some overcome this fault early and rapidly, but with others it is almost impossible to change. Five finger exercises and rapid scale playing are both helpful in destroying this, and I once had a teacher who had me to practice with a coin resting on the back of my hand, in order to encourage a pure finger touch, and all of these are conducive to that result.

A recently discovered method has been used very successfully in breaking up this habit; and that is, "Playing on the thumb." The student places the hand in the correct rounded position and then with each finger in turn taps the thumb. It is impossible to use an arm touch here, and if the pupil will next lay his thumb, nail side down, on one of the keys of the piano, and then play on the inner surface of the thumb with each finger, it will help him get the feel of finger playing. He then should be asked to play in the same way, but with the thumb removed. This has helped a great deal to do away with punchy arm playing among students; and, with the correct touch established, my pupils have been able to build a good technic.

* * * * *

"True art endures forever, and the true artist delights in the works of great minds."—Beethoven.

SOME CALL IT SOCIAL CHARM! Character and breeding and inborn graciousness have a way of shining through a fine piano, just as they do with people. Even if you did not know that it takes two patient years to create each Baldwin by hand . . . that the Baldwin is the chosen piano of Bauer, Iturbi, Gieseking, today's great masters . . . you would sense it instinctively. Some voice within you would say, "In all the world there is no finer piano."

CHOOSE YOUR PIANO AS THE ARTISTS DO! Among today's great masters who have chosen the Baldwin are Bachaus, Barer, Bauer, Bogus-lawski, Bori, Casella, Chaliapin, Dayas, Earle, Echaniz, Eisenberger, Ericourt, Firkusny, Gieseking, Golschmann, Goossens, Hall, Harms, De Horvath, Amparo Iturbi, Jose Iturbi, Edward Johnson, Keenan, Labunski, Josef Lhevinne, Rosina Lhevinne, Mirovitch, Naegele, Pons, Rosenthal, Schmitz, Slenczynski, Szigeti and Zachara.

THERE'S MORE THAN MUSIC IN A BALDWIN

THE SINGER'S ETUDE

Edited for April by Eminent Specialists

It is the ambition of THE ETUDE to make this department a "Singer's Etude" complete in itself

Lessons from Recorded Artist Singers

By HOMER HENLEY

ANOTHER CYCLE of great voices and great singing artists has receded into the limbo of the past. To-day the dearth of both great singing voices and great singing artists is more tragically pronounced than it has been at any time in the past one hundred and fifty years.

Where now are to be found such great voices as those of Caruso, Edouard de Reské, Tito Ruffo, Amato, Tamagno, Scalchi, Materna, Schumann-Heink, Gerville-Réache, Clara Butt, Sims Reeves, Charles Santley, Christine Nillson, Emma Eames, Nordica, Tetrazzini, Jenny Lind, Patti, Melba, Galli-Curci, and Chaliapin? Or such consummate singing artists as Jean de Reské, Calvé, Sembrich, Plançon, Bonci, Bori, de Luca, Lilli Lehmann, Campanari, Louise Homer, John McCormack, Alexander Heinemann, Julia Culp, or Battistini? With the exception of a few outstanding exemplars of our time, they simply do not exist.

Where then may the eager student of the present turn for the great vocal tone, the great *bel canto*, the great vocalized artistry of the majestic figures of the past, for exemplification of their silenced voices and art?

The Voice Preservative

FORTUNATE IT IS for these students of to-day, and for the students of posterity, that both the art and voices of the great departed are preserved to us by the aid of science, in phonographic records which are now capable of being reproduced indefinitely by successive recastings.

There are no lessons in voice placement, nor in the style and traditions of vocal supremacy, which can equal in practical value the constant rehearing of many of history's grandest singers. *If* the listener knows what to learn from them, and how to learn it. Let us see if these, in turn, cannot be made practical.

Let us begin with the "great tone" possessed in common by all the great singers, past and present. There are two phonographic records of the voice of Lilli Lehmann, the greatest Wagnerian soprano of all time, and who began her operatic career as a *coloratura*. One is a lovely Mozart aria; the other, the *Ah! Fors e lui* and *Sempre libera* from "La Traviata." Yes, there is the great tone, without question. And just what is the great tone? A distinctive voice quality of the rarest beauty and resonance, allotted, apparently by nature, to those we name as the possessors of great voices; and perhaps to some others whose singing has not reached the ear of the vast musical public which passes judgment. Many of these wonderful vocal organs have needed development, through right teaching, to attain the fullness of their birthright.

Secrets Revealed

WHAT CONSTITUTED that right teaching? [illegible] Right breath control. Four-fifths of [illegible] great singers of the past thirty years have personally told the writer of this article that they sang with their chests always held high; with the shoulders kept down and back-slanting; with the abdomen somewhat retracted; and with the upper body, above the waistline, slightly inclined forward as if in greeting a friend. This singing position, they declared, favored the free employment of the muscles of the sides and back of the upper body in controlling the breath. And it also brought about the automatic action of the diaphragm in furnishing that famous regulated "push" which gives to the voice regulated breath support, and, in turn, determines relative vocal intensity.

Second: Beginning each note on its true pitch, by tuning the voice in the head-cavities in the exact center of the tone desired. This takes time and much practice; but the voice never achieves its perfect freedom—and consequent beauty of quality—until every tone vibrates precisely in the center of the note intended. Furthermore, tuning the voice in this manner *places the tone.*

Third: Pronouncing beautifully. Which does not mean overpronouncing. But it does mean giving each consonant its just value in either enunciative or singing value (*G, J, L, M, N, R, V, W* (as in *will*) *Y* (as in *yet*) and *Z*, all are capable of vocalization). Every vowel must be shaped in rounded contours. Lilli Lehmann, for example, sang the vowel *E*, not *on* her upper front teeth, but just above them, in the buccal indentation behind the base of the nose. This placement robbed the *E* of its natural tendency to sharpness, and "molded it nearer to the heart's desire." So may an attentive and artistically discriminating ear deal with all vowels.

Those Middle Tones

IN THIS RECORD of *Sempre libera*, Lehmann gives us another lesson in the short scale passages. The lesson lies in her treatment of the middle voice. It may be noted that the notes from low E-flat to A-flat are shaped in *Oo* (as in *too*) form. From A-flat to the E-flat above, her tone changes to an *Oh* (as in *go*) form; and above E-flat the sound takes the form of *Ah*. As in the singing of scales, so in all of the middle voice placement of the Lehmann records do we perceive the same uniform tendency to round the middle tones, and to avert still any undue pressure on these more delicately adjusted notes. It may be here pertinently added that all the great lyric sopranos' pathetic, childlike, almost infantile middle voices are the result of carrying down the light head-register into the middle notes, to avoid weight.

In the Mozart record Lehmann gives the finest example possible of a trill in its legitimate perfection. William Shakespeare, the great English singing master, once told the writer, "The true trill should not sound like a toy canary-bird made of lead and filled with water. It should be the more or less rapid alternation of two notes sung with exact spacing; its two tones being distinctly heard throughout. I, myself, can say I have heard but two perfectly executed trills in my life, and they were sung by Melba. To be sure I have heard Melba trill possibly a hundred times or more, but only twice was her trill perfect. The trill is definitely not a warble."

And So We May Trill

THE ACQUIREMENT of the trill is best achieved through the practice of the following exercises. Begin on two notes in the upper middle range of any voice, very gradually working higher in the scale. The tones must be done—at first—on a full step apart, not on semitones. Practice these two notes in full voice, as loudly as the voice permits without forcing, slowly at first (faster later), the two tones being kept distinctly articulated. A strong accent should be placed on the upper of the two notes. Use the vowel *Ah*, which may be followed, after the trill has been developed, with other vowels. The trill exercise on *Ah* should be sung for not longer than ten-minute periods, and repeated six times daily. With careful practice, the trill should be born within a month's time: Listen, too, if you can, to the noble basso of Pol Plançon in the *Vulcan's Song* from "Philemon et Baucis." Here you will find another nearly perfect trill. Many of the operas and oratorios of earlier times were freely sprinkled with trills for all the male voices.

A concluding lesson from the Lehmann records may be found in the legibility of her carefully articulated scales; and from the meticulously careful manner in which each high note is *placed* pianissimo before entering into the full tone. Indeed, her whole range of voice may be said to be placed in the same fashion. In the case of high tones, in particular, it may be said to be axiomatic that these will be correctly placed if begun *pianissimo*—the true tone following so quickly that the device is not apparent to the casual ear. This, of course, implies skillful breath management and long practice, but the result is well worth the effort.

A Great Tenor Unfolds

IF WE FOLLOW the career of Caruso, from his earlier to the later records of his voice, we readily perceive the constant progress of his artistry and the marked improvement of his tone and its emission. The greatest lesson other tenors may learn from hearing his remarkable feats of carrying up his middle voice to high B-flat and even to B-natural, is *not* to attempt the same feats. Bruno Zirato, secretary to Caruso for seven years, told the writer that he personally knew of scores of tenors who had wrecked their own voices through attempting to model their singing on the miraculous and inimitable vocal wonders that Caruso alone—through his peculiar gifts—was able to accomplish. The next best lesson for tenors is to imitate Caruso's own invention of covering his upper notes on the teeth, by changing whatever vowel might occur to a sound between *Eh* (as in *set*), and *E* (as in *see*), with the *E* sound slightly predominating. This gives a much more brilliant sound to the high tones, and Caruso was quickly emulated in this device by all his contemporary brother tenors—to say nothing of the baritones.

Tetrazzini's record of *Caro Nome*, and Emma Eames' recording of the *Waltz Song* from "Romeo et Juliette," both hold outstanding examples of vocal technic in both *coloratura* and in their perfection of singing chromatic scales. In these voices the scale is as clean-cut as if they were singing long notes, instead of very short and rapid ones; and every note is as legible to the ear as clear print would be to the eye. The technic for attaining such perfection in chromatic scales, or, indeed, in any form of fleet *bravura*, is founded on the ancient Italian device of preceding each note with the letter *H*. Instead of singing *Ah* on the notes, sing *Hah*, without breaking the sound. It will be a matter of surprise to the student to find in how short a period of time his scales will lose their former blurring and become clearly and cleanly articulate. Practice all scales slowly and lightly, with as little cessation of continuous sound as possible, and true vocal velocity will quickly develop.

Listen to Patti's simple—but not artless—record of *Comin' Thro the Rye;* to Alessandro Bonci's *E lucevan le stelle;* to de Luca's *Di provenza il mar;* to Sembrich's *Batti, Batti;* to Calvé's *Charmant Oiseau;* to John McCormack's *Il mio tesoro;* to Louise Homer's *Nobles seigneurs;* to Battistini's *Ah! non mi ridestar;* and learn from the supreme singing artistry of each and all of them, the great fundamental lesson, which, sooner or later, must be learned by every singer who aspires to the name of artist—the art of *legato.*

The Vocal Gem of Ray Serene

IT IS LEGATO which preserves the musical singing line, without slurring or "scooping" either upwards or downwards. It may be acquired by every singer, by sufficient practice of the following exercise. When the singing of any note has been finished, then make the voice to leap like lightning to the level and true center of the next note—whether that new note be upwards or downwards—*without breaking the vocal sound.* The instantaneous leap to a new note from the old one makes slurring impossible and preserves intact the singing line, if the singer sufficiently supports the transition leap with a firmly controlled breath. Proper breath control is the secret of *legato;* yes, but only when the voice moves with the greatest possible speed from note to note. Listen again to the records that have been mentioned, and you will need no further convincing of this most important truth. Employ all the vowel

PERFECT VOICE INSTITUTE, Studio 5584
64 E. Lake St., Chicago

sounds. Practice from intervals of seconds to every division of an octave, with no breaking or cessation of the tone.

Listen to these superb artists for the best available traditions of style and interpretation. Here are handed down to us certain ways of singing certain passages, which cannot be found in the printed music itself. Certain added notes of ornamentation; certain most advantageous places for taking breath; certain transpositions of words and notes; certain greatly amplified *cadenzas* that are not to be found in the original scores—for many composers left the writing of the cadenzas in their arias to the great singers who created the rôles, and these are seldom printed.

Train yourself to listen to these finest documents of great singing and great voices that we know; for every difference between their methods and your own. Where differences are found, analyze them—which becomes easier as you go along. If the result does not make you a great singing artist, it will, at least, make you a far better one.

Lastly, listen for the singing soul behind all the mere technic. It is there for you to hear. Model the freeing of your own soul upon that, and you will presently learn that you are transcending technic. You will find that you are beginning really to sing, and that with the whole physical and emotional being

Voice Training in Our Schools

By REVEREND JOSEPH KELLY, MUS. DOC.

Part III

The home and social circles will feel the influence of the songs which the child learns at school. Therefore what care should the teacher exercise in the selection of children's songs. This does not mean a choice between one artistic form and another, but between one moral agency that strives for æsthetic betterment and others that would pervert music to that which is unworthy of it. The art of music cannot be associated otherwise than with that which is beautiful, true and good. Any other association is a perversion of the art. Since songs give expression to ideas, and since the child mind is so impressionable, it follows that whatever is taught in the way of songs in school should be of the very highest order, musically and morally. Music is the natural expression of what the mind of the child has assimilated. What care then should teachers not exercise in the selection of the proper material for the singing lesson. It is not only a duty, it is a responsibility upon every teacher of singing to select the very best material for the lesson.

An Educational Medium

THE FLEXIBILITY of school singing gives it its real value as an educative process. Sentiments and ideals of the most varied nature can be expressed in song as well as in language; and this is useful to the teachers in other branches of knowledge. Herein lies the educative value of music exactly. School singing enriches and ennobles while it educates. But that it may do this, the songs the children are asked to sing must be understood by them; the language contained in the melody must be comprehensible to them, so that they may be in a position to interpret its meaning. It may be said that this is expecting too much from children in the grades, especially in the lower grades; but there will be surprise, if dumfoundment, not to witness the delight of very small children, when they find that they can read melody and interpret it for themselves. The study of tone and rhythm, as a means of expression, gives them untold delight and stirs in them an intense interest, quite apart from the words of the song. Singing is as natural to children as speaking, and therefore the extreme youth of the child does not militate against his understanding of interpretation of a song.

In conclusion, no matter how much or how great the time and effort expended in teaching children to sing correctly, it is well worth while, in order to procure that delightful, mysterious, bell-like tone found only in the voice of the child. Much depends upon the time and effort given by the teacher to the preparation of the singing lesson. Such preparation is as necessary as for any other lesson. There seems no longer to be any question as to the frequency of singing periods, for all recognize the advisability of making each day attractive by its singing lesson. Our little ones would surely be happier in their first school days, were more of the brightness of song brought into some of their little lives. Moreover, there must be encouragment at every step on the part of the teacher, and this alone is a great strain on the teacher. In other branches one may succeed after a fashion without feeling encouragment; but one cannot sing if discouraged or disheartened. This constant encouraging presupposes much self-discipline and much patience with the efforts of beginners; for, though the child must be shown mistakes and gently corrected for them, he must never be discouraged, and the wrong tones or production of tones must be cheerfully borne by the teacher. The aim of the singing teacher is to lead the child to love and to appreciate the beautiful. Dissatisfaction, caused by imperfect or false tones and melodies, will eventually arouse the desire on the part of the child to reach the perfect, not only in music but also in the wider fields of life.

SINGERS, ATTENTION!

Information will be mailed to you free of charge which will enable you to learn to breathe correctly—the first requirement for vocal accomplishment. Without correct breathing, the best results cannot be obtained. Herein, the respiratory system of great singers of the 'Golden Age' of song is disclosed. Send stamp for immediate reply to

Baldwin

TODAY'S GREAT PIANO

Used and endorsed exclusively by such masters as Bauer, Gieseking, Iturbi, Lhevinne, and scores of others. Hear and play the new Baldwin. You'll marvel at its tone.

BALDWIN PIANOS • CINCINNATI

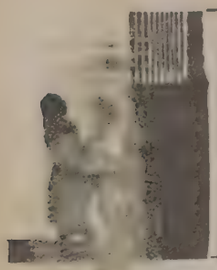
Liszt's piano in Wagner's Haus Wahnfried at Bayreuth

GERMANY

Happy Land of Music

Germany — land that inspired the majestic symphonies of Beethoven and Bach, the thundering operas of Wagner, the imperishable works of Liszt, Schumann and Brahms. This year, let Germany inspire *you* as you listen to these superb masterpieces—gloriously rendered in the atmosphere that nourished their creators' genius.

Leipzig presents Wagner's entire repertoire during the 125th anniversary of his birth. Famous Bayreuth offers Tristan, Parsifal and The Ring. At Munich, the new opera, Friedenstag, conducted by its composer, Richard Strauss, serves as prelude to the works of Wagner and Mozart. Heidelberg claims attention with its Haydn-Schumann fete and the Reich Festival Plays. At Dresden—the Philharmonic Serenades in the "Zwinger"; at Berlin—the Art Weeks and the State Symphony Orchestra; and in a score of other cities—artistically rendered performances, charming festivals, open air dramas and operas.



In art and architecture, also, Germany offers undying masterpieces . . . and in scenery such beauty spots as the Bavarian Alps, the winding castled Rhine and the Black Forest. Health awaits you at famous spas, and there are sports without number.

Everywhere — good living at moderate prices, ***still further reduced by the use of registered Travel Marks.*** And the German Railroads grant you ***60% reduction of rail fares.*** Now is the time to see Germany. Begin planning your trip today.

THE ORGANIST'S ETUDE

It is the ambition of THE ETUDE to make this department an "Organist's Etude" complete in itself

Interesting Sources of Some Famous Hymn Tunes

By CHARLES N. BOYD

Late Instructor in Church Music, Western Theological Seminary

THE HYMN TUNE is one of the smallest divisions of musical composition. Any harmony student can write a hymn tune. In fact many people who have little knowledge of harmony have written hymn tunes which have had wide circulation. A few men have been notably successful in this species of composition during the four centuries in which hymn tunes have been in use, but a large share of the tunes have been the work of people who had little or no musical distinction. Many tunes were first published in religious magazines or fugitive pamphlets of some sort, and only gradually made their way into hymnals. Furthermore, many hymn tunes have been taken from music originally destined for a quite different, perhaps even a secular purpose. The result is that it is often a difficult matter to trace the history of certain popular hymn tunes, and this study brings to light some unexpected sources. A man like the English organist, Henry J. Gauntlett, who estimated that he wrote approximately ten thousand hymn tunes, naturally gave few of them any special concern. Many other men, and a few women, are known by only one hymn tune, to which perhaps the composer attached small importance, and it is often a difficult matter to trace either tune or composer.

Some popular tunes have been written at one stroke. A tune for a certain publication in which a composer just mentioned, H. J. Gauntlett, was concerned, happened to be missing at the last moment. A messenger dispatched to Gauntlett's house found him at dinner, but Gauntlett kept him waiting only a few minutes while he wrote the tune *St. Alphege*. Dr. A. L. Peace wrote *St. Margaret* for *O Love that will not let me go* on receipt of the hymn. He said, "After reading it over carefully I wrote the music straight off, and I may say that the ink of the first note was scarcely dry when I had finished the tune." A story which has persisted in connection with W. H. Monk's tune, *Eventide* is that a piano lesson was interrupted for ten minutes while the tune was composed. Sir John Stainer's *In Memoriam* was written in the Langham Hotel, London, during a meeting of the music committee for "Hymns Ancient and Modern." George James Webb, an English organist associated with Lowell Mason's work in Boston, composed a song, *'Tis dawn, the lark is singing*, while he was on an ocean voyage, and it was first published in this form. Presently the music was adapted to the hymns *The morning light is breaking* and *Stand up, stand up for Jesus*, and the resultant hymn tune is now known in England and America as *Webb*, as *Stand up*, and as *Morning Light*.

A Bottled Hymn Tune

SOME YEARS AGO there was considerable "to do" over a hymn tune which was said to have been found in a bottle washed ashore on the Welsh seacoast. From this circumstance it was (and still is) called *Ton y Botel;* but little faith may be attached to the story, as the tune is now credited to a Welsh composer, T. J. Williams. William Henry Monk's tune, *Beverly*, was written for the hymn *Thou art coming, O my Saviour*, while the composer was on a railway journey. Chretien Urhan, one of the few French musicians whose name appears in our hymnals, was a noted violinist, and organist of a church in Paris. Though he played in a Paris opera orchestra for thirty years, his religious scruples prevented even a glance at the stage during all that time. The tune *Rutherford* is adapted from his setting of a French hymn. Bishop Phillips Brooks gave his Christmas hymn, *O little town of Bethlehem* to Louis H. Redner, with the request that he write a tune for it. One night Redner awakened to find the tune *St. Louis* in his mind, and hastened to set it down before it should be forgotten.

The tune known as *Innsbruck* was, on its first appearance in 1539, set to a German secular song *Innsbruck, I must leave thee*. Presently it became associated with two German hymns and was received into the company of chorales. Bach made no less than six settings of this melody, including its use in his "St. Matthew Passion." Another Bach harmonization of a tune originally of secular association is found in the case of the *Passion Chorale*, which in 1601 was sung as a love song. The tune by G. W. Fink, called *Bethlehem*, and sung to various Christmas hymns, began its career in 1842 with a song *There was once a giant Goliath*. The well known tune, *Flemming*, sung as a college song in Germany and England, is an original setting of Horace's ode *Integer vitae*.

The "Operatic" Hymn Tune

IT WAS ONCE a popular diversion to protest certain tunes as "operatic" and for that reason unfit for church use. It would be interesting to know if any objectors located Arne's *Arlington* as a tune really taken from the opera "Artaxerxes." The opera has long since disappeared, and the hymn tune is so thoroughly identified with church use that its origin would never be suspected. Another operatic stray is Rousseau's well-known tune which is known by his name or by *Greenville*. This tune is adapted from a melody in his opera "Le Devin du Village," first performed in 1752. Gottschalk's *Mercy* is originally the theme of a piano solo, *The Last Hope*, by one of the first American musicians to make an international reputation as a pianist. *Blumenthal*, often sung to *Saviour, when in dust to Thee*, is taken from a piece called *The two angels*.

Many of our hymnals still contain the *Spanish Hymn* arranged by Benjamin Carr of Philadelphia, in 1824. The original of this melody has not yet been divulged. It may be no more Spanish than *Adeste Fideles* is Portuguese, though the latter is often referred to as the *Portuguese Hymn*, perhaps from its use in the Portuguese Chapel in London. The origin of *Lyndhurst*, sung to *Now the day is over*, is somewhat of a mystery, but it perhaps had a Continental beginning. *Happy Land* is said to be an Indian air, to which Andrew Young, a Scotch schoolmaster, wrote *There is a happy land*. The question as to who composed the tune we know as *America* is still in doubt. The former *Russian Hymn*, found in most American hymnals, was composed by Alexis Lwoff in 1833, by imperial command. It is remarkable as a living example of "made to order" tunes, which usually have a brief existence.

Balerma has long been a favorite with American congregations. Its first appearance as a hymn-tune was in a Scotch collection of church music, but it seems to be an arrangement of a ballad by F. H. Barthelemon, to words from M. G. Lewis' *The Monk*. *Pleyel's Hymn*, sung to *Hasten, Lord, the glorious time*, and other hymns, is originally a theme for string quartet. W. H. Monk's tune, *Aber*, is, like other pieces in minor mode, avoided in many American churches, although it is a thoroughly appropriate setting for Rev. Henry W. Baker's hymn, *O perfect life of love*. The author was spending the night at the composer's home. The hymn was discussed in the evening, and the tune was ready by breakfast time next morning.

Hymn Tunes from the Masters

THE GREAT COMPOSERS have not been hymn tune writers. It is true that Bach's name appears in connection with many chorales, but the melodies were mostly old when he harmonized them and used them in his church cantatas and organ works. The *Austrian Hymn* was originally a Croatian folksong which Haydn made over into the national hymn of Austria in 1797. *Creation* is a portion of the chorus *The heavens are telling* from Haydn's oratorio "The Creation." The tune *Alsace* is part of the first theme in the slow movement of Beethoven's second symphony; and *Gorton* is from the

The Organ of St. John's Church of Covington, Kentucky. Attention is called to the peculiar Decorative Effect of the Exposed Pipes built up into Graceful Masses

same composer's "Sonata Appassionata," though in a scarcely recognizable form. *Sardis* is from Beethoven's *Romance in G,* for violin and orchestra—just a fragment taken from an extended composition. The worst of these perversions of Beethoven's masterworks is the so-called *Hymn to Joy,* taken from its place in the "Ninth Symphony" by some persons who had no sense of the eternal fitness of certain things.

Handel did write a few hymn tunes, but they have had little use compared to the arranged hymn tunes from his larger works. *Antioch,* probably the most familiar, has been said by authorities on Handel's music to be absolutely not his music, and they can hardly be blamed for such a statement. The first and last parts are not his, but the phrase at the words "And heaven and nature sing" is evidently from the first tenor solo in *The Messiah. Christmas* is more easily identified, as it is taken from his opera "Siroe", or, in English, *"Cyrus." Bradford* is from the wonderful solo *I know that my Redeemer liveth* in the "Messiah," and its use as a hymn tune is no more excusable than Beethoven's *Hymn to Joy.* Schumann is represented in many hymnals by *Canonbury,* which is a fragment of his beautiful *Nocturne in F,* for piano solo. Palestrina, noblest composer of music for the Roman Catholic church, is mentioned in Protestant hymnals as the composer of a tune bearing his name. Leaving off the *Alleluias,* there are twelve measures which Palestrina did write, not as a hymn tune, but as a part of the *Gloria* in his "Magnificent Tertii Toni," in 1591.

The name of Mozart, never a composer of hymn tunes, is attached to *Ariel,* an arrangement by Lowell Mason; and *Mozart,* an adaptation from the *Kyrie* in the "Twelfth Mass," which was included in the catalog of Mozart's music by error, and is apparently not his composition at all. *Mendelssohn,* sung to *Hark! the herald angels sing,* is an adaptation from that composer's "Festgesang," which Mendelssohn said would never do to sacred words! *Communion* is arranged from one of Mendelssohn's "Songs without Words" for piano, and at best is not thoroughly satisfactory for congregational use. A fairy chorus from Weber's opera "Oberon" furnished the hymn tune, *Seymour;* and the same composer's opera, "Der Freischütz" was drawn upon for the hymn tune *Jewett.* Modern English hymnals are eliminating almost all these tunes by the great composers, and the editors act wisely in so doing. It is better to omit the tunes than to misrepresent a masterpiece by a simplified quotation, even if the music be appropriate.

The tunes mentioned are among those which have become popular with hymn-singing congregations throughout this country and England. If tunes of lesser vogue were to be included the list could be continued almost indefinitely. When a composer writes a tune he has no idea whether it will be acceptable to the public or not. In many cases his own favorites seem to make no appeal to other ears, and in some of the cases noted above it is apparent that the tunes have strayed far from their original surroundings before they have found an association by which they are largely known. Judging from the past, one wonders what music the hymnals of the year 2000 A.D. may offer as a medium for praise and prayer through song.

Points for the Choir Director

By JESSIE L. BRAINERD

1. Explain that smooth and even *legato* singing (when not otherwise indicated) is essential to all good choir singing. *Legato* means to link the notes neatly together—not to slide perilously from one note to another, nor to scoop dizzily over long intervals.

2. Have a dictionary at hand. It takes only a minute to determine the exact meaning of a word. Another important reason for the dictionary is to find the preferred pronunciation of a word. All singers should pronounce the words in the same manner. A correct accent and a clear enunciation of both the vowels and the consonants are imperative.

3. Tell the singers about off-pitch singing. Should a singer feel that he is singing untrue to pitch, he should stop, listen carefully and find the correct pitch before proceeding.

4. Practice thoroughly. Each choir member should know the music and the text so well that he can observe every beat of the baton.

5. Instruct the singers how to keep an open throat and a relaxed jaw. They also should be shown how to maintain a steady and even flow of tone, because strained and forced voices cause hard and metallic tones, which are most ineffective in sacred numbers.

6. Take the time to explain about breathing. Every choir member should breathe deeply and at the same places marked in the music. If the breathing places are not marked, indicate the proper places with regard to interpretation, punctuation marks and phrasing, and have each member check these places lightly in his copy.

7. Set a goal to be achieved. Some of the outstanding virtues of a choir are: (1) to sing *pianissimo* (when the occasion occurs), and at the same time to keep the *tempo* and stay on key; (2) to pronounce the words distinctly enough to be understood as far as the back row of the church auditorium; (3) to be alert to any special light and shade effects and changes in *tempo* introduced, (4) and to make all attacks and releases clean and at exactly the same time.

8. Work for unity of tone. A choir should sound like four (soprano, alto, tenor and bass) big voices and blend harmoniously together. No one particular voice or section of voices should stand out more prominently than any other.

A Handy Organ "Gadget"

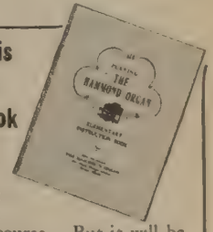
By D. R. ADAMSON

Do YOU HAVE a card on your music rack with the *Doxology* and Responses on it? What a tribute to an education that cost you several thousand dollars and untold hours of work. But, do not throw it away—at least, not this week. Try this scheme. Every day that you go to the organ or piano, for practice, play over the *Doxology* five times. On the Sunday following, have the card on the rack but over to one side and do not look at it, if you can avoid it. The next week repeat the dose, but on Sunday have the card on the bench—just as a precaution.

If on the third Sunday there still is need of the card—well, perhaps a little more strenuous effort to get rid of it might be a good pill for the organist.

The HAMMOND ORGAN
offers you
new income opportunities

Pianists find it easy to learn *and* to *teach* this remarkable instrument!



● The Hammond Organ, with its amazingly low cost and compact size, has made it possible for the family of fairly moderate means to own an organ. Thousands of Hammonds have already been installed in residences, as well as in churches, schools, auditoriums and conservatories.

Teaching jobs are being created fast, and many piano teachers are preparing themselves to take advantage of this lucrative opportunity.

It takes only a short time for a pianist to become sufficiently familiar with the Hammond to teach it. For the Hammond is easy to play, and your piano technique gives you the essential foundation.

The Hammond dealer in your community will gladly demonstrate this popular instrument. (Look in the classified directory under "Organs" or "Organs, Electric.") Through him, you can also arrange for the use of a practice organ at a very nominal charge.

Send for this fascinating instruction book

"Playing the Hammond Organ" does not attempt to be a complete organ course. But it will be valuable to you in adapting your piano technique to the Hammond, and useful later on in teaching. It also gives a comprehensive view of the potentialities of this extraordinary instrument . . . an instrument which a great musician has called "the most remarkable development in music in the last hundred years". Send the coupon today for your copy.

1712 Chestnut St., PHILA., PA.

Organ and Choir Questions

Answered

By HENRY S. FRY, Mus. Doc.

Ex-Dean of the Pennsylvania Chapter of the A. G. O.

No questions will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published. Naturally, in fairness to all friends and advertisers, we can express no opinions as to the relative qualities of various instruments.

Q. Enclosed is the list of stops of our thirty-five year old (tracker action) organ. We have one thousand dollars available for modernizing it. What action is advisable, electric or electro-pneumatic? What stops might we add or what other changes would you suggest either within our present financial limits or for future consideration?
—G. L. R.

A. We would not advise electrification of a tracker action instrument, and we cannot in these columns give an opinion on the comparative merits of electric (direct) or electro-pneumatic action. Our suggestion would be that you entirely rebuild the organ—using such of the old pipes as may be desirable, as well as the present case work. This would provide you with a new organ except for some pipes and the case. We suggest the following specification for the new instrument, based on your present instrument and including some unification:

GREAT ORGAN

Open Diapason	8′	73 Pipes
Dulciana	8′	85 Pipes
Melodia	8′	85 Pipes
Dulciana	4′	73 Notes
Flute	4′	73 Notes
Octave	4′	73 Pipes
Duliciana Twelfth . .	2-2/3′	61 Notes
Dulciana Fifteenth ...	2′	61 Notes

SWELL ORGAN

Lieblich Gedackt ....16′		97 Pipes
Violin Diapason	8′	73 Pipes
Stopped Diapason	8′	73 Notes
Salicional	8′	73 Pipes
Vox Celeste	8′	61 Pipes
Flute	4′	73 Notes
Nazard Flute .....2-2/2′		61 Notes
Flautino	2′	61 Notes
Oboe (Synthetic)	8′	61 Notes
Cornopean (bright) ..	8′	73 Pipes (Reeds)
Clarion	4′	61 Notes

PEDAL ORGAN

Bourdon .....16′		44 Pipes
Lieblich Gedackt .....16′		32 Notes
Flute	8′	32 Notes
Flauto Dolce	8′	32 Notes

Couplers, mechanical accessories and so forth. Two expression chambers, with two Swell pedals are advisable, if there is room available, and financial conditions will permit. The prospective builder can suggest stops to be provided for and installed later, if finances will not permit the organ to be completed at this time.

Q. Our church is contemplating the installation of a small pipe organ. If the console were placed in the position marked X on the enclosed sketch with the cabinet in Sunday School Class room and a grill directly over the console would the sound be so retarded in reaching the choir loft that this arrangement would not be advisable? We have found that the choir has difficulty in hearing a piano when it is placed at XX. Our main auditorium seats about two hundred and fifty. With the room at the rear, the balcony and extra chairs we can seat approximately five hundred. We enclose specifications of proposed instrument. Would you advise any changes and do you think them adequate?—R. L. H.

A. As the instrument you propose to install is small, and the choir has difficulty in hearing the piano at the point indicated on your sketch, we doubt the advisability of placing the instrument as suggested. We suggest the including of a Bourdon 16′ in the Pedal Organ, instead of reeds. This will be slightly more expensive, but worth the additional outlay. To judge the adequacy of the instrument for your auditorium we suggest your hearing a similar instrument in a room approximately the same size. Acoustics are likely also to affect the efficiency of the organ.

Q. Our church is considering the purchase of a four year old $7,000 theater organ. I do not know the make of the organ which has been offered at a final figure of $500 and which can be rebuilt according to enclosed specification for an additional $1,000. I realize it is impossible to judge the tone of the instrument without hearing it (it is dismantled) but would like your advice on the list. There are no couplers or pistons. The instrument has a xylophone which might be replaced with a harp. Would this be satisfactory? Do you think the price for rebuilding and installing is all right? The pipes would be placed in the upper half of a class room. Where should the console be located? Will you suggest some combinations of stops for solo playing, congregational hymn accompaniment and solo voice accompanying? The choir is arranged as per enclosed diagram. Do you advise changing positions of the choir members? If a piano is used with the organ, where should it be placed for best tonal effects?—T. A. L.

A. We cannot unqualifiedly recommend the specification. There being no couplers and only three stops available in the Pedal department, we feel that department would not be adequate. The list specifies "Notes" for all the stops which makes it difficult to know just what is included. The organ is probably duplexed with some unification. The price named seems entirely fair, though we question whether the instrument is not more than four years old. Most instruments built at so late a date include 32 notes on the Pedal instead of 30. The replacing of the xylophone by a harp would be advisable unless the builder would be willing to include some more desirable stop. Our feeling is, that, unless you are familiar with the instrument, it would be advisable to investigate very thoroughly before deciding on the purchase. The placing of the console should be at a point where the organist can hear the instrument as the choir hears it, and the piano should be placed at a point near the organ console—and where it can be heard by the choir. Some combinations for solo playing include Vox Humana; Vox Humana and Viol d' Orchestra; Flute Major; Melodia; Viol d' Gamba, with proper accompanying stop on a different manual. For hymn tune accompanying we suggest Great Organ—Open Diapason, Melodia, Viola Dulce and Flute, with the addition of Viol d' Gamba and Violina, if necessary, and the tone is not too strident. The stops to be used for accompanying solo voices will depend on the type of the passage sung. The conventional seating of a four part choir is

Tenor	Bass
Soprano	Alto

which seems preferable to the arrangement you now use.

Q. Our choir is preparing a cantata for a special service. We have a choir director and I am the organist. After three months hard work at rehearsals, we seem not to have made much progress, partly due to the fact that the choir is composed mainly of volunteers with little or no musical training. It seems to be a pet whim of most directors to inject too much of their personality into the rendition of works, such as changing the tempo, dynamics, and, in many instances, notation, to suit their fancy, thereby disrupting the whole work and giving a different meaning than that the composer intended to convey. Should the organist and those who know better, quietly submit, and permit such a wholesale butchering of a well written composition, or should a protest be made? I realize it is a delicate situation, and would be pleased to have advice as to procedure under such conditions.—S. G. V.

A. The situation, as you say, is a very delicate one and unfortunate for those who know better. It is difficult, however, to advise as to action. Assertiveness on the part of those who know may cause trouble and lead to loss of position. Much depends on whose opinion has the most weight with those in authority. It is difficult sometimes to submit to these unwholesome conditions, but if the offenders have influence a protest may be unavailing and unpleasant.

Q. Our church (Lutheran) will, shortly, dedicate its reconditioned organ, and I would appreciate suggestions for a Prelude, Offertory and Postlude. I try to play the simpler music of good composers and do not like "sugary" music for church services.—E. B.

A. Not being familiar with the specification of your organ, we cannot consider that feature in our suggestions. Your church being a Lutheran one, and your preference for good music, suggest that some work or works of Bach would be appropriate. We are therefore including some in the list. Many others are of course available. Numbers you might investigate for your purpose include: *"We All Believe in One God" (Fugue in D minor)*, by Bach; *Air for "G" string*, by Bach-Nevin; *"O Hail This Brightest Day of Days,"* by Bach; *Fugue in E minor*, by Bach; *Benedictus (from Modum Antiquum)*, by Edmundson; *Air*, by Mattheson; *Adagio (from a concerto)*, by Camidge; *Festival Prelude on "Ein' Feste Berg,"* by Faulkes; *Pastorale*, by Bonnet; *Retrospection*, by Hogan; *Postlude on "Ye Watchers and Ye Holy Ones,"* by Martin; *Scherzoso*, by Rogers; *Prelude and Sarabande*, by Corelli.

Q. For some time I have been helping to tune three pipe organs in my district and have now reached the stage where I can tune these instruments myself, but I would like to make further study. I would like to know how to design pipes for a given wind pressure, how to voice pipes, how the electric action works and so forth. I have tried in Australia for books on the subject without success. If you can inform me of any book giving this information and price of same, I shall appreciate it.
—J. C. C.

A. You might get some information from the following books:

"Organ Stops," by Audsley, at $2.50; "The Electric Organ," by Whitworth; "Cinema and Theater Organs," by Whitworth; "How to Build a Chamber Organ," by Milne; "Dictionary of Organ Stops," by Wedgwood.

The books named may be had from the publishers of THE ETUDE.

Piano Accordion Department

On Purchasing An Accordion

By PIETRO DEIRO

As told to ElVera Collins

PART I

NOTE: Information in this article is intended for parents who are contemplating the purchase of an accordion for their child. It will also be found useful for teachers who have recently entered the accordion field.

(Part II of this article will appear in the next issue of The Etude. It will contain advice for the adult purchaser.)

TWO QUESTIONS often asked are, "At what age should a child begin the study of the accordion?" "What size of instrument should be used for a beginner?"

Naturally the size of the instrument depends upon the age and size of the child who is to play it. The range of ages, with suggested corresponding sized instruments, will be discussed herein. The full term, "piano accordion," hitherto has been used to differentiate it from other types of accordions. The piano accordion, however, is now used almost universally in this country and for brevity it will henceforth be termed merely "accordion," although it is the piano type which is referred to.

Six or seven years is considered an average good age for a child to begin the study of the accordion. By this time he has begun school and his mind grasps the idea of thinking and of studying.

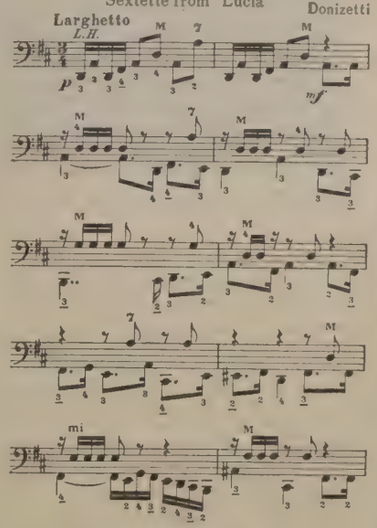
The exception to this average rule would be the frequent shining examples of children who have begun the study of the accordion when only three and a half or four years of age. It is quite possible for a child to progress well even at that age and in fact, some of these child prodigies surprise their parents and their teachers by their accomplishments. Several important factors should be considered before a parent starts a child that young. The first thought would be the health and strength of the child. Second, his size for his age and third, would be the natural talent and aptitude of the child for the instrument. It evidently is cruel for an ambitious parent to drive a four year old child to practice when he dislikes to do so and has to be coaxed each time the practice period arrives. It would be better to wait until he is older.

It must be admitted that a slight element of physical effort, combined with weight, enters into the manipulation of the accordion, a factor which is not encountered in the playing of the piano or the violin. When the accordion is properly manipulated, however, and if it is the correct size for the individual child, no more effort nor energy need be expended than would be used in the daily routine of recreational games. Of course, proper posture during practice periods is vitally essential.

The Beginner's Instruments

AND NOW ABOUT the size of the instrument. For the benefit of those exceptional children who begin from four to six years of age, the 12 bass accordion is recommended. There is very little weight to this instrument and it is surprising how many interesting melodies can be played upon it. The range of the piano keyboard is from middle C up two chromatic octaves, to high C. The bass keyboard provides basses and major chords for the following, B-flat, F, C, G, D and A.

The 12 bass accordion certainly has its place in the accordion world, but right here we would like to make the emphatic statement that the only time a twelve bass accordion should be purchased is when the stature or strength of the child does not warrant a larger instrument. A good general rule on this subject would be to select an accordion which would be the maximum as to size and completeness that the size of the child would permit.



The next instrument in size after the 12 bass is the 24 bass. This accordion has twenty-five piano keys, the same as the 12 bass, but has the addition of the minor chords in the bass as well as the E-flat and A-flat row of buttons. Although suitable in some instances, this size of instrument has never been particularly popular, as children who begin on a 12 bass usually go from that direct to a 48 bass instrument.

Most children of six or seven who are of average size and who are sturdy can begin the study of the accordion on a 48 bass instrument. This provides 34 piano keys, with a chromatic range from G below middle C up to and including high E. The bass keyboard provides two rows of bass buttons (fundamentals and counter-basses), as well as major and minor chords. There are twelve columns of buttons of four rows each. They progress in fifths from D-flat to F-sharp. The commonly used chords, such as C, F, G, and so on, are placed in the center of the keyboard.

This explanation of the scope of the 48 bass accordion shows why it is highly recommended as a beginning instrument. The 12 bass instrument suffers by comparison. Of course, if a child is particularly small for his age there is no other alternative than to begin him on a 12 or 24 bass instrument.

The following excerpt from *Sextette from "Lucia"* shows how this melodious selection can be played as a bass solo, both the melody and accompaniment being played by the left hand.

THE VIOLINIST'S ETUDE

Edited by

ROBERT BRAINE

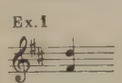
It is the ambition of THE ETUDE to make this department a "Violinist's Etude" complete in itself.

Checking First Position Double Stops

By ARCHIBALD SAUNDERS

DOUBLE-STOPPING is one of the early problems of violin technic. The initial process of tuning the instrument is a good test of aural ability. If the violin is not in tune at the start, then accuracy in double-stopping and chord work becomes impossible.

The self-taught student especially will welcome any means whereby he may check his intonation, for, in the first position alone, there is a large range of harmonies available.



Octaves and unisons constitute a good initial test for the student of double-stopping. Except, of course, on the fourth string, the third finger in its natural position on all the other strings may always be checked by sounding the open string next below. Similarly the accuracy of the fourth finger in its normal position can be checked, except on the E string, by playing the unison with the open string next above.

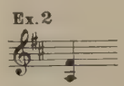
The best way to check double-stops is, where possible, to test one or both of the notes against another which can be taken as a reliable standard of intonation. Generally speaking, one note only of the two is at fault.

It is a good plan for the student to determine the fact in his own mind when he makes what he realizes to be a false harmony. He should then, before altering the arrangement of the fingers stopping the two notes, try to decide which note is at fault. Having settled this he may then, if necessary, move the offending finger after carrying out intonation tests.

Now for some of the tests. Let us say that the faulty double-stop is

Ex. 1

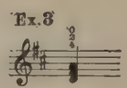
If the second finger on the D string is suspected, its removal will allow the octave, D, to be played—if this is perfect, the position of the third finger is proved to be correct and the second finger is the one at fault; *vice versa* if the third finger is at fault, the removal of this finger will permit the F-sharp to be sounded with the open A string, and to produce an easily recognizable harmony.



Yehudi Menuhin, young American wizard of the violin, shows how to hold the bow.

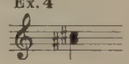
Bear in mind the fact that the ear often will recognize a chord more accurately in some other form, or even another chord not necessarily related to the original.

Where one of the notes is an accidental, it is usually best to be suspicious of this note first. The second finger in its sharpened position may often be tested without being lifted.



Assume that the faulty double-stop is

Ex. 2

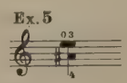


The lower note can be easily checked with the fourth finger on the D string without lifting the second. Additionally, this octave may be verified by a three stringed chord bringing in the open A string. A test of the second finger can be made by sounding the triad

Ex. 3

The difficulties increase where more than one accidental forms part of a double-stop or chord. These sometimes arise in extreme keys. For example, a double-stop such as

Ex. 4



is likely to cause the student doubt as to which of the two notes he has stopped wrongly. He will probably suspect A-sharp first.

It will be difficult, in such an example as this, to find a check which can be made without removing one of the fingers concerned. The best plan will be to keep both fingers in position and then to think of another harmony which will serve as a guarantee of the accuracy of one of the existing notes of the double-stop.

The obvious solution in this case is to sound the C-sharp with the open E string above. A pause should be made before doing these tests, so that the ear may free itself from incorrect impressions. If, on making this test, the student hears a satisfactory third, then the A-sharp is at fault. If the aural result shows the C-sharp to be out of tune, the third finger should be placed on the A string, and used to test the A-sharp by means of this chord.

Ex. 5

If double-stoppings are untrue, do not shift the fingers in search of correct tones. Follow directions here given, and drop the finger (or fingers) neatly.

How Do You Hold Your Bow?

By HENRY WOLK

WHEN WATCHING a violinist, the average person almost always focuses his attention upon the player's left hand. This is due to the continual and varied activity of this member. The rapid change of fingers, the movement of the hand when changing position, and the use of the vibrato serve to attract attention to the left hand. The right arm is occupied in drawing the bow back and forth over the strings and this more or less regular movement is soon taken for granted by the spectator. The bowing arm, however, plays a very important part in violin performance. The tone quality is greatly influenced by the bow; much of the rhythmic pattern is expressed by the bow; all dynamics, such as accent, *crescendo, decrescendo, piano* and *forte* are controlled by the right hand; and the various bowings, such as *staccato,* jumped and thrown strokes are articulated through control of the bow. Thus it is easily seen that the right arm and hand play an important part in violin technic.

The full size bow is a stick twenty-nine inches long; it has an inward curve (toward the hair), and is strung from the tip to the frog with horse hair. It is possible to loosen and tighten this hair, thus altering the amount of resistance or spring in the stick. When one considers that the bow is held at one end of the stick, and from this point of contact the violinist must develop perfect control of the entire bow, it becomes highly important how the bow is held. A discussion of the various grips, their advantages and disadvantages, without doubt will serve as an aid to the serious student in selecting the bow grip best suited to his physical adaptability and to his individual style of playing.

It must be remembered that in bowing one must strive for relaxation in the right arm and hand. Stiffness or tenseness in any part of the member affects the tone. One must try to achieve maximum control with a minimum of effort; and this can be accomplished by using the proper bow grip. There are three such distinct bow grips, namely, the German, Franco-Belgian and Russian. These names are derived from the various schools of violin playing.

The German grip may be described thus: place the flat part of the thumb on the under part of the stick so that it almost touches the frog. The other fingers are then placed on the stick but do not extend beyond the first joint of any of the fingers. The index finger is moved up from the other fingers and curved around the stick. The thumb is held straight and the tip of the little finger rests on the bow. The thumb and second finger rest opposite each other. Drawing the bow over the strings, it will be found difficult to confine the bow to one point of contact with the string. The bow does not feel at ease in the hand, and a pupil has the sensation that his bow is about to drop from his fingers. This is the oldest and least efficient of the bow grips and has been abandoned by present day instructors.

A Safer Grip

THESE DISADVANTAGES have been eliminated in the Franco-Belgian grip. The thumb is bent slightly and placed with its tip on the under part of the stick in such a manner that the thumb just touches the frog. The first finger is curved around the stick so that the point of contact of the stick and finger is halfway between the first and second joint. The other fingers are

curved around the stick naturally; all but the little finger, which is bent and its tip placed upon the stick near the other fingers. Thus the weight of the bow is supported upon the thumb and balanced by slight pressure of the little finger. The use of this grip necessitates a partial turning of the forearm at the elbow joint and a more pronounced curve of the wrist joint when playing near the frog; but actually less effort is required to produce the tone, and control of the bow is greatly increased. The index finger, being curved around the stick, controls the point of contact between the string and bow. The slight touch of the thumb against the frog prevents wobbling of the bow stick. The weight of the forearm and bow is not dead but live weight, thus giving maximum effort because every detail of handling the bow is utilized.

The Russian, or newest bow grip, has made rapid strides in gaining favor among violinists in the last ten years. The only difference between it and the Franco-Belgian method is that the first finger is brought still more around the stick so that the point of contact between the bow and the stick is above the second joint of the finger. This necessitates the placing of the fingers still further around the stick and a more pronounced curve of the wrist when playing near the frog. For people with stiff wrist joints, this bow grip may cause a cramp.

Of the three bow grips, the German is considered obsolete. To-day only the Franco-Belgian and Russian grips are being taught. It behooves the serious violin student to try each of these two grips over a period of two or three months and to adopt the one which is best suited to his style of playing and musical self-expression.

Put On Your "A" String In a Jiffy

By JOHN H. LEBICK

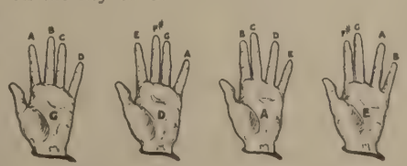
EVERY VIOLIN TEACHER owes it to his students to instruct them as to how the instrument functions, so that when they buy a violin it will be a good one, with good strings; and he should show the students how to put the strings on the violin.

No opportunity to learn something about the violin, either through reading or discussion with fellow players, should be overlooked. How to put on strings, and particularly how to put on the A string without any tools, is always a subject for interesting discourse.

Unless the violinist has very thin fingers, which enable him to grasp the end of the A string and pull it through the peg hole, he may use pliers, tweezers, hair pins, or anything else that serves; or he will wrestle with his violin and A string for some time before he finally accomplishes his purpose. By the time he does succeed, his fingers may be numb, and perhaps he will be unable to play the way he should. We know this from actual experience. The writer could not grasp the end of the A string, and therefore scissors were carried in the violin case especially for that purpose. Then, quite by accident, he found a way to put on the A string in a jiffy, and with no tools whatsoever to demand his care.

The average fiddler will proceed to put on the A string (the others are easy) in this manner; he will insert the end of the A string in the small hole in the peg, and will push it upwards as far as it will go; he will turn the peg towards himself, and then find that the string is out of the peg hole about one-half inch, which is not sufficient length for him to grasp the end with his fingers; therefore he uses pliers, tweezers or hair pins.

To eliminate this trouble, try to make this adjustment in the following manner: turn the A string peg in such a position that the hole will be upwards, in the throat of the voilin towards the scroll, then insert the end of the A string in the peg hole and push the string downwards, stop and turn the peg slightly forward in the usual manner, and push the string again. It will be found that the string will go as far as desired, inasmuch as there is nothing to obstruct the passage of the string downwards. After that is done, the peg is turned in the usual way (forward) until the end of the string comes up, out of the peg box. It may then be grasped and fastened to the peg in the usual manner. This method eliminates entirely the need for tools of any kind and renders it possible to make this adjustment in a minimum of time.



Improving Intonation in Violin Classes

By IRENE JENKINSON

IN TEACHING THE VIOLIN in classes it is often found that individuals become careless about playing on pitch. It is not always advisable to stop the entire group each time one pupil plays slightly off pitch, but neither is it wise to allow one violinist continually to spoil the intonation of the ensemble.

By making the players key conscious the intonation will be materially improved. Just reviewing key signatures is scarcely emphatic enough, especially for small children. Picturing intervals on the blackboard and having the child take the correct hand position will be found helpful.

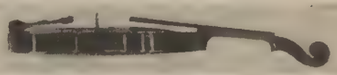
This can be made into a class drill which is both enjoyable and instructive to the child. In reviewing the key of a composition have the child hold his fingers in a position showing the half and whole steps on each string as in these illustrations based on the key of G.

By naming a key and then calling for the hand position on a certain string the whole class can take part simultaneously in a drill which teaches half and whole steps and key signatures, not only theoretically, but also as applied in playing the violin.

* * * * *

"The general function of music is to be beautiful. It is the one form of art not subject to ethical principles. It cannot be suppressed or censured as can literature. It teaches no laws; it prescribes no systems of behavior. Attempts to make it descriptive have met with defeat. Its ultimate aim is to produce the highest degree of beauty in sound."—Sir William Henry Hadow.

Its grace, however, is second only to its sweet tone of caressing beauty, which has been accomplished through a distinct, new, full 88-note scale producing much finer quality.



Equipped with latest type quick-repeating action, scientifically constructed, assuring life-time durability.

The Queen Anne Console is a piano that is small in size only, (2' 11" high). When you try it at your local Gulbransen merchant, you will be astonished to find that a piano so charmingly diminutive is so musically adequate—and at a price so moderate.

VIOLIN QUESTIONS

Answered

By ROBERT BRAINE

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

(Much of the mail addressed to the Violinist's Etude consists of written descriptions, photographs and labels of old violins. On the basis of these, the writers ask us to tell them if the violins are genuine, and their value. We regret to say that this is impossible. The actual violin must be examined. The great majority of labels in violins are counterfeit and no indication of the real maker. We advise the owner of a supposed valuable old violin to take or send it to a reputable expert or dealer in such instruments. The addresses of such dealers can be obtained from the advertising columns of The Etude and other musical publications.)

Books on Jazz

H. J. R.—A bookseller recommends these works on jazz: "Swing That Music" by Louis Armstrong, and "Hot Jazz" by Hugh Panassie. There are others, but these two will do for a start. They may be procured through the publishers of THE ETUDE.

Overcoming Physical Injury

D. E. S.—Much has been written about violinists, with considerable experience, who, owing to accident or disease affecting the right arm or hand, face the problem of learning to play left-handed, or of giving up their favorite pastime. Some do stop, believing that they could not succeed in gaining much facility in left hand playing. In this they are wrong, as many have learned to play the violin left-handed with considerable skill, although they have not become virtuosi. The problem has been solved in many other pursuits, such as painting, drawing, penmanship and mechanical pursuits, where the left hand has been called upon to do the tasks formerly done exclusively with the right. Three talented American artists, drawing under the pseudonyms of "Webster," "Ding" and "Tad," have achieved national reputations, drawing cartoons, comic strips, and pen and ink drawings, after they had switched from the right to the left hand. It took much effort, but in the end they conquered, and their left hand work is esteemed to be as good as their right. The same problem has been mastered frequently by violinists, who, through injury to the right hand or arm, successfully took up their work with the left.

Valuable Books

I. K. V.—Three of the most valuable modern works on violinists, and violin playing, are: "Violin Mastery," by Frederick H. Martens. "Violin Playing, As I Teach it," by Leopold Auer, and, "My Long Life in Music," also by Auer. These works, which may be found in many public libraries, contain a vast amount of interesting and valuable matter, on violinists and violin playing. They may be purchased through the publishers of THE ETUDE.

Qualifications of a Good Bow

S. C.—The stick of a well made bow should be made of perfectly straight grained wood; and it should not curve to right or left of the hair. It must, however, have a deep inner curve, so that when the hair is tightened to the proper playing tension, it will not grate on the stick when pressure is applied. In selecting a new bow, the violinist winds the hair up tight so that it is nearly parallel with the stick. He rejects all bows in which the stick curves to the right or left of the hair. He also rejects bows of which the sticks are so limber that, when wound up, they do not possess the required elasticity. Go to a reliable music store, and examine a number of bows, making sure that they fulfill these requirements.

Interest in Stradivarius

T. Y. R.—Because he was the greatest violin maker of all time, there is universal interest in Stradivarius, the number of violins he made, the number now in existence, the highest prices for which his violins have been sold, his secrets of manufacture, and many other points of interest. As a matter of fact, few of t questions can be answered with authority most of them are matters of guess work. prices at which these violins have been are more or less matters of hearsay. In a br cast, several weeks ago, by the eminent y violinist, Yehudi Menuhin, the announcer voted considerable time to describing the St ivarius violin on which the young artist playing. He stated that the violin was on the finest which Stradivarius had ever m It was a gift to young Menuhin from a fri and had cost $60,000. The tone of this v is marvellous, and, over the radio, it sou as if it were being played in the same r with the listener.

Meaning of *col arco*

J. K. F.—*Col arco* in violin music, m "with the bow". You can find all such mu terms in a musical dictionary, which e student should have.

A Book by Otto

A. V. G.—1. The book, "Structure and I ervation of the Violin," a German work Otto, is long since out of print. It is poss that you might pick up a copy in a sec hand book shop, which makes a specialty handling old books. It contains some inter ing passages. 2. According to your descript your violin is not a genuine Stradivarius it contains the words, "Concert Violin, Str vari," on the neck below the scroll. Gen Strads. have the label pasted on the insid the back of the violin. Instruments wh have the word Stradivarius, or Stradiva Conservatory Violin, branded on the scrol back, are imitations. 3. As your violin is imitation, and as these imitations are m by practically every violin maker in the wo I fear it would be impossible for you to iden your instrument. Many makers of imitat put their own names on the labels as wel the name of the violin copied, but that d not seem to be the case with your instrum

Making Repairs

T. R.—Out in "the sticks," where the timber grows, the country fiddlers do major part of their violin repairing themsel using their own judgment in the selection wood for the various parts, and the method of doing the work. It may be of inte to state that the backs of good violins made of maple, the tops of pine or spruce, bridges of maple (not too hard in grain), fingerboards, nuts, tailpieces and pegs of ebo the sound posts and bass bars of well seaso pine. Hickory, ash, and all kinds of hard wo which are so often used for these parts of violin are an abomination. The exceptions rosewood, boxwood, and some other hard woo which are occasionally used for the pegs, which are preferred sometimes by experien violinists. Large music houses carry all ki of woods, varnishes, trimmings, also t backs, and necks of violins, and all necessary smaller parts, ready to be put gether by the maker or repairer. Some mak prefer to buy the parts of the violins t intend making, "in the white" and then finish and varnish the violins themselves.

For Class and Individual Instruction

EDUCATIONAL VOCAL TECHNIQUE
IN SONG AND SPEECH
By W. WARREN SHAW
In Collaboration With
GEORGE L. LINDSAY
In Two Volumes

THIS is a comprehensive course in fundamental vocal procedure and practical voice training, presented in two volumes comprising twenty-five units. Each unit includes instruction, a study song, vocal exercises and an art song. Throughout the work there are timely, helpful suggestions which cover the finer points of artistic voice production and interpretation. These studies are based on Mr. Shaw's celebrated vocal method, lauded by Tibbett, Tokatyan, Jagel, Gladys Swarthout and other operatic artists, and arranged for class or private instruction by Mr. Lindsay, Director of Music in the Philadelphia Public Schools.

Wagner and Animals

A LONG ARTICLE could be written about Wagner's love for animals. Whenever possible he had pet dogs and pet birds. He is known to have made long midnight excursions in the woods to hear the nightingales. Although he would fly into a temper if anyone spoke while he was playing, the dogs might bark and the parrots might squawk with impunity. Near his grave behind his home at *Wahnfried* are buried his two pet dogs. This was done at his own direction.

Bands and Orchestras

(*Continued from Page 227*)

he must pay attention to his posture, direction of breath stream, and throat and tongue.

Intonation is a problem for the mind, just as much as it is a problem for the ear. Very few people are tone deaf, just as comparatively few people are color-blind. But many are accepted as being tone deaf because their musical consciousness has never been aroused.

Tuning the Band

LET US GO from the specific to the general. In answer to the question, "How can we tune our bands?", we believe that the mere tuning of an entire band daily does not bring about the desired end. Again the band must be viewed from the standpoint of the individuals which compose the unit. While occasionally we may tune the band on some chord of an overture or march, it is better to secure good intonation for the whole band by asking those players, whose intonation is poor, to play with those who do maintain good intonation. The experience thus gained by the poorer player is invaluable, for he is made to realize differences in pitch.

The student should work constantly to develop this tune sensitiveness—the sort of tuning that goes on constantly and carefully balanced from individual to individual and from note to note, throughout each piece of music. Each tone should be a tuning-up note, so to speak.

The orchestra with its string family is entirely different, in that the strings must be checked carefully; yet again the same problem presents itself. We are all familiar with this picture: The tuning of the orchestra is carefully checked — the violin, viola, violoncello and string basses are systematically gone over—every instrument carefully tuned. The conductor steps to the podium and the orchestra is . . . *off pitch!* What has happened? Many things — yet really only one. The stage manager opened the back stage door, and the temperature is below zero, or perhaps it is a misty, rainy day. Some of the instruments are not of the best; the pitch has begun to drop, and soon the orchestra (especially the strings) has dropped a semitone or more from the pitch to which it was tuned. The one thing that has really taken place is that the players themselves have not helped the situation, they have not heard themselves. If the player is musically conscious, he will finger the notes sharp and bring up the pitch. If he has not been taught to hear himself he will finger the instrument correctly, and yet be badly out of tune. We all know what changing temperature does to our instruments, so what is really gained in tuning our band as a unit unless the individual student tunes himself first?

Let us observe a band at rehearsal: Our student director strikes the tuning bar, the various instruments are checked, the sections are tuned. With the director on the podium, the band plays a few tuning-up chords (these are necessary not for the sole purpose of tuning, but also for balance, tone quality, and control) and, with the arousing of the musical consciousness of the student, we play a march or a selection of some sort.

Before the band has played three measures, the director has detected some tones which are off pitch. He stops the band (perhaps) and, looking over to the fourth horn player, he says, "You're a bit flat. Sound your note——no——a little higher, please——yes, some more——up——up——never mind, finger it ½ instead of open." The band plays another measure or two. Again the director stops the band to tell the second trombone player that his A-natural or D-natural is a trifle flat (he is not using a short second for A-natural or else he is playing D-natural in first instead of fourth position)—especially if it is a long tone. We go a few measures farther and the cornets are reminded that the D on the fourth line is flat, and it is suggested that they use ⅓ valves on some of the instruments that are unusually flat. The director is aware that the next measure has a low D which is usually played sharp; basses and baritones are having trouble on extremely low notes, and are playing them flat.

We reach the *Trio*. The first strain is written for wood-winds in the lower register. The first tone is E, first line, and is generally flat; the clarinets are asked to press the G-sharp key, raising the pitch slightly. The throat tones are inclined to be sharp because the student thinks he must relax on the low register. B, third line, is nearly always flat and needs considerable humoring. E, fourth space, is usually flat and needs an alternate fingering. Because of its close relation to E, the F is also flat. First A above the staff needs raising, and so on. The flute is flat on E and F, and a raising of the head with protrusion of chin is needed to lift these tones.

The high notes are generally sharp because of overblowing, or from weak embouchure caused by lack of systematic practice on long tones. The oboe's low tones are flat because the student puts his head down and places too much of the reed in his mouth. His high tones are sharp due to the extra pressure he needs to overcome a weak embouchure. The bassoon needs individual fingering. No two players finger alike, and no definite fingering can be followed throughout the register on this instrument.

The presentation of this picture of band rehearsal and its problems may perhaps serve the purpose of making us more alive to the difficulties of the students, and a review and discussion will undoubtedly lead us to a better understanding of discrepancies in intonation.

What Can We Do to Improve Intonation?

THERE ARE CERTAIN requisites essential to good intonation, and they may be summarized shortly:

1. The musical consciousness of the student must be aroused before he plays an instrument. The vocal supervisor can be of great assistance in this respect.

2. The proper instrument should be selected by each student, from the standpoint of adaptability. Only students with fine musical sense, who are alert, dependable, energetic, and keen eared for flute and oboe (violinists preferred), should be selected.

3. The instrument should be a good one. The inferior grade of instruments found in some of our bands is largely responsible for the bad intonation of these organizations. The cheap instrument, poorly constructed and inaccurate in its measurements, never can be played in tune, not even by a fine artist.

Of course, we realize fully the extent of this problem. We cannot select an instrument for a certain student. John's father played solo cornet in the village band twenty-five years ago, and now John is using the same cornet. The instrument was good enough for father, so why not for John? Besides, did he not pay (without consulting you) five dollars for a complete overhauling? It was more than he could afford, because he is on P.W.A. and has to sacrifice to get John started. We appreciate this sort of a problem—and face it—yet, John is handicapped from the first note he

(*Continued on Page 278*)

Especially Designed for

YOUR CHILD

No instrument will give your chi more pleasure and satisfaction than Deagan Marimba. It is the easiest of a instruments to play, and especially ea for those who have studied piano. It ma be carried anywhere—creates a hit whe ever it goes. *And now a special studen model is available at the lowest price Deagan's history.*

The Deagan Stu-Dette is a full-fledge 2½ octave marimba, with real resonato and bars of genuine Honduras rosewoo Its tone has all the rich, mellow beaut which for more than half a century ha distinguished Deagan instruments. comes complete and ready to play, wit folding legs that enable you to place out of the way when not in use.

There's a world of fun for all th family in this inexpensive instrumen with a chance to join one of the hu dreds of Stu-Dette Marimba orchestra now forming throughout the land. As for full particulars!

TEACHERS AND MUSIC SUPERVISORS

The low price of the Deagan Stu-Dett with its full, rich tone, opens an entirel new field of musical possibilities. Th Deagan lesson course makes it easy fo any instructor to teach the Marimba Why not a Marimba Ensemble for *you* school or among *your* pupils? Detail are yours for the asking.

Wagner and The Box Office

(*Continued from Page* 219)

libretti, with their plots and characters and dialogue; and bound the whole structure around with stage directions of such richness of content and such precision of detail that to deviate from even the slightest of Wagner's own indications is enough to ruin a performance.

I know this from experience. In 1910, during the time that I served as Chief Musical Director of the Royal Theater of Baden, in Mannheim, I had a burning urge to try to remount "Tannhäuser" in a freer, more modern style. I had no wish for sensationalism. Simply, I wanted to make certain changes in setting and mounting which, I believed, would make it more alive. Such experiments had been successfully carried through with Mozart, Shakespeare, and other masters; and I thought I could do it with Wagner's "Tannhäuser." Well, I found that it could not be done. New sets were made, my new directions were carefully coached—I coached them myself—and when the performance was ready it was not "Tannhäuser" at all. I was the first to see this, and Mannheim speedily went back to the orthodox presentation. The music, the plot, the stage action were all the same—but a deviation from Wagner's own superb directions for the performance led to disaster. Wagner's imaginative powers were so sure and so intense that he was able to set down, once and for all time, the only way in which his works should be mounted, to insure their proper effect.

A Style Recreated

AGAIN, IT IS NOT generally known that Wagner's researches among the old modes of formal poetry and singing, as they were actually used by the master singers of Hans Sachs' day, are so exact that they stand as the finest source material of the lyric effort of that time. In many colleges and universities, the libretto of "Die Meistersinger" (which, I believe, is my favorite of all Wagner's works) is used as the textbook in studying the poetry of that time.

Another benefit has resulted from the new popularity of Wagner. It is a very material one, but also important. People are coming on time to the performances. It is not an unusual spectacle to see latecomers at opera striding down the dark aisles during the overture, or even at the beginning of an act. And it is a wholly deplorable spectacle. Those who indulge in it make nuisances of themselves. They spoil the pleasure of those whom they pass and disturb; they annoy the men of the orchestra; they drive the conductor wild with their banging of seats and rattling of programs; and they give public testimony of the fact that their presence at the performance is to be accounted for by any reason other than a love of music. There should be a system adopted whereby the doors of the theater could be closed, and all late-comers made to wait for the end of the act before being seated. Now, happily, this outrage is beginning to decrease. It has not yet stopped entirely, but a difference can be noticed. People are beginning to come promptly, to be in their seats and quiet when the first note of the overture is played, and to assume the only becoming attitude in an opera house. Music, after all, is not merely entertainment; it is a means of spiritual uplift, and should be treated as such.

I do not for a moment suppose that every opera-goer is suddenly becoming a Wagner enthusiast and, having once arrived at this point, will remain up there on the heights forever. That is not possible. Wagner is not too easy to get into, and not all people get into him equally readily. Of course, it is the sheer truth and vitality of what he has to say, and the absence of thin matter in his works, which make this the case. And even among those who do understand him, taste fluctuates. One cannot hear the same music all the time, no matter how great it is. Europe discovered Wagner over forty years ago—before he was known here. And now one occasionally hears of a slackening of European interest in Wagner, just as he is becoming the vogue in America. But there is no doubt that Wagner will live as long as there are lyric theaters anywhere. Indeed he will always rank as the very backbone of operatic repertoire. Take Wagner out of an opera house, and you have very little left; little, that is to say, that will give the same type of pleasure to the same type of audience.

That is why it is extremely interesting to observe what has happened in America within these past few years. Wagner has come into his own in the hearts of a great many people who shunned him before, wholly on his hearsay reputation for stuffiness. The presence of a single singer in the Wagnerian casts, though, caused people to come to hear him; and having heard him, they began to appreciate him for themselves. This is quite as it should be. As a rule emotion is stronger than intellect, and what had been told people for years meant little to them, until they began experiencing it for themselves. Thus, through a new revelation of artistic performance, they saw what the works of Wagner can mean. This new popularity of Wagner signifies a great deal more than a matter of box office values on Wagnerian nights. It proves that the public is eager to take the best in art to itself, provided that this best is revealed in a worthy way. And that fact holds rich promise for everyone who loves music, whether he approaches it as a professional or as a layman listener.

Marvelous Memories

BEFORE THE DAYS of the miracle men, among pianists, or of Toscanini among conductors, pianists were accustomed to play long programs from memory; but a century ago public performers did not hesitate to "play from notes." Then, with the coming of Liszt, Rubinstein and Von Bülow, more and more stress was laid upon the value of memory. Certainly the absence of the gesture of turning pages makes a better stage picture.

Brahms is said to have possessed a wonderful memory. Von Bülow, who had himself a marvelous memory, once told Brahms that he contemplated plaything all of the twenty-four preludes and fugues of "The Well-tempered Clavichord" of Bach, but hesitated at the enormous task of memorizing them.

"Name any three from the twenty-four, and I will play them," replied Brahms, and he did, for he knew them all.

Von Bülow commented, "In the face of such competition, I lower my sails."

The feat is by no means an extraordinary one among the pianists of to-day.

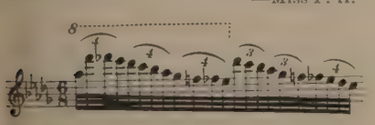
DEPT. E **CINCINNATI, OHIO**



jectives in Rural School Music.

Q. In order to establish a rather authentic t of objectives or goals to be attained in aching music in one room rural schools, I ould like to solicit your coöperation and dgment. Will you kindly indicate what you gard as fundamental outcomes or objectives be attained in rural school music?—O. P. W.

A. 1. An attitude of tolerance toward and terest in good music.
2. The ability to sing well or to play on me instrument, and the desire to continue nging or playing after leaving school.
3. Some knowledge of the world's great usic, so that certain compositions heard over e radio may be recognized and thrilled to.
4. Some ability to respond physically to usic heard, so that the movements may be least reasonably graceful and appropriate.
5. Acquaintance with music notation and at ast elementary ability to read easy music.
6. Acquaintance with the words and music at least 15 or 20 songs of the "community" pe (*America, Annie Laurie,* and so on), and bility and desire to sing them outside of hool and after leaving school.

laying Long Runs.

Q. In the example below from Chopin's ercouse, *have I marked the rhythmical pat- rns correctly? Should such markings be pplied to the* veloce *passages in Beethoven's Moonlight Sonata," and Paderewski's* Minuet?
—Miss P. H.

A. Generally such passages have to be di- ided mathematically, in some manner; at ast for practice. But you must be careful hat such a mechanical division is not too vident to the listener. Your grouping is good ecause a consonant note sounds on each beat. f you call the first two notes sixteenth notes nstead of thirty-second notes, the rest of the un can be played in even fours, but this is no etter than your scheme.

Mendelssohn's Wedding March.

Q. 1. How do you play the trill in the eventh measure of Mendelssohn's Wedding larch*? Are the first two grace notes struck efore, or with, the bass octave G? How would n organist play the grace notes?*

2. At the close of the composition, where he right hand trill is broken off to follow in he left, and repeat, does each begin with the rincipal and close with the note above?

3. What is the rate of the trills?—J. G. T.

A. 1. Play these grace notes as if you were laying a rolled chord, accenting the top note. n organist would play them the same way except that the three notes of the chord would probably be played together.

2. Yes. 3. Trill in sixteenth notes. This may not seem very fast, but notice that Mendelssohn has this march marked *Allegro Vivace.*

QUESTION AND ANSWER DEPARTMENT

Conducted

By KARL W. GEHRKENS

Professor of School Music, Oberlin College
Musical Editor, Webster New International Dictionary

No question will be answered in THE ETUDE unless accompanied by the full name and address of the inquirer. Only initials, or pseudonym given, will be published.

Theory Teaching in High School

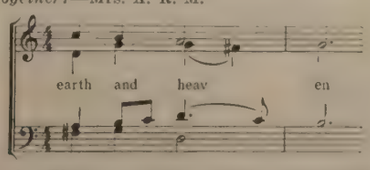
Q. As a beginning supervisor of music I have read some of your texts with great interest, and I should appreciate deeply a few words of personal advice. We are offering music theory in our high school for the first time this year. One of the aims of the course, as suggested by the School Board, is to remedy the deficiency in sight reading of rural school graduates entering high school. However, the group taking the course this year is composed of many who read music easily and play some instrument, and there are few who need the practice in reading. We have long ago covered the necessary theory and melody writing preparatory to harmony, which will not start until next year. I have been at a loss how to organize my course to benefit all.—G. E. H.

A. Your difficulty with students entering high school without much ability to do sight reading is common. One way of meeting it is to offer a course for one semester without credit. Your plan of limiting the first semester class to such students and then letting others enter for the elementary theory is all right if the class meets every day; but, if you see them only twice a week, one semester would hardly be enough to cover the necessary material. I have gone into this subject somewhat elaborately in one of the chapters in my book, "Music in the Junior High School," and if you have not read this, I suggest that you do so.

I like your plan of developing a high school course in theory and appreciation and I hope you may be successful in working the matter out. There are several good texts in high school harmony, and I hesitate to recommend any one as being better than the others for, of course, I do not know this material as well as those who are working in that particular field. I suggest, however, that you examine a book by Heacox called "Harmony for Eye, Ear, and Keyboard," if you have not already done so. This may be procured through the publishers of THE ETUDE.

A Junior High Course

Q. I am writing to inquire if you have completed the course of study in Public School Music for the Music Educators Conference? May I ask if this course is to replace the standard course recommended by the Research Council of the Music Educators Conference in 1921? If the new course is available will you kindly inform me as to how I may obtain a copy of it?



Will you kindly inform me where I may obtain a good music course of study for the Junior High School?—Miss J. R. W.

A. The new course of study about which you inquire will replace the one published by the Council in 1921, but I believe it is not as yet completed. I am not a member of the Council at this time so I am not in close touch with its activities and I therefore refer you to Mr. Russell Morgan, Board of Education, Cleveland, Ohio, for further details. My book "Music in the Junior High School," would probably be of some use to you in planning your work. It may be procured through the publishers of THE ETUDE.

Suspensions.

Q. Will you kindly tell me how the following measures are played?

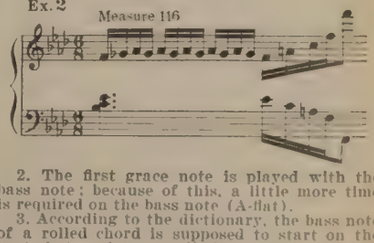
The part marked with "X" is the part I am stuck on. Are these two notes played singly or together?—Mrs. A. R. M.

A. The two notes are played together. This is what is called a suspension. The chord on the third beat is D-F-sharp-A but the F-sharp is delayed and the G from the previous chord is sounded for another beat. This produces a dissonance which resolves into a consonance as the G is replaced by F-sharp. Dissonances cause tension and this makes music more interesting than it would be if it consisted entirely of consonances.

The Rendition of Various Ornaments

Q. 1. How do you play the trill in measure 26 of Chopin's Ballade in A-flat?

2. In measure 116 should the eighth note in the bass be played with the first grace note, or with the melody note (C)?



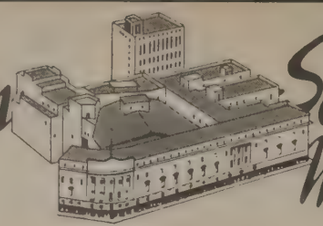
3. In the case of a broken chord such as the following, should the note in the treble be played with the first note of the broken chord or the last note?—Miss O. S.

Ex. 1

A. 1.

Ex. 2

2. The first grace note is played with the bass note; because of this, a little more time is required on the bass note (A-flat).



3. According to the dictionary, the bass note of a rolled chord is supposed to start on the beat, but artists pay little attention to this rule. If taken by itself this chord would certainly sound better played in this manner; however, I am inclined to think that most players would disregard the rule in this case because of the strong accent required on the top C. Play both C's together, but see that the bass A-flat is caught by the pedal.

Two Famous Mendelssohn Pieces

Q. Did Mendelssohn obtain the thematic material for the Scherzo *from the "Midsummer Night's Dream" and the second part of the "Rondo Capriccioso" from the same source?*
—Miss J. J. R.

A. If ever a composer was inspired, it was Mendelssohn when he wrote the "Rondo Capriccioso." This was written when he was fourteen years of age. Probably no other composition has been played so much in concert; yet it is as fresh to-day as the day it was written. The "Midsummer Night's Dream" music belongs to the same period; this, no doubt, accounts for the many similarities.

Eastman School of Music

UNIVERSITY OF ROCHESTER

One of America's great institutions of music, the Eastman School offers courses in all branches of music—instrumental, choral, voice, theory, composition, harmony, education, languages, psychology, etc.—for the degrees of B.M., M.A. in Music, M.M. and Ph.D. in Music. Affiliation with the University of Rochester provides additional opportunities for study in the liberal arts and sciences.

MODERATE TUITION

Partly because of the endowment provided by George Eastman, the tuition and other expenses are moderate. Student Aid funds are available for qualified students.

COMPLETE FACILITIES

In physical equipment the School is unusually well supplied—a library of 35,000 volumes, 196 practice pianos, 18 organs, recording equipment, etc.

PERFORMANCES

Frequent opportunity for performance is provided by other regular concerts, recitals and broadcasts by the Eastman Orchestra, band, ensembles, and chorus.

PLACEMENT BUREAU

The School's Placement Bureau has had a gratifying success in securing professional and teaching positions for graduates and students.

SUMMER SESSION June 27-July 30, 1938
FALL SESSION Opens Sept. 20, 1938

Due to a strictly limited enrollment early registration is advised. For information and catalogs, address Arthur H. Larson, Secretary-Registrar, Eastman School of Music, Rochester, N. Y.

HOWARD HANSON, *Director* RAYMOND WILSON, *Ass't Director*

JUILLIARD SCHOOL OF MUSIC

ERNEST HUTCHESON, *President* OSCAR WAGNER, *Dean*

INSTITUTE OF MUSICAL ART

GEORGE A. WEDGE, *Acting Director*

Thorough instruction in all branches of musical education. Private lessons in all standard instruments, courses in theory and composition, normal courses for teachers, methods of group training for children, preparatory courses for children, extension courses, and many others.

Public School Music course leading to degree of Bachelor of Science with Major in Music.

Catalog on request.

120 Claremont Avenue, New York

NEW ENGLAND CONSERVATORY OF MUSIC

Wallace Goodrich, Director. Faculty of eighty-four. Courses for Bachelor and Master's Degrees. Diplomas. Special students in all fields. Orchestral, ensemble classes. Dramatics. Illustrated 1937-38 catalog. Opening of first semester September 16.
310 Huntington Avenue, Boston, Massachusetts.

Pius X School of Liturgical Music
Manhattanville College of the Sacred Heart
133rd Street and Convent Ave., New York

Courses Offered

Gregorian Chant—Gregorian Accompaniment—Liturgical Singing—School Music, Tone and Rhythm Series—Organ, Piano, Vocal lessons—and other branches of music.

A Four Year Course leading to the Degree of Bachelor of Music is also offered.
SUMMER SESSION, JUNE 30TH—AUGUST 6TH

Composers and Stylists

(*Continued from Page* 216)

the melody. Instead of moving as the ear naturally expects it to do, it takes the contrary method of restlessly avoiding the normal sequence or following of melody, harmony and rhythm. As a result, the hearer is in somewhat of a quandary as to what the writer has in mind. It seems obvious that he had no fixed pattern in view, as he followed no particular line of reasoning.

It is a favorite pastime with composers of to-day to change key often in the course of a composition, as well as to employ various rhythms, introducing these changes at will. Just as the listener thinks he is settled in a certain tonality and rhythmic impulse, either or both will change without warning. This is a trifle upsetting until one becomes accustomed to this sudden upheaval, but at least there can be no monotony in this constant shifting of effects. It holds interest, even though it may or may not inspire admiration. These suppressed resolutions are disturbing to the uninitiated and one must hear much of this type of writing before being able to grasp the fact that this method of expression is done deliberately to create certain desired effects. In other words, the listener must learn to hear what in reality is not there, or to read between the lines.

A main difference between the old and new schools would seem to be a matter of a set pattern or natural melodic and rhythmic flow on the one hand, against the opposite factor which lacks these constituents, as characteristic of the

There is, however, a happy medi tween the classic and the ultra-n which might be called a modern ty which goes to neither extreme. It em the foundations of the old combine the unexpected progressions of the n such a way as to be, to many peopl most satisfactory condition of all.

César Franck is a fine exponent c intermediate idiom, being accepted as by the music lovers who are interes "stylists".

After listening to the very old and very new, as well as to the works inte ing, one may choose his own idiom. statement, however, has its reservat for it is known that a composer may much admire a certain type of compos but that he may be unable to express self according to the standards he reveres. This might be a result of tech inefficiency, it might be a lack of stud it might be that it is not natural for to write in this vein, no matter how he may desire to do so.

In any event, if we wish to compos must make it our business to do a l listening, a lot of studying and a l playing of all sorts of music; after w we will surely be able to find ourse as it were, and to occupy our own ticular stations on the way to success creative musical art.

Maurice Ravel

(*Continued from Page* 215)

is the Ile-de-France, and on the other side . . . England!"

The Master's Personality

NOW, THAT THE MASTER of "Le Belvedere" is no more, it seems appropriate to sum up the qualities which contributed to make his personality a most unusual and attractive one.

Although Ravel knew all that it is possible to know about music, he never became pedantic. In fact he had a perfect horror of "officialism" in music. He never conquered the *Prix de Rome* in composition, because as a student his individuality was already too pronounced and beyond scholastic standards. Later in life he never coveted any election as a member of that so-called "illustrious company," the *Institut de France*. Even when some well meaning friends proposed his name for the decoration of the Legion of Honor, he turned down this distinction on the ground that too many musicians, unworthy in his own eyes, had received or were receiving it. To say that he felt contempt for degrees and had no regard for doctors, masters and other titles, which are greatly esteemed in other countries, would be taking the matter too seriously: those "toys of vanity," so often associated with ignorance, simply tickled his sense of humor.

The Composer and the Man

AS A COMPOSER, Ravel was a classic at the same time as a lyric. One can venture to say that Mozart might have written the Ravel "Sonatine," if he had lived in our time. And "Daphnis et Chloe" is a powerful, intense and impressive masterwork

As an orchestrator, his gifts and craftsmanship were truly extraordin He will remain unexcelled as a poe luscious and shimmering instrumental h

As a man, he was modest although f conscious of his value. He spoke v little about himself, and remained at times a true aristocrat, who could laugh heartily at everything that was flated, bombastic or overdignified.

One has sometimes linked Ravel's n with Debussy's. This is not the place the time to start discussing this subj which I have covered at length in issues of this magazine in 1934. May say only this: had Debussy not exis it is possible that Ravel would have come quite another composer. Still, t styles are entirely different and this amply demonstrated by technical exami tion and analysis.

Considered as men, however, they much more in common. Both lived with a for their music, far from the intrigues, squabbles and the politics which too of infest the artistic world. Both were tiring, discreet and devoted to their idea They also were true "Parisians."

With Ravel's passing, the great linea of French modern music comes to an e He was much interested in the efforts what we call the "less than thirty," or coming generation of to-day, still und thirty years of age.

Let us hope that from these young priests of the musical temple will rise o who will be able to carry on the flam and who will prove to be his worth successor.

* * * * *

"The public requires to be treated as a lady; it does not like to hear anything but what is very agreeable. It loves to 'be in the fashion.'"—Berlioz.

THE ETUDE is profoundly regretful that we must inform our readers, and his many devoted friends, that on February thirteenth our distinguished conductor of this department, Frederick W. Wodell, died in St. Petersburg, Florida. Mr. Wodell was born seventy-eight years ago, in London, and came to America at the age of ten. He was a pupil of Frederick Root and of the noted English voice authority, William Shakespeare of London. For some years Mr. Wodell was a conductor of opera and of choral organizations in Boston. He then became the director of the noted music festivals given at Converse College at Spartanburg, South Carolina. He was at one time president of the Voice Teachers Association of Boston, where he also was director of music at the First Presbyterian Church. He was very active in Masonic circles. His book, "Choir and Chorus Conducting," has long been regarded as indispensable for the purpose. He had been a regular and valued contributor to THE ETUDE for over forty years.—*Editor of* THE ETUDE.

How Can I Help?

(*Continued from Page* 214)

beauty from art, music, literature and general culture.

Work constructively with every possible human beneficent movement for the betterment of man. Take a more active part in church work, in Boy Scout work, in Girl Scout work, in the Salvation Army, in the Y. M. C. A., the Y. W. C. A., the Knights of Columbus, or the Y. M. H. A. You will feel better for having done so. That is, forget your own troubles by relieving those of others.

When those around you commence to preach gloom and ruination, switch the conversation to the brighter and kindlier things of life, to nature, sport, art, music and literature. We once knew a member of an excitable, irritable family, who, when a squabble arose, went to the piano and played a soft, quieting composition. She said that in most cases the bickering stopped in a few minutes.

Seek to get others, particularly young people, actively interested in music, remembering the words in "Don Quixote" when Cervantes says, "Where there is music, there is no mischief."

"Start each day with a song," as Henry Ford advised.

Make lists of the fine things in the day's radio programs, fine concert programs and fine church programs, and distribute them where they will do the most good.

Learn to smile sincerely when it is most difficult to smile. *That is the first lesson in the making of a hero.* Remember, you cannot have the music of joy and kindness in your heart and a look of hate upon your face.

Play gladly for those who are in trouble, when a message of music may mean a blessing. Most of all, learn tolerance.

If you would evade nightmares, waking and asleep, pin upon your wall Leigh Hunt's immortal poem:

"Abou Ben Adhem (may his tribe increase!)
Awoke one night from a deep dream of peace,
And saw, within the moonlight in his room,
Making it rich, and like a lily in bloom,
An Angel writing in a book of gold;
Exceeding peace had made Ben Adhem bold,
And to the Presence in the room he said,
"What writest thou?"—The Vision raised its head,
And, with a look made all of sweet accord,
Answer'd, "The names of those who love the Lord."

"And is mine one?" said Abou—"Nay, not so,"
Replied the Angel. Abou spoke more low,
But cheerily still; and said, "I pray thee, then,
Write me as one who loved his fellow men."

The Angel wrote and vanished. The next night
It came again, with a great wakening light,
And showed the names whom Love of God had blessed,
And lo! Ben Adhem's name led all the rest!"

* * * * *

Speaks Up for English in Singing

"I have sung in many languages and I say now that, with the exception of Italian, there is none easier to sing in. I would willingly wager that if both the Metropolitan and the Chicago Civic Opera were to announce all operas must be sung in English, all singers would accede to the demand, and we should get the surprise of our lives."—Charles Hackett.

THIS Summer Study in Chicago

Take advantage of Sherwood's unusually low cost courses

Enjoy a cool summer beside Lake Michigan

Every summer hundreds of ambitious students and teachers come to Sherwood Music School to take advantage of the thorough professional courses offered at unusually low cost. Join these congenial young people in their earnest study and joyous leisure-time activities. You, too, will enjoy the performances of the world's finest music "under the stars" at Ravinia and in Grant Park. You will find Chicago, stretching along the shores of Lake Michigan, ideally planned for healthful, worthwhile recreation. Sandy beaches, parks and playgrounds invite to all land and water sports; theaters, art galleries and museums will help develop your cultural and artistic side.

Private instruction in piano, voice, violin, organ, cello, wind instruments, theory, composition, dramatic art and dancing. Faculty of 75.

Special short-term classes in 50 subjects, including piano normal class, teaching repertoire, class piano, violin master class, voice master class, public school music, band, orchestra and choral conducting, theory, composition, microphone technique, and many others.

Dormitory accommodations. Certificates, diplomas and degrees awarded. Write today for catalog and all-expense estimate.

A Trip Through Musical Paris

(*Continued from Page* 218)

giant)!' Perhaps it was that fear which caused this dislike. He little appreciated Schubert, and even Mozart did not seem to satisfy him much."

I remember also that at another time, the old gentleman said, "Chopin wished to walk in life without moral guidance and, having forgotten the teachings of his saintly mother, he abandoned the faith. Though he loved Bach, he never understood the greatness of such a soul no more than he understood that of Beethoven."

As Dr. Reinkoff was among the last friends who saw Chopin alive, being near the moribund during the night of October 17, 1849, he told me of those tragic hours when the unfortunate young master passed away, while one of his lady friends sang to him softly a beautiful psalm by Marcello.

After having spent a while glancing at the old mansion which looked just as it had been known in those days herein mentioned, I strolled along and finally reached the Exposition grounds. It was already dark. I remained to see the fireworks. This time I saw the most wonderful ones that have come into my experience. But this time the show was entirely different. These were not ordinary fireworks, where men are seen, torch in hand, running from one place to another, sometimes getting badly hurt too, but quite a novelty; they were an accompaniment to music by Debussy and Ravel, those two charming masters of the modern French school. Not one single note of the odious and repulsive jazz. Thank goodness! Real and clean and artistic music was heard by all, that wonderful night, through immense amplifiers; and, when this music was being performed, one single fellow somewhere near the Eifel tower, from where the fireworks were shot from every story, simply pressed some hundreds of electric buttons from a console which looked somewhat like that of an organ. Before him was a musical score where were indicated the different colors and noisier fireworks to be let loose, thus illustrating either through speed, or intensity of volume, or accentuated notes, what the masters intended to convey to people's minds. But on the whole, it was never noisy as in ordinary fireworks. With the exception of a few firecrackers, the entire show was rather *mezzoforte*, increasing at times to a simple *forte* and returning to quiet rockets, going up in the air as silently as Roman candles. It was superb, and it is to be hoped that America will soon adopt this marvelous novelty invented, it is said, by a French scientist and never before given to the world.

Before leaving Paris, it was felt that it would not be fair to have paid a visi the tombs of Rousseau and Voltaire a Pantheon without paying one also t tombs of Chopin and a few other g musicians of Paris. So I went to Père La Chaise, that famous necropol the east of the great capital. As the cetery was familiar, in the 11th division tomb of Chopin was easily found, close by, that of his beloved friend, Bo This division is near what is known as *Rond-Point Casimir-Périer*. In this division are also the tombs of Les Cherubini (whose body was transfe later to Italy), Gretry, Boieldieu, a few others less well known here. A and many other famous French compo also rest here, but in another divis Rossini is in the 4th division, first sect Mehul in the 13th division.

While standing before Chopin's t surmounted by an elaborately sculpt stone, I pictured those sad moments w the casket of the Polish master was l ered into this grave. Mr. Reinkoff been present at the very instant when of the old friends of Chopin dropped t the coffin a small amount of earth f Poland, which Chopin had brought hi from his native land and had piously served through all these years to be at his burial.

In order to learn a little more about future musicians of the great city, inqui were made among friends, who told m two among the most promising ones. first one, Lesur, I had already met. is an organist of talent and professor modern counterpoint at the Schola torum. The other, Olivier Messiaen, an excellent organist, plays at the Guilmant church, *Trinité*, R. C., and h a professor of organ at the same sc as Lesur. Still quite young, having born in 1909, he was very interesting, after supper we spent two charming h with music, he playing many of his m ernistic compositions. They are ultra- modernistic, and it would take more t one hearing to judge them satisfacto This new music deserves close analy it is daring and far from even C Franck's own audacities, as they w called by some antiquated old teachers the Conservatory during the lifetim this genius.

French and, it may be said, all Europ music is going through a great crisi very serious one, a real revolution, as in politics. What will be the outc no one can tell. But there is positive new school in the making. In a few y we may be able to see it in a matu form.

Beethoven's Tragic Affliction

Beethoven's deafness cut into the feelings of the composer more than most people realized. It came upon him gradually, but in 1800, when he was thirty years old, he was aware of his tragic hopelessness. Thereafter, for twenty-seven years, he suffered untold misery from this affliction. He wrote at that time, "The humming in my ears goes on day and night without ceasing. I may truly say that my life is an intolerable one. For the last two years I have been avoiding all social contacts, for it is impossible for me to say to people that I am deaf. Were my profession of music any other, it would not so m matter; but in my calling it is an aw thing; and my enemies, of whom there quite a few, what would they say to t

"To let you know how terrible deafness really is, permit me to say when at the theater I have to lean ward, close to the orchestra, in order catch what is being said on the stag often I can hardly bear anyone speak to me; I hear the sounds but not actual words, and when any one yells at I am in misery. Please do not mention to anyone."

* * * * *

"Melody tells the most secret emotions of the heart, and reveals every desire of the human will; hence it is called the language of the emotions."
—Schopenhauer.

Right Hand Technic for the Classic Guitar

ONE OF THE MOST important phases of guitar technic is the proper manner of attacking the ngs. When we examine the works of the at masters of bygone days, most of om were self-taught, it appears that y experimented for longer or shorter iods until they found the method most isfactory to obtain their object—a clean , round, full tone. While there are some ght differences in their methods, results ove that a real artist instinctively finds correct answer to his problems. The st commonly used system amongst the itarists of an early period was based using the thumb for the bass strings d the alternating first and second fingers strike the treble strings. For rapid scale ssages on the bass strings many used the ernating thumb and first finger. This is ll used by a number of present day itarists; and, when properly developed eat speed can be obtained. The third ger was used principally for chords and peggios. The modern Spanish school akes use of the third finger more exusively and advocates that most of the ale passages be played with first and cond fingers from lowest to highest inuding those on bass strings.

A subject that has caused considerable ntroversy amongst guitarists concerns the ger nails of the right hand. Should they trimmed closely, so that they will not me in contact with the strings? Most the classic guitarists, with few exceptons, kept the nails short and touched e strings with only the fleshy part of e finger tips.

The so-called nail stroke was strongly dvocated by Francisco Tarrega and is used most exclusively by the modern guitarists every country. In his later years Tarrega xperimented, playing with his nails cut hort; and Emilio Pujol, one of his pupils uring this period, is one of the few adherents to this style of playing.

So that there may be no misunderstanding in connection with the "nail stroke," et us state, right here, that it does not nean that the nails should be long enough be used as a sort of plectrum. They hould be filed and kept smooth and project nly about one thirty-second of an inch eyond the fleshy part of the finger tips. One can readily see that, when striking he strings in this manner, the finger tip egins and the edge of the nail ends the troke, giving the tone a certain amount f crispness and brightness impossible to rocure with the fleshy part of finger tip lone. All those fortunate enough to hear Andres Segovia, have marveled at the eautiful, scintillating tone he gets from his nstrument and the variety of color and ther tonal effects resulting from his using his so-called "nail stroke."

In the Manner of Tarrega

UP TO THE TIME of Francisco Tarrega the manner of striking the strings was to rest he thumb against one of the bass strings, hen to strike one of the treble strings with the first finger, drawing this finger slightly backward towards the palm of the hand. The Tarrega method is to force the finger across the string with a gliding downward movement towards the next string. By this method one is able to procure a strong round tone; and it is especially useful in slow or *legato* passages, where it is desirable to have the melody stand out prominently above the accompaniment. It is obvious that this stroke cannot be used for chords, or arpeggios, or *staccato* passages.

The writer has met, personally, many of the foreign guitarists and prominent teachers in the European musical centers; he has heard them play and has been present during some of their practice hours. This, together with his many years of experience as concert guitarist and teacher, should suffice to enable him to make some additional suggestions to the young student of the guitar or to those players wishing to improve their technic. When selecting an instrument, see to it that it is made especially for gut and silk strings. The sound board is much thinner on this type of guitar, than on those constructed for wire strings. The guitar should be of fairly large size, strings adjusted close to fingerboard, evenly balanced as to treble and bass and responsive to the lightest touch of the fingers.

The playing position assumed by all the prominent artists is to sit on a chair of medium height, placing the left foot on a footstool six to seven inches in height, and resting the guitar on left thigh in almost vertical position, with neck of instrument slanting slightly upwards. Now hold neck in the crotch between thumb and first finger of left hand near first fret. The thumb should press against the neck on the side of the E bass string, and not project over and above the finger board. Place the right forearm lightly on top of the widest part of the guitar and let the hand hang in a relaxed position over the strings, the thumb near the center of the sound hole, with the first joint turned to the left. The right wrist should be slightly curved upwards and in this position place the thumb on the A string. Bend the fingers until they touch the treble strings, first for G, second for B and third for E. Hold the wrist well up, thereby keeping the fingers almost at right angles with the strings.

The Fingers Glide

PRACTICE WITH THUMB by gliding it across the A string until it touches the D, also gliding it across the E string until it touches the A string. This gliding stroke with the thumb produces the best tone and should be practiced with fingers resting on the treble strings and the hand kept steady. It is well to strike lightly at first and gradually to increase the force, avoiding all noises due to the pulling of the strings sideways. The best point of contact of thumb with strings is the fleshy part next to the left side of the thumb nail.

Practice with the first, second and third fingers should be begun by resting the thumb on one of the bass strings; the little finger should not be placed on the sound board, as this interferes with the action of the other fingers.

Having placed the finger nails in proper condition, practice the gliding stroke on the open strings at first, using the first finger for the G string, second for B and third for E. Glide first finger with an energetic movement over the G string towards the D string and repeat, using the second finger over B string towards the G string and third finger over E string towards B.

Use the same stroke by alternating first and second fingers on the same string and later practice all scales in the same manner. When this stroke is mastered begin again

(*Continued on Page 275*)

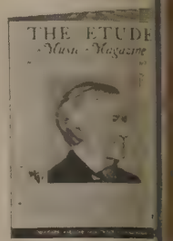
Piano Part	.20
Play with Pleasure—Piano Album	.40
Reward Cards—Second Series	.35
Ten Studies in Style—Piano—Kern	.20
Twenty-Eight Miniature Etudes—Piano—Ketterer	.30

Keep Scratching



• A group of the officers of the Music Teachers' National Association, learning that its founder, the late Theodore Presser, was making large gifts for musical education and musical philanthropy, approached him with the suggestion that he endow the Association to which he was naturally greatly devoted. He gave the matter long and deep consideration for many months, and then when asked for his decision, said: "As long as a hen keeps scratching, there is nothing to worry about, but when it stops scratching it is a dead hen." Of course, what he wanted to convey was that as long as the element of activity is present, there is a certainty of internal interest and progress which sometimes vanishes when things come too easily. Twelve years after Mr. Presser's passing, his judgment is vindicated by the fact that the M. T. N. A. is more active than ever. It is still scratching and is a very lively, useful body.

A recent survey of some musical conditions in the Mid-West indicates amazing musical advances and activity. We are of the opinion that this, of all times, is one in which it will pay teachers to dig and scratch harder than ever, because the opportunities never were greater.

The Theodore Presser Co., realizing that practical teachers always are on the lookout for up-to-date materials and better teaching procedures, is issuing many new and especially valuable works, as described in this monthly department of news about necessary publications.

The Cover for this Month

Wagner's famous opera, "Parsifal," had its premiere at the Wagner Festival Theatre in Bayreuth, on July 28, 1882. It was held exclusively to Bayreuth productions until December 24, 1903, when it was given with sensational success at the Metropolitan Opera House in New York.

The opera is filled with religious symbolisms. The story of "Parsifal," with its Holy Grail and the Body of Knights, who with their King had dedicated themselves to religious contemplation and ascetic purity of body, has a decided Christian allegory. Gurnemanz, a veteran Knight of the Grail, had a hermitage in the woods near the Castle of the Grail. Kundry was something of a messenger in the service of the Knights and at the same time often was under the spell of the wicked Klingsor, who transformed her into a beautiful but wicked sorceress to tempt the Knights of the Grail. Klingsor, who because of the blackness of his heart and his wicked sorcery could not become a Knight of the Grail, as he wished, prepared a garden of enchanting women to lure the Knights to their undoing. He had come into possession of the sacred Lance and with it had wounded Amfortas, King of the Knights.

Parsifal, the youth, wandered into the woods of Monsalvat. Klingsor summoned Kundry and using his strong magic again made her better desires transformed her into a temptress to overthrow Parsifal, whom Klingsor feared to be the guileless youth of whom the prediction had been made that he would recover the Lance. Kundry failed and Klingsor flung the sacred Spear at the youth. The Lance, however, stopped suspended in the air over Parsifal, who seized it and when he made the sign of the cross with it Klingsor's castle fell to ruins and the garden became a desert. At the time that Parsifal withstood the allurement of the transformed Kundry he saw in a vision the Holy Grail, and when the sacred Spear came into his hands he set forth in a suit of black armor to find the Castle of the Grail.

After a long and weary search he was met by Gurnemanz. Gurnemanz told him that he was on holy ground and because of this and because of it being then "Good Friday" requested that he remove his armor to avoid profaning the ground and the day. Kundry, no longer under the spell of the evil Klingsor, was again serving the Knights of the Grail, and was present when Parsifal complied with the request made by Gurnemanz. They immediately recognized Parsifal and the sacred Spear, and after Gurnemanz anointed his head and consecrated him as King of the Grail, Parsifal baptized Kundry.

(It is following this point in the opera that the "Good Friday" theme, which is shown on the front cover of this issue of The Etude, is taken up by the orchestra.) Then Gurnemanz brought forth a coat of mail and the mantle of the Knights, and after he and Kundry had placed these on Parsifal they wended their way to the Castle of the Grail. When he entered the hall of the Grail, Parsifal touched with the Spear the wound in the side of the weak and dispairing Amfortas. Parsifal then assumed the sacred office of the King of the Knights of the Grail, and after he ascended the altar steps he performed for the first time a duty which he had taken from Amfortas, and uncovered the sacred Cup. The Knights knelt before it in adoration.

The opera, "Parsifal," is the last of Wagner's works. Wagner himself did not view it as the usual type of opera and the usual secular performance as is indicated by the subtitle which he named the "Stage-consecrating Festival Drama."

Graduation Awards

Every sincere student of music realizes that the real reward for tasks completed will ever be the satisfaction of possessing an accomplishment to which one can turn in hours of joy and trial, yes, in hours of necessity, too. But a certificate of promotion at the end of the school year, a diploma at graduation, a medal for especially meritorious work, all are incentives to greater effort.

Naturally, an award of this nature especially designed for music students is doubly welcome. In the *Music Teacher's Hand Book* there is a complete list, with illustrations, of the music students' awards obtainable from Theodore Presser Co., 1712 Chestnut St., Philadelphia. Send for a copy today. It's Free.

Engraving of recipient's name, etc. on medals and engrossing on diploma and certificate forms may be arranged for at reasonable prices. Full particulars upon request. Time can be saved in correspondence if, in your first letter, you mention the names and exact wording desired when price quotations on engraving and engrossing are requested.

Commencement Music

In these days when secondary schools, academies, and colleges give the youth of our land so many opportunities to gain a superb musical education and such a high proficiency in performing ability, the director of music can make the musical part of any commencement program a fine and varied contribution to the occasion.

Theodore Presser Co. can furnish music for vocal or instrumental solos, or whatever vocal or instrumental combination of a standard character that might be desired. Single copies of requested or suggested numbers will be sent for examination with return privileges, if you will but write indicating the particular numbers, or describing the type of numbers that you would like to have the opportunity of examining.

The commencement season in its approach is also a reminder to the private music teacher that closing-of-the-season pupil recitals soon will be at hand. So it is well for the private teacher, as well as the music director, to review program plans as they stand at present, and where necessary seek out things to carry the program through to the desired length, and most important of all to provide sufficient contrast and perhaps a touch of novelty where possible.

Fourth Year at the Piano

By John M. Williams

The patience of those who have been waiting for copies of this fourth book in Mr. Williams' important educational series will soon be rewarded. The final selection of material, the detailed editing and annotating which are such a vital part of works bearing this educator's name, and the engraving of plates, have been completed, and but a short time will be required for the printing and binding.

The study material from which the author has drawn combines standard and modern resources. From the former, Mr. Williams has delved into the pages of Carl Czerny, J. Concone, Ludvig Schytte, E. Nollet, and Alexander Dorn. Modern composers of etudes are represented by Mathilde Bilbro, Albert Franz, and Cedric W. Lemont.

A noteworthy feature of this book is the group of choice pieces presented in Mr. Williams' own editing; these alone are well worth the price of the book. Complete with detailed fingerings, pedaling, phrasing, and other annotations are such favorites as *Evening Prayer* from "Hansel and Gretel" by Humperdinck; *Butterfly*, Grieg; *Träumerei*, Schumann; *Valse Excentrique*, Eggeling; *Esquisse* and *Meditation*, Lack; *Humoresque*, Dvorak; and *Reflets*, by Clarence Cameron White.

We shall continue to accept orders for this important book, until publication, at the special price of 50 cents cash, postpaid. The sale of *Fourth Year at the Piano* will be confined to the U. S. A. and Its Possessions.

The Etude Historical Musical Portrait Series

In directing attention to this unique series we can't help getting a bit statistical in order to emphasize properly certain of its unusual features. First of all, this month's instalment is the 63rd consecutive one in the series—adds pictures and brief biographies of 44 more outstanding musicians and musical personalities, making a total of over 3300 presented to date.

Continuing the alphabetical sequence, the instalment on page 210 of this issue runs on with the letter "S," from Scriabin to Seydal, includes musical notables of 15 different nationalities representing 13 distinct fields of musical endeavor.

When just one instalment is so multifarious its easy to understand why this is the most all-inclusive series of musical biographies available in any form—why it is proving so valuable for reference, for program notes and for scrap book purposes.

For any of our readers who may have missed some instalments and wish to have a complete set, as well as those who may want separate copies of past instalments to cut up for scrap books, we have printed additional copies of each page that has appeared to date. These we will be glad to supply at the rate of 5 cents each.

ward Cards for Music Pupils

(Second Series)

ast month's initial announcement of this series has been enthusiastically received teachers who for years have used the inal set of 16 Reward Cards. The system iving these cards as a reward for well ticed lessons has proved most effective. or the benefit of readers who may not familiar with the original *Reward Cards* hose who overlooked last month's article he new series we give a brief description. h packet known as "Second Series" will ain 16 Reward Cards, similar to those he "First Series," also a Prize Card. Each ard Card has an excellent likeness of the poser, his birthplace, or other scene of rest, all printed in beautiful colors. On the rse there is a short biography and a facile of the autograph and a manuscript of composer. The Prize Card, printed from teel engraving, has photographic reprodons of leading composers set in an artisdesign and space for writing in the pupil's the teacher's name, the date, etc.

mong the composers represented in the series will be: Georges Bizet, Cecile aminade, Claude Debussy, Antonin orák, Edward Elgar, Christoph W. R. von uck, Edvard Grieg, Edward MacDowell, es Massenet, Moritz Moszkowski, Modest ussorgski, Giacchino Rossini, Anton Rustein, Camille Saint-Säens, Jean Sibelius l Nikolai Rimsky-Korsakow.

The special advance of publication price the *Reward Cards* (Second Series), inding Prize Card, is 35 cents, postpaid. e set only at this price, please.

Manual of Fugue

By Preston Ware Orem, Mus. Doc.

Dr. Orem has an unusual gift in that he can explain in understandable language even the most advanced problems in the science of music, and can with his original examples show the student how to carry things through himself.

This type of text book is a great aid to the teacher l assures better than any other the gain of results with the pupil. This has been ved by the great success of Dr. Orem's *rmony Book for Beginners, Theory and mposition of Music,* and *The Art of Interwing Melodies.*

This *Manual of Fugue,* now in course of blication, has ten lesson chapters and an logue. The book takes up all the various les of Fugue writing—Canon, Imitation, l Double Counterpoint being covered. roughout, the study of Fugue is handled such a way as to make the student realize at by such study beautiful music may be ated. So often Fugue study is presented in ch a pedantic fashion as to make a forlding subject of that which this book makes fascinating adventure.

Ten Studies in Style

For the Piano

By Carl Wilhelm Kern

The engraving of the plates to be used in printing this book has been completed and shortly it will be published as an addition to the *Music Mastery Series* of piano studies.

Mr. Kern's piano compositions are known to all experienced teachers as pieces that always are acceptable to students. His piano studies are not only interesting, but practical, the author's own experience as a teacher inspiring the creation of them to care for the varied technical practice needs of pupils.

In this set of studies material is provided for players in the early intermediate grades. They cover touch, phrasing, pedaling, rhythm, finger dexterity, contrasting dynamics, etc. and, in general, provide that supplementary work for earnest students' technical practice known as style.

Books of studies in the *Music Mastery Series* are uniformly priced at 60 cents. Prior to publication orders may be placed for single copies of *Ten Studies in Style* at the special cash price, 20 cents, postpaid.

One-String Solos

For Violin Beginners

By Kate LaRue Harper

"One string at a time" might be the paraphrased quotation to describe this book. Teachers who believe in "making haste slowly" will be delighted with it, because it provides that most necessary element in early violin study—attractive supplementary material.

As with books of similar grade for juvenile pianists, fascinating story texts and charming illustrations are employed and everything is so worked out as to make the children just want to play the violin. Only three fingers and the open strings are used.

This material should prove helpful either in private or in class teaching. For convenience in the latter use the work will be issued in two separately bound volumes, one for violin, one for piano, the violin part for juvenile students, the piano part for teacher or accompanying pianist. Each book will be printed in the convenient oblong size.

In advance of publication single copies of the violin part may be ordered at the special cash price of 15 cents; of the piano volume, 20 cents, postpaid.

Grown-Up Beginner's Violin Book

By Maurits Kesnar

Seekers of material for beginning the study of the violin usually are shown books of which large portions are devoted to dry exercises, and to meaningless melodies whose only value is that they make use of the notes and open tones of the four strings. This new work uses, for the same purpose, real tunes of melodic worth, thus giving real pleasure as well as a means for acquiring and developing skill; a feature that will be especially appreciated by the "grown-up beginner."

Violin teachers will find this book invaluable because of its wealth of new material. There is a liberal use of simplified arrangements of copyrighted pieces, of dances and classics from the masters, and of both familiar and little-known folk tunes and dances.

In order to acquaint the pupil with the finger patterns of each string, the "Key of C approach" is used. Interspersed with the melodies will be found charts and illustrations which make easier such problems as holding the violin and the correct placing of the fingers on each string.

To assist the violinist-teacher in giving individual instruction there has been added a second violin part to many of the studies which helps to enrich the harmony and increases the interest of the student. This added part is especially valuable in group teaching where it may be played by more advanced pupils. Piano accompaniments are provided for most of the pieces.

Our advance of publication plan enables teachers to obtain single copies of this book for 40 cents, postpaid, cash with order, delivery to be made on publication. The sales of this book will be confined to the U. S. A. and Its Possessions.

Play with Pleasure

An Album for the Grown-Up Piano Student

"Encouragement of the amateur" articles in music magazines, and the rapidly increasing number of those who "play for pleasure" are developments that may be traced directly to the influence of the radio in the spread of musical appreciation and to the fine work of the educators in our schools.

Piano teachers have learned that not all pupils aim to reach the virtuoso stage. As a result many of more mature years have taken up the study of the instrument, merely to be able to "play with pleasure."

For such of those who have passed the beginner stage our editors are compiling this book. It will contain popular favorites among better-class compositions like *Selections* from "Mikado," Sullivan; the *Gypsy Song* from "Carmen," Bizet; *España,* Spanish Waltz, Waldteufel; *On Wings of Song,* Mendelssohn and others. All will be within the playing capabilities of adult performers who can play what with younger students would be called early third grade music.

While the preparation of this book is in progress an opportunity is given all to place an advance order for a single copy at the special cash price, 40 cents, postpaid. Orders can be accepted only from customers in the U. S. A. and Its Possessions.

28 Miniature Etudes

A Book of Studies for the Third Grade Piano Student

By Ella Ketterer

The modern teacher realizes the advantage of never overemphasizing any weakness that may develop in the pupil's technical development and usually strives to overcome the fault by assigning a piece which unobtrusively requires some practice of the particular technical problem This procedure is sometimes a bit expensive for the pupil who is required to buy the sheet music numbers, and realizing this Miss Ketterer, a most successful teacher, has composed a book of studies that covers practically every technical problem that may arise in third grade study at the piano.

Each of the twenty-eight etudes is one page in length and is designed to provide just enough practice material without boring the student. Arpeggios, chords, hand-crossing, chromatics, fingered thirds, wrist development and repeated notes are some of the features covered and each selection is attractively and appropriately titled to add to the pupil's interest.

In advance of publication one copy of this helpful book of studies may be ordered at the special cash price, 30 cents, postpaid.

Little Pieces from the Classic Masters

For Violin and Piano

Compiled and Arranged

By Leopold J. Beer

"Full many a gem, of purest ray serene,
The dark, unfathomed caves of ocean bear"

wrote the poet Gray, and full many a gem of melody from the writings of the great music masters is practically buried and forgotten.

The author of this book, for many years an outstanding educational authority in the music life of Vienna, delights in delving into ancient libraries for little-remembered compositions of those whose pioneering efforts meant so much to the present-day development of the art of music.

Here he presents, in easy-to-play violin arrangements (piano accompaniment), numbers culled from Rameau, Purcell, the Couperins (Francois and Louis), Bach, Handel, Gluck and Kuhnau, composers of the 17th and 18th centuries. Each arrangement is carefully fingered and the bowings plainly marked. They may be played either in first or third position.

Copies of this unique collection may be ordered now in advance of publication at the special cash price of 35 cents, postpaid.

A Child's Journey

Rote Songs for Primary School Activities

By Ada Richter

In the primary school grades the first requisite of the material used is that it be interesting. If the songs taught the youngsters can be correlated with other class activities, so much the better. When these songs are sufficiently rhythmic to be effective without piano accompaniment, if an instrument is not available, their use will be even more widespread.

Mrs. Richter, in this new book of sixteen rote songs, provides the primary grade teacher with material that will be more than welcome Not only are the little tunes melodious and very easy to sing, but each tells of some memorable experience in child life and each can be used with some feature of primary instruction.

Note the titles: *At the Barber Shop, Mr. Policeman, On a Double-Decker, The Camel, Lazy Sleepy Crocodile, Mrs. Kangaroo, An Airplane Ride, Two Frogs, A Cow, The Happy Bee, Lo Ling Lee, Tiny Suki San, Little Dutch Children, Hallowe'en, Mr. Turkey Runs Away* and *My Christmas List.*

A single copy of this book may be ordered in advance of publication at the special price of 35 cents, postpaid.

Master Pieces with Master Lessons

For the Piano

Regular readers of THE ETUDE are familiar with the "master lessons" on celebrated piano compositions which from time to time have appeared in its pages. Analyses of master works for the instrument by the greatest living teachers and piano virtuosi, such as Rosenthal, Hambourg, Edwin Hughes, Goodson, Spry, Biart and others are of priceless value to students, many of whom never would have the opportunity to journey to metropolitan centers for instruction under such renowned pedagogs.

So many requests for publication of these "master lessons" in book form have been received that the publishers, some time ago, decided to issue a volume of the most-frequently-called-for compositions. The editors are now well along in the selection and preparation of the material and the special advance of publication cash price on this work soon may be withdrawn.

There is still time this month, however, to place an order for a single copy of the volume at 50 cents, postpaid.

Child's Own Book of Great Musicians

Brahms—Tschaikowsky—MacDowell

By Thomas Tapper

Some years ago we started a series of booklets depicting, in simple language, the main events and most interesting facts in the lives of great musicians like Bach, Handel, Haydn, Beethoven, Mozart, Chopin, Grieg, Mendelssohn, Liszt, Schubert, Schumann, Verdi and Wagner.

We are now preparing three more booklets pertaining, respectively, to Brahms, Tschaikowsky, and MacDowell. These are great composers who all lived long enough to begin to enjoy the fruits of growing popularity and increasing income, so different from a few, like Mozart and Schubert, whose lives were a constant struggle for existence.

In the lives of all great men were many incidents and experiences of interest to the young mind. It is always true that when a child knows something about the composer whose music he is studying, he takes more interest in his work and gets a better groundwork of musical knowledge, thus leading to better interpretation. Learning how composers, through perseverance, overcame great obstacles, should always be helpful to young pupils in surmounting their own problems.

Accompanying each book is a sheet of pictures to be cut out and pasted in their proper places in the book. Interest is further

Child's Own Book

(*Continued from Page 273*)

strengthened by the art cover, and by the needle and cord furnished with each copy for binding the book.

While the regular price of each book is 20 cents, single copies of the three new books may now be ordered at the special advance of publication price of 10 cents each, or 25 cents for the three. Cash must accompany the order; delivery will be made upon publication.

The Tortuous Way

Not every snowflake that falls on the mountain-top, nor every raindrop coming down on the hillside is destined to reach the sea. Some help make up stagnant or muddy puddles that seem to serve no purpose. Others fill a passing need of dry soil, while others go by way of the evaporation process.

In some places melting snow waters, or many drops of rain, seem to find a course to a quick meeting with others which flow into a mighty river, rushing onward to the sea. In other instances the snow water must twist and turn hundreds of times trying to find a way down the mountain side, and then there are tortuous wendings through woods and around hills before the way of great waters is met.

The Publisher's Printing Order is like the way of great waters. It is here that the successful music publications eventually find their way as it becomes necessary to print new editions. For some music works it is a matter of but a few months after the first edition before a reprinting is necessary, in other cases works which now seem destined for immortality did not make any headway until years after the first edition.

It is an education for the active music worker to become acquainted with works which sell sufficiently well to require reprintings. Here are some of the things reprinted on Printing Orders of the past thirty days.

SHEET MUSIC—PIANO SOLOS

Cat. No	Title and Composer	Grade	Price
24425	My First Dancing Lesson. *Johnson*	1	$0.25

Caution!

Daily receipt of complaints from music lovers in many places that they have paid for a subscription to THE ETUDE and have received no copies, causes us again to warn every one against paying money to strangers. We never tolerate high-pressure sales-talk measures. Look out for the man offering THE ETUDE or other high class publications in combination at ridiculously low prices and accept no ordinary stationery-store receipt. Authorized representatives of THE ETUDE carry the official receipt book of the Theodore Presser Company, publishers. Permit no changes nor alterations in any contract offered. Read carefully any order blank offered you. We especially warn Canadian music lovers that there is a group of swindlers working in the Provinces who offer THE ETUDE at a price which is invariably a cut rate. Pay no money unless you are convinced of the responsibility of the canvasser. We cannot be responsible for money paid to swindlers.

Changes of Address

Where a subscriber changes his address, it is imperative that we be notified at least four weeks in advance, giving both old and new addresses. Magazine wrappers, of necessity, are addressed very much in advance of the date of publication to insure delivery of copies on the first of the month. Unless these changes of address are received promptly, the next copy will go to the old address. Please help us to give you good service.

Useful Merchandise Given for Etude Magazine Subscriptions

THE ETUDE offers high class merchandise as a reward for those music lovers who obtain subscriptions for this magazine. You may have, in your circle of musical friends and acquaintances, some who are not ETUDE subscribers. Interest these people, secure their subscriptions and we will send you a fine gift as our appreciation. See partial list of premiums offered on another page in this issue. Send for Premium Catalog showing complete list of gifts.

Saint-Saëns as a Spy

IN HIS youth, Saint-Saëns was threatened with tuberculosis, and he continually made trips to Africa and other southern climes to find warmer weather. So successful was he in preserving his health that he lived to the hale and hearty age of eighty-six. Once he went to Palmas in the Canary Islands, with the intention of finishing his work and following his hobby of solving astronomical problems. He traveled incognito and arrived unknown. He locked himself in a room for hours at a time, and 'ere long the local police became convinced that he was a dangerous spy. He was conscious of being watched and three times changed his address. Finally he was obliged to inquire what was the matter, whereupon he confessed who he was and was received with marked honors by the public.

* * * * *

"The teacher, if he is finally to come to that point of proficiency in his art where he can even measurably predict and control what his pupils are to think and feel and do, must begin by learning such fundamental facts about human nature, and especially about child nature, as are fairly universal in their application."—Karl W. Gehrkens.

BERNARD HAMBLEN

This composer of songs that singers like to sing was born in Yeovil, Somersetshire, England. His education was obtained in the country of his birth, but he has long been identified with American music and American musicians. His songs, published in this country, have been given a most cordial reception. Mr. Hamblen resided for quite some time in Encinitas, Calif. He now makes his headquarters in New York.

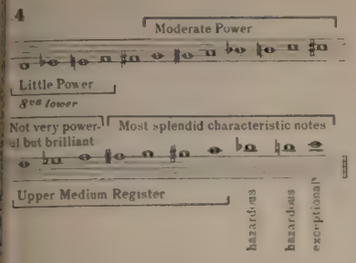
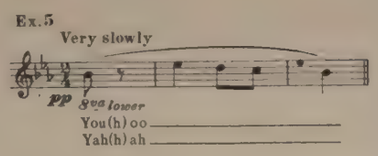
COMPETITIONS

THE AMERICAN SOCIETY OF TI ANCIENT INSTRUMENTS is offering Prize of Five Hundred Dollars for a com sition to require not less than fifteen minu nor more than twenty-five minutes in its p formance, and to be suitable for interpre tion by this ensemble. The competition clo August 31, 1938; and full information m be had from Mr. Ben Stad, founder and dir tor of the organization, 4331 Chestnut Stre Philadelphia, Pennsylvania.



A PRIZE OF ONE THOUSAND DO LARS is offered by the Cincinnati M Festival Association, for a composition fo children's chorus of six hundred voices which an adult chorus may be added), w orchestra, or organ, or both. The work w be performed at the May Festival of 19 entries close August 31, 1938; and full i formation may be had from the May Fe tival Association, 142 West Fourth Stre Cincinnati, Ohio.



THE SALZBURG OPERA GUILD offering a prize for an Opera on an Am ican subject, by an American compos The winning work will be performed by t Guild, and the composer will receive trip to Salzburg with two months of ente tainment at the Guild Headquarters in t Schloss Mondsee, during the summer Sal burg Festival. Manuscripts must be s not later than May 1st, to Mr. Pa Csonka, Mondsee, Austria, from wh further details may be learned.

THE W. W. KIMBALL PRIZE of O Hundred Dollars is offered again by t Chicago Council of Teachers of Singing, t time for a setting of the poem, *Longf* by Matthew Arnold. The contest clo June 1, 1938, and full particulars may had from D. A. Clippinger, 617 Kimb Hall, 306 South Wabash Avenue, Chica Illinois.

The Interesting Falsetto

(*Continued from Page 222*)

oting that head voice is characterized a fluty, birdlike quality, which can be duced by both sexes, and recommending use by a man for illustration when hing women, Mr. Shakespeare warns t it is not "that whoopy falsetto which often mistaken for head voice, nor is it t soft effect sometimes heard in the y high notes of the tenor voice which produced by the medium register." Nor it that "whoopy sound heard in so- ed male altos, and also in yodling." (See . Shakespeare's latest and smaller book, ain Words on Singing."—This book is w out of print and can be found only public libraries and in collections made teachers of singing.—Editor.)

Paul Savage is a real thinker, and in his reative Singing" sets forth a body of ught worthy the serious attention of dents of voice. He rejects the "register" trine and describes the "break" as not erent in the nature of the vocal instru- nt, but the result of wrong thinking.

We hold that the real working compass a singer's voice is that series of tones on which he can show a swell, at least some degree, and pronounce distinctly. hether the very light high tone of the n's voice (called by some the falsetto) of acceptable quality and can be strength- ed without loss of quality and continuity, any individual case, is the test of its ghest artistic usefulness to the singer. a light, very high note, is of a lovely, ty quality, it may be of service for a rticular and limited type of phrasing. No he which is the product of a rigid vocal paratus can be agreeable to cultivated rs. When there is no rigidity, and the ill of the singer in managing the breath essure enables him, upon a given pitch, increase that pressure, and bring a eater amount of substance into vibration, thout disturbing the responsive freedom the vocal instrument as a whole, we have e artist at work. In training young tenor ices it is often advantageous to give them rly work in finding, by skip from below, e light, high production we call head ice, and to carry it carefully, without loss evenness or quality, slowly downward, far as may be, in the scale; for instance, Should there be difficulty in finding the light, high tone on the top pitch given, try the exercise at a higher pitch. The head voice is accompanied by a sensation as though it were reflected into the top of the head toward the back, rising and falling there, following the curve of the skull, with the change of pitch. The vowel is always to be thought of as though formed in the upper front mouth. The great value of head voice, for practice, lies in the fact that it positively will not sound if there is the least rigidity in the vocal apparatus, particularly at the back of the tongue, and at the jaw. Short, downward arpeggi may also be used in similar fashion. Any vowel desired may be substituted. The preliminary aspirate may later be dispensed with, but a click of the glottis must be avoided. The Y syllable is intended to assist in a free and sufficient opening of the mouth. There must be no movement of the lips, jaw and tongue after the first syllable. This head voice may well be used by baritones and basses, as high and as low as it can be found, as a valuable device for discovering what it really is to sing with a nonrigid, open throat. When the attempt to sing a high pitch with the head tone results in the production of a hooty, whiney, or whistling sound, this bad effect is not to be charged to the use of a register called the falsetto, but to a lack of skill in keeping the vocal instrument free from rigidity, upon the basis of a properly managed breath. The important rule in this connection is to compel the note to sound to the minimum breath pressure.

As the pitch lowers, step by step, the feeling as of reflection of tone into the upper back head is gradually lost, should the power of the sound be increased, and a sensation as of tonal vibration in the upper front mouth and face takes its place. The combined sensation narrows and concentrates automatically, as the pitch descends. This sensation in the face and mouth is a sign that the tone generating apparatus in the larynx, and the resonating cavities above, are being allowed to perform their functions in starting, sustaining and reënforcing the tone without interference.

Underneath all this work, from the very beginning, must lie the development of the student's concept of tonal beauty, and of his earnest desire to make singing the expression of thought and feeling.

Fretted Instruments Department

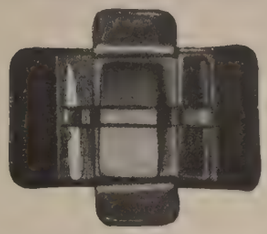
(*Continued from Page 271*)

ith the scales, using the orthodox manner of riking by letting the fingers turn towards e palm of the hand. Chords and arpeg- os and other intricate movements can done only with the stroke of this type. common fault of many amateur guitar- ts is placing the fingers under the strings d pulling them upwards. When released e strings will snap back on to the finger- ard and create more noise than tone. No matter what stroke is being used the and should always be kept quiet and all tion should come from the fingers which ust be held closely together; the move- ent of each finger should be kept to a inimum, especially so in rapid passages.

QUESTION BOX

J. E. R., Washington, D. C.

The bass strings for classic guitar are made of silk wound with silver wire. The treble strings are made of gut and for these a good grade of first, second and third violin strings of medium thickness may be used. These gut strings must be true in their entire length on account of the fretted finger board. Some dealers carry a string made especially for the guitar. Try to obtain this, if possible. If you will send your name and address we will be pleased to give you the other information desired.



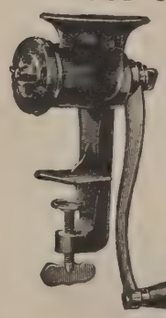
WE OFFER YOU THESE

Valuable Rewards

FOR MAKING NEW FRIENDS
FOR "THE ETUDE"

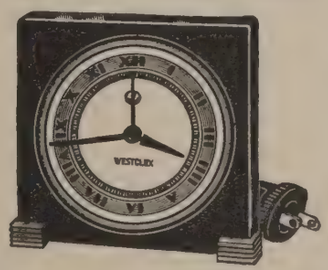
● In return for subscriptions to THE ETUDE, which you can easily and quickly obtain from your musical friends and acquaintances, we will send your choice of these attractive articles WITHOUT COST. All you need do is send us the name and address of each subscriber together with $2.00 for one year or $3.50 for two years, together with your choice of reward. It's as easy and simple as that. Get your first order and send it to us today. In Canada add 25c a year for postage. Foreign postage is $1.00 a year extra.

COMB and BRUSH KIT



A compact arrangement including brush, comb and nail file in a black leather case. Your reward for securing ONE SUBSCRIPTION. (Not your own.)

ADJUSTO-LITE

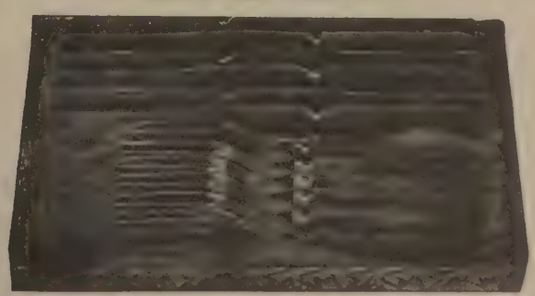


This unique lamp clamps everywhere —can be used for reading, writing, sewing — protects eyes and eliminates eyestrain. It is finished in brush brass and comes with cord and plug. Height, 12". Base 4½" by 3". Awarded for securing THREE SUBSCRIPTIONS.

FOOD CHOPPER

A very practical kitchen utensil. This Keystone Chopper will grind any kind of meat, raw or cooked; all kinds of vegetables —coarse or fine. It is easy to operate; easy to clean. Complete with 3 cutting plates. Your reward for securing TWO SUBSCRIPTIONS.

ELECTRIC ALARM CLOCK



Now you can have a dependable Electric Alarm Clock to waken you at whatever hour you wish. This is a genuine Westclox. Its ivory color harmonizes with any other color and will always be clean and new looking. Your reward for securing SIX SUBSCRIPTIONS.

"SAVAGE" OVENETTE

A practical kitchen utensil—bakes, roasts, toasts perfectly on any cooking burner—saves fuel—cooks without overheating the kitchen. Approved by Good Housekeeping Institute. Your reward for securing TWO SUBSCRIPTIONS.

KNIFE and FORK SET

A fine set of six stainless steel Knives and Forks with genuine Marbalin non-burn handles—your choice of green, red, or onyx. A very practical gift and award. Your reward for securing TWO SUBSCRIPTIONS.

Frisky Rhythms

By Danelia Jannsen

THE SQUIRREL, Frisky, has some rhythms all his *own;* just watch him at his antics when he's all *alone!* In slow *adagio* he leaves his tree-top *nest,* and scouts along the branches to see what move is *best.*

Frisky

All's well along the tree-trunk; then with *presto spurt,* he runs a bit, then pauses with his mind *alert;* and as he looks around, his metronomic *tail* keeps time to careful thinking on a *largo scale.*

A change! six-eight, *stringendo!* Safe to scamper *on, toccatowise,* clear down the tree, across the *lawn. S-taccato* sniffing, 'neath a bush, he seeks a *treasure* (acorns buried long ago to give him *pleasure*). Ha! a clew! Now watch him dig. His paws *a-prance,* as when a great pianist plays a whirlwind *dance.* The treasure's found! With nut to mouth he's on his *haunches,* and *vivace,* now, his teeth into the shell he *launches,* like rhythmic castanets, they sound a *rat-a-tat.* Oh dear, there's sudden danger! His enemy, the *cat* comes into view, his heart goes *pit-a-pat.*

And *presto,* now there's vacancy where Frisky *sat!* For like a rush of *demisemiquavers,* played *prestissimo* by one who never *wavers,* Frisky runs right toward the tree, his refuge without *fail,* himself a blurry note, a wobbling stem, his *tail.* Then up the tree, *volante,* puss a racing *second;* Frisky's on a branch which cunningly he's *reckoned* Puss could never reach.

From here, with *ad lib. chatter,* laughs at Kitty, foiled, who starts a downward *patter.* He's climbed too high, and Frisky taunts him nigh to *grief.* He's down, and off he slinks to Frisky's great *relief.*

In all his rhythms Frisky never used a *rest,* but now he takes a long one in his tree-top *nest.*

DONALD AND THE GYPSY

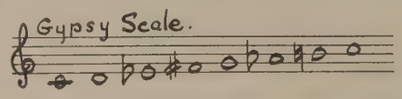
By MARJORIE KNOX

DONALD was returning from his music lesson, when beyond him in the shaded road, he saw a rickety truck parked under a tree. In it were at least eight brown faced Gypsies.

From somewhere behind the high boarded sides of the truck, he heard a violin. Unexpectedly, a little Gypsy girl jumped from the truck and skipped toward him. She held out her hand and said in English, "I will tell your fortune, if you will let me read your palm." Donald sat quietly and let her tell him about his wonderful future. Then he summoned up enough courage to ask her about the violin he had been hearing.

"Someone in your family takes violin lessons, doesn't he?"

"You don't know much about Gypsies, do you, Boy?" or you would know that Gypsies do not have to take music lessons as Americans do; they are born musicians. They learn what they know from other people; they have a wonderful natural talent for imitation. It was I who was playing the violin you heard. I have never read a note of music in my life. I learned to play by listening to people I met during our travels. Wait! I will get my violin and play for you." She returned quickly and played for several minutes without a single pause or mistake.



"Beautifully done!" exclaimed Donald. "I wish I could do it that easily; I have to study so hard to learn what I do," he added, with a short sigh. Then he brightened. "Does your music have scales?"

The Gypsy girl frowned slightly, then put her violin to her shoulder, saying: "I think I know what you mean. Would a scale go like this?" She played these notes:

"Yes, that is a scale," nodded Donald, "That is a Gypsy scale with its two augmented seconds. That one you played has an oriental sound to it."

"We have many scales like that in our music. But you know," the Gypsy confided to Donald, "What Americans often call *real* Gypsy music is almost always Hungarian, because the Gypsies who have lived in Hungary have made more music than any other branch of the Gypsy people."

"Listen!" the boy exclaimed. "I do know something about Gypsy music that perhaps you don't! Hungarian Gypsy music has been used in hundreds of famous compositions. It is found in Haydn's *Gypsy Rondo,* piano trio and Franz Liszt's many "Hungarian Rhapsodies." Johannes Brahms' numerous compositions and "Hungarian Dances" have many folk songs for their themes. Bach's compositions show that he was influenced by it.

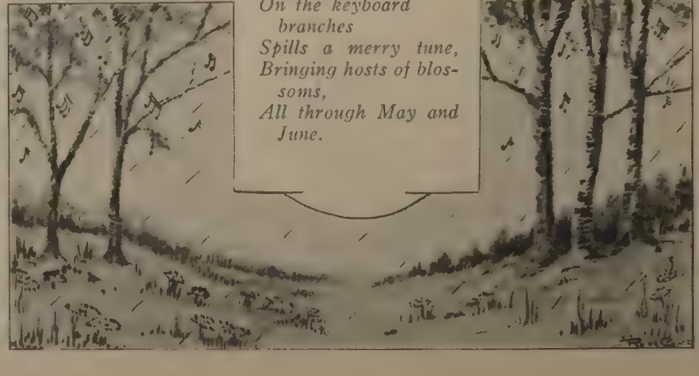
The Gypsy handed him her violin, saying, "Play something for me." Donald obeyed, and played Brahms' *Hungarian Dance, No. 5*

When Donald finished playing, the Gypsy was wide eyed with surprise. "You play very well, too," said she.

Eager to know still more about these interesting Gypsy people, Donald hastened to ask: "Just what are Gypsies anyway? What country did you all come from in the beginning?"

"We are called "Gypsies" because it was first thought that our people came from Egypt, and so the word "Egyptian" was contracted and we were named "Gypsy." In truth, we originated in Asia and roved in many countries of that continent. We came to Europe about the fifteenth century. You probably hear us often referred to as "Bohemians." That is because so many of our people have made Bohemia their main camping ground. "Bohemia" is now included in the country called Czechoslovakia.

"But your language," Donald said thoughtfully, "what do you speak when you are over there in the truck with your family?"



(*Continued on Next Page*)

AN APRIL LILT

By LOUISE GODFREY OGLE

Bright-eyed little raindrops
Tap the budding trees;
"April's here" they carol,
"Come out, baby leaves."

Tumble, tumble, tumble,
Down they pour legato;
Tinkle, tinkle, tinkle,
Less'ning to staccato.

On the keyboard branches
Spills a merry tune,
Bringing hosts of blossoms,
All through May and June.

Music's Gymnasium

By E. A. G.

You hear a good deal in school abo "gym work" and the many advantages "taking gym;" in fact, lots of pupils thi that is the best thing in school. You "gym work" so you will grow strong, you will be good enough to play bask ball, or hockey, or baseball, or to be a go swimmer or diver, or what ever your fa orite sports activity happens to be.

In your piano work you also have certain amount of "gym" to do, and y do it so that your fingers and arms a wrists will grow strong and be able play well on the keyboard, or on a violi or on what ever your favorite instrume happens to be.

You do not swing Indian clubs mere to learn how to swing them, but for t good the exercise will do your arm and shoulders, to make them strong enou for other sports activities, or for yo general health.

You do not practice five-finger exerci just to learn how to play them, but f the good this exercise will do your han and fingers, to make them strong enou for playing the piano, or for your gener musical health.

So remember your musical "gym" wo and "Daily Dozen," and look forward the goal that they will help you win.

Bridge Building

By Augusta Wixted

IN THE PRETTY little village of Maj Sixth the townspeople voted to have series of arched bridges erected in the Fenway.

The most expert of engineers was co sulted and his blue prints promised great to improve and beautify the landscape.

The day for the actual work arrived a everyone was interested in the progress the construction. Stone piers were erect on each side of the bridge in order t support the arch. The stability of the stru ture depended largely upon these pier They must be solid, for they must carr not only the weight of the arch but also t weight of vehicles which would travel ov these bridges. The inhabitants of Maj Sixth would not have it sung that "Fenwa Bridge is falling down"; and so all wor must be carried on with care and thoug for the future.

Now it occurred to all the young mu cians in this little town that the hand of pianist was intended for nothing other tha an arched bridge. After thinking the ma ter over carefully they realized that t thumb was to serve as one pier and t little finger as the other pier and that the two fingers must support the arched brid of the hand. A span of a sixth was agre upon for the series of bridges to erected upon the keyboard.

After watching the careful work of t bridge builders in the Fenway they we home and practiced spanning a series sixths and no musicians in all the land ha better shaped hands or played sixths wi more assurance.

These musicians would not have it sa that their bridge was "falling down" eith

DONALD AND THE GYPSY

have a language of our own. It is e ancient "Prakrit," or Indian, com- ith the languages of the numerous with whom we come in contact many travels."

me show you how Gypsies dance." watched. At first, her dancing was ow; and something about it made l; then before he knew it she had l its *tempo* (time), and her red ure was moving about like darting of flying, angry fire. Finally she and her golden earrings ceased apid reflecting of the yellow, low- ering sun of the early Summer evening.

"What you just saw," said she, "is the kind of dance we Gypsies love to do. It is called a "Czardas." Did you notice its two parts: one slow, the other fast?"

Donald nodded. "It was a lovely dance, Gypsy Girl. I could feel its strong rhythms and accents. That, too, I suppose, came from Hungary?"

"You are right," and before he knew it, Donald was waving goodby to her as she waved at him from the sputtering truck that was beginning to creak down the street.

FINGER FROLIC

(For very young Juniors)

By ERNA KABLE

's ten little fingers had really to practice this morning, but Betty ken them out of doors to play s with brother. The ten little fingers t like to play marbles—they were y good at it, and they did not think much fun. But they did like to play no, and they could do that rather f Betty would only let them. But l not give them half a chance, and ecided it was time to do something t.

now what we'll do," said one little "we will learn to play by ourselves, y won't help us."

t morning at practice time the little were very happy. As soon as Betty em on the shiny keys they began their best; but Betty looked out of the window, and one of the little fingers lost his place, another fell off his key, and another did not play at all.

Then, suddenly, all the ten fingers were running and scampering, up and down the keyboard. They chased each other, pushed and joggled. Betty's mother came in to see what the noise was. Betty seemed to have fallen asleep and the ten little fingers were trying to practice by themselves!

Betty promised she would not treat them that way any more. She would guide them and teach them to play.

And that is just what she did. The ten little fingers worked ever so hard after that, and soon Betty had them playing very well indeed, and it was hard to tell who was more pleased, Betty or the ten little fingers.

Grace Larsen; Nancy Anne Zanolli; Ann Marie Friedly; Elizabeth Jones; Betty Jordan; John William Murray; Fred Chasan; Sheila Falconer; Jane Robinson; Carol Plisch; Helen Fraze; Ann Doris Oates; Roslyn Secunda; Katherine Fraze; Elizabeth Johnson; Lenore Glaser; Jean Katz; Marilyn Hagen; Lola Wallace Howell;

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays, and for answers to puzzles.

Any boy or girl under sixteen years of age may compete, whether a subscriber or not and whether belonging to a Junior Club or not. Class A, fourteen to sixteen years of age; Class B, eleven to under fourteen; Class C, under eleven years.

Subject for story or essay this month, "How to listen to music." Must contain not over one hundred and fifty words and must be received at the Junior Etude Office, 1712 Chestnut Street, Philadelphia, Pennsylvania, by April eighteenth. Names of prize winners and their contributions will appear in the September issue. The thirty next best contributors will receive honorable mention.

RULES

Put your name, age and class in which you enter on upper left corner of your paper, and put your address on upper right corner. If your contribution takes more than one sheet of paper do this on each sheet. Write on one side of paper only. Do not use typewriters and do not have anyone copy your work for you.

When clubs or schools compete please have a preliminary contest first and submit no more than six contributions (two for each class).

Competitors who do not comply with all of the above rules and conditions will not be considered.

Does Practice Make Perfect?

(Prize Winner)

DOES PRACTICE make perfect? I had to stop and think about that one. But what I concluded is that I think anybody would say yes. And one reason is this. My sister came home for the week end and, finding her new number of The Etude on the piano, she immediately sat down and began to play. In one of the pieces she made mistakes in the same place several times. She worked and worked on it. No use. The next morning when she got up she tried it and played it perfectly.

Almost the same thing, only on a different basis happened to me. There was a song I liked very well and I made up my mind to learn it, so I did. It was awfully hard at first but soon I knew it by heart because I practiced it so much.

Yes, practice does make perfect.

VERNON MCCAIN (Age 10),
Class C, Idaho.

Does Practice Make Perfect?

(Prize Winner)

DOES PRACTICE make perfect? After having concentrated upon the subject of discussion my mind was in a whirl.

Practice does or does not make perfect. To some it does and to others it does not. My own aim is always to play the very best I can. When I am to play in public I commence the study of my classics months ahead, and after the first week of sincere and earnest hard practice I feel that I have accomplished a great deal. Then later the task is made easier by constant repetition. Finally, I can play the piece perfectly. So to me, practice does make perfect.

A little saying which always runs through my mind is, "If at first you don't succeed, try, try again."

THOMAS GALLEN (Age 15),
Class A, Ohio.

Does Practice Make Perfect?

(Prize Winner)

THE RIGHT KIND of practice does make for perfection. Some people can sit down at a piano and practice for three hours very slowly and then close their books and walk away without any more knowledge of what they played than when they first started. Others can practice only one half hour and concentrate while doing it. They gain more than those who practiced three hours. This is my explanation of real practice.

Perfection is never reached, even by the greatest artists—but a standard of perfection is. Each of us is endowed with a limited amount of talent; and we acquire our standard of perfection by *real* practice, although our standard may not reach that of a great artist.

JEANNE BIDWELL (Age 13)
Class B, Michigan.

Answers to January Opera Wheel Puzzle

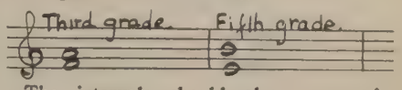
Faust; Fidelio; Lucia; Tosca; Aïda; Lohengrin; Carmen; Oberon.

Prize Winners for January Opera Wheel Puzzle:

Class A, Thomas Petrick (Age 14), Illinois.

Class B, Jean Fordenbacker (Age 12), Pennsylvania.

Class C, Katheryn Kane (Age 9), Kentucky.



What Grade in School?

GAME

By Gladys Hutchinson

IN ORDER to play this game, it is necessary to have "flash cards" containing various intervals.

The leader flashes a card and says, "What grade in school is this?" and the players in turn, will answer according to the degrees of the intervals.

The intervals should also appear in broken form.

For advanced students the game of intervals can be carried to defining the kind of intervals. Explain that every interval has two names just as every person has a given name and a surname, as major third, minor sixth.

Answers to Who Knows

1. The second time. 2. D-sharp. 3. Stephen Foster. 4. The "Mass in B minor." 5. Francis Hopkinson, a signer of the Declaration of Independence. 6. Italy. 7. About 1600. 8. "Das Rheingold," "Die Walküre," "Siegfried," "Götterdämmerung (Dusk of the Gods)." 9. Twenty-four. 10. Diminished seventh.

Operatic Subtraction Puzzle

By Stella M. Hadden

EACH ANSWER begins with the last letter of the preceding word and contains one letter *LESS*.

1. An opera by Wagner
2. An opera by Verdi
3. An opera's prelude
4. Ill-fated lover in the opera, "Lucia"
5. An opera by Weber featuring a magic horn
6. An opera by Bellini
7. An opera by Verdi
8. A part of an opera
9. Initials of conductor who brought fame to the "Chicago Opera"
10. A consonant

MERRY MELODIES MUSIC CLUB
Albany, Oregon

LETTERS FROM ETUDE FRIENDS

One Community and Its Music

To THE ETUDE:

"Shop work supplementary activity to general music development"; so reads an "A. P." headline. In Winnetka, Illinois, David Dushkin, Director of the School of Musical Arts and Crafts, believes general musical development more important than proficiency on any given instrument; so this article states. I believe in it for the general public.

Some of our rural schools in Waseca County are doing just that, and our city schools have begun it, with cornstalk flutes, cigar box violins, and water glasses or bottles for xylophones. One rural school teacher had drums made of tin boxes, the ends covered with old inner tubes. For drumsticks she had old organ stops. The old school organ was good for nothing else.

Of course the cabinet organ is found in most rural schools; and it is an ideal instrument for use with children's voices. Many of these instruments have grown old in service and are practically useless. A neighboring school has just purchased a new one.

PWA with its recreational leaders, has brought puppetry to the children. Rural electrification will soon allow radios in the rural schools.

Our 4H clubs gave a pageant one fall at the County Fair. These clubs have their musical and dramatic contests.

We have placed in one school a wall map of instruments obtained from an instrument company, at a cost of ten cents. Also one was given to the County Superintendent, with notes on their development written on it, to suggest further study of instruments.

The development of American music rests much with rural America. There is our foundation, our beginning. This is a year of celebration of the one hundred and fiftieth anniversary of the Constitutional Convention (1787-1937), and music is part of it. A good time to take account of our advancements.

DOROTHY DEBAR

Music Extension Study Course

(*Continued from Page* 228)

on the dominant—A major. From here the player goes back to the beginning—*D.C.*—and plays to the *Coda*, which is built upon material from the second theme.

A very charming number, typical of the melodic spontaneity one has become accustomed to expect from the pen of Mr. Rogers.

GOOD FRIDAY SPELL

By RICHARD WAGNER

This music from "Parsifal," so associated with the Easter season, and considered by some to be Wagner's greatest opera, is particularly apropos for inclusion in this issue of THE ETUDE. Before playing it, the performer should of course be familiar with the story of the opera. This in itself will suggest the proper interpretation.

Give to the melody in the right hand your best possible singing tone, and be sure to subdue the accompaniment, which, for the most part, is in triplet figures in the left hand. It might be well to use the *una corda* (soft pedal) for most of the *pianissimo* parts. The pedal is not indicated so it will have to be used at the descretion of the performer. Try, if possible, to hear it either on a phonograph record, over the radio, or, best of all, in opera form. This will prove more helpful than any amount of description through the medium of mere words.

FROM THE SIXTH SONATA

By THOMAS ARNE

This excerpt from Thomas Arne's "Sixth Sonata" is an interesting example of the eighteenth century style of music and gives an idea of the sonata form before it had reached the height developed later by Beethoven.

Note the free use of ornaments, mordents, trills, and so on. Because the earlier keyboard instruments lacked the sonority of the pianos of later vintage, these devices were used often to help give the melody tones a feeling of prolonged resonance. All the figurations are written out, in a footnote, as they should be played. Be sure to observe them and play them strictly as indicated.

Bands and Orchestras

(*Continued from Page* 265)

attempts to play. We can be thankful that the boy is interested and has a keen desire to learn to play; and probably the issue is settled by letting him use one of our good cornets until he is financially able to get a good one of his own.

4. Instruments must be kept in good playing condition. It is rather surprising that the intonation of our bands and orchestras is as good as it is, when we consider the condition of instruments used. Leaky pads, action out of line, pads too high or too close to the holes, warped clarinet and saxophone mouthpieces, poor reeds; all of these things are responsible for poor intonation and are the little details which must be checked if we are to have good intonation.

5. The best type of mouthpiece for either brass or woodwind for each individual is an important factor. We know that the lay of a woodwind mouthpiece will affect the intonation, and also the depth or shallowness of a cup mouthpiece has its effect on intonation.

6. Keeping instruments cleaned and in perfect mechanical condition is very important.

7. Development of correct method of tone production, position, posture, breathing, attack, sustain, release.

8. Use of only finest of reeds for reed instruments, especially for oboe and bassoon.

9. Use of alternate finger positions when necessary.

10. Systematic study of exercises which emphasize intonation, in addition to study on unisonal exercises.

11. Teach students to practice more slowly. Give them opportunity to listen to themselves.

12. Teach students to voice the tone before playing it.

13. The commandment, "Thou shalt hear thyself," should be impressed upon the mind of every student.

Finally, intonation is affected by so many things that it is practically impossible to maintain perfection. Perhaps your band does play out of tune—it is but one of thousands experiencing the same difficulties.

So give the student a pat on the back. Encourage him—after all he does not want to play out of tune—and as a final prescription, see that he sings, sings, sings, and then sings some more.

* * * * *

"Music—the most abstract of the arts—is deeply rooted in spiritual sources. When these sources fail, divine melody is no longer heard in the land. The heart withers; feeling is replaced by cerebral activity; inspiration by the ingenuity of the human mind. No matter how vast our technical skill, how enormously enlarged our knowledge of harmonic and rhythmic material—without the authentic voice our creations will prove lifeless, void.

—Thilo Becker.

Next Month

THE ETUDE for MAY, 1938

May Day heralds the height of Spring, and for this glad period THE ETUDE has prepared an issue of unusual charm and practical value.

BALLYHOO AND MUSIC

Why did Franz Liszt remove his green gloves at a concert and toss them into the audience to watch his admirers scramble for them? What is the present day attitude toward the publicity of the artist and the teacher? An editorial article treats this subject in light and informative fashion.

FRANZ LISZT

STARTING A PROSPEROUS SUMMER

Josephine Perry, author of successful teaching works, tells how she launched a very prosperous Summer Class in a New England town. The plans used were so very simple and practical that it would seem that any wide awake teacher could do the same thing.

IMPORTANT STEPS IN THE MAKING OF A PIANIST

It is natural that the keenest interest should attach to any article from M. Isidor Philipp of Paris, dean of the great living piano teachers of the world. M. Philipp has a way of saying things which students never forget. This article is one of his best.

THE MARVELS OF A MUSICAL MEMORY

Arturo Toscanini has startled the world with his fabulous musical memory. In an article by the distinguished French virtuoso-teacher-conductor, Maurice Dumesnil, the case of Toscanini is discussed and the reader is told how such memories are acquired.

THE GOAL IS ALWAYS MUSIC

Yehudi Menuhin, the youthful violin virtuoso, tells our readers how persistent working for a main objective has helped him to ascend to stellar heights. This interview was secured especially for THE ETUDE by Rose Heylbut.

OTHER INTERESTING ARTICLES and special features by distinguished teachers and musicians, PLUS 24 pages of interesting new music to play and sing.

MUSICAL BOOKS REVIEWED

Debussy, Man and Artist

By OSCAR THOMPSON

So many Debussy books have appeared recently that he may join the ranks of the biographical hatracks—Shakespeare, Napoleon and Wagner. This ultramodest, retiring, simple Frenchman, with a complete atmosphere of the Bohemianism of Montparnasse-Montmartre, who went on and on producing masterpieces in an inimitably original style probably never realized that he would be followed by an avalanche of articles and books. The latest of these tomes, by Oscar Thompson, is a credit to American biographical research and musical appraisal. Mr. Thompson has portrayed Debussy as many have not yet known him, and the work should make a valuable addition to any musical library.

Pages: 395.

Piano Accordion Department

(*Continued from Page* 261)

Although the 48 bass accordion does have the chord of the dominant sev the student will find quite a librar music available for it, as most elemer arrangements are made so that, where sible, the major chord is substituted the seventh and the harmonization of right hand made to include the seventh

The 60 and 80 bass accordions are in order of progression. They are the approach toward a complete instrumen the three principal chords in all keys possible upon them. The important d inant seventh chord has now been ad Most of the less expensive 60 and 80 instruments have thirty-four piano keys some of the de luxe models of 80 instruments have thirty-nine keys. number of bass buttons has been incre as the name of the instruments imply. modern 60 and 80 bass accordions mechanically combined so that it is sible to produce a diminished chord combining the seventh with the pr counterbass. True enough, it will not a complete diminished chord but will fice until the student is able to hav standard, full sized instrument. Ano advantage with these instruments is right hand register switch which is erally not placed upon the smaller ins ments. The application of the regi switch couples in the reeds of the lo octave and produces a full rich tone. removal of the switch tends to emu the sweetness of the violin tone and hances the interpetation of melodic sages.

The 96 bass instrument is next in or It provides 37 piano keys. Instrum previously described have had only rows of buttons but we now add the s row which produces the diminished ch Some of the better type of 96 bass cordions have the bass register swi These models are compact, light in we and attractive in design.

Children between the ages of nine twelve vary so much in size that i difficult to recommend a definite ins ment. Nothing less than a 60 or 80 should be purchased and if the chil large for his age and strong, a larger strument should be secured. It is easily cernible that the more complete the in instrument is, the longer it will last be it needs to be changed for a larger Naturally each trade of instruments m an additional outlay of money with the feiture of some of the original investm

Published monthly by THEODORE PRESSER CO., Philadelphia, Pa.
Entered as second-class matter January 16, 1884, at the P. O. at Phila., Pa., under the Act of March 3, 1879. Copyright, 1938, by Theodore Presser Co. for U. S. A. and Great Britain.

This outstanding volume is "new" from cover to cover. It is of particular interest in view of the growing demand for music of the modern school of composition, not alone in concert programs but also in the home and studio repertory of the average pianist. Includes a large group of selections of recent origin, as well as a select number of favorite classics, many of which do not appear in any other collection. A graded index has been included for the assistance of teachers and students. Newly engraved, large page size with large notes. At all music stores or direct (except Canada and Europe). Price $1.50.

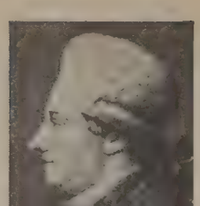
MUSICAL AMERICA says:
"Miscellaneous collections of piano music have always been more or less suspect because of the padding that formerly characterized them. But a well selected and well edited group of compositions in one binding has a specifically useful place in the musical scheme of things and such a one emphatically is the "Piano Pieces for Everyone." The compiler has brought together many of the current favorites with both those who are serious students and those who play only for their personal pleasure. The general accessibility of the contents is indicated by the fact that while ten of the pieces are of Grade III difficulty and a few of Grade V and still fewer of Grade VI, the majority are of the fourth grade. They have been carefully edited and are printed spaciously and attractively on good paper."

D. APPLETON-CENTURY CO.
35 West 32nd St., New York

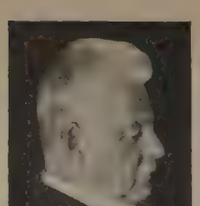
THE ETUDE HISTORICAL MUSICAL PORTRAIT SERIES

An Alphabetical Serial Collection of



THE WORLD'S BEST KNOWN MUSICIANS

This series which began in February, 1932, has included to date a total of 3344 celebrities. It will be continued alphabetically until the entire history of music is adequately covered. Start making a collection now. Nothing like this has ever hitherto been issued.

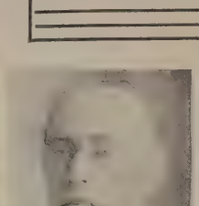


Etude readers desiring additional copies of this page and pages previously published are referred to the directions for securing them in the Publisher's Notes Department.

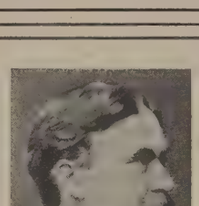
Frederick Preston Search—B. Pueblo, Colo., July 22, 1889. Comp., violoncellist. Studied at N. E. Cons. and Cin. Cons. Toured Europe and Amer. Orch. and violoncello wks. Res. San Fran.

Franz Seydelmann—B. Dresden, Oct. 8, 1748; d. there Oct. 23, 1806. Comp., cond. With his father, was cond. of court church, Dresden. In 1787, Kapellm. at Italian Opera. Many large wks.

Ernst Hermann Seyffarth—B. Krefeld, Ger., May 6, 1859. Comp., cond. Studied at Cologne Cons. and Berlin Hochschule. Cond. of Neue Singverein, Stuttgart. Miscl. wks.

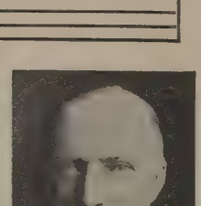


Harriet Ayer Seymour—Chicago, Piano teacher, a thor. Studied in New Y and at Royal Cons., Stu gart. Has taught at Inst. Mus. Art. Founder of o school, N. Y.

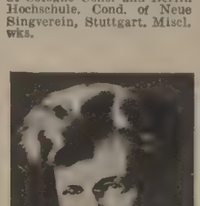


John Laurence Seymour—B. Calif. Comp. Studied in Los Angeles and in Europe. His opera, "In the Pasha's Garden," prod. at Metro. Opera House, 1934. Fac. mem., Sacramento Jr. Coll.

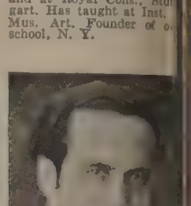
Giovanni Sgambati—B. Rome, May 18, 1843; d. there Dec. 14, 1914. Comp., pianist, cond. Gave free instrn. at Acad. St. Cecilia, which led to founding of Liceo Musicale. Piano wks.



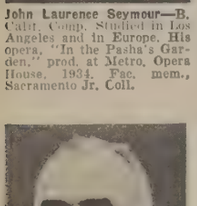
Frederick Newell Shackley—B. Laconia, N. H., Oct. 25, 1868. Comp., organst., cond. Was organst. in Lewiston, Maine, then in Boston. Church mus., org. pieces. Res. Roslindale, Mass.



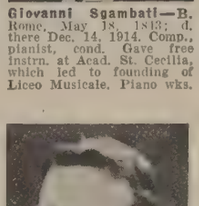
William Shakespeare—B. Croydon, Eng., June 16, 1849; d. London, Nov. 1, 1931. Tenor, noted teacher, comp. Long prof. at R.A.M., also cond. of concerts. Author "The Art of Singing."



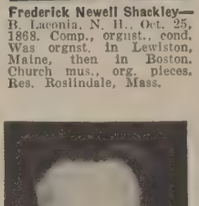
Myrna Docia Sharlow—B. Jamestown, N. Dak. Soprano. Début, Boston Opera House. Has sung with Royal Opera, Covent Garden and with Chicago Opera. Many concert appearances.



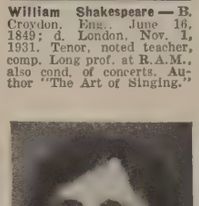
Cecil James Sharp—B. London, Nov. 22, 1859; d. there June 22, 1924. Comp., author. Was dir., Hampstead Cons., also of Folk Dance Soc. Publd. books of folk songs of Europe and Amer.



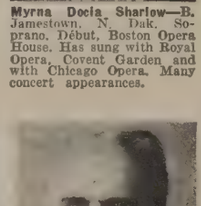
Arthur Shattuck—B. Neenah, Wis., April 19, 1881. Pianist. Pupil of Leschetizky. Début 1902 with Copenhagen Philh. O. Has appeared with major orchestras in Europe and America.



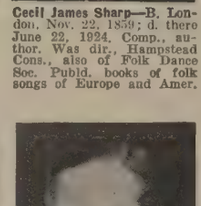
Vladimir Shavitch—B. Amer., July 20, 1888. Con pianist. Concertized as anist in Europe. Guest con London Symphony. In 19 became cond., Syracu Symph. O.



W. Warren Shaw—B. Mattoon, Ill. Tenor, voice teacher, author. Studied in Milan. Sang with Carl Rosa Opera Co. For over 30 yrs., teacher in New York and Phila. Author of "The Lost Vocal Art."



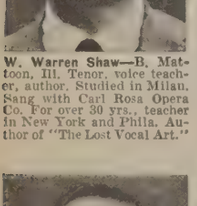
George Edward Shea—B. Pittsburgh, Pa., Oct. 16, 1865. Opera bar., teacher. Sang in opera and concert at The Hague, also in Europe and Amer. Ex-pres., N. Y. Singing Teachers' Ass'n.



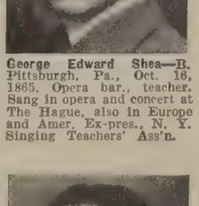
Charles A. Sheldon, Jr.—B. Atlanta, Ga. Comp., organist, teacher. In 1914 apptd. munic. organist of Atlanta; also holds important church position. Has written a cantata, organ pcs., anthems.

Lillian Taitt Sheldon—B. Gouverneur, N. Y., Sept. 10, 1865; d. there Jan. 10, 1925. Comp., organst. Pupil of W. F. Sudds and Hugh A. Clarke. Wrote mostly sacred solos and anthems.

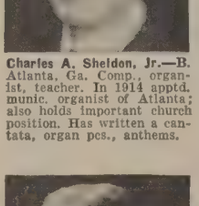
Harry Rowe Shelley—B. New Haven, Conn., June 8, 1858. Comp., organst., teacher. Has filled important post in N. Y. churches. Wks.: 2 symphonies; pieces for org.; pia.; violin; anthems and songs.



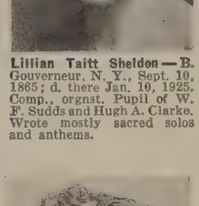
Edgar Shelton—B. St. Louis, Mo., Jan. 20, 1904. Pianist, tchr. Pupil of E. R. Kroeger, Hutcheson and Schnabel. Appearances in London, Paris and Berlin. Soloist with St. Louis Symphony Orchestra.



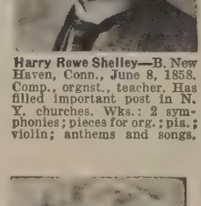
Louis Shenk—B. Allen County, O. Comp., baritone. His recitals in New York and Phila., have estab. him as a distinctive interpreter of songs. Has publd. songs and chl. mus. Res. Phila.



Arthur Shepherd—B. Parl Idaho, Feb. 19, 1880. Comp pianist, teacher. Studied N. E. Cons. In 1908 apptd. of harmony there. Cond. var. societies, Boston. Orc works, pia. pcs. and song

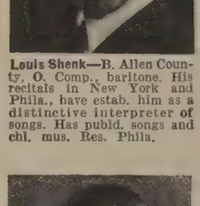


Ernest H. Sheppard—B. Brockley, Kent, Eng., 1888. Comp., organst., tchr. Studied in England. In 1913 secured first organ position in Amer., at Somerville, N. J. Has written organ pieces.

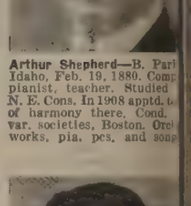


Frank Sheridan—American pianist. His concert appearances have won highest praise from critics and public. In 1936 he was soloist with the New York Philharmonic-Symphony Society.

Leander S. Sherman—Music publisher. Went to San Francisco at 14. In 1870 bought out his employer and in 1879, he established the firm, Sherman, Clay and Co. Was pres. until 1920.



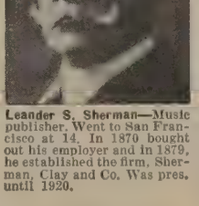
Edgar Harmon Sherwood—B. Lyons, N. Y., Jan. 29, 1845. Comp., pianist. Bro. of W. H. Sherwood. Active in Chicago and New York. In 1895 Nat'l Mus. Dir. of Union Veterans' Union.



William Hall Sherwood—B. Lyons, N. Y., Jan. 31, 1854; d. Chicago, Jan. 7, 1911. Comp., perhaps America's most eminent pianist. Was tchr. in N. E. Cons., Chi. Cons.; estbd. Sherwood Pia. S.

William Shield—B. Whickham, Durham, Mar. 5, 1748; d. London, Jan. 25, 1829. Comp., violist. From 1778-97 comp. at Covent Garden. In 1817 apptd. Master of the King's Music.

Nathaniel Shilkret—B. New York, Jan. 1, 1895. Comp., cond. For 14 years, was mus. dir., RCA Victor Co. Dir. of many important radio broadcasts. Since 1935 in Hollywood, Calif.



Dmitri Shostakovitch—Leningrad, Russia, Sept. 1906. Comp. Studied at Leningrad Cons. Began writi at early age. His "Macbeth of Mzensk" Amer. prem. in 1935.

AWARDS and PRIZES *for* *Graduation*

Diplomas • Teacher's Certificates
Promotion Certificates and Medals Suitable for Presentation to Music Students

DIPLOMA AND CERTIFICATE FORM

Diploma · Certificate · Teacher's Certificate
10 x 8 in.; Price, 25c each

This style Diploma or Certificate form may be obtained for either of the three uses. Also with text as shown in illustration, but no designated award; thus permitting of other award titles, such as Promotion Certificate, etc.
Printed on fine Parchment Deed stock in the modern 10 x 8 size. **Price, 25 cents postpaid.** Holder Frame (may be hung on wall, or used as an easel) **$1.50.** Prices on leather and imitation leather holders on request.

PARCHMENT DIPLOMA OR CERTIFICATE
21 x 16 in.
Price, 60c each

This full-size form, suitable for framing, comes in two styles—may be used as a Diploma or Certificate. The Diploma has the wording: "This Certifies that..... has completed in a creditable manner a course in.....Music as follows"..... Then follows a design containing the word "Diploma," followed by: "In testimony whereof.....have affixed..... name." The Certificate form has the same wording but the design bearing the word Diploma is omitted. Printed on a good parchment stock.

CERTIFICATE OF AWARD
12 x 9 in.

With Text—Price, 12c Without Text—Price, 6c

A neat, but inexpensive design, for undergraduate promotion certificates. The Certificate with text has the same wording as indicated opposite for Parchment Diploma. Both styles are printed on a good paper stock. In a neat border the words "Certificate of Award" surround a figure in classic garb representing music.

Interesting and Important Items Gleaned in a Constant Watch on Happenings and Activities Pertaining to Things Musical Everywhere

ROBERT L. SANDERS

THE FIVE HUNDRED DOLLAR PRIZE, offered by the New York Philharmonic - Symphony Orchestra for a short composition, has been divided between Charles Haubiel of New York University (for his *Passacaglia in A minor*) and Robert L. Sanders of the faculties of the University of Chicago and Chicago Conservatory of Music, and assistant-conductor of the Chicago Civic Orchestra (for his "Little Symphony in G").

THE FIVE HUNDRED DOLLAR PRIZE, offered by the New York Women's Symphony Orchestra, has been awarded to Philip James, for his *Song of the Night*. A. Louis Scarmolin, of Union City, New Jersey, and Louis Cheslock, of the Peabody Conservatory of Baltimore, received honorable mention.

THE BI-CENTENARY of the Capitol Theatre of Toulouse, France (founded in 1737), was celebrated, early in February, by a gala performance of "The Damnation of Faust" by Berlioz, with Ninon Vallin and Vanni-Marcoux in the leading rôles.

JEAN SIBELIUS, the eminent Finnish composer, has replied to an offer of the Rectorship of St. Andrews University of Edinburgh, Scotland, "Although I deeply appreciate the signal honor accorded me, I reluctantly feel obliged to decline the invitation." Guglielmo Marconi was the last to hold this position.

THE BRAVE NEW WORLD is a new radio series of South America, exploiting Latin-America, and reminding us that the United States is also "brave" and "new," and that reciprocal programs based on North American progress, music and culture would be welcome to our neighbors on the south.

DON LORENZO PEROSI has been commissioned to make a setting of the Mass in commemoration of the four hundredth anniversary of the birth of St. Charles Borromeo; the work to be performed at the Cathedral of Milan with the composer conducting.

TODD DUNCAN AS *Porgy*

"PORGY AND BESS," the most heroic operatic venture of the immensely talented George Gershwin, had its first complete performance on the Pacific Coast when given, early in February, before eleven capacity audiences of Los Angeles, followed by a season in San Francisco. The cast was practically the originals of the New York productions, with Todd Duncan in the leading rôle and with the Eva Jessye Choir giving a fine choral support.

THE NATIONAL CONGRESS OF MUSIC EDUCATION of Mexico, at its recent convention in Mexico City, passed a resolution demanding that all music teachers possess university certificates approving of their competence in their respective fields.

WITH KIRSTEN FLAGSTAD, Lauritz Melchior, Gina Cigna, Gertrude Wettergren, and a growing group of singers of but slightly less glowing art, it begins to seem like the dawning of another era of brilliant vocalism in opera. But where are the Americans to sustain the glorious traditions of our former Lillian Nordica, Emma Albani, Geraldine Farrar, Emma Eames, Louise Homer, David Bispham, Emma Nevada, Myron Whitney, and others with international renown?

THE EVANSTON MUSIC FESTIVAL will be celebrated from May 17th to 21st, with Dr. Frederick Stock conducting, and with the participation of the Chicago Symphony Orchestra, the usual grand chorus, the A Cappella Chorus of Northwestern University, and a galaxy of soloists. Important works to be presented include the "King David" of Honegger and the "Requiem" of Brahms.

THE THIRTIETH ANNIVERSARY of the death of Edward MacDowell has been commemorated by the Columbia University Library, with an exhibition of his manuscript scores, photographs and autographed letters and documents.

MLLE. RENEE NIZAN, the brilliant young French organist, opened her second tour of America with a recital on the afternoon of January 12th, in St. Thomas Church of New York.
